2030-E	1 to 2,000,000 megohms	Fixed 200 volts d.c.	±5% full scale	battery operated transistor supply	6" x 8" x 4" 8 lbs.	225.00
* 667	0 to 10,000 megohm	Fixed 100-250-500 1000 v.d.c.	± 2.5% of scale length	battery operated transistor supply	8½" x 4½" x 5" 4½ lbs.	175.00

Rack type available — 1620 series 19" x 10½" x 9½"
1020 series 19" x 7" x 9½"

* Norma Instruments, Freed exclusive U.S. agent.

INCREMENTAL INDUCTANCE BRIDGES

Direct in-line readings of inductance and conductance of iron core component at audio frequencies with or without superimposed direct current. The bridge uses the Owens circuit with provisions for measuring the series or parallel inductance and conductance of the unknown inductor; five precision resistance and capacitance decades are provided to indicate these values. "Q" or storage factor can be measured as the product of the inductive reactance and the conductance.

Type	Inductance Range	Conductance Range	Frequency Range	D.C. Current	Accuracy	Dimensions and Weight	Price
1110-C	1111.1 h to 1 mh 5 decades 1.1 h to 1 μh 2 decades	0.015 μmho—100 mho "Q" = 600 max @ 100 cycles	20 cycles to 10KC	up to 2 amperes	±0.5% to 5 KC ±2% to 10 KC	21¾" x 17½" x 15¼" 50 lbs.	525.00
1115	111.1 h to 100 μh 5 decades 0.11 h to 0.1 μh 2 decades	0.15 μmho—1000 mho "Q" = 600 max @ 100 cycles	20 cycles to 10 KC	up to 15 amperes	±1% to 5 KC ±3% to 10 KC	21¾" x 28" x 15¼" 80 lbs.	825.00
1185	111.1 h to 100 μh 5 decades 0.11 h to 0.1 μh 2 decades	0.15 μmho—1000 mho "Q" = 600 max @ 100 cycles	20 cycles to 10 KC	up to 30 amperes	±1% to 5 KC ±3% to 10 KC	21¾" x 33¼" x 15¼" 100 lbs.	1250.00

COMPARISON & LIMIT BRIDGE

A rapid and convenient method for laboratory or production testing of resistors, capacitors and inductors. Components may be sorted for tolerances up to ±20% or selected in matched pairs.

Type	Inductance Range	Capacitance Range	Resistance Range	Test Frequency	Accuracy	Dimensions and Weight	Price
1010-A	10 μh-100 h	10 Pf-100 mf.	1 Ω-20 MΩ	50 or 60 cycles 1 KC-10 KC	±0.1% on 5% range	10½" x 12" x 12" 17 lbs.	350.00

LOW FREQUENCY "Q" INDICATORS

Direct indication of "Q" at low frequencies, inductance, distributed capacity, impedance and dielectric loss can also be measured. Instrument may be used to study the magnetic properties of iron core material for stability as a function of applied voltage and losses as a function of the frequency.

Two units are available, the 1030-A indicates "Q" as a product of meter readings multiplied by dial settings.

Type	Test Frequency	Q Range	Accuracy	Test Voltage	Power Requirements	Dimensions and Weight	Price
1030-A	20 cycles to 200 K.C.	1-1000	±5% 20 cycles to 50 KC— to 200 KC at reduced accuracy	Voltage to series circuit, 0.01 to 10 volts voltage across coil variable to 100 volts	105-125 volts 50-60 cycles	21" x 23" x 15" 120 lbs.	1250.00

IMPEDANCE & ADMITTANCE BRIDGE

An audio frequency bridge for measuring the complex impedances of inductors, transformers, filter networks and capacitors.

Type	Frequency Range	Impedance and Admittance	Accuracy	Maximum Applied Voltage	Dimensions and Weight	Price
1120	20 to 20,000 cycles	XL, XC and R up to 1000 ohms, BL, BC and G up to 1000 microhms	R: ±1% G: ±2% X: ±1% up to 5 KC B: ±1% up to 5 KC	125 Volts	10½" x 12" x 12" 25 lbs.	455.00

UNIVERSAL BRIDGE

The Freed Type 1150-A Universal Bridge offers the laboratory a combination of eight bridges in one instrument. This bridge will measure the reactive and resistive component of impedances, capacitance, resistance and phase angle.

In the Hay and/or Owen bridge configuration the incremental permeability of an inductance can be measured.

Type	Inductance Range	Capacitance Range	Resistance Range	"D" Hay Bridge	Price
1150-A	5 μh 1110 h	5 pf-10 mf	0.05 Ω-1 MΩ	0.001-10 Q = 0.1-1000	825.00
	"Q" Maxwell 0.01-50	"Q" Series Owen 0.01-600 @ 100 cycles	"Q" Parallel Owen 80 @ 100 cycles	"Q" Parallel Resistor-Condensor Bridge 0.01-11.1	
	Accuracy Inductance ±0.5% up to 1 KC. ±2% to 10 KC. Capacitance ±1% @ 1 KC. "D"-"Q" ±5% @ 1 KC. Resistance (ac.) ±1% @ 1 KC.			Dimensions and Weight 21¾" x 24½" x 17" 65 lbs.	

NULL DETECTORS

Sensitive null detectors for bridge measurements, with self contained selective filters to limit the amplifier characteristics at various bridge measuring frequencies.

Type	Sensitivity	Frequency Range	Filter	Power Requirements	Dimensions and Weight	Price
1140-B	10μ volts @ 1 KC for 15% meter deflection filter in	20 to 20,000 cycles	Fixed 60, 400, 1000 cycles Adjustable ±5% of center Other frequencies available	105-125 volts 50-60 cycles	Cabinet 12" x 8½" x 10"—18 lbs. Rack—19" x 6" x 10"	250.00
2076	1μ volts @ 1 KC for 15% meter deflection filter in	20 to 20,000 cycles	Fixed 60, 400, 1000 cycles Adjustable ±5% of center Other frequencies available	Transistorized Battery operated	Cabinet—8" x 6" x 8" Rack—19" x 5¼" x 8"	295.00

NULL DETECTOR — VACUUM TUBE VOLTMETER

Designed primarily for a.c. bridge measurements, a dual purpose instrument for indicating bridge balance and the a.c. excitation across the unknown.

Type	Null Sensitivity	Frequency Range	Filter	Power Requirements	Dimensions and Weight	Price
1210-B	10 M volts @ 1 KC for 15% meter deflection	20-20,000 cycles	Fixed 60, 400, 1000 cycles provision for other frequencies	105-125 volts 50-60 cycles	*21" x 12" x 13" 37 lbs.	350.00
	Voltage Range	Input Impedance	Frequency Range	Accuracy	Rack	
	0.1 to 150 volts ac. 0.15-1.5-15-150 volts full scale	500 KΩ in parallel with 25 PF.	20 to 20,000 cycles ±1db	2% of full scale	19" x 8¾" x 9½"	

D.C. SUPPLY

A constant voltage transformer regulated current source designed for use with the Freed Incremental Inductance Bridges. Solid state bridge rectification, L-C filters and low internal impedance provides good current regulation with a minimum of circuit complexity.

Type	Current Ranges	Voltage Ranges	Regulation	Power Requirement	Dimensions and Weight	Price
1170-A	4 ranges, 0-5, 25, 100 and 1000 milliamperes	Maximum no load voltage 1000 Ma, 270V, 100 Ma, 270V, 25 Ma, 85 V, 5 Ma, 48 V	± 1% for line variation 105-125 V	105-125 volts 60 cycles	19" x 10½" x 13½" 66 lbs.	350.00

INDUCTANCE COMPARISON BRIDGE

A complete production unit for comparing transformer and inductor impedances under dynamic conditions against a standard resistor. The instrument has a self-contained metered 500 Ma. d.c. supply, metered 135 volt a.c. source and a direct reading percentage deviation indicator, provision for connecting external test frequencies up to 10 Kc. is provided.

Type	Inductance Range	Deviation Range	Test Frequency	D.C. Current Range	Dimensions and Weight	Price
1870	25 mh - 100 h	±20%, accuracy 1% ±30%, accuracy 5%	60-10,000 cycles	0.5 ma., 0-25 ma., 0-100 ma., 0-500 ma.	22" x 19½" x 15" 150 lbs.	550.00

DISTORTION METER

The type 1970 Distortion Meter is a wide range low input impedance instrument, designed with passive circuitry resulting in high stability, low residual distortion and hum levels.

Type	Frequency Range	Input Impedance	Input Voltage	Sensitivity	Dimensions and Weight	Price
1970	20 cycles to 1 megacycle	75-150 300-600	1 to 200 volts	Distortion level of 0.02% for 1 volt input	19" x 10½" x 12" 30 lbs.	525.00

A.C. LINE REGULATOR

A distortion free 60/400 Hz electromechanical a.c. line regulator. Features a tubeless fast response phase reversible magnetic amplifier preceded by a transistor comparison amplifier with zener reference.

Type	Nominal Input Voltage-Frequency	Output Voltage	KVA Rating and Regulation Range	Regulation Accuracy	Response Speed Volts/sec.	Dimensions and Weight	Price
R.A.C. 1.5/3	115 Volts 60 or 400 Hz	Adjustable 110-120 volts	3 KVA for ± 10% regulation 1.5 KVA for ± 20% regulation	±0.25% for ± 10% regulation range ±0.5% for ± 20%	10@ ± 10% 20@ ± 20%	19" x 7" x 13" 45 lbs.	450.00

DECADE CAPACITORS

The Freed series of Decade Capacitors cover a wide range of values and can be supplied as individual decades from 0.0001 PF. per step to 1 mf. per step or in various combinations of assembled decade boxes. All capacitors are non-inductively wound and heat treated for stability.

Type	Total Capacity	Dielectric	Dissipation Factor	Accuracy	Dimensions and Weight		Price
1415	10 μf in steps of 1 μf	Mylar	<0.005	±1%	3" x 3" x 7"	2 lbs.	40.00
1416	1 μf in steps of 0.1 μf	Polystyrene	<0.0002	±1%	3" x 3" x 7"	2 lbs.	55.00
1417	0.1 μf in steps of 0.01 μf	Polystyrene	<0.0002	±1%	3" x 3" x 7"	2 lbs.	40.00
1418	0.01 μf in steps of 0.001 μf	Polystyrene	<0.0002	±1%	3" x 3" x 7"	2 lbs.	40.00
1419	0.001 μf in steps of 0.0001 μf	Polystyrene	<0.0002	±1%	3" x 3" x 7"	2 lbs.	45.00
1250	1.110 μf in steps of 0.001 μf	Polystyrene	<0.0002	±1%	13¾" x 6" x 4½"	8 lbs.	180.00
1351	11.111 μf in steps of 0.0001 μf plus 100 pf variable air capacitor	Mylar Polystyrene Air	<0.005	±1%	19" x 10¾" x 8"	25 lbs.	305.00
1352	1.111 μf in steps of 0.0001 μf	Polystyrene	<0.0002	±1%	19" x 5¼" x 10"	13 lbs.	220.00
1353	11.111 μf in steps of 0.0001 μf	Mylar Polystyrene	<0.005	±1%	19" x 5¼" x 10"	14 lbs.	275.00

Maximum operating voltage, 500 VDC or peak. Capacitors can be supplied to better than ±1%, write for complete information.
In addtion to listed equipment, Freed manufactures a complete series of decade inductors, AC and DC regulated power supplies, comparison and limit bridges.
Write for complete catalog.

DECADE INDUCTORS

Each unit is an assembly of four toroids wound on a stabilized Molybdenum permaloy dust core. The coils have a nominal inductance of 1-2-3-4 and are connected in series and switched to vary the inductance from 0-10.

Type	Frequency Range, Cycles	Maximum*	Inductance per Step	Total Inductance	Accuracy	Dimensions and Weight		Price
1220	500-20,000	230 @ 4 KC	0.001 h	0.01 h	±2%	3" x 3" x 9"	4½ lbs.	$100.00

† Type 1164 inductors are wound on special nickel alloy laminated cores.

Inductance per step:	1 mh	10 mh	100 mh	1 h	10h
Nominal Accuracy:	±2%	±1%	±0.5%	±0.25%	±0.25%

*Maximum Q depending on inductance value and a.c. voltage across coil.

SHORTED TURNS INDICATOR

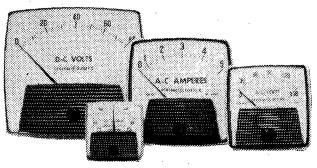
The *type 134 shorted turns indicator is a high sensitivity instrument which will detect the presence of one or more shorted turns in a coil using up to #44 wire. Eddy current losses are minimized by the use of a very low frequency built in test oscillator. The instrument will test most types of audio, power, IF, chokes, relays, and other coreless coils. Power requirement: 115 Volt 60Hz Wt. 13.5 lbs.
Dimension: 11" x 9" x 10" Price $395.00

TRANSFORMER RATIO METER

The *type 277 will measure transformer ratio of 1 to 1011 in three decade ranges with an accuracy of 0.1%. The instrument can also be operated as a ratio comparison tester with a deviation range of ± 1%.
Power requirements: 115 volts 60Hz, Size 17" x 13" x 6" wt: 25 lbs. price — $925.00 *Norma Instruments, Freed Exclusive U.S. Agent.

PANEL, SWITCHBOARD, AND RECORDING INSTRUMENTS

BIG LOOK™ PANEL METERS

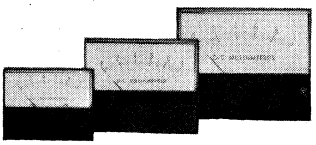


features: 1½-, 2½-, 3½-, and 4½-inch sizes . . . a-c, d-c, and rectifier types . . . iron-vane mechanism in a-c models . . . pivot and jewel, or taut band mechanism for 2½-, 3½-, and 4½-inch d-c models . . . electroluminescent and expanded scales available . . . completely sealed cases on 2½ and 3½-inch models . . . available in all standard scale ranges.

specifications: . . . accuracy ±2% (3% on rectifier types) . meets ASA Spec C39.1 . . . displays a-c and d-c volts, amperes, milliamperes, percent motor load, and other parameters equivalent to d-c microamperes, milliamperes, etc.

Write for Bulletin GEC-1076

HORIZON LINE® PANEL METERS

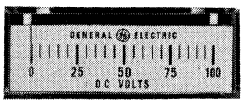


features: 2½-, 3½-, and 4½-inch sizes . . . a-c, d-c, and rectifier types . . . iron-vane mechanism in a-c models . . . pivot and jewel, or taut-band mechanism for d-c models . . . expanded scale available for all models . . . all meters have snap-on snap-off covers.

specifications: . . . accuracy ±2% (3% on rectifier types) . . . meets ASA Spec C39.1 . . . displays a-c and d-c volts, amperes, percent motor load, and other parameters equivalent to d-c microamperes, milliamperes, etc.

Write for Bulletin GEC-1076

TYPE 185 EDGEWISE PANEL METERS



features: . . . 2¼-inches wide by 1-inch high by 3-inches deep . . . horizontal or vertical scale . . . d-c meters have moving-coil D'Arsonval mechanism . . . rectifier-type D'Arsonval mechanism in a-c meters . . . shielded, dust-tight, one-piece molded cycolac window . . . flush case sides permit mounting of two, three or more units.

specifications: . . . accuracy d-c meters 2% of full scale (3% on a-c meters) . . . meets ASA SPEC C39.1 . . . displays a-c and d-c volts, amperes, microamperes and milliamperes.

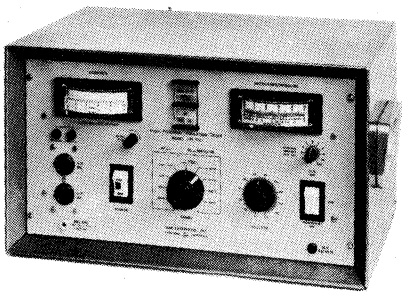
HIGH POTENTIAL INSULATION TESTER MODEL HPT-100



MEASURES OR TESTS ☐ DC Insulation ☐ AC Insulation ☐ DC Leakage Current ☐ AC Leakage Current ☐ Megohm ☐ Corona **ON INDUSTRIAL AND MILITARY** ☐ Transformers ☐ Capacitors ☐ Cables ☐ Motors ☐ Insulation Materials ☐ Appliances ☐ High Voltage Rectifiers **FOR** ☐ Quality Control ☐ Production Testings ☐ Research and Development ☐ Maintenance ☐ Repair

Easy To Use, Illuminated Functional Operation

FEATURES

DC OR AC DIELECTRIC STRENGTH TESTS
- ☐ Edgewise meter calibrated to read 0-10 kvdc or 0-5 kvac
- ☐ 0-1000 vdc expanded scale provded by using leakage current meter
- ☐ KV meter re-calibration

DC OR AC LEAKAGE CURRENT MEASUREMENTS
- ☐ I.C. operational amplifier used for linear, damage-free measurement of leakage current.
- ☐ DC and AC leakage current range switch
- ☐ Microamp meter re-calibration

INSULATION RESISTANCE MEASUREMENTS
- ☐ 5 ranges up to 5000 megohms at 500 vdc
- ☐ Up to 100,000 megohms at 10 kvdc

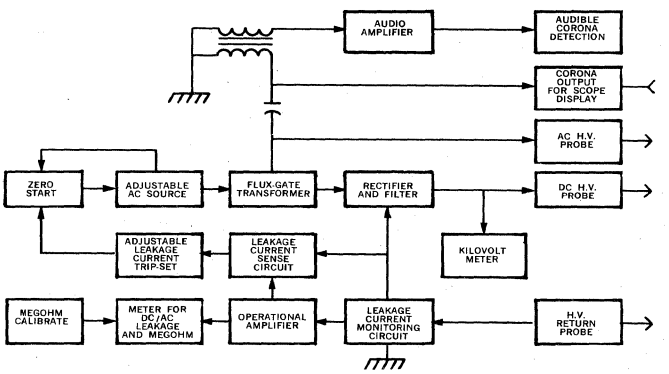
CORONA LEVEL VOLTAGE TESTS
- ☐ Scope output for visual peak-to-peak corona level indication
- ☐ Speaker output with volume control for audio corona detection

SAFETY PROVISIONS
- ☐ Continuously adjustable leakage current trip-set-point from 1 ua to 5 ma may be used for NON-DESTRUCTIVE high potential tests
- ☐ Flux-gate H.V. transformer (model HVT-1) automatically decreases the output voltage when overloaded or short circuited.
- ☐ Zero start interlock to minimize erroneous application of test condition
- ☐ Positive selection of DC or AC function by relay logic to have only DC or AC output, but not both
- ☐ Leakage current trip set, flux-gate transformer and zero start interlock doubles as safety feature to the operator

SIMPLICITY
- ☐ Easy-to-operate, illuminated instructional display

CONVENIENCE
- ☐ High voltage on/off/momentary switch for abrupt voltage application on the sample under test

BLOCK DIAGRAM



SPECIFICATIONS

INPUT VOLTAGE 115 vac, 60 hz

POWER CONSUMPTION 70 watts

OUTPUT VOLTAGE DC: 0-10 kv continuously variable AC: 0-5 kv continuously variable

LEAKAGE CURRENT DC: 5 ranges zero to 5ua/10ua/50ua/100ua/500ua AC: 4 ranges zero to 100ua/500ua/1ma/5ma

MEGOHM INSULATION RESISTANCE AT 500 VDC 5 ranges: 1-50/5-250/10-500/50-2500/100-5000 megohm

ACCURACY DC: ±3% current and voltage AC: ±4% current and voltage for up to 1ma range AC: ±5% voltage for 5ma range MEGOHM: ±5%

LEAKAGE CURRENT TRIP-SET-POINT DC: 1ua-500 ua continuously adjustable AC: .02ma-5ma continuously adjustable

NON-DESTRUCTIVE HIGH POTENTIAL TEST APPLICATION Continuously adjustable leakage current trip-set-point from 1ua to 5ma may be used for non-destructive high potential tests

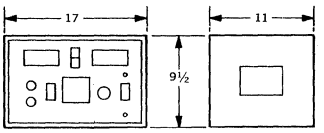
CORONA Scope output per MIL-T-27B and per ASTM D1868-61T Audible output via speaker for corona detection

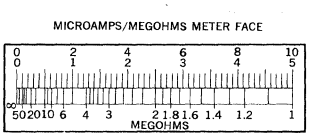
ZERO START FOR H.V. OUTPUT Minimizes erroneous electrical test condition. Eliminates hysteresis from previous on-off usage

FINISH Cabinet: Hammertone. Panel: Semi-gloss light green. Other colors available on special orders

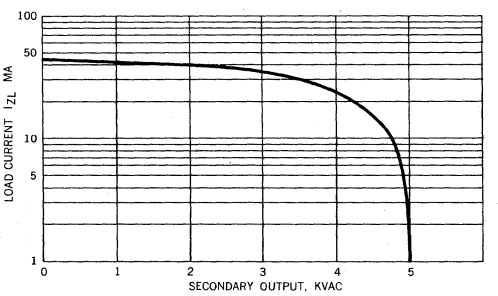
WEIGHT 35 pounds

PORTABILITY Handles provided for ease of carrying

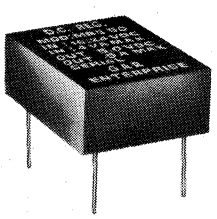




OIL FILLED H.V. TRANSFORMER, HVT-1 USED IN THE HIGH POTENTIAL INSULATION TESTER GAR MODEL HPT-100



MINIATURE VOLTAGE REGULATOR



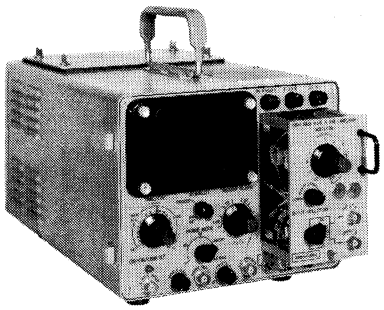
Designed for installation in computers, control, automation GSE, and other digital logic systems.

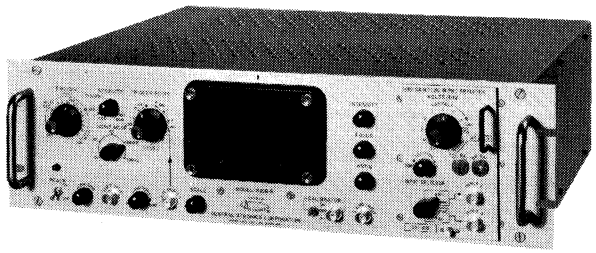
The Model MRS Series Voltage Regulator: 1) dissipates only 20% of the power consumed by conventional regulators; 2) distributes power to digital systems in the form of higher voltage and lower current; 3) delivers high current only at the point of installation; 4) reduces system noise by reducing buss bar currents.

SPECIFICATIONS

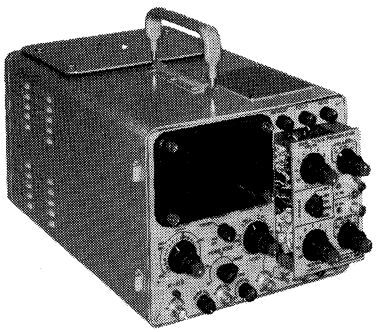
1. Input voltage range: 16-24 VDC
2. Output voltage:
   Model MRS 45 — 4.5 VDC
   Model MRS 50 — 5.0 VDC
   Model MRS 55 — 5.5 VDC
3. Load current: 0-500 ma
4. Efficiency: 65% @ Full Load
5. Line regulation: ±0.5% Max.
6. Load regulation:
   No load to full load: ±0.5% Max.
7. Output ripple: 40 m v P-P Max.
8. Temperature stability: 2.0 m v/°C
9. Operating temperature: 0-65°c
10. Overload and short circuit protection: Protected against dead short and above 150% overload
11. Recovery time:
    (a) No load to full load: 0.75m sec
    (b) Full load to no load: 4.5 m sec
12. Size: 1 1/16 x 1 1/4 x ½ inches high Leads: ⅝ inches long

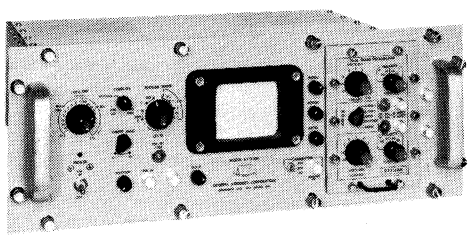
FULL-MIL CUSTOM DISPLAYS for SYSTEM REQUIREMENTS—TRANSISTORIZED PORTABLE OSCILLOSCOPES





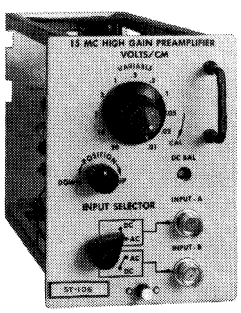
ALL MIL 6-10 MHz PORTABLE. Meets requirements of MIL-E-16400 — proof of ruggedness and reliability. Ideal for use in A/N equipment design. Transistor-cool operation — draws only 24.5 watts. 2½" x 2" useful display area on rectangular screen. 19 calibrated sweep ranges in 1-2-5-10 sequence from 0.1 μsec to 0.1 sec/div. Dimensions: 8¾" wide, 6½" high, 14" deep. Only 18 lbs. Available in bench and rack mounts as shown. **MODEL K-106.**





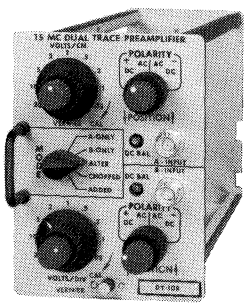
15 MHz PORTABLE
Same specifications as K-106 (above) with 15 MHz bandwidth. Available in both bench and rack mounts as shown. **MODEL K-115.**

ACCESSORIES FOR ALL-MIL PORTABLES GIVE HIGH GAIN — DUAL TRACE

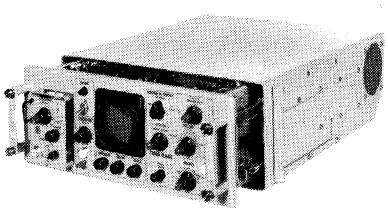


HIGH GAIN PLUG-IN AMPLIFIERS — Single trace amplification for Models K-106 and K-115. Two inputs selectable. Calibrated sensitivity from 10 mV to 20 V/div in eleven selectable positions in a 1-2-5-10 sequence. **MODEL ST-106 (dc to 6 MHz), MODEL ST-115 (dc to 15 MHz).**

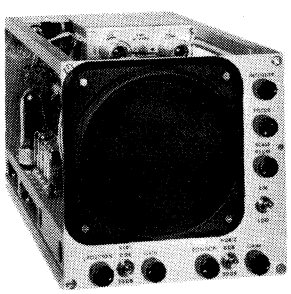
DUAL TRACE PLUG-IN AMPLIFIERS — Provide dual trace presentation on a single gun tube for Models K-106 and K-115. Available in five operating modes. **MODEL DT-106 (dc to 6-10 MHz), MODEL DT-115 (dc to 15 MHz).**



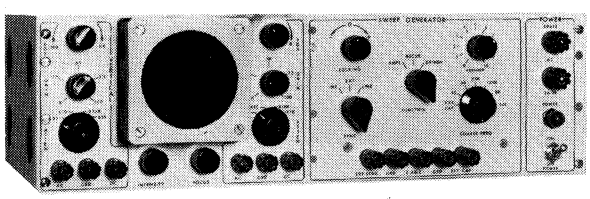
TYPICAL CUSTOM DESIGN SYSTEM MODELS



MILITARIZED MONITOR—A compact, bright trace, MIL efficient, rack-mounted oscilloscope, 10 MHz bandwidth—plug-in versatility. Simplicity of design insures ease of installation and maintenance. High brightness 10 kV insures easy reading on the 3" CRT. **MODEL K-14-R.**



POPULAR PRICED 5" SCREEN LIGHT-WEIGHT — Reliable low-cost monitor featuring equal X and Y, full screen positioning and true portability. Adaptable to many applications. Measures 7¾" x 7¾" x 17¾". Weighs only 23 lbs. Sensitivity, 0.1 v/cm. **MODEL K-12-R.**



3" ROUND DISPLAY IN AN EQUAL X-Y PORTABLE—Trimmed to a mere 8½" in depth . . . 5" in height and 19" in width, for high performance within space limitations. Rugged, Mil-guided construction. Excellent stability. Also available in conventional housing. **MODEL K-13-R.**

ETC® | GENERAL ATRONICS®

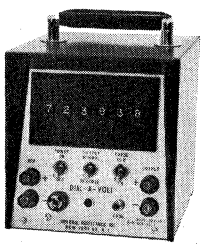
GENERAL ATRONICS

ELECTRONIC INSTRUMENT DIVISION • PHILADELPHIA, PENNSYLVANIA 19118

HI-ACCURACY, STABILITY, PERFORMANCE
DC INSTRUMENTATION

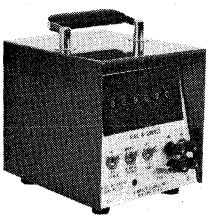
General Resistance's DC instrumentation line makes GR **first source** for high-accuracy, stability and performance in DC Voltage, Current and Resistance Equipment. Nearly everything for DC Voltage, Current, Resistance and Ratio Calibration is available from GR.

Your test instrumentation can be no better than its calibration standard and GR's instruments are among the best of those. The examples here are a small part of the total GR line. Write for your complete catalog.



DIAL-A-VOLT
Dialable Voltage Reference

±1 μV to ±10 V. Accuracy up to 0.0015% • Stability: 0.001% • Resolution: 1 PPM • to 7 Decades • In-Line Readout • From $399.

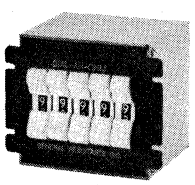


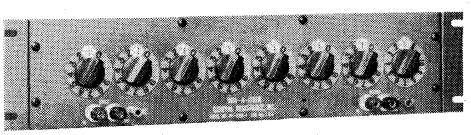
DIAL-A-SOURCE
Dialable E/I (Zero Impedance) DC Calibration Source

±0.1 μV to ±10 V @ up to 25 mA • Stability ±10 PPM • Accuracy to ±0.0015% • to 6 Decades • In-Line Readout • 5 Models • from $875.

DIAL-A-VIDER
Dialable Volt/Ratio Divider

Linearity to ±3 PPM • Resolution to 1 PPM • Phase Angle @ 10 Kc < 0.1° • to 7 Decades • In-Line Readout • 5 Models, Bench/OEM • From $119.





DECADE RESISTANCE UNITS
DIAL-AN-OHM DIAL-A-STAT
RESIST-O-STAT
Universal / Dialable / Precision Resistance Decades

GR offers one of the widest lines of accurate resistance decades available. All use GR precision wirewound resistors and combine excellent accuracy with simplicity of operation at low prices: Dial-An-Ohm units are as low as $17/decade, Dial-A-Stat units from $83, Resist-O-Stat units from $95. In bench or OEM configurations.

VOLTAGE DIVIDERS
Primary / Secondary Standard Voltage Dividers

Complete line of Primary Standard and Secondary Standard Voltage Dividers using Kelvin-Varley (isohmic) circuits and GR precision wirewound resistors. ±0.5 PPM (DV4107) or ±1 PPM (DV5008) Accuracy. Stability ±0.5 PPM/yr (DV4107) or ±1 PPM/yr. Prices start as low as $339 (DV5008, 8 dials) for a 1 PPM Divider.

RESISTANCE MEASUREMENT
Systems, Bridges

Complete line of automatic, semi-automatic, manual R-measuring systems and bridges with accuracies to ±0.001% are available from GR. Auto systems are GO/NO-GO with high speed production capability. Write for complete data on GR R-measuring systems and bridges.

GR's DC instrumentation capability is available to you whatever your need from an automatic high-accuracy system for production resistance measurement to a high-quality zener reference. GR's sales/service is world-wide. Write or 'phone for complete new catalog.

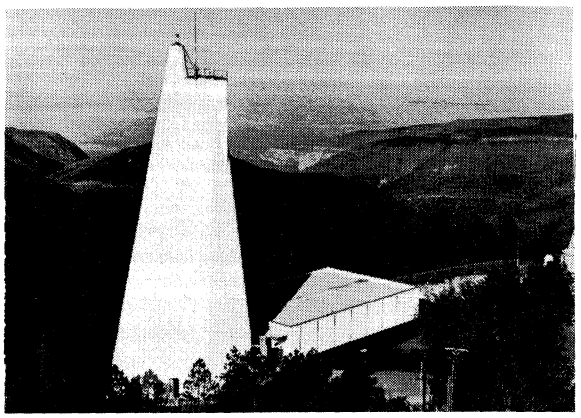
GEO SPACE SYSTEMS, INC.

PRECISION INSTRUMENT SYSTEMS AND EQUIPMENTS

COMPLETE INSTRUMENT CONTROL SYSTEMS



MOVABLE TURRET ASSEMBLY & CONTROL SYSTEM SACRAMENTO PEAK OBSERVATORY

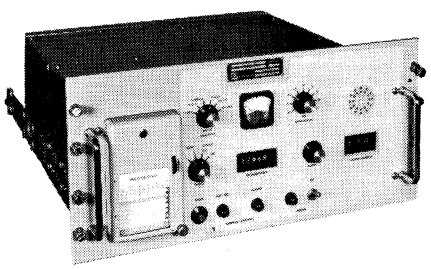
The Air Force Cambridge Research Laboratories' Sacramento Peak Vacuum Telescope is a vivid demonstration of the Company's depth of diversified talent and systems capability.

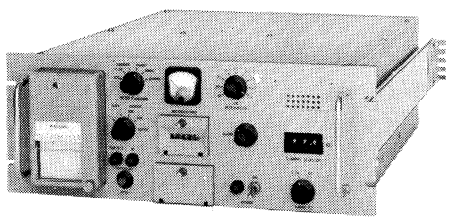
This telescope, with associated instrumentation and electronics, is located at Sunspot, New Mexico, 9200 feet above sea level. It stands 136 feet above ground level and extends 221 feet into the heart of the mountain. It is schduled to become operational in 1969.

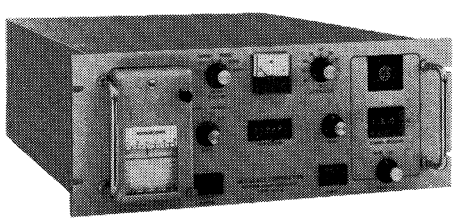
The instrumentation and electronics furnished by Geo Space Systems, Inc., will serve as the operating controls of the telescope. It is designed to auto-track or track on a programmed basis, the sun, other stars or planets and will enable scientists to learn more about the physical composition and activity of these bodies. The instruments can provide continuous automatic compensation for the rotation of these bodies with respect to their celestial coordinates during all tracking phases. One hoped-for result of these studies will be the ability to forecast accurately solar flares. This ability will be of great importance to world-wide communications and to space programs.

The GSS role in this program involved design, production and installation of an optimum switched, non-linear servo control system to drive the 10,000 ft/lb torque motor which rotates the 230 ton evacuated optical tube forming the lower part of the telescope; and the servo control systems operating the upper turret section and its precision components, including solar-optical error detectors yielding auto-track accuracy within 30 arc sec. GSS is also building and installing the large spectrograph and the Echelle spectrograph.

TIME/FREQUENCY CONTROL EQUIPMENT

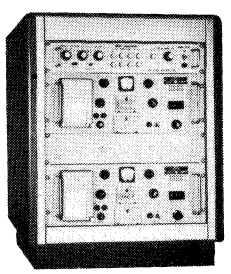






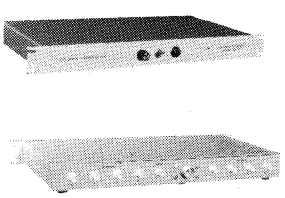
GSS VLF RECEIVERS

The GSS VLF receivers are designed for precision phase monitoring of VLF stations or rating of local standards. They are also capable of monitoring the new Omega stations when used with a suitable commutator. Characteristics are standard inputs of 100 kHz or 1 MHz, tuning range of 10 to 30 kHz in 50 Hz increments, mechanical or electronic servo, .006 Hz servo bandwidth, 10 nanovolt sensitivity and a built-in chart recorder for read-out. Units are line operated with optional DC standby input available.



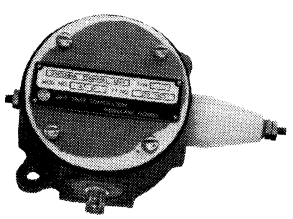
OMEGA SYSTEM

The Omega Navigation System provides navigation for ships and aircraft with excellent accuracy. Results are obtained with readouts of "lane crossings" and an analog position voltage. Suitable outputs are also provided for interfacing with a computer for more sophisticated readout and data analysis.



VLF ANTENNA MULTICOUPLER

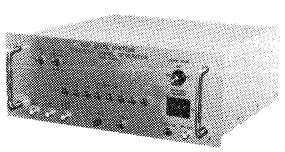
This multicoupler can reduce such problems as desensitization, phase shift, cross-coupling interference, and coherent ground circuit interference. Input impedance is 50Ω, with 8 independent 50Ω outputs featuring 50 db isolation, and a gain of 3 db.



VLF LONG-WIRE AND WHIP ANTENNAE

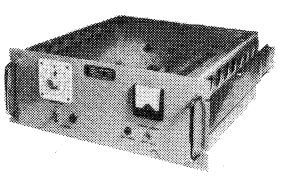
The AT-10 long wire antenna and matching network provide excellent VLF reception, and allows use of a 50Ω coaxial transmission line.

The WA-10 whip antenna excels in areas of heavy horizontally polarized man-made noise.



COHERENT SIGNAL GENERATOR

This instrument furnishes a stable and controllable input signal for complete, rapid testing of performance characteristics of VLF receivers, including sensitivity, stability, accuracy, time constant and lag, deadband, noise rejection, adjacent channel rejection, intermodulation distortion, image response, and desensitization. The reference and the GSC-12 outputs are simultaneously monitored by the receiver under test, yielding data that is an absolute measure of the receiver's response.



BATTERY POWER SUPPLY

The GSS standby battery power supplies have been designed to furnish emergency DC power to critical equipment when primary AC power fails. Stable output voltage is obtained from nickel-cadmium batteries for long periods. Integral circuits provide fast and trickle charge. In the fast charge mode, batteries are restored to full charge in less than 8 hours. Full voltage life is dependent upon Amp/Hour rating of batteries supplied and the load current. Indication of approximate charge status is provided by a front panel meter and indicator lights.

As a leading manufacturer of standard frequency correlation and time signal synchronization equipment, Geo Space Systems, Inc. has successfully met the growing needs for time synchronization between geographically separated stations.

With its equipment serving the U. S. Army, Navy, NASA and FAA, and by meeting their stringent requirements, Geo Space is continually expanding its efforts to develop new approaches and instrumentation in this field.

HICKOK

DMS 3200

DIGITAL MEASURING SYSTEM

(Fully solid state with IC's)

This all-solid-state precision measurement system offers unlimited expansion capability through plug-in additions, resulting in a specialized instrument for each type of measurement. New plug-ins now broaden the measurement capability of this field-proven unit. Over 10,000 are in use at present.

Scaling controls make possible resolution of up to seven digits on the three-digit display by utilizing the overrange capability of many of the plug-ins, thus providing high resolution and accuracy with minimum investment. Companion devices such as the PR 4900 Digital Printer and 1050 Digital Set-Point Controller further extend the utility of the DMS 3200 System.

DC VOLTMETER PLUG-IN DP 100 **$175**
00.1 mv to 999. volts
± 0.1% rdg ± 1 digit

DC MICROVOLTMETER PLUG-IN DP 110 **$450**
0.001 mv to 999.9 volts
± 0.05% rdg ± 1 digit
4-digit resolution

AC VOLTMETER PLUG-IN DP 130 **$375**
0.01 mv to 999. volts
± 0.1% rdg ± 1 digit
22 Hz to 1.0 MHz

EVENT COUNTER/SLAVE PLUG-IN DP 140 **$90**
Up to 1,000,000 counts/sec
Cascade with second DMS to obtain 6-digit display

1 MHz COUNTER PLUG-IN DP 150A **$230**
00.1 Hz to 999. kHz
± 0.0005% rdg ± 1 digit
7-digit resolution

80 MHz COUNTER PLUG-IN DP 160 **$395**
00.1 Hz to 80.0 MHz
± 0.00005% rdg ± 1 digit

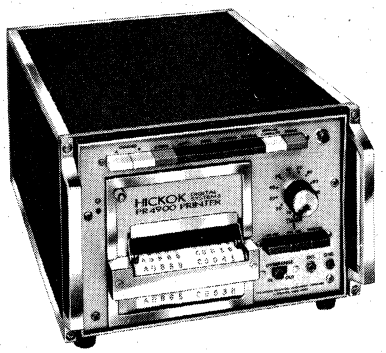
DC CURRENT METER ADAPTER D 310 **$90**
.0001 microamp to 9.99 amps
± 0.15% rdg ± 1 digit

PR 4900

DIGITAL PRINTER



From $760

This professional printer provides print-out of up to 10 columns of digital information from one or two independent sources. It is a companion unit to the Hickok DMS 3200 Digital Measuring System; however, it may be used with any device which provides 10-line decimal or BCD coded data outputs. Voltage, frequency, time period, resistance, capacitance or event counts are examples of data which may be recorded in printed form on paper tape for storage and future reference.

1050

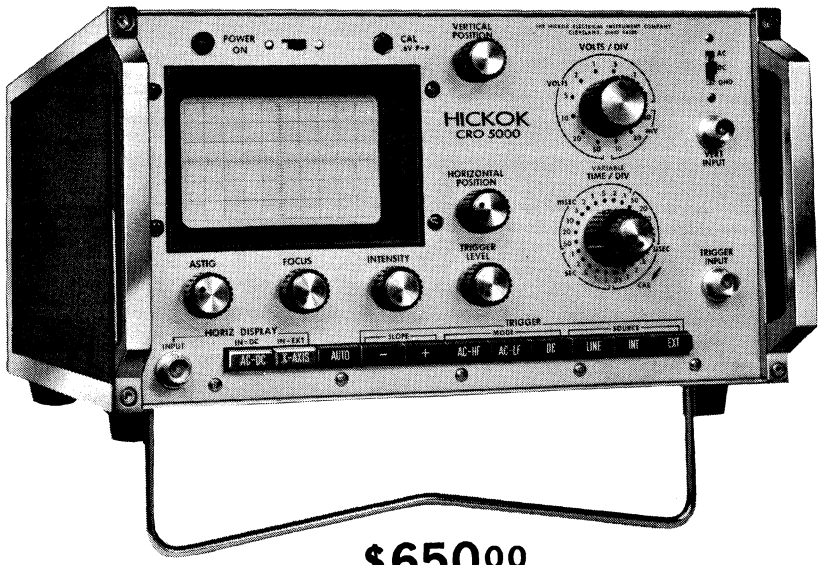
DIGITAL SET-POINT CONTROLLER

$230

The Model 1050 Digital Set-Point Controller, when used with the Hickok DMS 3200 Digital Measuring System, can start and/or stop the operation of any peripheral function at predetermined measurement values, as selected by the operator. Set-points are absolute, assuring start or stop functions at specific values with zero set-point error.

When used with the DMS Main Frame and the appropriate DP Series plug-in digital measurements of voltage, frequency, period, resistance, capacity, events (and with appropriate transducers, pressure, flow, temperature, strain, etc.) can be used to activate external mechanical feeds, drives, print-outs, reject hoppers, feed motors, fuel adjustments, blowers, tabulation recorders, etc.

HICKOK CRO 5000 25 MHz Oscilloscope (all solid state)

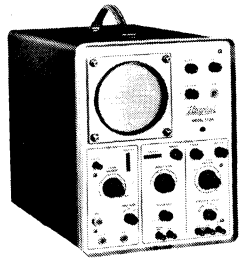


$650.00

This high-precision laboratory oscilloscope equals the basic performance of higher priced, sophisticated 'scopes, yet meets the industry need for such performance in the $600 price range. Emphasis has been placed mainly upon those characteristics most important in precise measurements, eliminating some of the more exotic and somewhat superfluous functions found in higher priced instruments. The result is an all-solid-state instrument in the medium price range with extraordinary stability, sensitivity, bandwidth, sweep-speed range, trigger capability, reliability, and ruggedness.

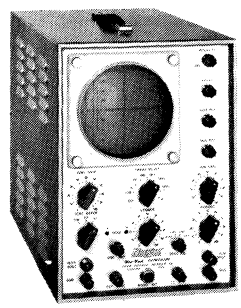
- **25MHz vertical bandwidth (to 3db down points)**
- **Usable to 50MHz**
- **All solid state for high stability and reliability**
- **12 calibrated vertical attenuator ranges 10 mv/div to 50 volts/div (±3.0% accuracy)**
- **24 calibrated sweep ranges 0.05 microseconds/div to 2 sec/div (±3.0% accuracy)**
- **Vertical delay line assures viewing of full leading edge of pulses**
- **"Sweep Delay" of up to 40 divisions**
- **Sweep speed continuously variable between ranges**
- **X-axis channel bandwidth DC — 5MHz**
- **4" flat-faced CRT, 6 x 10 division graticule**
- **3.8 kv HV provides sharp, bright trace**
- **Vertical amplifier will handle overloads, with negligible distortion of waveforms increased to 5 times screen height**
- **Internal 1.0% calibration squarewave**
- **Fast, convenient push-button selection of trigger modes**
- **Positive, solid triggering on all displays**
- **Small — 11¼" W, 6⅞" H, 19" D; 24 pounds**

HICKOK



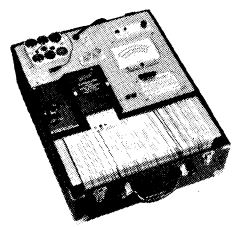
770A OSCILLOSCOPE — General purpose industrial oscilloscope with calibrated 4MHz DC vertical amplifier, 18 direct reading calibrated sweep rates from 1μ sec/cm to 0.5 sec/cm, choice of free-running, driven or automatic sweep modes. Flat-faced 5" post-accelerated CRT.

$475.00



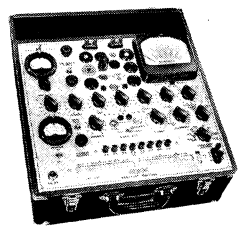
677 OSCILLOSCOPE — Low cost utility and service instrument with 5" CRT. Vertical amplifier response within 3db from 5Hz to 4.5MHz. Built-in calibrator simplifies peak-to-peak measurements. Horizontal sweep has preset positions for TV vertical and horizontal signals.

$249.50



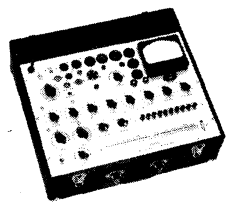
123R CARDMATIC TUBE TESTER—Automatic tube testing using card-programmed switch, eliminates errors. A fast, automatic tube tester which includes tests for saturation and cut-off in addition to mutual conductance.

$725.00



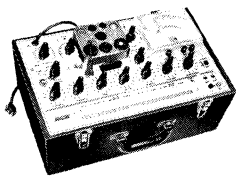
539C TUBE TESTER — Laboratory and industrial instrument. Provides both handbook condition tests and tests "tailored" to specific individual conditions. Roll chart data.

$595.00



752A TUBE TESTER — Communications and industrial maintenance instrument. Includes tests for 4-digit industrial tube types, VR tubes, and low power thyratrons. Best buy for general purpose industrial maintenance. Roll chart data.

$415.00



6000A TUBE TESTER — Service technician's high-speed, portable tester. Tests all popular entertainment types, also transistors and diodes. Time-saving leakage and short indicators. Replaceable socket plate for obsolescence protection. Roll chart data.

$279.50

870 Dynamic Beta Transistor Tester
$395.00

890A Dynamic Beta In-circuit Transistor Tester
$215.00

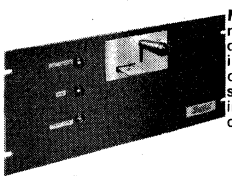
CARD READERS

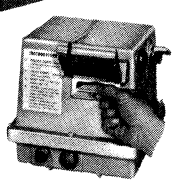
- CONTROL
- AUTOMATION
- DATA COLLECTION

MODEL 50 — Manually operated card reader — 50 contacts (5x10). Card actuated multiple switch containing 50 wiping-type contacts, each capable of carrying up to 10 amps. Solenoid release makes contacts instantly. Manually opened. Card size: 3¾" x 1½" — 50 individual bottom-contact connections. Upper contacts — 5 common columns. **$195.00**

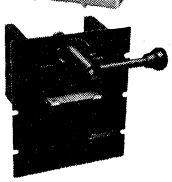
MODEL 50M — Motorized card reader — 50 contacts (5x10). Similar in most respects to the Model 50, manually operated card reader, except that this model utilizes a ⅙ hp fast action motor instead of the spring actuated closing mechanism. Card size: 3¾" x 1½" — 50 individual bottom-contact connections. Upper contacts — 5 common columns. **$425.00**



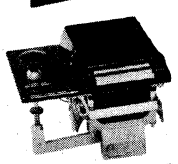
MODEL 50P — Panel mounted card (badge) reader — manually operated — 50 contacts (5x10 matrix) for data collection systems requiring heavy duty industrial type installations. Once inserted, card is locked in position and can only be withdrawn when reader is opened by external signal. Card or badge will only operate reader if inserted in correct position. Available also in 80-, 120- and 264-contact configuration. **$650.00**



MODEL 80 — The HICKOK all-weather badge reader is an inherently explosion-proof data input device controlled by punched cards (badges). The enclosure is cast aluminum and the reader is operated by means of the card entry door. Unit is approximately 10⅜" wide x 9" high x 7½" deep. All switching is accomplished by means of hermetically sealed switches providing an inherently safe reader. **Prices on request**

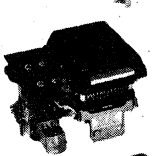


MODEL 120 — Lever operated 120-contact card (badge) reader for heavy duty industrial applications — 15x8 matrix. Utilizes high current capacity pin-sleeve type contacts assuring positive action even under severe environmental conditions. Card is positively locked in place during "read" period and can only be withdrawn when lever is returned to "open" position. 120 individual bottom-contact connections — upper contacts bussed in 15 common columns. **$500.00**

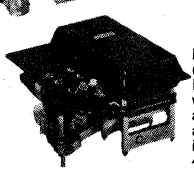


MODEL 186 — Manually operated card reader — 186 contacts (11x17). Card actuated multiple switch containing 186 wiping-type contacts, each capable of carrying up to 10 amps. Solenoid release makes contacts instantly. Manually opened. Card size: 5⅝" x 3". 186 individual bottom-contact connections. Upper contacts — 11 common columns. **$295.00**

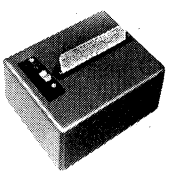
MODEL 324 — Manually operated card reader using pin-sleeve contacts and having the same contact arrangement and spacing as the Model 540M except that it has only 27 columns. The configuration is 12x27. The card will activate a microswitch if inserted correctly and release the handle which then may be moved to the "close" position. The "read" light indicates the program card is being read. Connections to each of 324 discrete bottom contacts. Upper contacts bussed in 27 common columns. **$650.00**



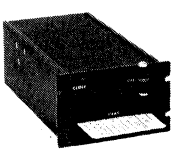
MODEL 186M — Motorized card reader — 186 contacts (11x17). Similar in most respects to the Model 186, manually operated card reader, except that this model utilizes a ⅙ hp fast action motor instead of the spring actuated closing mechanism. Card size: 5⅝" x 3". 186 individual bottom contact connections. Upper contacts — 11 common columns. **$495.00**



MODEL 540M — Motorized card reader — 540 contacts (12x45). Designed to accept standard size Remington Rand cards. Card actuated multiple switch containing 540 wiping-type contacts, each capable of carrying up to 10 amps. Uses a heavy duty, fast action, ⅙ hp motor for actuating switch mechanism. Card size: 7⅜" x 3¼". 540 individual bottom contact connections. Upper contacts — 45 common columns. **$1295.00**



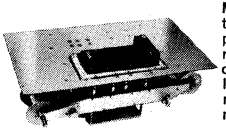
MODEL 960M — Permits high reliability "block reading" of full 80-column punched tab cards, 960 discrete outputs — 12x80 matrix. Computer use-proven multi-stranded brush type contacts provide absolutely dependable closure even if card is key-punched slightly out of position — literally no chance of misread. Motorized drive — push button operated — features mechanism which completely swallows card during read cycles. Heavy-duty rugged design. Over 1,000,000 cycle life. **$1490.00**



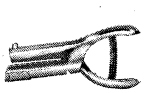
MODEL 960 SL — Small size, manually operated, reliable card reader which reads all 12 rows and 80 columns of a standard punched tab card. It is a "block reader" with 960 discrete outputs featuring an automatic card swallow mechanism and multi-stranded brush type contacts assuring absolutely dependable contact closure even if card is key-punched slightly out of position. Small size (3" high x 5" wide x 9" deep) permits installation in smaller control panels. Operates in any position. Unique design allows entire unit to be taken apart and reassembled in a matter of minutes if necessary. Rugged, over 1,000,000 cycle life. Available with full diode matrix if required. **$650.00**

FOR CREDIT CARDS

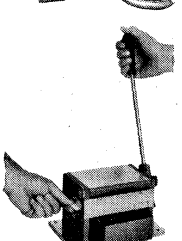
MODEL 264 — Credit card (badge) reader having 264 individual contacts arranged in a standard 12-row-x-22-column Hollerith-type format. Reader actuates simply by inserting card in the slot provided. Read head features highly reliable multi-stranded brush type contacts, assuring positive "read" even if the card is key-punched slightly out of tolerance. Card is released and ejected simply by depressing the front panel control lever. The Model 264 is ideal for data collection systems. Standard credit card size. **$250.00**



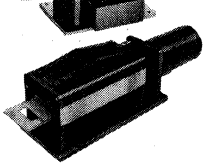
MODEL 540MT — Highly versatile sequentially operated tape reader capable of controlling up to 540 contacts per program image on the tape. Tape is indexed, fed and read automatically at predetermined time intervals. The duration or interval of programs are controlled variables. Ideal for automatic test systems requiring a predetermined number of test conditions or for numerical control machine applications. **Prices on request.**



MODEL CP-5 — Hand punch for use in punching program cards. Heavy duty steel construction — nickel plated. Use with program cards pre-printed with locating circles. Use 3/16" hole size for Models 50, 50M, 186, 186M, 372M card readers. Use ⅛" hole size for Model 540M card reader. **$12.50**



MODEL CP-10 — Master card punch specifically designed to provide a rapid means of precisely punching program cards. 187 machined pins assure cleanly punched holes. Lever operated. For use with Models 186 and 186M (and old Model 185) card readers. Can also be used for Model 50 and 50M cards when supplied with adapter kit. **$500.00**



MODEL CP-15 — Master card punch for precisely punching program cards for the 540 contact (Model 540M) card reader. As many as 540 holes may be punched simultaneously. Simple, easy to operate motor driven unit. **$2500.00**

MODEL CP-540-LK — Keyboard type card punch for Mylar program cards. Designed to punch the 540 contact Rem-Rand type cards column by column. Will punch any or all 12 holes in a given column simultaneously. Automatic advance to next column. Specifically developed to program cards for the HICKOK Models 540M and 324 card readers. **$1295.00**

THE HICKOK ELECTRICAL INSTRUMENT COMPANY
10514 Dupont Avenue • Cleveland, Ohio 44108

If you were spending your own money, you would buy HEATH Instruments...

Here's why:

Low Cost

The guiding philosophy of the Heath Company is to offer the best value in instruments. Best value is achieved by offering quality design, precision where it counts, omitting the frills, and selling direct to you. The result is more performance for your dollar.

Quality Engineering

Experienced people, unique approaches, extensive testing, rigid quality control... add up to instruments you can count on.

Wide Product Lines

Industrial, research, and educational users look to Heath for many laboratory needs ranging from simple VTVM to sophisticated instrumentation.

Modular Designs

Heath instruments "go together"... instruments that look right together, work right together, and allow for future modules.

Assembled or Kit Models

Many Heath instruments are available either in factory assembled and tested form or in do-it-yourself kit form. Either way, you save significant sums from the cost of similar equipment.

Direct Sales

You save in many ways when you buy direct from the manufacturer; communication is direct so you save time, eliminate misunderstandings, receive greater satisfaction; sales are direct so you save distribution costs.

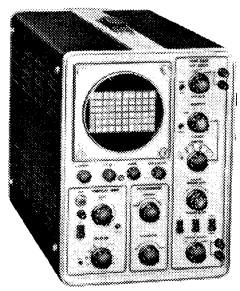
Service

Factory service is available should you ever need it... service centers also located in major cities. Specialized, authorized all perform warranty service at no cost, regular service at moderate cost.

Technical Consultation

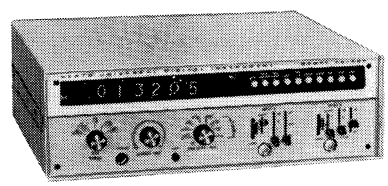
Heath maintains a staff of technical consultants whom you can call upon for advice on any instrument we manufacture. We help on the selection of the right instrument, its application, maintenance.

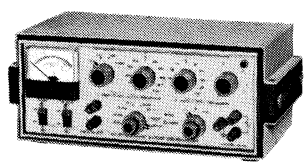
Here's what:



Oscilloscopes

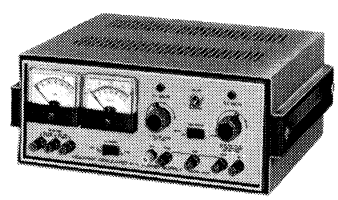
Universal Digital Instruments

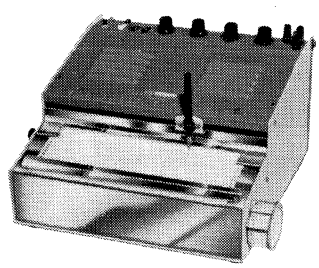




Generators

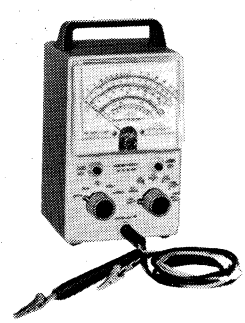
Power Supplies





Recorders

Meters

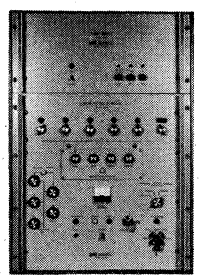


For your FREE copy of the Heath Scientific Instrumentation Catalog write to Heath Company, Dept. 180, Benton Harbor, Michigan 49022 EK-273

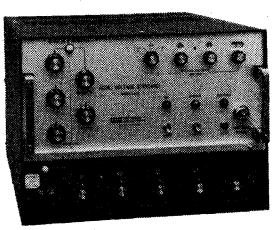
HOLT
INSTRUMENT LABORATORIES

the leader in precision A.C. instrumentation offers the highest accuracy obtainable in these outstanding models:

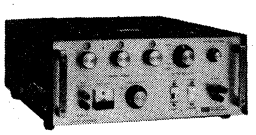
8 AUDIO VOLTAGE SOURCE MODELS
2 THERMAL VOLTMETER STANDARDS
2 A.C. AMMETER STANDARDS



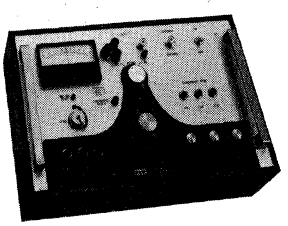
MODEL 325A



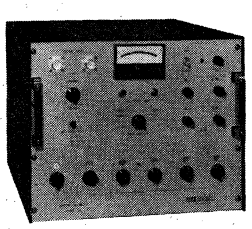
MODEL 631B



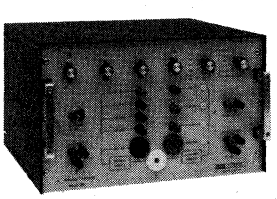
MODEL 613



MODEL 6A



MODEL 10



MODEL 250

A decade in the AC instrument business provides Holt with the depth and experience to solve any AC measurement or calibration problem. Holt led the industry to the **FIRST** Audio Voltage Standard, the **FIRST** 1 for 1 commercial Thermal Transfer Standard, the **FIRST** fully — protected Thermo — Element circuit and the **FIRST** Automatic AC Ammeter Calibrator to 100 amperes. Bring us your AC problems . . . . . we've got to protect our reputation.

MODEL	GENERAL DESCRIPTION	PRICE
11	THERMAL VOLTAGE CONVERTER SET - Three Thermoelements and five Resistor Modules providing eighteen, overlapping Voltage ranges from 1 Volt to 1200 Volts. Calibration options available to 3 MHz with NBS Traceability.	$ 995 *
325A	AUDIO VOLTAGE STANDARD - 30 Hz to 35 KHz, all solid state, fully variable internal oscillator. Output voltage automatically maintained to accuracies of ±.02% at any setting from 1 MV to 1011 volts. The broadest capability of any Audio Voltage Standard with highest reliability.	$15,900 *
323C	Audio Voltage Standard - 35 Hz to 20 kHz. 5 internal frequencies and output voltage range from 10 mv to 1000 volts. Regulated output maintained at 0.02% mid-band regardless of voltage setting.	$7480 *
631B	Audio Voltage Standard - 50 Hz to 10 kHz, fully variable internal oscillator. Output voltage from 1 mv to 1011 volts. All solid state with automatic overload protection. One year recalibration period.	$6950 **
630A	Audio Voltage Standard - Same voltage and frequency range as the Model 631. Five internal, fixed frequencies or can be used with an external oscillator. Voltage Deviation System calibrated in percent of output. ±.035% basic, mid-range accuracy.	$5800 **
613	AC Voltage Calibrator - 50 Hz to 5 kHz, 3 internal frequencies. Output voltage variable from 1 mv to 1000 volts. Completely variable in frequency from external oscillator. 0.25% accuracy.	$2500 **
612	AC Voltage Calibrator - 50 Hz to 5 kHz, 3 internal frequencies and 14 voltage outputs, .5 volts to 1000 volts. 0.25% accuracy. Can be used with external oscillator for continuously variable frequency.	$1290 **
AVA-30M	Audio Voltage Amplifier - 1 volt RMS input required for completely variable output voltages, 0 to 1000 volts. Low distortion and excellent gain stability. 35 Hz to 20 kHz.	$ 950 *
32	ULTRA AUDIO FREQUENCY AMPLIFIER - 10 KHz to 100 KHz, up to 1000 volts over the entire frequency range. The first all-solid-state amplifier providing this broad coverage. Unique tuning circuit permits cancellation of capacitive load power losses. Short term amplitude instabilities never exceed ± .01%.	$6000 **
10	Thermal Voltmeter - For direct, true RMS, voltage measurement with NBS traceability. Self standardizing, no transfer required. All solid state, full thermoelement protection. Voltage range, 1 volt to 1011 volts, frequencies to 1 MHz. Six-dial voltage readout, .005% stability and .001%/division resolution. Absolute accuracies to 0.015%.	$4900 ** †
6A	Thermal Transfer Voltmeter - Identical to the Model 6 with its own internal, solid state null detector. Large, self-contained meter provides up to 10 ppm/division resolution. Guaranteed thermocouple protection. Lightweight and portable.	$ 880 **†
250	AC AMMETER CALIBRATOR - generates over 100 amperes when driven with any source of AC voltage. Standardizes currents to 100 amperes and frequencies up to 20 KHz. Standardization is automatic with Holt Model 631B or manual with any 1 volt AC voltmeter. Accuracy to ±0.03% is achievable.	$2200 **
HCS-1	Primary AC Shunt Set - Transfer Shunts 5 ma to 26 amp. to 50 kHz. .02% AC-DC difference. Includes 7 modules, carrying case and transfer unit. For use with TVI, Model 6 or 6A.	$ 850 *†
275	Direct Current Standard - Direct reading, regulated DC current source accurate to 0.1%. 500 milliamps to 10 amps. Stable, low noise output ideal for ammeter and shunt calibration.	$2060 *

* Rock Mounted - cabinet additional
** In Bench Cabinet - rack mount on special order
† Holt test report - (NBS Traceable) - no charge. NBS Test Report - additional

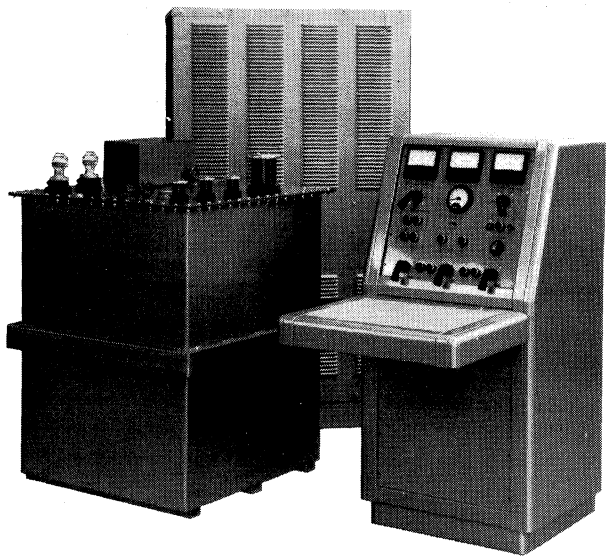
HIPOTRONICS INC.

AC INSULATION TESTERS



Hipotronics AC Insulation Testers are conservatively engineered, to insure quality and dependability. The most advanced techniques and years of high voltage experience go into every unit, from the smallest AC Hipots to heavy units rated in excess of 2000 KVA. Using Hipotronics' own transformers, corona free performance to full rating is guaranteed.

All units are designed for maximum operator and equipment protection. The surge devices preclude injury to any component from repeated short circuits at full output and the many safety devices insure operator protection.

FEATURES

- **Continuously adjustable output control from zero to maximum.**
- **Continuously adjustable electronic thyratron operated overload – prevents excessive burning of cable or insulation when failure occurs.**
- **Back-up magnetic overload circuit breaker.**
- **Triple range output connected KV meter, 4½" square, 2% accuracy.**
- **Single range current meter in grounded HV return.**
- **Circuit breaker input.**
- **HV on and off pushbuttons.**
- **Zero start interlock – compels operator to always raise voltage from zero.**
- **External interlock provision.**
- **Main, HV on and failure pilot lights.**
- **Surge and transient protection on all meters, transformers etc.**
- **Corona-free to full output.**
- **Meets ASTM, IPCEA, MIL, UL etc. specifications.**
- **Less than 5% waveform distortion on all models.**

OPTIONAL EXTRAS

Corona Detection Equipment: Any AC or AC/DC units may be supplied with Hipotronics' own advanced corona detector as part of an integrated system. See catalog sheet for features and prices of Hipotronics Corona System.

Motorized output control, single speed $250

Motorized output control with 10 to 1 range of adjustment $350

Burn Feature – bypasses overload and inserts line reactor in series with HV transformer's primary.

Price depends on KVA of unit.

½ KVA ..... $ 50
1 KVA ..... $ 75
2 KVA $100
5 KVA $200

Multi-pi secondary – increases secondary current capability X4 at ¼ output, X2 at ½ output, thus increasing test capacity. Price depends on unit but in general ..$50 + $10 per KVA extra

DC OUTPUT CHANNEL for 1.3 or 2.6 times AC rating with current capability of 10 ma. Price is around $14 KV of DC output i.e. a Model 715-1 with 20 KV DC output would cost $280 extra.

HV on Dwell timer – allows operator to preset maximum HV on time $150

Memory KV – maintains KV meter reading at breakdown value on motorized units $200

Floor model cabinet with clear plastic 2 foot door $200

Caster mounted HV section ..... $ 50

Test Jigs – Any ASTM jig – ¼" dia., 2" dia., oil cup, ¼" x 4, etc. $150

SPECIFICATIONS

Hipotronics will provide more complete details including sizes, weights, input voltage, and delivery time on a particular unit. While size and configuration of units depends on KV and KVA rating as well as optional extras that might be required, the following is an approximation:

Up to 25 KV Units generally air-insulated and in one cabinet.

Over 25 KV High voltage section hermetically sealed in oil.

100 KVA and up Consists of slope front desk type control console, a G.E. Inductrol regulator, and an oil tank containing the HV transformer, meter multiplier and power separation filter for corona testing if desired.

Over 200 KVA Normally as other units above 100 KVA, with a fourth section containing the main circuit breaker and contactor.

SERIES RESONANT

Hipotronics Inc., recommends the use of Series Resonant Dielectric test sets for very high KVA capacitive load testing. Write for details.

MODEL NUMBER AND ORDERING INFORMATION

Hipotronics uses this system. AC Insulation testers are preceded by the number "7". The next number or numbers is the KV rating, the number after the hyphen is the KVA rating, i.e.

715-5 is a 15 KV @ 5 KVA AC unit
7150-500 is a 150 KV @ 500 KVA AC unit

When DC outputs are available they are indicated with numbers following the AC designation, i.e.

715-1/20 is a 15 KV @ 1 KVA AC tester with 20 KV DC available.

Corona testers are indicated by the letters CT following the number designation, i.e. **750-2CT**

When requesting further information or quotation, please include complete details of your requirements and any special restrictions that might be applicable. If you are not sure which units best suit your needs, describe the tests to be performed, including capacitance of the load (i.e. rating and length of cable), test standards used IPCEA, NEMA, etc.

DC INSULATION TESTERS

Hipotronics DC Insulation Testers are specifically designed for insulation testing with sufficient current capacity to charge high capacitive loads.

All units are designed for maximum equipment and operator protection. The surge devices preclude injury to any component from repeated short circuits at full output, and the many safety features insure operator protection.

An instantaneous overload relay turns the HV off and the internal shorting relay discharges the sample under test immediately after failure.

All units are ruggedly constructed for plant or field use and are designed for long life trouble free operation. Every unit is shorted many times at full output before shipping to insure the effective operation of all surge devices.

SAFETY FEATURES

- Output shorting relay with discharge resistor, gravity operated.
- Instantaneous adjustable overload relay in grounded return.
- Instantaneous overload circuit breaker in primary of HV transformer.
- Zero start interlock – compels operator to always raise voltage from zero.
- External interlock provision for test cage door or "dead man" switch.
- Surge limiting resistor in HV output.
- Shielded output cable or bushing.
- Three wire grounding type cord and plug on 115 volt units.
- 115 volt control circuitry in 220 volt models.

CONVENIENCE FEATURES

- Solid state rectifiers
- Triple range output connected KV meter with recalibration facilities
- Triple range current meter in grounded return
- HV on and off push buttons with HV on pilot light
- Continuously adjustable output control
- Hermetic sealed oil filled HV section on all models 30 KV and up
- 4½" square Weston meters with 2% accuracies

CORONA DETECTORS

All Hipotronics AC, DC, or AC/DC Insulation test sets are corona free to full rating and can be supplied with Hipotronics advanced Corona Detector Oscilloscope to provide a complete and integrated corona test system. These systems meet or exceed testing requirements as specified by ASTM, IPCEA, MIL-C-17D and MIL-T-27. Request a complete quotation to fill your requirements.

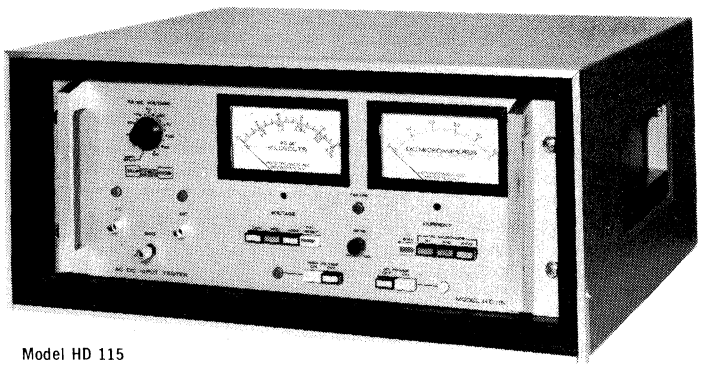
HIPOTRONICS INC. NON-DESTRUCTIVE HIPOT & INSULATION TESTERS

100 Series
NON-DESTRUCTIVE HIPOT AND INSULATION TESTERS



Model HD 115

The Hipotronics line of non-destructive AC/DC hipot test sets utilize an all new, solid state overload circuit for unprecedented reliability and speed of operation. Reaction time is remarkably low, sensitivity is variable over a range of 1 to 110% of rated output current. With circuit sensitivity set at maximum, corona discharge or leakage currents of sufficient magnitude will trip the HV before insulation failure occurs. No warmup time is required.

Each unit is packaged on a rack mounted panel installed in a new, attractive desk-top cabinet. The unit may be removed from the cabinet and mounted to a standard equipment 19" rack in minutes. Controls have been human engineered to provide ease of operation, safety, readability, and an attractive, professional appearance.

Two versions are available: a standard unit with minimal control features, and a deluxe unit with all the most desired controls for laboratory precision testing programs.

FEATURES IN STANDARD MODEL:

• AC input on and off switches • Input fuse and pilot light • Output control continuously adjustable from zero to maximum • Single range, output connected KV meter, 2% full scale accuracy, 3½" arc • Single range current meter in grounded HV return. 2% full scale accuracy, 3½" arc, 0-5 ma AC/DC • Meters are recessed for protection • KV meter recalibration facility • Continuously adjustable, solid state overload circuit from 50 ua to 5 ma • Failure indicator and reset button • Front panel, re-entrant output jacks with shielded HV output lead and ground lead • AC/DC meter switch with reminder lights over output jacks • External interlock provision • Surge limiting resistor in DC output • Deluxe, 21"W x 19"D x 10"H cabinet (slightly larger for 25 KV unit) • Pushbutton range and function switches

ADDITIONAL FEATURES IN DELUXE MODEL:

• Zero start interlock with HV on and off buttons—compels operator to start test at zero volts • Triple range KV meter • Triple range DC current meter, 0-50/500/5000 ua DC • High Voltage On pilot light

OPTIONAL EXTRAS (ALL UNITS):

- HV test probe $10
- Gravity operated output shorting solenoid with discharge resistor $35
- Audible failure signal $15

SPECIFICATIONS:

Input	115 VAC, 60 Hz, 5 amps max.
Size & Weight	21"W x 19"D x 10"H; appx. 60 lbs.

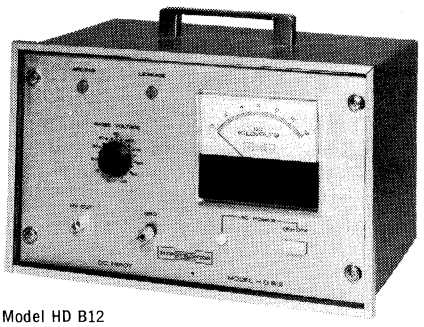
AC and DC PRODUCTION HIPOT TESTERS
A and B Series



Model HD B12

Designed for use by unskilled or semi-skilled personnel in mass testing of electrical components, transformers and appliances. Simple to operate, reliable for go no/go testing. Indicators provide information on component leakage and internal arcing. Continuously variable output voltage and output connected KV meter provide optimum test accuracy at lowest cost.

FEATURES:

• Detachable test leads enter front panel • Continuously adjustable output from zero to maximum • Output connected KV meter for maximum accuracy • "Arcing" detector employs corona pickup network for best sensitivity • "Leakage" detector sensitivity continuously adjustable from 500 ua to 5 ma • Three-wire grounding cord and plug • Shielded output lead thru re-entrant jack • AC input switch, fuse, and pilot light • Each model has a corresponding deluxe model with a solid state audible failure alarm circuit incorporated in its design

OPTIONAL:

HV probe $10

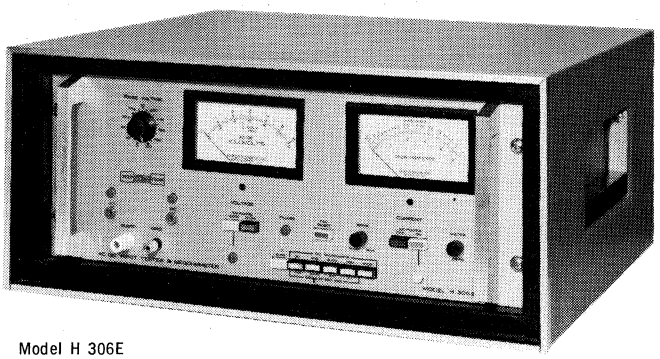
HIPOT TESTERS & MEGOHMMETERS

300 Series
AC/DC HIPOT TESTERS AND MEGOHMMETERS



Model H 306E

The 300 series of Hipot Testers and Megohmmeters are voltage test sets which perform three different functions. They may be used for AC Hipot, DC Hipot and DC megohm tests. The "A" units perform 1R tests to 1000 megohms and the "B" units to 100,000 megohms at 500 volts. Megohms at any other voltage may be determined from the volt and current meter readings.

New design package is human engineered for easy operation, flexibility, and safety, and is available in two series:

A SERIES: Four current ranges
Two resistance ranges
Reads currents as low as 1 ua
Measures megohms to 1,000

B SERIES: Current amplifier permits reading as low as 0.01 ua as high as 100,000 megohms
Six current ranges
Four resistance ranges

FEATURES:

- Overload circuit has continuously adjustable sensitivity from 50 ua to 5 ma. Maximum sensitivity allows non-destructive testing of insulation and dielectrics.
- Reset button and failure indicator.
- Unit is mounted in an attractive, dust-proof, bench-top cabinet. May be removed from cabinet and mounted on a standard equipment rack.
- Dual range output connected KV meter, with set point for megging clearly marked.
- Pushbutton range and function switches.
- Front panel test lead connections, with AC and DC output reminder lights.
- Input on and off switches, pilot light, and fuse.
- Recalibration facilities.

SPECIFICATIONS:

Input	115 VAC, 60 Hz, 1 amp max.
Size & Weight	21"W x 19"D x 10"H; appx. 50 lbs.
Meters	2% full scale accuracy, 3½" arc
Current meter ranges:	
A Series	0-50/500/5000 ua DC; 5 ma AC/ 1-100 megohms, x1, x10
B Series	0-.5/5/50/500/5000 ua DC; 5 ma. AC/ 1-100 megohms, x1, x10, x100, x1000

Model	Output Voltage (KV) AC	DC	Output Current	Megohm Ranges	Price

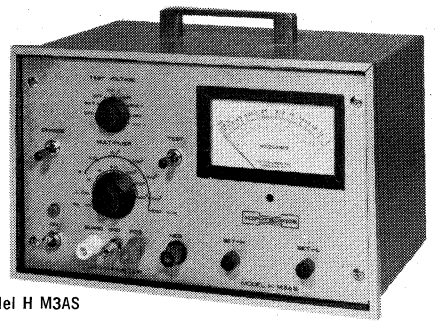
H 306A	5	6	5 ma.	2	465
H 306B	5	6	5 ma.	4	605

Special requirements will be filled. Consult factory for quote.

MEGOHMMETERS



Model H M3AS

Hipotronics megohmmeters are precision instruments for use in production or laboratory testing of cables, capacitors, printed circuits, transformers, electronic assemblies, etc.

- The output voltages are both regulated with a ferro-resonant line and a solid state electronic regulator. Even with large capacitive loads on the 20 million range, there is no bounce.
- The indicating device is a high quality Weston with better than 2% accuracies on all ranges below 1 million and 3% on 10 million. The VTVM circuit driving the meter on the higher range models has no zero shift on any range.
- The short circuit protection is such that the output may be continuously shorted without injury to any component.
- Self contained calibrating resistors in the seven range models permit the operator to periodically verify the calibration.
- A three terminal output network (positive, negative and guard) permits grounded or ungrounded tests to be made.
- Dual color scale on multiple output voltage models improves readability.
- The units also contain a resistor and switch position for discharging both the internal and load capacitance.
- Available in 6 models, all with 115 Volt, 60 Hz input and AC input switch, fuse and pilot light.
- Two models have mandatory 2-hand operation.

Model	Output Voltage	Range	Price
H M1	500	1-100 megohms (X1, X10)	$170
H M3A/3AS	50	1-100 megohms ($X.1/1/10/10^2/10^3/10^4$)	$315/$340
(H M3AS has mandatory two-hand operation)	100	2-200 megohms ($X.1/1/10/10^2/10^3/10^4$)	
	500	1-100 megohms ($X1/10/10^2/10^3/10^4$)	
	1000	2-200 megohms ($X1/10/10^2/10^3/10^4$)	
H M6B/6BS	50	1-100 megohms ($X.1/1/10/10^2/10^3/10^4$)	$255/$280
(H M6BS has mandatory two-hand operation)	250	5-500 megohms ($X.1/1/10/10^2/10^3/10^4$)	
	500	1-100 megohms ($X1/10/10^2/10^3/10^4/10^5$)	
M6C	250	1-100 megohms ($X.1/1/10/10^2/10^3/10^4$)	$250

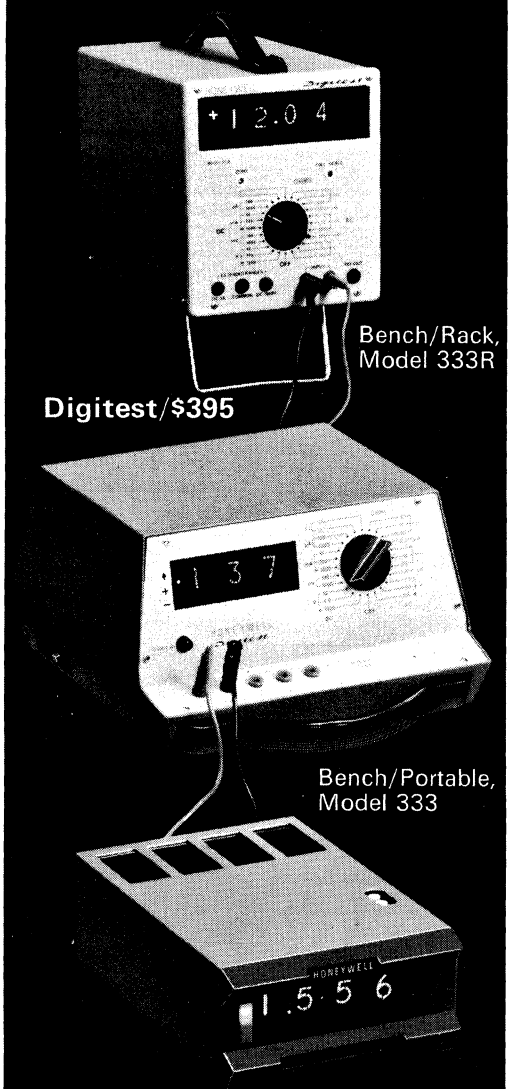
One instrument or an entire system...



VT-100 Panel Meter/$245

The three digital meters (measuring AC/DC volts, current and ohms) shown above have been vital in the solutions to many measurement problems:

VT-100 Digital Panel Meter. Plug-in card feature changes range and function to any of 20 different configurations. Full scale calibration, automatic zero and 100% overrange. Accuracy to .2% or reading ± 1 digit.

Digitest, Model 333. Portable battery operation (as well as AC) with ±.5% accuracy and 100 UV resolution. 3½-digit readout with overrange indicator.

Digitest, Model 333R. Same specs as Model 333 but with an overrange digit.

Honeywell

Whatever it takes, Honeywell sales engineers can draw from Honeywell's great depth of instrumentation and systems capability to zero in on precise solutions for industrial, aerospace, medical, educational and other fields. And they're eager to put their problem-solving capabilities to work for *you*.

Below, we've listed selected product lines by category, plus a number of helpful services. For full information on items of interest, call your local Honeywell sales engineer or write: Honeywell, Test Instruments Division, P.O. Box 5227, Denver, Colorado 80217.

INCOR

WIDEBAND DC INSTRUMENTATION AMPLIFIERS

INCOR's Instrumentation Amplifiers are solid state devices containing their own regulated power supplies. Designed specifically to fulfill DC instrumentation requirements, each has the ability to drive all types of galvanometers, A to D converters, multiplexers, tape recorders and extremely long data lines.
Amplifiers provide low output impedance and frequency response from DC to 100 KHz. Up to ten amplifiers may be mounted in the INCOR Series 103 Rack Adapters, or supplied with individual cases for single channel bench operation.

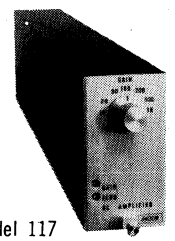
Model 130



Model 117

STRAIN GAGE/TRANSDUCER POWER SUPPLIES

INCOR power supplies are designed specifically for low level DC instrumentation applications. They feature a high degree of guarded isolation from the power lines (0.1 picofarads) and ground (10,000 megohms minimum). Other features are high resolution 10 turn voltage control potentiometers, .01% time stability and .005% / °F temperature coefficient.
Up to 10 channels can be accommodated in the Model 103 rack, Fig. A.

Model	Voltage Range	MA Current Range	Noise to gnd., μv.	Line Reg. 95-135V	Ripple	Remote Sensing Current	Remarks	Price

Fig. A

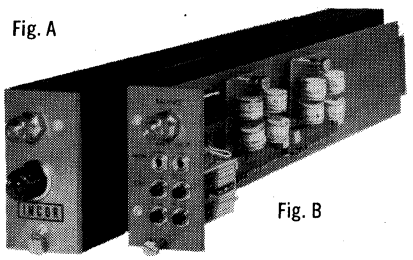

Fig. B

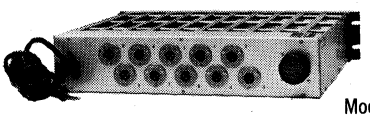
The Model RB-2 signal conditioning unit shown in Fig. B. There are two internal cards for bridge completion resistors and calibrating resistors. Spare resistor cards are available for $2.00 each and may be prepared for different transducers. Signal conditioning units may be combined with any power supply by combining their model numbers and prices.

Model	Balance and Calibration Units			Price
RB-2	10 turn Balance control	4 point shunt calibration	Excitation & balance monitor jacks	$65
RB-3	Same	4 point shunt calibration	Polarity switch Relay for remote or automatic calibration	80



Model 103B

RACK ADAPTERS AND CASES

The INCOR series adapters provide interchangeable mountings. The amplifier units plug in from the front with complete access to operating controls and test points. The rack adapter provides for AC power distribution and signal input (XLR-3-14) and output connectors (MS3102A) for operation in a recording system. Blank filler panels are provided for all unused positions. Rack size is 19" x 3½" x 18" deep. Case 3" x 1.7" x 13".

Model	Amplifier Capacity	Connectors		Price
		Input	Output	
103	1-10	Amphenol 143-010-01		$ 90

PHAZOR

The operation of the Phazors is unique in that the input and reference signals are applied to an electronic multiplier which derives the instantaneous product of their amplitudes. The multiplier output is then applied to a DC meter which produces a deflection proportional to the time average of this product.

Expressing this function mathematically we have: Meter Deflection = $\frac{k}{T}\int_0^T V_S \cdot V_R \, dt$

PHASE METERS

High Accuracy and Resolution • Measures 0°-360° Without Ambiguity • Rejects All Noise and Harmonics (without filters) • Wide Input Voltage and Frequency Range • Self Calibration Assures Accuracy

MODEL 200A

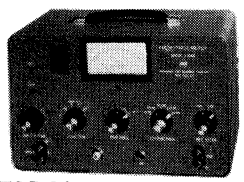
$440.00

APPLICATIONS: Measures phase shift in transformers, amplifiers, etc. • Readings not affected by noise and harmonics • Measures in-phase or quadrature voltage components • .01 degree can be measured employing special techniques.

SPECIFICATIONS

ACCURACY: ..... ±2 degrees
FREQUENCY: ..... 20 Hz to 20 KHz

MODEL 210AB



$795.00

This instrument retains the essential feature of other Phazor models in that accurate measurements can be made even though signals may be complicated by noise and harmonics. The quadrant is read directly on a projection readout. The angle within the quadrant is displayed on the meter.

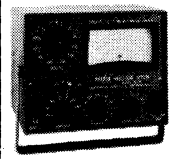
SPECIFICATIONS

ACCURACY: ..... ±2 degrees
FREQUENCY RANGE: 15 Hz–30 KHz
SENSITIVITY: ..... 5 millivolts

VECTOR VOLTMETERS

Precise Measurement of:
IN-PHASE VOLTAGE • QUADRATURE VOLTAGE
TRUE RMS VOLTAGE • PHASE ANGLE
NULL VOLTAGE

MODEL 300PB



$1,200.00

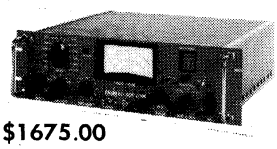
- Portable — All Solid State
- Direct Reading Phase and Quadrant Indicator
- Battery Operated — Eliminates Power Line Ground Loops

SPECIFICATIONS

INPUT VOLTAGE: ..... 1 MV–300 V
INPUT IMPEDANCE: ... 1 megohm
VOLTAGE ACCURACY: 2% full scale
PHASE ACCURACY: ... ±1 degree
FREQUENCY RANGE: 60 Hz–10 KHz
NULL SENSITIVITY: ... 10 microvolts
HARM. REJECTION: .. 40 db down without filters
WEIGHT: ..... 9 lbs., approx., with batteries

AC Power Pack Available — $150.00

MODEL 300B



$1675.00

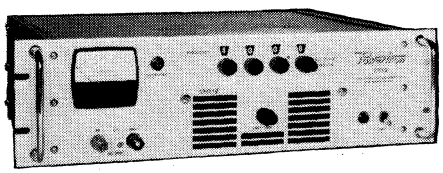
- Direct Reading Phase Angle
- Wide Frequency Range
- Rejection of Noise and Harmonics without Filters

SPECIFICATIONS

INPUT VOLTAGE: ..... 1MV to 300 V
INPUT IMPEDANCE: 10 megohm
VOLTAGE ACCURACY: 2% Full Scale
PHASE ACCURACY: ... ±1 degree
FREQUENCY RANGE: 15 Hz to 30 KHz
REF. VOLTAGE: ..... 5V to 220V
NULL SENSITIVITY: ... 10 Microvolts
HARM. REJECTION: ... 40 DB without filters
RACK PANEL SIZE: .... 19″Wx5¼″H

Powertron ELECTRONIC GENERATORS

Series 250S (Solid State)



$595.00
(Less Plug-In Osc.)

The Series 250S (illustrated above) and the Series 1000S Solid State supplies are designed to be used in modular form so that they may readily be stacked for 1Ø, 2Ø or 3Ø output power.

Fixed frequency and variable frequency plug-in oscillators are available for single phase, or poly-phase operation. The variable frequency oscillators are digitally set to three significant figures. They feature excellent stability and continuous resolution and are readily adaptable to remote programming.

A complete line of 1Ø, 2Ø & 3Ø models with power output ratings from 3 VA to 9 KVA and frequency accuracies to .0001%

These AC Power Supplies provide stable, low distortion AC power at frequencies within the audio frequency spectrum. The highly reliable and versatile power sources find wide application in calibration and test stations, motor drives, gyro wheel supplies, laboratory use, military component testing, and operating foreign equipment.

SPECIFICATIONS
(Series 250S Illustrated)

OUTPUT CIRCUIT: ..... 1Ø, Isolated
OUTPUT POWER: ..... 250 VA
POWER FACTOR: ..... Unity ±0.7 (at full power)
OUTPUT VOLTAGE: .... Selectable — 0-130V RMS or 0-190V, 0-75V, 0-67V, 0-38V, 0-30V, and 0-17V
FREQUENCY RANGE: .. 45 Hz — 10 KHz full power
20 Hz — 20 KHz derated
DISTORTION: ..... 0.1% mid-band
REGULATION: ..... 0.5%, 0—full load
0.1%, for ±5% line
RESPONSE: ..... 50 microseconds
HUM LEVEL: ..... 80 db down
SHORT CIRCUIT PROTECTION: Output may be shorted indefinitely
THERMAL PROTECTION: ..... Output transistors protected by thermal cutout
EXTERNAL AMPLIFIER INPUT: Available on rear
EXT. SYNC. INPUT: ..... Available on rear
CONVENIENCE OUTLETS: ..... Two switch-controlled outlets on rear
INPUT POWER: ..... 115V or 230V, 50-60Hz (400 Hz avail.)

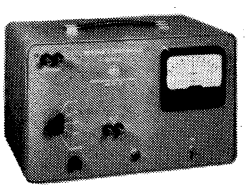
IMPEDANCE COMPARATORS

MODEL 60



$250.00

PRECISE, RELIABLE AND RAPID COMPARISON OF COMPONENTS

The circuit consists of a bridge, two arms of which are precision resistors matched to .01%. The two remaining arms are the standard and the component under test. Any voltage resulting from bridge unbalance is amplified and fed to a phase discriminator. The percentage deviation is read directly in both sign and magnitude on a meter.

FEATURES: High Accuracy & Stability • Fast Response • Linear Meter Scales • Self Calibrated

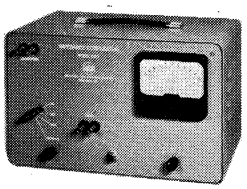
SPECIFICATIONS

FREQUENCY: ..... 60 Hz
FULL SCALE RANGES: ±1%, 5%, 10%, 20%
IMPEDANCE LIMITS:
Resistance ..... 5 ohms to 5 megohms
Capacitance ..... 500 mmfd. to 500 mfd.
Inductance ..... 15 milihy to 10,000 hy

SPECIFICATIONS

FREQUENCY: ..... Either 1 KHz or 10 KHz
FULL SCALE RANGES: ±5%, 10%, 20%
IMPEDANCE LIMITS:
Resistance ..... 5 ohms to 5 megohms
Capacitance ..... 50 mmfd. to 10 mfd.
Inductance ..... 100 microhy to 100 hy

MODEL 1010



$385.00

OTHER MODELS AVAILABLE } **MODEL 1000—1000 Hz—±1%, 5%, 10%—$395.00**
MODEL 1025—1KHz, 25 KHz—±5%, 10%, 20%—$425.00

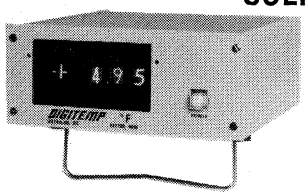
1500 & 1600 SERIES

SOLID STATE DIGITAL TEMPERATURE INDICATOR



Solid state circuitry, non-mechanical electronic tube readout and compact size team up in this Instrulab Series 1500 to produce a highly reliable temperature indicator with digital readout. Wherever the indication of temperature is required, the Instrulab 1500 does the job quickly, quietly, accurately and economically.

Automatic Polarity — Instrument automatically indicates sign of reading (+) or (—) and fixed decimal point is prominently displayed resulting in completely digitized readout.

Direct Readout — No Conversion Tables Needed — Reading is directly in degrees, positive or negative. No conversion tables or graphs are required. Assured accurate reading even when used by inexperienced personnel. Fahrenheit and Centigrade models available.

Large, Non-Blinking Readout Display — Prominent easy-to-read, 5/8" high digits are always present. Easily seen from a distance in fully-lighted rooms. Electronic tube readout is quiet, non-mechanical, has exceptionally long life.

Solid State, Integrated Circuitry — Entire circuit is solid state, using the latest integrated circuits as well as high-reliability discrete components. No relays, stepping switches or mechanical counters to wear out. Circuit provides high noise rejection. A highly sensitive and stable circuit amplifies and linearizes the senior output which is fed into a dual slope integrating digital readout to give an accurate repeatable readout in engineering units.

Compact Size — Instruments are available in two case sizes — Case #86 which is $3\frac{15}{32}$" H x 8 3/8" W x 11 1/2" deep, or in Case #87 which is $3\frac{15}{32}$" H x 17" W x 11 1/2" deep. In either case, optional ears may be purchased for rack or panel mounting.

Manual Hold — Instrument samples temperatures at 5-per-second rate. Indication may be manually held, where desired, by the use of an external switch to short circuit "hold" terminals.

BCD and Analog Output — Binary-coded (parallel) decimal or analog readouts for operating external recorders, printers, scanners, and other accessories are available as options.

Case — Normally supplied in the 86, 1/2 rack case. However, for some options such as control, manual selected multi-channel inputs of over 3 channels, etc., the unit is furnished in the 87, full rack case.

SPECIFICATIONS:

INPUT: Floating-sensor can be grounded without affecting reading

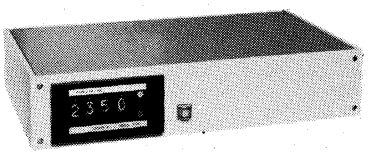
RESPONSE TIME: 1/2 second to within 99% of full scale step change.

CASE: #86 — $3\frac{15}{32}$" H x 8 1/2" W x 11 1/2" deep, for bench-top use. Ears furnished optionally to allow case to be rack-mounted or panel-mounted. Can be furnished in #87 Case also: $3\frac{15}{32}$" H x 17" W x 11 1/2" deep.

CONNECTIONS: All inputs and outputs except BCD are to screw-terminals at rear of case in a covered terminal compartment provided with "plugged" 1/2" conduit holes (7/8" diameter). BCD connections are to a PC connector. Model 1563 and 1663 have 3 input jacks on front panel with 4 position manual selector switch. One position is Power off — other 3 are input channel selector positions.

COLOR: Top, bottom and rear cover — pastel blue; sides and front panel — pastel gray.

CASE NO. 86



CASE NO. 87

OPTIONS:

A. BCD Output 8421 — buffered; 0 logic: 0 ±.4 VDC, positive sink for > 20 MA; 1 logic: 5 ±1 VDC, output impedance < 10K ohm. Available on connector at rear of case.
B. Reference Voltage Available — Consult Factory.
C. Print Command — Transition from 0 to 5 V. Furnished with BCD at no charge.
D. Analog output — 1.0 Mv/degree, linearized: load impedance 5K ohm minimum, available on screwed terminal strip at rear of case.
E. On-Off Control Form — 5 Amp. 117 VAC non-inductive set with 4 digital thumbwheels on front panel. Accuracy of setting 1%.
F. Same as E but with manual reset button for hi-limit shut-off.
G. Tilt Stand — Part No. 133-0081 for #87 Case.
H. Tilt Stand — Part No. 133-0082 for #86 Case.
J. Pair of Rack or Panel Mount adapter ears, Part No. 133-0083.

To order — specify Model No., Case No., Range No., and Options.

Example — to order one RTD Digital Temperature Indicator with a range of 0 to 1000°F with BCD with print command, on-off Control, and ears for rack-mounting, in Case No. 87 — specify: **1 ea. 1540-87-22-ACEJ Digital Temperature Indicator.**

Terms: Net 30 days. **F.O.B.:** Dayton, Ohio. **Delivery:** 4-6 weeks.
Prices and specifications subject to change without notice.

Model 1540—100 Ohm Platinum RTD Actuated

RANGES AND ACCURACY

Range No.	Range in Degrees	Resolution	Instrument Accuracy
21	−100 to +500°F	1°F	1°F ±1 Digit
22	0 to 1000°F	1°F	3°F ±1 Digit
23	−350 to +1000°F	1°F	5°F ±1 Digit
24	−200 to +500°C	1°C	3°C ±1 Digit
25	0 to 500°C	1°C	1°C ±1 Digit

Other ranges and accuracies available — consult Factory. Ranges within the limits of −150.0 to +150.0°F or °C can be furnished to a resolution of 0.1°F or °C.

Models 1560 & 1660—Thermistor (700 Series) Actuated

RANGES AND ACCURACY

Range No.	Range	Resolution Model 1560	Resolution Model 1660	Overall Accuracy of Instrument and Sensor
11	22 to 122°F	0.1	0.01	±0.60°F
12	0 to 100°C	0.1	0.01	±0.35°C
13	−5 to +45°C	0.1	0.01	±0.20°C
14	−30 to +50°C	0.1	0.01	±0.30°C
15	30 to 100°C	0.1	0.01	±0.25°C
16	32 to 212°F	1.0	0.1	±0.50°F
17	23 to 113°F	0.1	0.01	±0.35°F

Instruments can be specially calibrated to give a closer tolerance over a narrow part of the above ranges. For other ranges and accuracies — consult Factory.

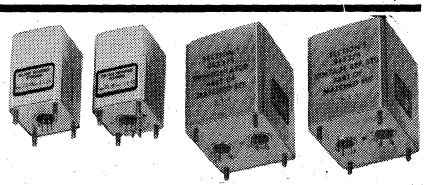
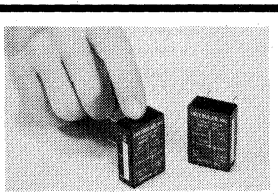
Military Units, Custom Designed for Aerospace and Military Applications.

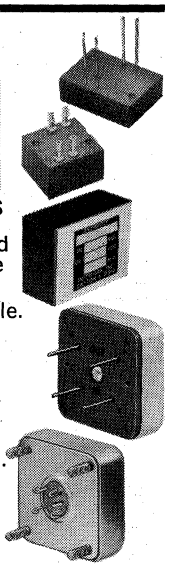


700 SERIES



MINIATURE VOLTAGE REFERENCE UNITS

Provides fixed D.C. voltage to a constant load regardless of wide variation of input voltage or ambient temperature changes.
Printed Circuit and Chassis Mounting available.
Complete prepackaged voltage reference.
Component size.
Encapsulated.
Wide selection of Temperature Coefficients and Regulation Voltages and Currents.
Does not require temperature compensation.
Simplifies Circuit Design.
Reduces Panel Space.
Does not require controlled temperature environment.

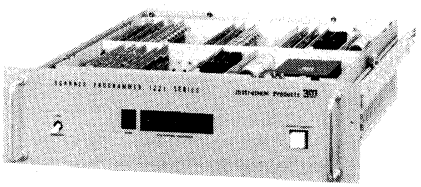


3M INSTRUMENTATION SWITCHING SYSTEMS...

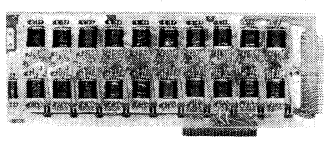
3M Reed Relay Switching Systems are built to solve high speed switching problems. Modular construction permits intermixing and field expansion of various types of switching configurations. Plug-in switching module assemblies are available with 1, 2, 3, 4, and 6-wire switching as well as multiple-pole form "C" and form "A-C" combinations. Low-level switching modules with thermal offset of less than 10 microvolts are available.

Standard 1-2-4-8 BCD programming logic is used in 3M Switching Systems. The switching speed is less than three milliseconds after program command. Pull-in and drop-out time is constant from channel to channel.

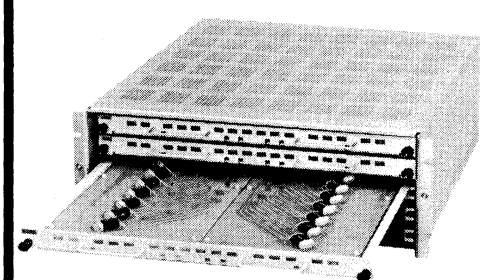
If our off-the-shelf family of modules does not meet your needs, our experience is available for custom design to your specifications.



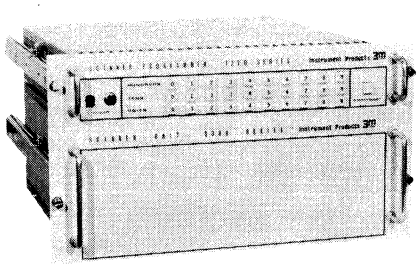
1221 Scanner Programmer



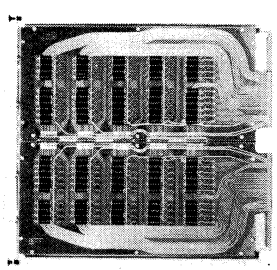
3380 Switching Module



3383 Scanner Chassis



3380/1220 Scanner



3990 Switching/Memory Module

3380/1220 Series Scanner

- Maximum of 1000 channels (single or multiple pole).
- Digital display of programmed channel number.
- 3380/1220 Series Scanner is packaged in standard rack-mountable chassis. The 3½" 1220 chassis is used for program decoding and power drive to the 7" 3380 chassis housing plug-in switching modules.
- 10 to 20 channels per plug-in switching module depending on relay configuration.

3383/1221 Series Guarded Scanner

- Completely guarded for high CMR in system applications.
- Output multiplex to enable routing of Scanner output to any of 10 destinations (optional).
- Binary program input (optional).
- Input storage registers for direct computer interface (optional).
- Guarded plug-in switching modules have 40 to 200 channels per assembly—depending on relay configuration.
- 3383/1221 Series Scanner is packaged in standard rack-mountable chassis. The 5¼" 1221 chassis is used for program decoding, guard isolation and power drive to the guarded 7" 3383 chassis housing plug-in switching modules.
- Low capacitance, typically less than 25 pf crosstalk for 100 channels of 3-wire switching.
- Maximum of 10,000 multiple pole channels.
- Decimal readout of channel number.

3990 Series Guarded Switching Matrix

- Random access, two-dimensional switching matrix to enable *multiple* connection paths from one side to the second side of the matrix.
- Solid-state integrated circuit memory for each crosspoint.
- Programmed from a 1-2-4-8 BCD source to select given crosspoints and direct "set" or "reset" commands.
- The 3990, like all 3M switching instruments, is built with modular techniques. A 10½" power supply/decode module will program/power up to 2000 individual relay crosspoints.
- Guarded construction techniques make the 3990 ideal in system applications requiring high CMR.
- Plug-in switching/memory modules are packaged in a 7" chassis with 500 crosspoints per chassis.
- Basic matrix configuration is 1 x 10 which may be wired in any multiple combination.

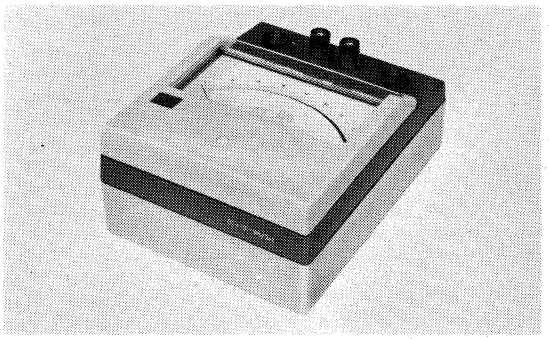
3990 Matrix in Test System Application

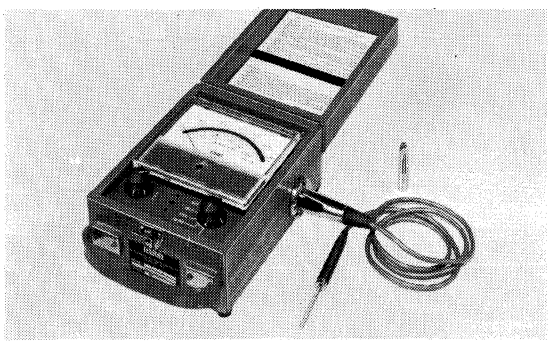


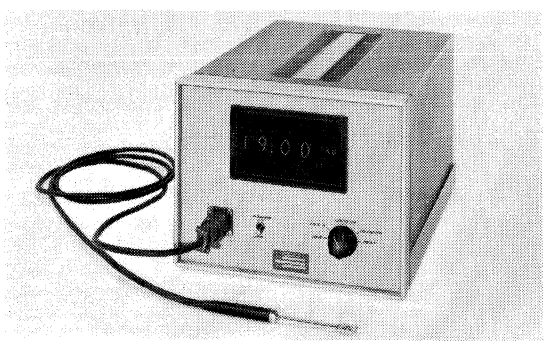
MODEL 621 F NORMA FLUXMETER

Joining the widely used model 251F is the new, small and rugged model 621F fluxmeter. This accurate instrument, with a simple scale of 10^{-4} Webers (10,000 Maxwells)/Scale Division is expressly intended for the educational field. The economical price and liberal education discount makes its purchase for student use possible even with the limited budgets that exist in many science departments.

MODEL A GAUSSMETER

With prices starting at $185.00 (including probe) and a ten year history of performance and durability, the Model A Hall Effect Gaussmeter is the answer to many engineering, production and inspection requirements. The instrument includes a built-in magnet standard and can be supplied with axial probes to a diameter of 0.125 inches and transverse probes to a thickness of 0.006 inches.





MODEL D GAUSSMETER

The model D Gaussmeter provides a digital (3 ½ digit) display for exceptional readability and high resolution. As a highly stable laboratory instrument the model D Gaussmeter is available with a wide selection of probes including special units for operation at 4.2°K or 200°C.

MODEL 251F NORMA FLUXMETER

The model 251F is a highly sensitive, versatile fluxmeter for laboratory and production use. The instrument provides ten ranges covering 5 x 10^{-6} to 5 x 10^{-3} Webers (500 to 500,000 Maxwells)/Scale Division. Search coils, carrying/storage cases, etc. are also available.

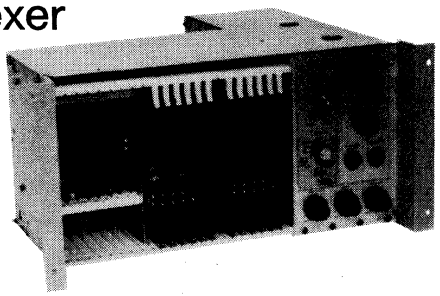
IEC DATA PRODUCTS DIVISION

Low Level Analog Multiplexer

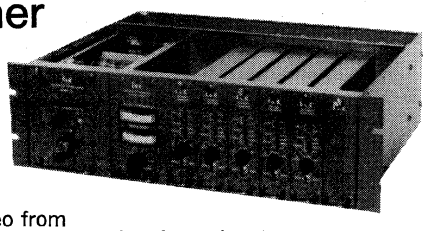


Model MX-500

Versatile interface for sampling low level signals in computer oriented data acquisition systems.

- Input– ±5 mv to ±500 mv F.S.
- Output– ±10 v F.S.
- Up to 50 kHz sample rate
- Easily expandable up to 1000 differential guarded channels
- Sequential or random channel address
- Automatic and programmable gain

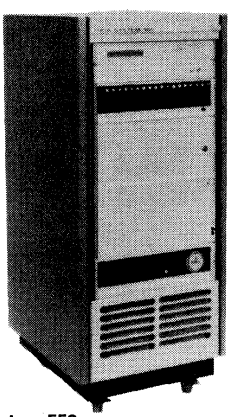
Post Detection Diversity Combiner



Model 810

- Combines detected video from dual receivers to recover data from signal fades and to improve SNR
- Adapts to most receivers by means of channel matching controls
- Operates with any type of diversity reception and modulation
- Wide video response from 5 Hz to 4 MHz

Remote Low Level Data Acquisition Terminal

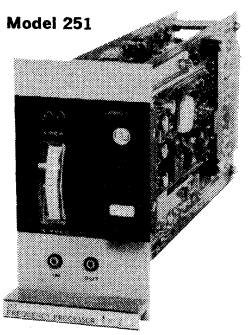


System 550

Complete unit for monitoring low-level analog signals at remote sites with real time digital data transmission to a central processor.

- Input level–±5 mv to ±500 mv F.S.
- Input channels–up to 1000 in groups of 10
- Output–12 bit binary serial PCM, transmitted up to 3 miles via standard coaxial cable
- Sample rate–up to 10,000 samples per second

General Purpose Phase-lock Receiver Module

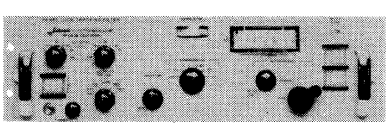


Model 251

- PM/AM demodulator
- Frequency tracker
- Multiplies frequency
- Zero phase shift filter
- Data synchronizer
- Input–periodic signals in the range from 1 kHz to 450 kHz–special units to 12 MHz–50 db dynamic range
- Outputs–clean square wave phase locked to the input frequency and multiples thereof–AM, PM and FM

Narrow Band Tracking Filters and Demodulators

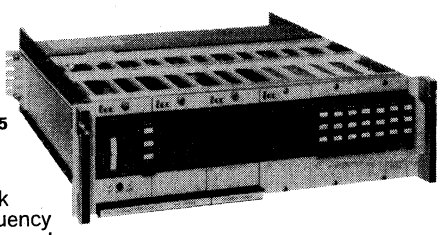
Model 450



The ultimate unit for narrow band phase lock recovery of noisy signals.

- Automatically tracks frequency varying signals
- Tunes–from 100 Hz to 120 kHz, continuously
- Outputs–clean sine wave phase locked at multiples of 1, 10 and 100 times the input frequency
- AM and PM data to 60 kHz bandwidth

Tape Data Synchronizers



Model 2755

Automatically tracks playback reference frequency to produce coherent clock, synchronous with data being read from tape. Selected output clock frequency is clean square wave free of drop-outs, containing the same record/reproduce pertubations as the data. When used as reference for coherent demodulation flutter errors are cancelled. The selected clock frequencies are produced at all standard tape speeds over a wide range of input reference frequencies.

JULIE MULTI-VIDER — PPM MEASUREMENTS IN VOLTAGE, CURRENT, RESISTANCE, RATIO

It is no longer necessary (or desirable) to buy special purpose potentiometers, resistance bridges and other instruments because . . .

The plug-in Multi-Vider, the newest and most useful tool created by 12 years of Julie pioneering in DC instrument and system development, obsoletes other DC devices. Like the modern plug-in oscilloscope and the modern plug-in counter, the modern plug-in Multi-Vider works for everyone, everywhere, everyday . . . keeps your company up-to-date with the accelerating requirements of the DC art.

The most accurate DC instrument is the Divider . . . because it is a pure ratio instrument. The widely recognized Julie Ratiometric system, now in its newest form (the MV-1 Multi-Vider), exploits this fact to create a unique, optimum, integrated system of measurement that advances the state of the art 5 ways:

- ☐ It is now possible to measure resistance, current, voltage, and ratio with accuracies **of the order of a few parts per million** — not just at "cardinal values", but at **any** value; not just in the region of a few volts or ohms or amperes, but **over a range of several million to one.**
- ☐ These measurements can be made by relatively unspecialized personnel, without significant increase in the limit of uncertainty — manipulation error is **virtually eliminated** by the RATIOMETRIC system. The RATIOMETRIC system is equally tolerant of **environment** — the limit of error does not significantly increase when the equipment is moved out of the industrial laboratory into a production-test environment.
- ☐ Determinations that once took hours, and even days, of painstaking manipulation and checking can now be performed in a matter of minutes — even faster, if secondary-standard (0.001%) results are acceptable.
- ☐ Every test configuration employed in the RATIOMETRIC system is **self-checking,** and all are referenced to only **two** "NBS traceable" standards —emf and resistance. Any test, regardless of its precision or parameter range, may be validated in a matter of **minutes.**
- ☐ A complete RATIOMETRIC laboratory costs far less than a comparable complement of conventional standards equipment for measurement over the same ranges — despite the clear-cut superiority of the RATIOMETRIC approach. **Patents applied for on all instruments and systems.*

Julie instruments are normally supplied with stainless steel panels as shown on the following pages. They are also available, on special order, with painted panels as shown to right.

The Multi-Vider and Plug-ins

The basic Multi-Vider is an integrated, low-cost divider detector combination with provision for plug-in adapters. Of itself, the Julie Multi-Vider offers the best ratio capability for all applications. Inserting one of the many available Multi-Vider Plug-ins immediately converts the Multi-Vider to the best instrument in that class.

As an example, the Julie Model MV-1 MULTI-VIDER consists of:

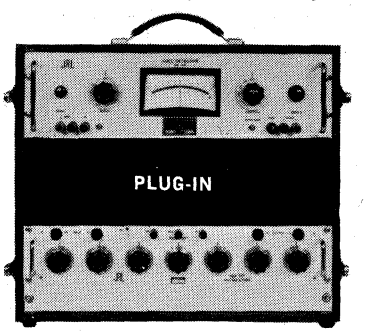
1. **VDR-307** Kelvin-Varley voltage divider — The divider reading is always easy to obtain and has a resolution of 7 places with a basic accuracy to 6 places (0.0001%). Price: $900.00
2. **ND106** Null Detector — a superior general-purpose galvanometer with a sensitivity of ±0.1μv. Price: $800.00
3. **PLUG-IN** — Julie plug-ins can be purchased for your individual requirements. They offer divider-accurate divider-easy, divider-reliable, DC readings from nanohms to gigohms, pico-amperes to amperes, and nanovolts to kilovolts.

Optional accessories include Julie power supply plug-ins which convert your Multi-Vider to ultra-precise voltage and current supplies.

With only two plug-ins, the Julie Multi-Vider measures all four:

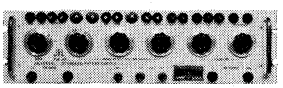
Resistance	**Ratio**
Voltage	**Current**

to an accuracy of 6 places with 7-place sensitivity.

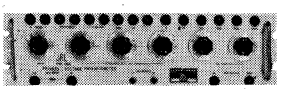


MODEL MV-1 Multi-Vider

TYPICAL VOLTAGE PLUG-INS

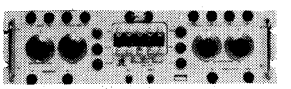


PVP-1001J

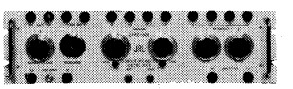


PVP-1000

TYPICAL RESISTANCE PLUG-INS

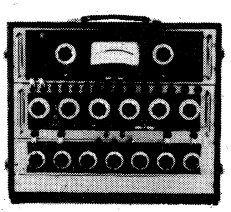


PRB-205



DRRS-108

VOLTAGE & CURRENT



MODEL MV-1 with Model PVP-1000 C Plug-in

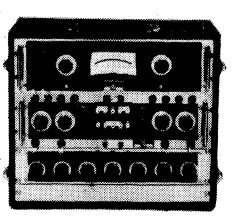
Usable for both laboratory and production test. Comprised of the following JRL primary standard instrument modules: **PVP-1000C** Potentiometer with integral precision volt box, **VDR-106/7 (or VDR-307)** Voltage Divider, **ND-106** Null Detector, and **SCO-106** Absolute Voltage Reference, all 4 of which can be used independently in a wide variety of applications. Primary standard accuracy is achieved through close control of error-contributing factors and by basing the design on JRL Type NB-1 resistor and JRL primary standard instruments. NBS-Certifiable.

Range and Accuracy
Potentiometric: 0 to 1.1 vdc
0.0003% ±1μv
0.0001% ±1μv with self-calibration
Extended: 1.1 to 1100 vdc
0.0002% ±0.1 ppm (fs) with self-calibration

Resolution: 0.00001%

Working Current
Source: Thermally-lagged mercury cells
Stability: 0.0001%/8 hrs.

RESISTANCE & RATIO



MODEL MV-1 with Model PRB-205 C Plug-in

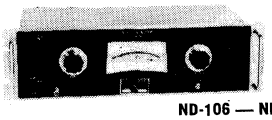
Measures absolute resistance, relative resistance (deviation), and resistance ratio. Accuracy is determined primarily by the resistance standard. Offers 7-digit resolution.
Consists of the **PRB-205C** Primary Resistance Bridge Component, **VDR-307** or VDR-106/7 Voltage Divider and **ND-106** Null Detector. Contains a convenient plug-in module with 5 JRL Resistance Standards **(MRS-106)** at an accuracy of 0.0015%. By calibration of the MRS to National Bureau of Standards reference levels, the accuracy of the PRB-205S System can be raised to 0.0005% ±0.1 ppm (fs) over entire range.

Range: 5 ranges from 1000 ohms to 10 megohm, fs
Limit of error: 0.0015% ±1 ppm (fs) guaranteed
0.0005% ±0.1 ppm (fs) w/calibration data on std and self-calibration of the Divider

Rel accuracy: 0.0001%
0.00001% w/self-calibration
Resolution: 0.00001%

JULIE MULTI-VIDER™ BASIC COMPONENTS AND MEASUREMENT PLUG-INS

NULL DETECTORS



ND-106 — ND-106/7

Range: ±3.0 microvolts to ±30 millivolts in 9 ranges f.s.
Sensitivity: 0.1 microvolts
Input impedance: 100,000 ohms
Stability: drift less than 1 microvolt/week
Output: ±1.5 volts full scale
Input: 115 vac, 60 cps, 200 ma

ND-106 Null detector and DC amplifier. Features fully solid-state circuitry and provides high sensitivity and high input impedance for use in ultra-accurate measuring systems such as the PRB-205S and PVP-1000S. Gain may be set to provide linear, calibrated, or logarithmic output. The ND-106/7 is a modified version that is used with the ND-107.

SA-106. This unit is similar to the ND-106 and has an output amplifier for use as an electronic servo in feedback control systems.

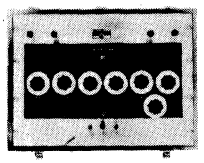
NANOVOLT NULL DETECTOR PREAMPLIFIER

ND-107

A universal detector for all measurement applications (nanovolts to millivolts) is obtained by combining the all-solid-state model ND-107 Nanovolt Preamplifier with a modified basic null detector model ND-106/7.

This combination gives superior performance — low noise, high stability, high sensitivity — over the widest possible range of circuit impedances.

Sensitivity: 0.3 nanovolts
Resolution: 1.0 nanovolt, X1000 range
Input Range: 0 to ± 30 mv in 15 steps
Input Impedance: 10 ohms to 50,000 ohms
Stability: 3 nanovolts/24 hrs after 1 hour at constant ambient.



VDR-106/7

VOLTAGE DIVIDERS FOR DC AND AC

VDR models for primary and secondary standards and for production test.

SPECIAL FEATURES
SVD-108—Ovenized for increased stability from 20°C to 30°C
VDR-307—Basic Multi-Vider component
VDR327J—1.1 and 1.2 Over-ranges; basic Multi-Vider component
VDR-307H—1.2 Over-range used with JRL generating systems
VDR-327P—Data Logging Output

RESISTANCE PLUG-INS

RESISTANCE BRIDGES

Primary resistance bridge adaptor instruments used in conjunction with a **VDR** Voltage Divider and **ND-106** Null Detector. Permit ultra-precise 2 or 4-terminal resistance measurements from 0 to 10^{12} ohms. Zero offset circuitry establishes the true zero point and eliminates all test lead effects. Special direct reading dials on PRB-205C allow precise measurements of resistance deviation to ±150 ppm from any nominal value. Integral and selectable bridge excitation is provided from highly stable mercury batteries controlled by a polarity reversing switch and push keys. Plug-in ultra-stable JRL resistance standards provide measurement traceability to NBS reference units.

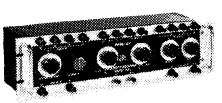
100,000 Megohms	±.04% ±.0001% f.s.	

* Absolute accuracy of measurement is equal to the absolute accuracy of the resistance standard used plus the accuracy of the bridge as shown above.

DIRECT READING RATIO SET



MODEL DRRS-108

The JRL Model DRRS-108, a new plug-in bridge device for the Multi-Vider system, offers the user a direct reading ratio set capable of measuring the Thomas pattern 1 ohm resistor with an accuracy of .1 ppm and a precision of .1 ppm. The unit permits making 1:1, 1:9, and 1:10 comparisons of 2 and 4 terminal standard resistors to the same accuracy and precision. The DRRS-108 is self-calibrated and offers a 7-place in-line digital readout.

- Low impedance permits use with nanovolt null detector
- Simple automatic calibration with self-contained 1:1 STD.
- Use with .001 ohm to 10 meg resistors

VOLTAGE PLUG-INS

POTENTIOMETERS AND VOLTAGE MEASURING DEVICES

PVP-1000C
TO 0.0002%

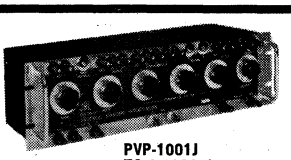
PVP-110C is a primary standard potentiometer instrument with integral thermally lagged mercury cells. It is used in combination with other standard modules (VDR-106/7 or VDR-307, SCO-106, ND-106) to provide a potentiometer system (PVP-110S) for precision measurements over a range from zero to 1.1 volts.

Accuracy: 0.0002% at 1 volt (as potentiometer) ±1 microvolt (as standard cell comparator) NBS-Certifiable.

PVP-1000C has all features of the PVP-110C plus a high voltage capability to 1100 volts DC. The low voltage ranges are extended by a highly accurate volt box with range multiplying factors of 3, 10, 30, 100, 300 and 1000.

PCVP-1000C has the features of the PVP-110C plus a set of internal current measuring shunts to permit current calibrations on several ranges. Shunts may be specified for current values to 10 amperes full scale.

NANOVOLT POTENTIOMETER



PVP-1001J
TO 0.0003%

The PVP1001J is a highly accurate voltage potentiometer capable of potentiometric (infinite input impedance) measurements over a wide range of voltage. Continuous reference monitoring, 20% over-range on all ranges, and self-calibrating capability make this potentiometer an extremely useful addition to the JRL plug-in primary standard measuring system. The PVP-1001J module contains the range resistors, working reference, and galvanometer reversal switching circuitry. Applications for this potentiometer include comparison of standard cells and zener reference elements and high resolution low voltage measurements on thermocouples and current shunts.

Range	Accuracy Direct Reading	Accuracy With Correction
0 - ± 12 volt	.0005% ± 1 μvolt	.0001% ± .1 μvolt
0 - ± 1.2 volts (standard cell comparison)	.0003% ± 1 μvolt	.0001% ± .1 μvolt
0 - ± .12 volts	.0005% ± .1 μvolt	.0002% ± .02 μvolts
0 - ± .012 volts	.0008% ± .01 μvolt	.0003% ± .3 nanovolts
0 - ± .0012 volts	.0013% ± .001 μvolt	.0004% ± .1 nanovolts

Resolution: .1 PPM; 10^7 discrete steps
Dimensions: 19" wide; 5¼" high; 6¼" deep

JULIE MULTI-VIDER™ — FOR AUTOMATED AND COMPUTERIZED TESTING

AUTOMATIC D.C. MEASUREMENT SYSTEMS CAN NOW ATTAIN 1 PPM ACCURACIES

The extension of the one-part-per-million art of DC measurement into the fields of high speed automatic and programmable test instruments and systems has been made possible with the development of a 1 PPM automatic and remotely programmable voltage divider by Julie Research Laboratories, Inc.

AUTOMATIC VOLTAGE DIVIDER RVD-106

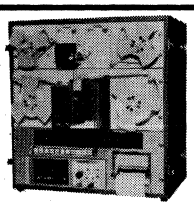
- .0001% accuracy
- Automatic
- Programmable
- May be manually operated

The six-digit (1 PPM) accurate Model RVD-106 is the latest in the JRL line of high precision relay operated voltage dividers.

The availability of the RVD-106 adds automation such as tape and computer programming capabilities, without degradation, to all JRL 1 PPM instruments such as bridges, potentiometers, voltage and current sources and ratio sets. A lower cost five-digit divider, RVD-105, is also available.

Range: ratio .000000 to 1.000000 (RVD-106); .00000 to 1.00000 (RVD-105)
Accuracy: ratio ± .0001% (RVD-106); ± .001% (RVD-105)
Resolution: 1 PPM (RVD-106); 10 PPM (RVD-105)
Response time: 10 milliseconds or less.

AUTOMATIC INPUT/OUTPUT CONTROL MODULE AIO-106



- 10-line Decimal Readout
- Punch Tape Memory
- Fully Automated

The new JRL Model AIO-106 Control Module provides visual readout, data logging and retrieval, and automatic voltage divider set and reset. When used with the new JRL data logging divider (VDR-327P), a permanent record of data is kept. When used with the new automatic, remotely programmable divider (RVD-106), not only is a permanent record of data kept but the divider can be reset from the memory of the AIO-106 to repeat each measurement on a group of components. The measured deviation from the initial reading on each component together with a component identification number is returned to memory storage and also printed out together with the original measured value.

AUTOMATIC DATA LOGGING VOLTAGE DIVIDER VDR-327P

- 7 Digits
- 10 Line Decimal and/or BCD Outputs
- .0001% accuracy

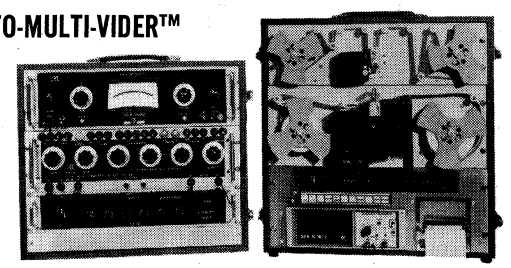
The JRL Model VDR-327P is identical to the VDR-327J with an added feature. Visual displays, paper tape or typewriter printers, tape punch and other computer I/O equipment can be fed from the outputs located at the rear of the device.

SCANNING MATRIX SM-106

- High speed scanning of short or long production runs
- Converts any conventional equipment into high speed tester
- Converts any Digital Voltmeter into high speed tester
- Automated programmable test tray

The JRL Scanning Matrix SM-106 represents one process for automated systematic component testing and measurement. Any number of components may be placed into the various connectors of the SM-106; then any scanning program will be followed so that several components per second are measured using external bridges, potentiometers, etc. Output and power input terminals are provided. Either four terminal or two terminal measurements are possible. Provision is made for manual scanning.

AUTO-MULTI-VIDER™



The portable plug-in type automated DC measurement system, the Auto-Multi-Vider (at left), incorporates the RVD-106 or the VDR-327P Kelvin Varley Voltage Divider as its basic readout module. The Auto-Multi-Vider and the JRL Model AIO-106 Control Module form a complete automatic measurement and data logging system. The outputs of this system (component identification number and measured value) are also available for multiplexing into other computer facilities. This unique system covers all DC parameters of measurement and generation and can be programmed to perform all automated test and calibration programs.

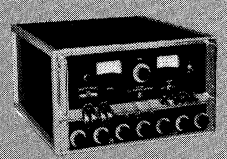
JULIE SOURCES — DC PRECISION VOLTAGE AND CURRENT SOURCES

HIGH VOLTAGE 0.0015%

MODEL DVS-106

Whether used for calibration of high-precision DC voltmeters or other purpose, DVS-106 provides ultra-stable output levels in 3 dual ranges from 0 to ±1200 vdc, fs. Each range affords 12 million dialable steps with a linearity of .0001% and an output stability which is maintained to within 0.002% for a period of at least 30 days.
Completely self-contained. Direct reading with full front panel control for all functions, including range selection, polarity reversal and automatic voltage as well as current monitoring and calibration.

Output range: 0 to ±12, 120, 1200 vdc
Resolution: 7 digits
Accuracy: 0.0015% of setting ±1 ppm (fs)
Linearity: 0.0005%
Stability: 0.0001% (fs)
0.0015% of setting + 0.0001% of fs, 7 days
0.0025% of setting + 0.0001% of fs, 6 mos.



HIGH CURRENT 0.003%

Model DCS 105

Model DCS 105 is a high precision current source which is a companion instrument to the DVS 106. It features high linearity (.0025% on the 10 amp range; .001% on the other ranges) and easy front panel calibration. DCS 105 is lightweight (40 lbs.) and highly reliable because of its all solid-state circuitry.

Julie high current sources can be used with Julie potentiometers to make high-accuracy, low resistance measurement systems. These systems feature a resolution of 10 pico-ohms and make yoke and lead compensation unnecessary. Accuracy of .001%.

- Simultaneous display of output voltage and current
- All solid state

Ranges: 0 to ± 1.2, 12, 120 ma
1.2, 12 amps
Accuracy: Low Ranges: .003%
1.2 amps .006%
12 amps .01%
Compliance: ±10V
Line Regulation: .0005%

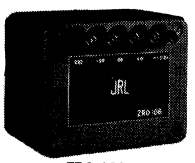
JULIE REFERENCES — REFERENCES, OPERATIONAL AMPLIFIERS AND SYSTEMS

SOLID STATE REFERENCES — OVENIZED

- Extremely rugged
- Short-Circuit Proof
- 3 Voltage Levels for Intercomparison

ZRO-106A
HALF-RACK MODEL

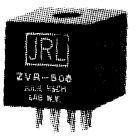


ZRO-106
BENCH MODEL

ZRO-106 is a Zener reference source enclosed in a proportional, temperature-controlled air bath. Extremely rugged and short-circuit proof, this reference has stability approaching that of saturated cells.
Also available is an ovenless reference ZVR-106.

Output levels: +1.018v., +1v., −5v, or any combination
Line regulation: 1 ppm 15% line change
Stability: 10 ppm/month
Power: 105-120 vac; can be supplied from external 24vdc supply or portable battery pack.

MINIATURE ZENER VOLTAGE REFERENCE MODULE



Model ZVR-500 Series

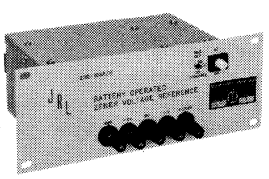
- *Zero Temperature Coefficient
- Fast Warm-Up time
- .0001%/day stability
- Smaller than a 1" cube
- Contains internal regulating circuitry

In the space-age technology of today comes the ever increasing demands for portability, reliability, compactness, and ruggedness. In this realm the demand for voltage references possessing such desirable features as high, long and short term stability, fast warm-up, *zero temperature coefficient, and excellent short circuit recovery characteristics, are also in the forefront.
To meet these demands Julie Research Laboratories has developed an entirely new voltage reference module, ZVR-500 series, which virtually discards the need of oven enclosed references. The unit is less than the size of a one inch cube; it can be mounted on a printed circuit board or plugged into a standard nine-pin socket. Several ZVR models are available; each is capable of delivering up to 1 ma of current to a constant load.

Model	Input (+10%)	Output (nominal)	*TC	Stability
ZVR-506	22 VDC	6.3 VDC	Less than .2 ppm/°C from 20° to 30°C	1 ppm/day
ZVR-512	24 VDC	12.6 VDC		10 ppm/mo.
ZVR-518	35 VDC	18.9 VDC		

Operating Temperature Range: 0°C to 50°C, 0 to 10,000 Feet Altitude.
Humidity: 0 to 90% R.H.
Storage Temperature Range: −55°C to 60°C, 0 to 40,000 Feet Altitude.

BATTERY OPERATED ZENER VOLTAGE REFERENCE



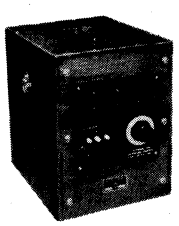
Model ZVR-106B

- Battery operated
- Internal charging circuit
- TC: Less than 1 ppm/°C
- Stable to 1 ppm/day

The ZVR-106B (bench model) and ZVR-106A/B (half rack model) combine the advantages of a miniature "Zero TC" reference module (JRL Model ZVR-506) low TC resistors (less than 1 ppm of ratio /°C) and an internal ni-cad power source with internal charging circuit to produce a completely portable, self-contained, high stable, voltage reference that can be used with confidence for almost any production or laboratory requirement.
There are three available output voltage taps: 5 V, 1 V, and a 1.018 V tap (nominal) useful for comparing cells, or quick easy determination of the zener's accuracy. Line regulation is better than 1 ppm/15% line change; while switching from battery operation to AC line operation changes the output less than 1 ppm. Lasts 10 hours on a single charge.

Either the ZRO or the ZVR may be used as references for operational amplifiers, dialable voltage sources, dialable current sources, and precision potentiometers.

VOLTAGE REFERENCES



SCO-106
Guaranteed
0.0001%

SCO-106 Primary standard voltage reference. Provides the highest accuracy and stability obtainable. This is derived from 3 saturated standard cells in a temperature stabilized enclosure which afford two orders of magnitude better accuracy than unsaturated cells customarily used for laboratory work. The SCO-106 is transportable under oven heat thus eliminating the need for lengthy restabilization.

Accuracy: ±0.0001% (voltage) absolute*
Stability: ±0.0001%/year
Temp Reg: ±0.05°C long term

*With NBS Certification.
With JRL Certification, 0.0002%.

OPERATIONAL AMPLIFIERS

OA 600 SERIES

Output Power Capability:
OA-601, ±10 ma, zero to 1000 ohms load
OA-602, ±40 ma, zero to 750 ohms load
OA-603, ±10 amps, zero to 1 ohm load
OA-604, ±1,200 volts, 35 ma capability
OA-605, ±150 volts, 50 ma capability

Julie self-powered OA series operational amplifiers are uniquely drift free and ultra-low in noise content. Specially designed for high precision DC applications, these amplifiers feature input stability of 100 nanovolts and typical gains from 10^6 (120db) to 10^8 (160db).
Julie precision resistors, references, dividers and amplifiers can easily be assembled into high precision generators and sources in a wide range of output configurations.

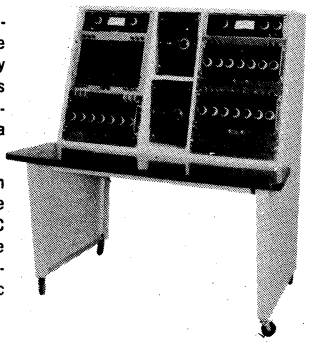
TYPICAL SYSTEM
DIALABLE VOLTAGE REFERENCE SOURCE DRU 207

Linearity: 0.0001% (fs)
Resolution: 7 digits
Output: 0 to ±3V
Stability: .2μv/24 hrs.
Output Impedance: 100 μohms

Components:
1 Standard Cell SCO 106
1 Operational Amp. OA 601
1 Voltage Divider VDR 307

AC/DC SYSTEMS — STANDARDS LAB, SYSTEMS, SPECIAL PACKAGES, TRAINING WORKSHOPS

ENGINEERING DATA AND ASSISTANCE



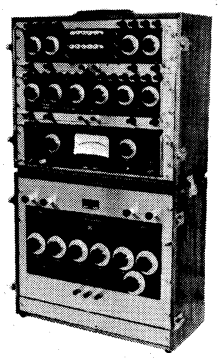
Multi-Vider systems may be assembled for special purposes from the basic Multi-Vider units and the many specific plug-ins. Special plug-ins can be designed for special applications. Automatic systems and data logging are our specialties.

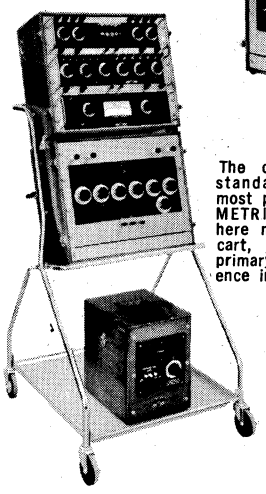
The exclusive JRL instrumentation console shown here contains, on the right, a complete RATIOMETRIC DC standards laboratory, and, on the left, a complete wide-range DC current source, assembled from basic RATIOMETRIC instrument modules.

Specifications, Ratiometrics Laboratory:

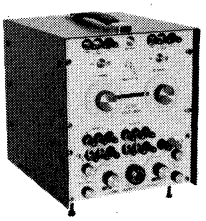
Performance of the complete system is specified by combining the specification abstracts in the preceding pages for:

Primary Standard
Voltage System: PVP-1000S
Resistance Bridge: PRB-205S
Voltage Divider: VDR-106/7
Voltage Reference: SCO-106
Null Detector: ND-106





The complete JRL portable standards laboratory — the most popular form of RATIOMETRIC facility — is shown here mounted on a portable cart, which also carries a primary standard emf reference in oven, SCO-106.



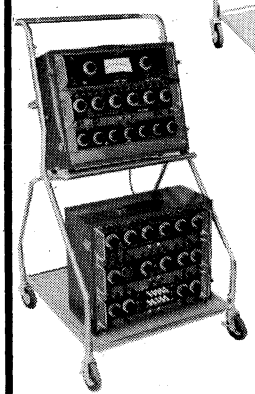
AC TO DC THERMAL TRANSFER STANDARD

The JRL Model **TRS-105** Thermal Transfer Standard is designed to provide rapid and simple referencing of any AC voltage up to 1,024 vrms to known DC voltages with a basic accuracy of .001% without the use of calibration curves or correction tables and with excellent thermal stability and DC reversal error. **Voltage Ranges: 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1,024 vrms with each range useful from .5 to 1 times its maximum.**

AC/DC Uncertainty:

	to 64V	128 to 512V	1,024V
5 Hz through 10 KHz	.001%	.002%	.003%
10 KHz through 20 KHz	.002%	.003%	.005%
20 KHz through 50 KHz	.003%	.004%	.01%
50 KHz through 100 KHz	.02%	.1%	.2%
100 KHz through 1 MHz	.1% up to 10 V.		

Thermocouple Reversal Error: Less than .0005% of input.
Input Impedance: 100 ohms/volt.



Transit case available with each bench laboratory

PORTABLE MULTI-VIDER with Plug in Storage Rack

The Julie Multi-Vider and Plug-in Carrier shown here mounted on a cart is the most convenient way of utilizing the portability of the Multi-Vider system while still maintaining a high degree of flexibility.

JULIE LITERATURE AND TRAINING WORKSHOPS

This "miniature textbook" provides a detailed exposition of Ratiometrics as a philosophy, as a science, and as a "body of method." An index to the articles and papers published about the Ratiometric method and other state-of-the-art instrumentation techniques. Ten such documents published in an 18-month period are shown and summarized.

THE JULIE 2-DAY COURSE

Provided as a service without charge, the JRL Workshop is a special course of lectures and laboratory exercises in a new, simplified method of DC measurement, calibration and certification.

A session of the Julie school is pictured on the left. All aspects of the Ratiometric measurement method—philosophy, theory, instrumentation, techniques proof, procedures—are covered in these courses. A text-book is provided. This training program is one of the features that make Ratiometrics the cost complete, as well as the most accurate, method of DC measurement. As will be seen from the attendance summary, sent on request, scores of the world's leading electronic organizations — National Laboratories, Government Units, Colleges, Universities, Manufacturing Firms and others —have participated in the program.

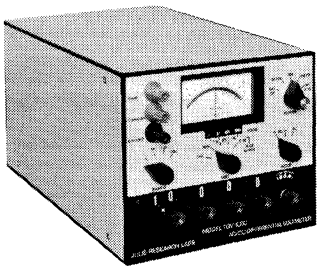
JULIE NEW DEVELOPMENTS—1969

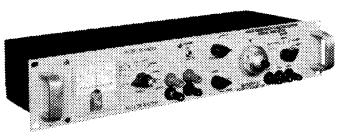
MODEL TDV-1000 AC/DC DIFFERENTIAL VOLTMETER



- ±.0025% DC Accuracy
- ±.05% AC Accuracy
- Infinite-Life Solid-State Chopper
- 80 Percent Fewer Calibration Adjustments
- 0-1100 Volts AC/DC on Four Ranges
- Battery or Line Operated
- 100 Microvolts F.S. Sensitivity
- Frequency Range of 10 Hz to 100 KHz
- Operates from 4°C to 40°C, from 0 to 10,000 Feet Altitude, at from 0 to 90% R.H.

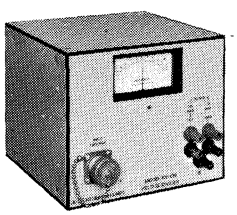
Included in its completely solid-state electrical design is an infinite-life solid-state chopper that never requires servicing. This instrument reflects real state-of-the-art accomplishments in modern instrumentation techniques. Size: 7″ L x 8½″ W x 14¾″ D.

MODEL NVS-503A and NVS-1103A MICROVOLT POTENTIOMETER and SOURCE



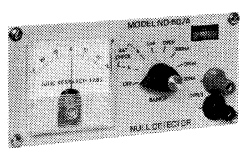
- Accuracy is ±.04% of Reading or ±.004% of Range or .1 uv Whichever is Greater
- Operates from 4°C to 40°C, from 0 to 10,000 Feet Altitude, at from 0 to 90% R.H.
- 5 Microvolts (0.2 nv Resolution) to 500 Millivolts in 6 Ranges for NVS-503A
- 10 Microvolts (0.2 nv Resolution) to 1.1 Volts in 6 Ranges for NVS-1103A
- Only 3½″ High Standard Rack Mount
- Completely Self-Powered
- Removable Null Detector

MODEL KV-10R and KV-5R HIGH VOLTAGE DIVIDERS



- 0-10KV D.C. Maximum Input (KV-10R); 0-5KV D.C. (KV-5R)
- .01% Accurate Ratios of 1,000:1 and 10,000:1 (KV-10R); 500:1 and 5,000:1 (KV-5R)
- 10 Megohms Input Resistance (KV-10R); 5 Megohms (KV-5R)
- Ratio Stability of .0015% per Year
- Size only 7″ L x 8½″ W x 8″ D
- Operates from 4°C to 40°C from 0 to 10,000 Feet Altitude at from 0 to 90% R.H.

MODEL ND-507A ELECTRONIC NULL DETECTOR



- 30-0-30 Nanoamperes (2na/scale division)
  300-0-300 Nanoamperes (20na/scale division)
  3-0-3 Microamperes (200 na/scale division)
- Maximum Drift of 10 Nanoamperes Per Hour After 60 Seconds Warm-Up
- Powered With Self-Contained Mercury Cell for 150 Hours of Operation
- Operates from 4°C to 40°C from 0 to 10,000 Feet Altitude at from 0 to 90% R.H.

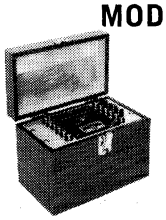
MODEL HV SERIES ULTRA HIGH VOLTAGE DIVIDERS

- HV-100, 100,000 V D.C. Maximum Input Voltage; 85,000 V D.C. (HV-85) (other inputs available upon request)
- Ratio Accuracy ±.05%
- Output Levels 10 V D.C. or 1 V D.C. (other outputs available upon request)

MODEL DR-100 (Series) PRECISION DECADE RESISTOR

- Standard Accuracy of .02%
- Accuracy of .0025% Available
- 6 Decades
- Resistances Up to 12 Megohms

MODEL NB-104S PORTABLE STANDARD REFERENCE RESISTOR



- Stability 1 PPM/year
- Accuracy ±5 PPM
- Resistance Value 10,000 ohms.

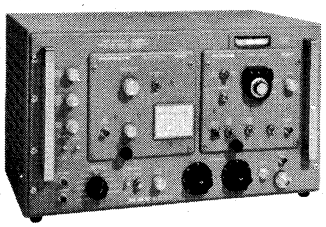
KAY Sweep and Marker Generators



1500C
20 Hz-4 GHz

1500C: The model 1500C is a high performance solid-state sweep and marker system which accepts a variety of sweep and marker plug-ins to cover the frequency spectrum from 20 Hz to 4 GHz. The basic rack unit contains a variable sawtooth sweep generator, a fast-acting AGC, birdie and pulse marker controls, and RF output circuits including precision attenuators and built-in detector.

860H: The model 860H includes all of the features of the model 1500C with the exception of the frequency marking facility. It is intended for use where the frequency marking is obtained from an external source or counter.

SWEEP PLUG-INS for the 1500C and 860H systems feature: A group of highly stable, low residual audio band modules; extremely flat wide band video, VHF and UHF plug-ins; and a new series of low cost, high output, solid-state microwave devices which extend the range of these systems to 4 GHz.

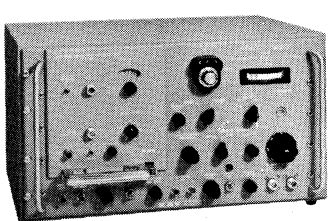
MARKER PLUG-INS for the 1500C include: Model PCM7631, 7632, 7633, and 932 which provide customer specified crystal pulse markers.

Model PCM861 which supplies either single frequency or harmonic birdie-pip markers.

Model PM7670 featuring a completely variable birdie-pip marker *plus* 1 and 5 MHz harmonic markers *plus* a counter output terminal for monitoring the variable mark and pin-pointing critical frequencies.

Frequency Range	Model	Sweep Width	RF Output	FEATURES
20 Hz—200 KHz	PC-141A	0*—20 KHz	1.0V RMS into 50 ohms	Ultra-stable, Narrow band plug-ins. Crystal-controlled beat-frequency oscillators provide 1.0 V rms output with excellent waveshape. Extremely low residual FM: <0.2 Hz. Drift: <3 Hz/min. Log or linear sweeps.
35 Hz—600 KHz	PC-142A	0*—40 KHz		
100 Hz—2 MHz	PC-130F	0*—2 MHz		Ultra-stable, narrow sweep plug-ins; wide sweeps to 2 MHz. Residual FM: <1 Hz. Drift: <30 Hz/min. Log or linear sweeps.
1 KHz—20 MHz	PC-152B	0*—20 MHz		Wide video sweep plug-in; sweeps from 20 MHz down to less than 1 KHz. Log or Lin sweeps. Spurious beats down more than 30 DB. Residual FM: <150 Hz.
50 KHz—115 MHz	PC-154A	0*—100 MHz		Solid-state wide sweep plug-in; very flat output: ±.25 DB; harmonic and spurious distortions >30 DB down. Residual FM: <100 Hz. Log and Linear sweeps.
1—175 MHz	PC-857A	0*—30%		Ultra stable, narrow band plug-in, very low residual FM.
2—220 MHz	PC-860F	0*—30%		Solid-state, fundamental frequency sweeps to 220 MHz; Twelve band direct reading dial; high output with excellent waveshape. Extremely low residual FM.
220—470 MHz	PC-867A	20 KHz—70 MHz	0.5V rms into 50Ω	Solid-state, VHF-UHF, fundamental frequency sweeps. Excellent waveshape.
Following Models Available for 1500-C, 860-H and 121-C Rack Systems				
100 MHz—1 GHz (Any octave)	PC-123A P-123A	0.2%—octave	0.5V rms into 50Ω	Solid-state octave sweeps to customer specifications. Excellent linearity over full octaves. Stable outputs.
.75—1.5 GHz	PC-120A P-120A	Nom. 0—Full octave	10 MW levelled 13 MW unlevelled	Completely solid-state octave-wide sweep plug-ins; high-level outputs. External or internal pin levelling. Quality not luxury prices; spurious distortion: >60 DB down, Harmonic distortion: >20 DB down.
1—2 GHz	PC-125A P-125A	Nom. 0—Full octave		
1.2—2.4 GHz	PC-126A P-126A	Nom. 0—Full octave	50 MW levelled 70 MW unlevelled	
1.5—3 GHz	PC-128A P-128A	Nom. 0—Full octave	15 MW levelled 18 MW unlevelled	
2—4 GHz	PC-127A P-127A	Nom. 0—Full octave	10 MW levelled 13 MW unlevelled	

* Residual



121C
500 KHz-4 GHz

121C: This solid-state instrument is an electronically swept wide sweep and marker generator which accepts a choice of UHF and microwave sweep plug-ins to provide extended frequency ranges and sweep widths. With its plug-ins, the 121C covers a range of 500 KHz—4 GHz, offers a new series of solid-state microwave sweeps featuring high output at low cost, and accepts a variety of narrow and wide-sweep plug-ins for special applications such as UHF TV.

The basic 121C system includes variable sweep rates, external modulation, CW and manual operation, built-in attenuator and detector plus a fine digital frequency control for smooth center frequency settings and remarkable adjustment during narrow operation.

Frequency Range	Model	Sweep Width	RF Output	FEATURES
500 KHz—1050 MHz	P-121A	5 KHz—350 MHz	0.5V rms	Electronic, wide-sweep, stable narrow sweeps.
900—1300 MHz	P-122	200 KHz—400 MHz	0.5V rms	Electronic, wide-sweep, stable narrow sweeps.
1.3—1.7 GHz	P-124A	500 KHz—400 MHz	0.5V rms	Electronic, solid-state, wide sweep.
.75—4 GHz	Microwave Plug-in Models P120 thru P128 see table above

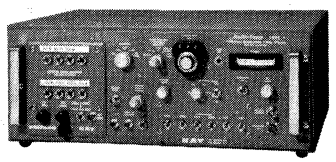
154C - 159C: These up-to-the-minute versions of Kay's 154 and 159 are completely solid-state, electronically swept, wide-sweep and marker generators which cover their ranges in a single wide sweep. The additional features of continuously variable sweep width and multiturn digital frequency dial provide exceptional fine touch settings over the video, IF and VHF range. The use of a broad output amplifier in these beat frequency units permits light coupling of the mixed oscillators, thus providing high RF levels with superior waveshape; distortion and spurious are minimal.

Performance characteristics include line lock, CW, manual, wide variable sweep rates, and external modulation input. Frequency range may be swept from HI to LO or from LO to HI as required. Automatic leveling may be controlled either externally or internally.

PCM7650B and PCM7660B marker plug-ins offer up to eight, optional, pulse or birdie markers at customer specified frequencies. New model PM7670 provides variable birdie marker plus harmonics of 1 and 5 MHz — plus counter output for critical measurements. Provision for a variable birdie marker derived



159C
1-300 MHz

from an external oscillator is included on these instruments. A built-in detector and precision step attenuator are standard features.

Freq. Range	Model No.	Sweep Width	RF Output	Flatness	Markers	Features
50 KHz-110 MHz	154C	5 KHz-100 MHz	1.0 V., 50Ω metered	±0.25 db	PM7660 up to 8 single markers to order. PM7650 up to 8 pulse birdie or 7 harmonic birdie markers to order. PM7670 variable birdie plus 1 and 5MHz harmonic birdie markers.	Solid-state, wide sweep: plug-in marker system. Sweeps full 110 MHz to low end 50 KHz. Pulse and harmonic markers. Sweep rates .01-1000 Hz.
1MHz-300 MHz	159C	20 KHz-300 MHz	0.5 V., 50Ω metered			Similar to 154C solid-state sweep and marker system. Very flat, very low harmonics and spurious.

KAY Sweep Synthesizers

101A: The model 101A is a sweep synthesizer which provides not only the solid-state 100 MHz wide sweep capability of Kay's proven 154C (see above) but also superb, low residual, narrow sweep features essential for steep-skirted, narrow band filter applications and for the design and production of pin-point frequency discriminating circuits. In addition it provides a new order of swept and cw stability, of narrow-band frequency marking, of calibrated (0.01%) cw output frequencies, and of digital/analog programmability through the use of newly developed IC synthesizer circuitry. The price at around $3000 for a unit that includes a "locked" range of 100 KHz to 100 MHz is a fraction of the cost of the usual synthesizers.

Front panel controls select stabilized (±5ppm/min; 20ppm/hr) cw operation, stabilized narrow-sweep operation variable up to 4% of center frequency, or free-running wide sweep operation variable up to 100 MHz of sweep between the limits of 50 KHz and 110 MHz. The stabilized frequency output is controlled by a direct-reading 3 place digital switch arrangement (calibrated to ±0.002%) and a digital-reading, vernier dial calibrated for overall accuracy of ±0.01%. Center frequency and sweep width are remotely programmable.

The standard 101A includes a wide range of variable sweep rates, manual sweep, external and cw modes of operation, front panel zero adjust, built-in attenuators, and detectors; plus a pin-point digital-frequency readout. It also includes provision for switched pulse and birdie markers using the models PM7650 and PM7660 as above. IC circuits are used in the new variable plug-in module model PM-10. This complex system consists of: (1) A direct reading variable pulse marker — only cycles wide and accurate to ±.05%. (2) A slave pulse marker that can be accurately and simultaneously set only cycles away. (3) A mixer-amplifier providing all marker coupling and 30 db of pre-amplifier gain.

Kay in-line and rotary attenuators are designed to provide a means of inserting an accurate and fixed amount of loss in circuits operating in the DC-12.4 GHz range. Attenuation is controlled by field-proven high-frequency toggle switches. Solid silver contacts set in Teflon for low loss and superior match are employed throughout. The precision resistors used are 1% tolerance, carbon film resistors. The maximum total error is very low and incidental insertion loss is negligible. These units have met rigid environmental tests and are traceable to N.B.S.

The individually-switched steps are isolated in broad-tuned, shielded compartments, providing high accuracy and a flat frequency response over the specified range. All models are symmetrical, (bi-directional), attenuators. Most models are available in either 50, 75, or 90 ohms.

To afford maximum utility, Kay in-line attenuators are available for your special built-in applications. These attenuators are ideally suited for inclusion in a wide variety of equipment, such as test equipment, IF amplifiers, receivers, etc. In general, the electrical specifications are the same as for the in-line model. They differ, however, in mechanical configuration.

PROGRAMMABLE

A new series of programmable attenuators has been introduced to provide precise increments of fixed attenuation which may be switched from a remote position or be controlled by programmed opens and shorts on a 9 wire control system.

These models feature programmed values of attenuation in the DC-12.4 GHz region. Utilizing Kay's proven in-line models, these devices incorporate a new light-weight, low-cost control package that includes a low-level SCR network,

ATTENUATORS

facilitating use in large test systems where a low current drain is essential.

A rotary control arrangement is available for remote sequential control of attenuator levels.

4430B — DC - 1300 MHz
0-135 db in 1 db steps

4461A — DC - 4 GHz
0-132 db in 1 db steps

4424A — DC - 6 GHz
0-90 db in 10 db steps

COAXIAL ATTENUATORS

A new group of switched, coaxial attenuators is now available to span the DC - 12.4 GHz range. Developed from Kay's precision VHF - UHF attenuators, these devices eliminate the cumbersome technique of inserting and reinserting individual pads or the need to go thru a time-consuming rotary step-cycle.

Individual attenuation steps are controlled by finger operated, spring-loaded slide switches. These models consist of a complete coaxial system. Each segment is constructed with air dielectrics, and fine silver contacts insuring precision surfaces. Individual steps are isolated in broad-tuned, shielded compartments.

A variety of models is available to provide customer specified attenuation and frequency ranges covering the 0 - 132 db — DC-12.4 GHz range. Standard models are listed on the attenuator chart; many attenuators in this series are available in single coaxial pads, two or three step versions or special versions to suit customer specifications.

- **One Band, Application Oriented, Sweep and Marker Units.**
- **Easy to Use, Lower Cost Excellent for Production.**

1483B: The new 1483B is a solid-state sweep and marker generator used to design, test, and align UHF-TV receivers, it develops a full 0.5 volt rms output into load over the entire channel 14 to 83 frequency range. A front panel control permits switching of the sweep width from a wide 520 MHz (entire UHF-TV band) to continuously variable widths from 60 down to 5 MHz.

Channels 14 and 83 are provided at two separate switch positions, allowing easy selection of the extreme ends of the UHF band. Single or harmonic frequency birdie marker modules are available at customer specified frequencies. A variable marker input is provided. Provisions have been made for the use of two, optional, precise rotary attenuators. The attenuation ranges available include 0-10 DB in one DB steps, 0-33 DB in 3 DB steps, and 0-60 DB in 10 DB steps.

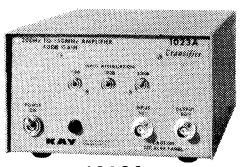
1484-A: A new UHF fundamental frequency, wide sweep generator is now available as a plug-in module for use in the 1484. The module provides a swept output in a single sweep with no spurious and no beats generated. Harmonic distortion is more than 30 db down and the 1.0 V rms output is flatter than ±.25 db overall. Sweep width is continuously variable from 0 to the 190 MHz range of the module.

The standard 1484 offers sweep and marker capabilities in a limited (e.g., 10.7 MHz, 88-108 MHz) range production type unit. Frequencies may be selected up to 1 GHz.

The 1484 may be specified with pulse, CW and harmonic birdie markers, RF turn-off or post injection markers. RF output is controlled by two optional attenuators and a 5 db variable RF level control.

The 1484 as well as the 1483 is half rack size and may be combined for production applications utilizing dual outputs.

Model No.	Frequency Range	Features
1483	UHF Channels	Compact, Low Cost
1484	Selectable to 1 GHz	Production Radio and TV Sweeps



1023A

- **High Output Video Amplifier**
- **300MHz Wide Flat Amplifier**

AMPLIFIERS

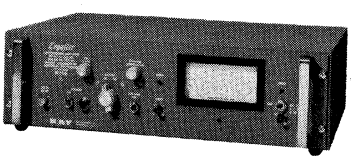
1022A, 1023A, 1024A: These solid-state video amplifiers include two wide-band models with excellent gain-bandwidth characteristics, (40 db - 150 MHz, 30 db - 300 MHz), and a high output 8 MHz unit delivering 15 volts rms into 50 ohms. Each of these amplifiers has unusually flat response over its full frequency range. Each is designed for accurate input and output impedances of 50 ohms, but can operate an accessory probe to provide amplification from high-impedance outputs without loading down the test signals.

For high impedance applications, the 965A broad-band probe is designed for operation with these 50 ohm input amplifiers.

LOG AMPLIFIERS

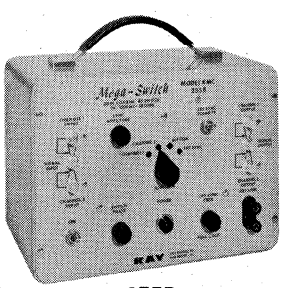
1025B: The 1025B gives overall response, and at the same time gives detailed, easily seen measurements of points on the curves as far down as 80 db. The unit permits highly accurate viewing of the skirts and sharp slopes of bandpass filters, single side-band filters, traps, etc. A control gives expansion of the top critical points simultaneously with the log display. 80 db log range, also available as undetected RF signal.

Model	Frequency	Features
1022	50KHz-8MHz	High 15V RMS Output Flat to Within .25DB
1023	1KHz-150MHz	40DB Gain; Compact Built-in Attenuator
1024	200Hz-300MHz	Wide Band Unit with 30DB Gain; Low Noise
1025	20KHz-220MHz	Log Amp with Dynamic Range of 80DB; Lin. Range



1025B

- **Log Amplifier for Swept Filter Applications.**



255B

COAXIAL SWITCH

Essentially, the 255B provides a high frequency DPDT coaxial switch whose rate of switching can be set by an internal generator or can be locked to an external sync signal. A phase shift control is included so that the starting point of the switching action can be varied.

In general, any application which can benefit by a "simultaneous" display, by the continual referencing of one significant characteristic vs. another; by the action, that is, of an automatic switch with superior switching, range, and control can profitably employ the 255B.

- FREQUENCY RANGE: DC to 1000 MHz
- VSWR: DC to 500 MHz — less than 1.15:1
  500 to 1000 MHz — less than 1.4:1
- CROSSTALK: Down more than 70 DB, (measured at 200 MHz)
- SWITCHING RATE: With external sync, 0.2 - 100 Hz;
  With internal sync, 5 - 100Hz

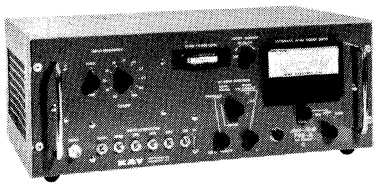
KAY SOLID-STATE NOISE FIGURE METERS



792A

- TUNED IF INPUT AMPLIFIER (NO SPURIOUS READINGS
- BROAD 10-1000 MHz SOURCE (NO CHANGING SOURCE IN MID-BAND)
- OPTIMIZED IN PRICE AND PERFORMANCE FOR 10-1000 MHz RANGE
- NOISE MEASUREMENTS TO 26.5 GHz
- 75Ω MEASUREMENTS FOR CATV COVERAGE

The 792A is a sensitive, solid-state, noise figure meter. Primarily focused on the frequency range below 1000 MHz, this instrument provides better accuracy and greater flexibility at considerably less cost than conventional noise generators. The 7921A hot wire noise source is a unique broad band generator and operates over the full 10-1000 MHz range.

Provision is made for later addition of noise sources covering the range to 26.5 GHz. In this way, an expanded applications requirement can be met without the full expense or added space demands of an additional unit.

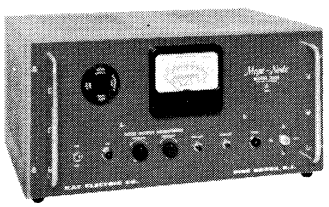
Additional noise sources provide variable impedance and balanced VHF outputs from temperature-limited diodes, waveguide output from argon gas tubes. Either 6 db or 15.2 db excess noise outputs can be selected for increased accuracy at low or high noise figures, respectively.

This wide coverage eliminates the inconvenience (and the inaccuracies) of changing noise generator source in mid-band, as is usually required.

INPUT FREQUENCY: 10-120 MHz Continuous Coverage
BANDWIDTH: Approx. 4% of Center Frequency
INPUT SENSITIVITY: 0 to 75 dbm (noise source on). Approx. 35 db gain required between lowest noise source & input.
INPUT IMPEDANCE: 50 ohms nominal
INPUT ATTENUATOR: Steps of 20, 10, 5, 3, 2, and 1 db.

Model No.	Frequency Range	Type	NF Range	VSWR	Excess Noise Output	Accuracy
7921A	10-1000 MHz	Hot Wire	0-20 db	1.2:1 to 900 MHz 1.35:1 to 1 GHz	6 db	±0.1 db 10-200 MHz ±0.2 db 200-400 MHz ±0.3 db 400-1000 MHz
NM-781	.4-4 GHz	Argon Waveguide	3-30 db	1.3:1	15.2 db	±0.5 db
RG-48/U RG-53/U	2.6-26.5 GHz	Argon Waveguide	3-30 db	1.1:1	15.45 db	±0.5 db

NOISE GENERATORS



780A

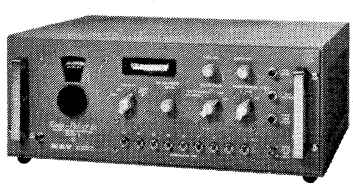
240, 403, 780: These models are calibrated random noise sources providing output over a wide frequency and power range. They employ noise diodes with tungsten filaments as temperature-limited noise generators. The plate voltage of the noise diode is regulated and the diode plate current, (proportional to noise power output), is variable by a front panel control. A calibrated meter provides direct reading in noise figure. The ability to vary the noise output in an accurately known way, greatly simplifies the measurement process since it permits precise matching of circuit noise rather than a more complicated referencing back to some fixed output.

Model	Frequency	Features
240	5-220MHz	0-23.8DB Noise Figure
403	3-500MHz	0-19DB Noise Figure
780	1-3GHz	0-20DB Noise Figure

PULSED RF SIGNAL GENERATOR

The 5070-B is a solid-state instrument whose pulsed output features sharp rise and decay and flat tops. The unit will serve as a CW generator, as well as a video pulse generator. It provides a stable CW signal from 10 MHz to 120 MHz, continuously variable, in five overlapping bands.

The features of flat, pulsed RF, continuously variable frequency, sharp 10 ns rise and decay time, and low leakage provide for reliable and accurate measurements. The RF output is held at the same peak levels during either CW or pulsed RF operation. The carrier pulses are flat (including overshoot) within ±5% and the rise and decay times are less than 70 db (to 85 db) below the carrier level at all frequencies.



5070B

CARRIER-OFF LEVEL: 85 db to 30 MHz, 80 db to 70 MHz, 70 db to 120 MHz.
PULSED CARRIER RISE AND DECAY TIMES: Less than 10 ns.
VIDEO PULSE RISE AND DECAY TIMES: Less than 20 ns.
PULSE REPETITION RATE: 50 pps to 5000 pps.
PULSE WIDTH: 100 ns to 100 μs.
ATTENUATOR: 101 db in 1 db steps plus approximately a 6 db continuous variation.

OTHER MODELS AVAILABLE
The Model 5071-A offers a wider frequency range of 10-250 MHz. The Model 5072-A expands the standard 5070-B to provide carrier-off levels of up to 95 db.

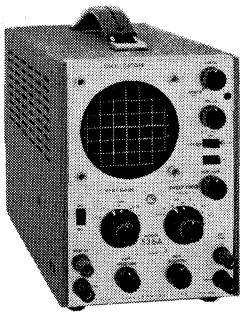
ELECTRONIC MEASURING INSTRUMENTS

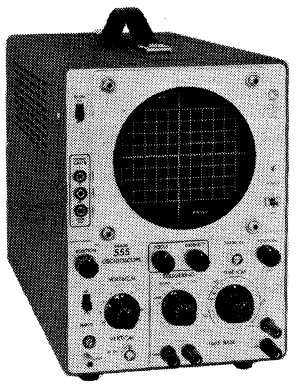


MODEL 536A (75mm) OSCILLOSCOPE

Vertical Axis
- Deflection Sensitivity: 20mVp-p/cm at 1KHz
- Frequency Response: DC 0～1.5MHz, within −3dB
  AC 2Hz ～1.5MHz, within −3dB
- Input Impedance: 1MΩ shunted by 22pF

Horizontal Axis
- Deflection Sensitivity: 300mV/cm at 1KHz
- Frequency Response: 2Hz～500KHz, within −3dB
- Input Impedance: Approx. 200KΩ shunted by 20pF

Sweep Generator
- Sweep Frequency: 10Hz～100KHz and TV. H (15.75kHz/2)
- Synchronization: Internal (+ & −), Line & External
- CRT: 3KP1F
- Dimensions: 140W×210H×355Dmm
- Net Weight: 7kg approx.

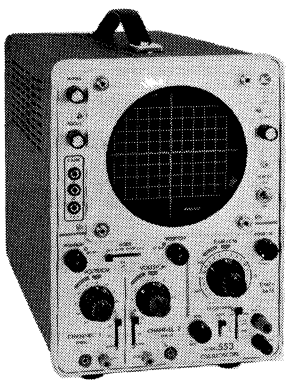


MODEL 555 (133mm) OSCILLOSCOPE

Vertical Axis
- Deflection Sensitivity: 20mV～10V/cm
- Frequency Response: DC 0～7MHz within −3dB
- Rise Time: Less than 0.05μs
- Input Impedance: 1MΩ parallel capacity less than 33pF

Horizontal (Time) Axis
- Sweep Range: 1μs～1sec/cm
- Sweep Calibration Accuracy: ±5%
- Magnifier: 5 times Accuracy: ±5%
- Trigger Range: 20Hz～7MHz

External Sweep
- Deflection Sensitivity: 1Vp-p/cm
  (possible up to about 200mVp-p/cm with 5 times magnifier)
- Frequency Response: 2Hz～200KHz
- CRT: 5UP1F or 5UP7F
- Dimensions: 205W×295H×450Dmm
- Net Weight: 11kg approx.



MODEL 553 (133mm) OSCILLOSCOPE (DUAL TRACE)

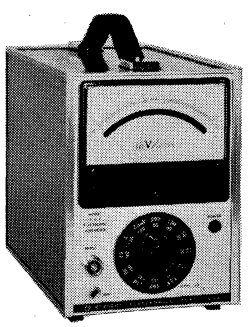
Vertical Axis
- Sensitivity: 10mV/cm～20V/cm accuracy ±3% 1-2-5 Sequence 11 position
- Frequency Response: DC～7MHz −3dB
- Input Impedance: 1MΩ parallel capacity 38pF
- Rise Time: 0.05μs

Time Base
- Time Range: 1μs/cm～1sec /cm
- Calibration Accuracy: ±5%
- Magnifier: 5 times accuracy ±5%

Trigger
- Trigger Source Internal, external, line

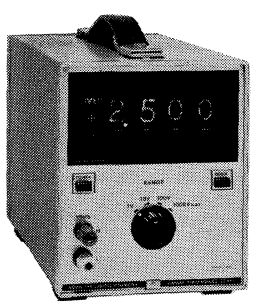
Horizontal Axis Sensitivity 1Vp-p/cm magnifier 0.2Vp-p/cm
- Input Impedance: 1MΩ parallel capacitor less than 40pF

Voltage Calibrator
- Output waveshape Square Wave
- Dimensions: 206W×295H×450Dmm
- Net Weight: 11kg approx.



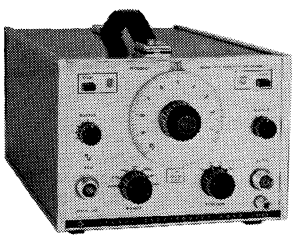
MODEL 165 AC HIGH SENSITIVE VOLTMETER

- RMS Scale: 0～1.5/5/15/50/150/500mV & 1.5/5/15/50/150/500V (12 ranges)
- dBm Scale: −60/−50/−40/−30/−20/−10/0 10/20/30/40/50dBm
- Input Impedance: 10MΩ on any range
- Accuracy: ±3% of full scale
- Stability: Less than 0.5% of full scale, for ±10% variations of line voltage
- Frequency Response: 5Hz～10MHz, ±10%
- Output: 100mV approx. at full scale indication.
- Distortion: 1%
- Frequency Response: 3Hz～15MHz, within +1, −3dB
- Dimensions: 140W×205H×295Dmm
- Net Weight: 3.5kg approx.



MODEL 155 DIGITAL VOLTMETER

- Methode of Conversion: Integrated Type
- Circuit: All Transistorized (Silicon Transistors, IC)
- Measuring Range: 4 range manually selected ±2.500V, ±25.00V, ±250.0V, ±1,000V, full scale
- Over Range: 150% (2500) or more
- Resolution: 1mV/digit
- Accuracy: ±(0.1% +1 digit) of reading, 15°C～35°C
- Polarity: Automatic change
- Input Resistance: 10MΩ on all range
- Input Terminal: Floating
- Indicator: Over-range
- Power Consumption: Approx. 16VA
- Dimensions: 130W×160H×265Dmm
- Net Weight: 4kg approx.



MODEL 455 FUNCTION GENERATOR

- Oscillation Frequency: 0.005Hz～100kHz (7 ranges)
- Accuracy: 2%±(dial scale ±0.05)
- Output: Sine, Triangular, Ramp and Square wave
- Max. output voltage: 30Vp-p or above
- Frequency characteristics
  - For 1kHz (Sine, triangular, Square wave) ±0.3dB or below
  - For 1kHz (Ramp wave) ±1dB or below
- Distortion (Sine wave): 20Hz～20kHz 1% or below 20kHz～100kHz 3% or below
- Output Impedance: 600Ω ±20%
- Square wave output voltage (at 50Ω terminal Output open): 1Vp-p or above
  Rise time (at 50Ω termination): 70 nsec or below
- Synchronous output: −10V peak or above
- Pulse width: 5μsec or below
- Start. Stop: possible
- Dimensions: 200W×155H×370Dmm
- Net Weight: 5.1kg approx.

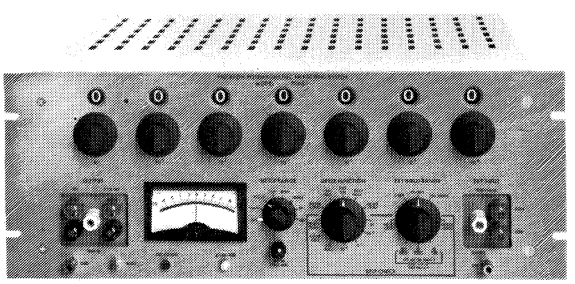
PRECISION POTENTIOMETRIC MEASURING SYSTEM PPMS-1



The Model PPMS-1 is a self-contained system with the basic components for making parts/million measurements of external resistance ratios or dc voltages up to 1000 volts.

The instrument consists of a 10-volt dc source with its saturated standard cell reference, along with other critical elements, housed in a proportional temperature controlled oven (maintained within 0.001°C), a self checking seven digit Kelvin-Varley divider, a null indicator having a basic sensitivity of 1 microvolt full scale and precision voltage dividers to scale down externally-applied voltages to within the primary range of 10 volts. A second standard cell, known as the comparison cell, is included for checking the working standard cell reference.

An output signal fully isolated from, but proportional to, the deflection of the null meter is provided for driving strip-chart and other recorders. Thus, the unit can also function as a self-contained monitor of the stability of other voltage supplies.

A unique method of self-checking the four most significant decades of the Kelvin-Varley divider WITHOUT additional equipment is built in. The built-in circuitry also provides for verifying oven temperature and monitoring standard cell voltage and for observing the resistance of the voltage divider.

*Instruments listed above are produced under license from PAR, Princeton Applied Research Corporation, and are available exclusively from North Hills Electronics.

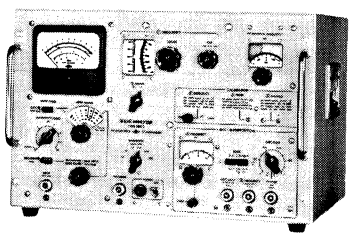
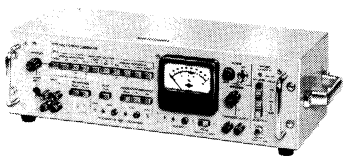
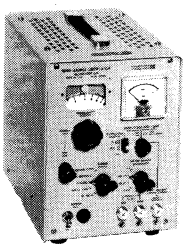
▪ COMPONENT ▪ AUDIO ▪ RF TEST EQUIPMENT *by* RADIOMETER



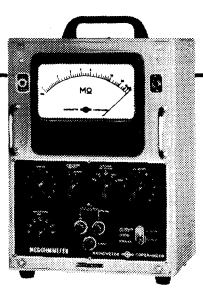
***FRA3 WAVE ANALYZER** — Frequency Coverage: 10Hz to 60kHz. Six Bandwidths: ±3, 6, 12, 25, 50 and 100 Hz. Sensitivity 30μV to 300V.f.s. Distortion, noise and hum: in the order of —100db. Recorder output. Internal BFO and Superposition Amplifier for Intermodulation Measurements.



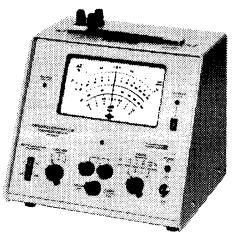
***SMG1 STEREO GENERATOR AND MODULATOR** — Both Composite and RF Outputs (100MHz). Exceptionally stable stereo signal in accordance with FCC standards. SCA modulation with FM subcarriers.



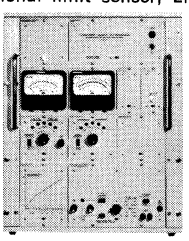
***RCO11 WIDE RANGE SINE-SQUARE WAVE GENERATOR** — 10Hz to 1MHz in 5 ranges. Metered Outputs: Sine wave; 50Ω and 600Ω (0.1mV to 1Vrms-monitored) also direct at approx. 10Ω (0 to 5V) Square wave: 50Ω and 600Ω (0.1mV to 1V peak to peak-monitored) 50ns rise time.



IM5 MEGOHM METER — High resistance measurements with low or high voltages as desired. 5 to 1000 volts for up to 10^7 MΩ. 50 to 1000 volts for up to 10^8 MΩ. Includes specific provisions for measuring capacitor dielectrics.

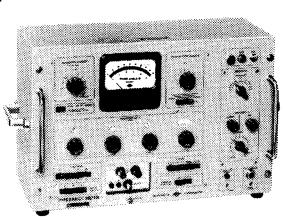


***TRB11 R-L-C COMPONENT COMPARATOR** — Rapid and accurate comparisons of magnitude and phase angle for components and networks. Manual or automatic operation without balancing. Resistance: 10Ω to 10 MΩ; Capacitance: 20 pF to 20 μF; Inductance: 1mH to 10 H. Magnitude Deviation: ±1.5% to 100% f.s. in four ranges. Phase Angle Deviation: ±.015 to 0.6 radians f.s. Output for automatic limit sensing. Test Frequency. 1kHz. Optional limit sensor, LMSI.

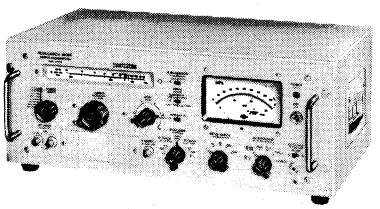


***CLT1 COMPONENT LINEARITY TEST EQUIPMENT** — Fast, nondestructive RELIABILITY TEST METHOD for detecting latent defects in resistors, capacitors and other components. May be used on laboratory basis or on-line for automatic check of up to 10 components per second. High sensitivity ■ Interference free. Impedance range: 0.01Ω to 100MΩ. 10kHz Test signal.

***CMB11 CAPACITANCE COMPARATOR** — For manual or automatic check of capacitance directly or against a standard. 7 ranges from ±1 to ±1000pF f.s. Test frequency: 1MHz. Optional limit sensor, LMSI.

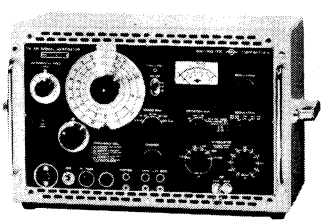


***GB11 VECTOR IMPEDANCE METER** — Accurate measurements of magnitude and phase angle of capacitive or inductive impedances from 1 ohm to 1.1 megohm. Frequency range 25 Hz to 1 MHz. Option for d-c polarization. Phase angle from 0 to ±90°

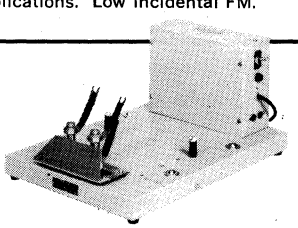


***AFM2 AM/FM MODULATION METER** — Frequency range: 5MHz to 1002MHz. AM: 3% to 100% f.s. FM: ±3kHz to ±300kHz, High Sensitivity: 3 mV to 10V input at 50Ω. Mod. Freq. Response: 10Hz to 200kHz. Automatic level control. L/R separation better than 46 db. Distortion less than 0.2%.

AFM1 AM/FM MODULATION METER — Freq. range: 3MHz to 1000MHz. AM: 3% to 100% f.s. FM: ±3kHz to ±300kHz. Accuracy: 3% f.s. AF and IF outputs for monitoring. Distortion: less than 0.5%.



MS27 FM/AM SIGNAL GENERATOR — Wide Range: 0.3 to 240MHz in 5 ranges. 0.5% accuracy with crystal calibration. Int. or ext. mod.: ±75kHz FM and 80% AM — Low distortion — ±50kHz incrimental frequency for narrow band applications. Low incidental FM.



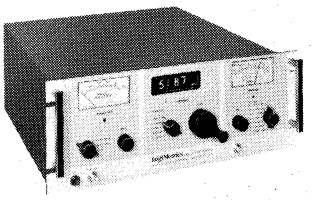
KPH1 COMPONENT TEST JIG — Electrically operated, rapid action clamp for testing large numbers of components with TRB11 and CMB11 Comparators, IM5 Megohm meter, etc. Automatically disconnects measuring circuit while changing components.

Specifications subject to change without notice. Detailed literature and demonstrations available on request. *Solid State Circuitry.

THE LONDON COMPANY 811 SHARON DRIVE • WESTLAKE, OHIO 44145
In Canada: Bach-Simpson Ltd., Box 2484, London, Ontario

LogiMetrics Digital RF Signal Generators

Model 910 —
100 kHz to 32 MHz, ddc to ±0.01% Accuracy & Resolution in an Economical, Production-Oriented Design Retaining Full 4-digit calibration. $1475.



Bands	Resolution
0.1–0.3 MHz	100 Hz
0.3–1.0 MHz	100 Hz
1.0–3.2 MHz	1 kHz
3.2–10 MHz	1 kHz
10–32 MHz	10 kHz

Accuracy: The total uncertainty, worst-case, in the frequency determination is less than 1.1 times the resolution figure quoted above.

Stability: The maximum drift observed (see note 1) will not exceed: ±1 least-significant digit per hour, after a 5-minute warmup; ±1 least-significant digit for a 10% change in line voltage; ±1 least-significant digit for a 10°C change in ambient temperature in the ambient range from 0° to 50°C.

Calibration: Direct reading, in correct units, with automatic decimal point positioning.

Output Level of CW signal adjustable from 100 μV to 1.0 V, by calibrated attenuator.

Power Level: –67 to +13 dBm, CW or peak modulated. (0 dBm = 1 milliwatt into 50 Ω).

Attenuator: 7 steps, 10 dB/step, plus continuously adjustable 18 dB calibrated vernier.

Monitor: 3½" meter, 0–0.3/0–1V, –15 to +3 dB.

Levelling: ±1 dB across range.

Accuracy: Monitor plus Attenuator uncertainty (worst-case), ±1.5 dB.

VSWR: Maximum of 1.15, terminated in 50Ω.

AMPLITUDE MODULATION
Internal: at 400 and 1000 Hz (nominal, ±5%), continuously variable 0–100%.

Envelope Linearity: < 1% distortion up to 30% AM. < 3% at 70% AM.

Monitor: 3½" meter, scaled: 0–100%.

FREQUENCY SHIFT CAPABILITY
Range of Control: 0.8% min. at high end of band; 0.02% min. at low end of any band.

SIGNAL ANOMALIES (see note 2).

PRINTOUT (Optional – see note 3).

POWER INPUT (see note 4).

PHYSICAL CHARACTERISTICS (see note 5; cabinet optional).

Model 920 —
50 kHz to 80 MHz, ddc to ±0.01% Accuracy & Resolution, 3 Volts/50 Ω Output. $1950.

Bands	Resolution
0.05–0.1 MHz	100 Hz
0.1–0.3 MHz	100 Hz
0.3–1.0 MHz	100 Hz
1.0–3.2 MHz	1 kHz
3.2–10 MHz	1 kHz
10–32 MHz	10 kHz
32–80 MHz	10 kHz

Accuracy: The total uncertainty, worst-case, in the frequency determination is less than 1.1 times the resolution figure quoted above.

Stability: The maximum drift observed (see note 1) will not exceed: ±1 least-significant digit per hour, after a 5-minute warmup; ±1 least-significant digit for a 10% change in line voltage; ±1 least-significant digit for a 10°C change in ambient temperature in the ambient range from 0° to 50°C.

Calibration: Direct reading, in correct units, with automatic decimal point positioning.

Output Level of CW Signal adjustable from 0.1 μV to 3.0V RMS, by precision attenuator, across 50 Ω.

Power Level: –127 to +23 dBm, CW or peak modulated. (0 dBm = 1 milliwatt into 50Ω).

Attenuator: 14 steps, 10 dB/step, plus continuously variable 18 dB calibrated vernier.

Monitor: 3½" meter, 0–1/0–3V, –15 to +3 dB.

Levelling: ±1 dB across range.

Accuracy: Monitor plus Attenuator uncertainty (worst-case), ±1.0 dB.

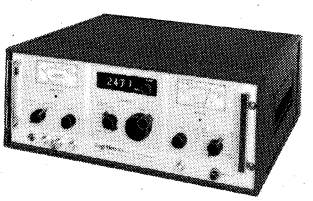
VSWR: Maximum of 1.1 terminated in 50Ω.

AMPLITUDE MODULATION
Internal: at 400 and 1000 Hz (nominal, ±5%), 0–100% at 1V RMS output and lower.

External: 20 Hz–20 kHz, when carrier permits; full 20 kHz range above 500 kHz. 0–100% at 1VRMS output and lower.

Envelope Linearity: < 1% distortion up to 30% AM; < 3% at 70% AM.

Monitor: 3½" meter, scaled 0–100%.



FREQUENCY SHIFT CAPABILITY
Range of Control: 0.8% min. at high end of any band; .02% min. at low end of any band.

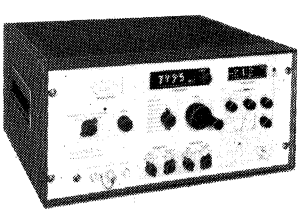
SIGNAL ANOMALIES (see note 2).

PRINTOUT (Optional – see note 3).

POWER INPUT (see note 4).

PHYSICAL CHARACTERISTICS (see note 5).

Model 930 —
50 kHz to 80 MHz ddc to ±0.01% Accuracy & Resolution. All 920 features, plus Stabilization & Programmable Frequency & Amplitude. $4200.



FREQUENCY BANDS, ACCURACY, STABILITY, & CALIBRATION.

OUTPUT LEVEL & ACCURACY.

MODULATION, DISTORTION, ETC.

} SAME AS FOR 920 ABOVE

ATTENUATOR: 1200 steps, 0.1 dB per step, plus continuously adjustable 18 dB calibrated vernier. Attenuator manually operable or programmable.

PROGRAMMABILITY
Frequency: by 8-4-2-1, BCD-coded, positive-true-logic, single-rail inputs, from any external source in which ZERO = 0.5 ±0.5V, and ONE = 3.5 to 20 Volts. Operates on any band, up to 1000 consecutive display values.

Amplitude: by BCD-coded inputs, as for frequency, over a 119.9 dB range, in 0.1 dB steps.

Model 940 —
2 MHz to 230 MHz ddc to ±0.01% Accuracy & Resolution. Stabilization and Programming Available as Standard Options. $2350.

Bands	Resolution
2–6 MHz	1 kHz
6–18 MHz	1 kHz
18–54 MHz	10 kHz
54–120 MHz	10 kHz
120–230 MHz	10 kHz

Accuracy: The total uncertainty, worst-case in the frequency determination is less than 1.1 times the resolution figure quoted above.

Stability: The maximum drift observed (see note 1) will not exceed: ±1 least-significant digit per hour, after a 5-minute warmup; ±1 least-significant digit for a 10% change in line voltage; ±1 least-significant digit for a 10°C change in ambient temperature in the ambient range from 0° to 50°C.

Calibration: Direct reading in correct units, with automatic decimal point positioning.

Output Level of CW signal adjustable from 0.1 μV to 1.0 V RMS, by precision attenuator, across 50 Ω.

Power Level: –127 to +13 dBm, CW or peak modulated (0 dBm = 1 milliwatt into 50 Ω).

Attenuator: 13 steps, 10 dB/step, plus continuously variable 18 dB calibrated vernier.

Monitor: 3½" meter, 0–0.3/0–1V, –15 to +3 dB.

Levelling: ±1 dB across range.

Accuracy: Monitor plus Attenuator uncertainty (worst-case), ±1 dB.

VSWR: Max. of 1.1 terminated in 50 Ω.

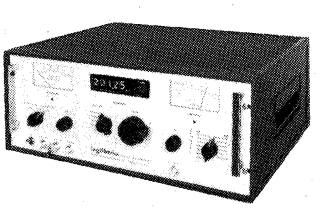
AMPLITUDE MODULATION
Internal: at 400 and 1000 Hz (nominal, ±5%), continuously variable 0–100%.

External: 20 Hz–20 kHz.

Envelope Linearity: < 1% distortion up to 30% AM. < 3% at 70% AM.

Monitor: 3½" meter, scaled 0–100%.

FREQUENCY SHIFT CAPABILITY
Range of Control: 0.8% min. at high end of any band; 0.02% min. at low end of any band.



SIGNAL ANOMALIES (see note 2).

PRINTOUT (see note 3).

POWER INPUT (see note 4).

PHYSICAL CHARACTERISTICS (see note 5).

NOTES:

1. Instabilities never affect accuracy, since they are immediately revealed by a change of frequency reading, and are therefore correctable by resetting. (This is *not*, of course, possible in conventional dial-calibrated generators.)
2. **Carrier Harmonics:** <3% of fundamental.

   Incidental FM: <100Hz + 10ppm @ 1kHz, 30% AM. Spurious AM: Hum and Noise at least 65 dB below carrier, down to thermal noise threshold of 50 Ω.

   RFI and Leakage permit receiver sensitivity measurements down to 0.1 μ V.
3. **Frequency Printout** is a standard option on the 910, 920, and 940.

   On 930: Frequency and Attenuation Printout (standard).
   BCD, 8-4-2-1, single-rail, positive-true logic. ZERO = 0.5 ±0.5V, up to 10 mA sink. ONE = 4.8 ±0.5V, from 1500 Ω.
4. **Line Voltage:** 105–125 or 210–250 VAC RMS.
   Line Frequency: 50–400 Hz.

   Power Requirement: 30 Watts nominal at >0.8 p.f. at 115V. (50W for Model 930.)
5. **Dimensions** (Rack panel): 7" High x 19" Wide x 18" Deep. (Cabinet): 7¾" High x 19¾" Wide x 18" Deep. (Cabinet optional on Model 910.)
   Weight: Net, 40 pounds maximum. Shipping, 65 pounds maximum.

LogiMetrics Digital RF Signal Generators

Featuring ddc — Direct Digital Calibration. The frequency you read is the frequency you get — to four significant digits! No drift, aging, or interpolation errors—ever!

These RF signal generators attain higher accuracy and resolution – **two orders of magnitude higher** – than the best conventional designs. In effect, each of these unique new generators provides the functional resources of **two instruments in one**: an ultra-stable, ultra-high resolution RF signal generator having high power output, low harmonic distortion, and excellent modulation linearity, and a high-speed digital frequency counter capable of direct high-frequency measurement over the required range. Ordinarily, such a combination would cost at least twice as much as a conventional (±1% calibrated) generator. However, the Series 900 designs are based on new and exclusive circuit concepts (patents applied for) that permit great simplification of the digital counter, thus reducing the price of the digitally calibrated instruments to little more than that of any high-quality RF source.

In LogiMetrics Series 900 Signal Generators, the dial is eliminated. It is replaced by "direct digital calibration" – **ddc**^{TM}– which displays the results of measuring the frequency by **directly counting** each cycle of the generated signal. This measurement is made (at all frequencies) with respect to a highly stable reference – a crystal "clock", of far greater accuracy and stability than is required for four-digit calibration.

DESIGN HIGHLIGHTS

PROGRAMMABILITY— Standard in Model 930. Digital control of both amplitude and frequency may be added in other models by use of accessories described below.

STABILIZATION– By feedback to frequency-shift (varactor-trimming) input; add accessory module Model 330, described below.

PRINTER OUTPUT– BCD-coded, compatible with most digital strip printers and other data-link/recording/processing equipments. Standard in Model 930, optional in others.

HIGH LEVELLING ACCURACY– Markedly better than conventional designs. Higher Attenuator/Monitor accuracy, too.

VERY LOW VSWR, DISTORTION, SPURIOUS.

COMPACT, COOL, LIGHTWEIGHT– All-solid-state, plus IC logic. . . completely modern design.

COMPLETE SYSTEM COMPATIBILITY– see below, and page 4, for details.

SYSTEM-COMPATIBLE ACCESSORY MODULES

Typical Accessory Module, Model 330 Digital Frequency Stabilizer/Programmer, measures 3½"h x 19"w x 18"d. Models 310 and 360 are same size.

MODEL 310 FREQUENCY-PROGRAMMING MODULE. Accepts BCD-coded digital words, and controls the frequency of any Series 900 instrument equipped for digital printout, so as to program its frequency in accordance with the coded instruction.

MODEL 330 FREQUENCY-STABILIZING MODULE. Compares BCD-coded printer output of generator to a frequency "word" selected by the six digital dials on its front panel. Differences are used to make proportional, bidirectional frequency adjustments, within the signal generator. Also functions as a manual or automated digital programmer similar to Model 310, but with an additional significant digit.

MODEL 360 AMPLITUDE PROGRAMMING MODULE. Accepts the output of any Series 900 instrument or comparable RF source, and attenuates it by an amount determined by a digitally coded word fed to it as an instruction. Attenuation is thus programmable over a 119.9 dB range, manually or automatically. Two modes: direct-reading in dB; direct-reading in dBm.

PROGRAMMABLE SYNTHESIZERS DC VOLTAGE STANDARDS

PROGRAMMABLE DC VOLTAGE

Standard Model 102

with

HIGH ABSOLUTE ACCURACY

SIX DIGIT RESOLUTION

HIGH SPEED PROGRAMMING

SWITCHES OPERATE AT 5K OHMS
No Switch Cleaning Required

Output Voltage

10 volt range: 10 microvolts to 9.99999 volts in 10 microvolt steps
100 volt range: 100 microvolts to 99.9999 volts in 100 microvolt steps

Output Current
0 to 50 ma for any setting on 10 or 100 volt range

Absolute Accuracy
10 volt range: ±(0.003% of setting +100 microvolts)
100 volt range: ±(0.005% of setting +1 millivolt)
From 20° to 30°C and for a ±10% line voltage variation

Stability 7 days
10 volt range: ±(0.001% of setting +30 microvolts)
100 volt range: ±(0.0013% of setting +300 microvolts)

Noise
10 volt range: less than 25 microvolts rms
100 volt range: less than 250 microvolts rms

ACCESSORIES

Remote Digital Readout
Operates with main unit in local or remote program mode.

Remote Programmer
Voltages or Frequencies may be preset on eight rows of manual switches. Any preset program may be selected by a front panel push button or a single contact closure. Remote programmers may be cascaded.

Programmable Attenuator
0 to 99 db in 1 db steps; DC to 60 MHz; may be controlled by front panel decade switch, remote BCD program or remote programmer accessory.

Harmonic Generator
Generates a comb of frequencies to 100 MHz precisely derived from the synthesizer.

100:1 Precision Divider
Provides a 0.1 volt range on Model 102 DC standard.

IRIG Programmers for Telemetry and FM Tape Systems
These devices generate BCD signals which program Model 201 Synthesizer to frequencies covering all telemetry channels (both constant bandwidth and proportional bandwidth). Other programmers set FM tape system center frequencies and 20 frequencies across the band in accord with IRIG standards.

60MHz, 2MHz, 100KHz and 1KHz

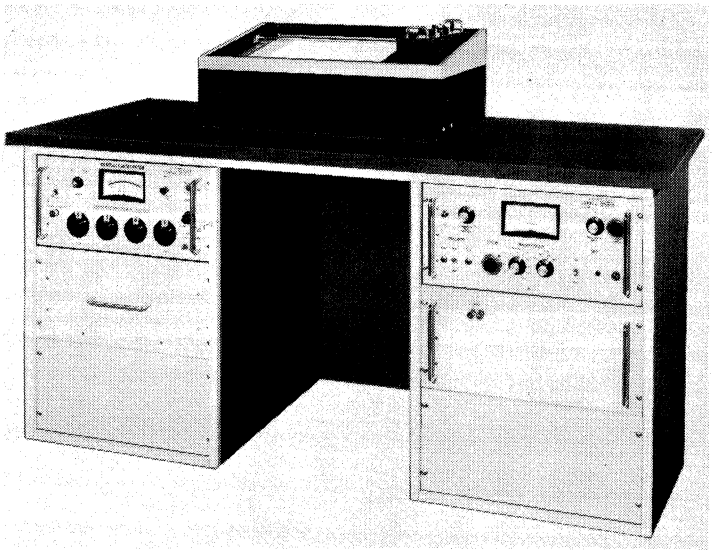
MODEL V ALL-ELECTRONIC D.C. HYSTERESIGRAPH

by Lowell Electronics Corporation



The Model V Electronic DC Hysteresigraph replaces several laboratory pieces of equipment used in the point by point method of generating hysteresis curves. Traditionally the H axis is obtained by employing batteries, ammeter, rheostat, ballistic galvanometer and a reversing switch.

The operator is faced with the compound problem of monitoring power supply drift and balancing a ballistic galvanometer while reading flux and current.

The Model V DC Hysteresigraph does all this automatically by plotting a continuous B-H curve.

Operator time is decreased to approximately 20 seconds per curve and an infinite number of points plotted. No important data is overlooked or missed. Both major and minor loops may be programmed at will.

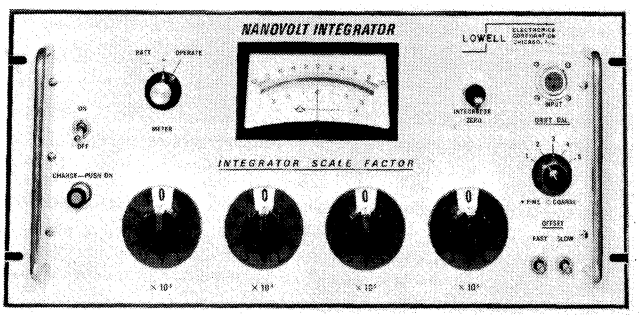
Driving samples to zero flux is insured by automatic recycle control so that initial permeability curves may be plotted.

The Hysteresigraph automatically does the following:

- Draws the positive half of the loop.
- Reverses the field when the preselected value of magnetization is reached.
- Draws the negative half of the loop and reverses direction of the field again when the desired value is reached.
- Initiates another reversal of field and completes the positive half of the loop.
- Lifts the pen from the recorder and turns off the current source.

Other programs are possible by manipulating front panel controls.

B AXIS CONTROLS



Integrating Fluxmeter—search coil employed in a Miller Integrator Circuit

Accuracy—0.05% or better

Stability—3% of display at ±100 Maxwell turns for one minute or better allows practical measurements as low as 10 Maxwell turns

Sensitivity—Scaled by operator. Displays of 10 Maxwell Turns per inch readily obtainable

The Nanovolt integrator is also sold as a separate unit

Input Impedance—essentially infinite

Output —5 to +5 volts at 5 ma

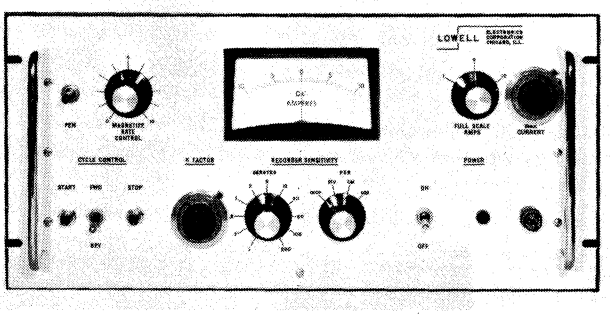
REMANENCE TEST SET

Operator positions piece part in solenoid, presses button, activating programmed power supply, and withdraws piecepart at end of program signal and reads remanence flux on digital display.

Magnetizing force up to 1000 Oersteds with flux sensitivities to 15 Maxwells.
Special as well as stock fixtures available.

Special magnetic system designed to your requirements.

H AXIS CONTROLS



Power Supply—Programmed −10 to +10 Amps, current regulated, 1 KW max, short circuit proof.

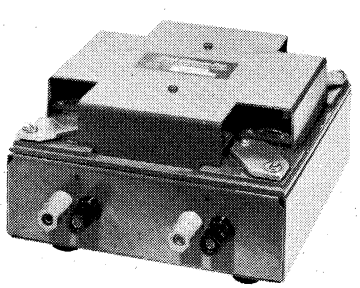
CONTROLS

Max current—Adjusts power supply output from 2 ma to 10 amps
Full scale amps—Meter scale selector
Magnetize rate control—Adjustable from 0 to 1 amp per second
Recorder Sensitivity—K factor control sets recorder to display 0 to 10^5 oersteds per division. Continuously variable with .1% calibrated multipliers
Forward-Reverse—Permits initial magnetization in positive or negative mode changes sweep direction without changing polarity

Size—Instrument is 30" high x 60" wide x 30" deep in a steel frame desk. A handy storage drawer is supplied. The top is walnut grain formica
Recorder x-y type 11" x 17" display

MAGNETICS TEST FIXTURES

Typical one shown below—ask for information.



MODIFIED EPSTEIN FRAME

Sample size—2 cm wide x 13 cm long x .03 cm
K-Factor—5.024

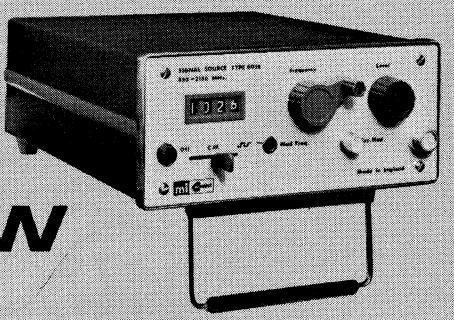
MODEL 2006 SOLID STATE PRECISION SIG. GEN. — All solid state unit in which each frequency range is covered by separate fundamental RF oscillator unit. Generators will accept any 4 of 5 available units. Features very low microphony 12KHz deviation under ½ G acceleration. Low noise pure spectrum typically 12Hz telephone weighted, 40Hz flat over entire range.

NEW



MODEL 6055 SOLID STATE SIG. SOURCE — All solid state microwave signal source operates on fundamentals 850MHz to 2150MHz with digital frequency readout. Unwanted harmonics are −25 db; spurious unrelated components −35 db. Resettability 0.1%; square wave AM. FM to special order.

SIGNAL GENERATORS — FM/AM/SWEEP/TRANSISTORIZED

DESCRIPTION	FREQUENCY	FEATURES
AM SIG. GEN. (6625-900-1016) Model 144H/4	10KHz to 72 MHz	0.2μv to 2v ±0.5 db, 50Ω. Also max. direct output 2.75v, xtal check, 400KHz and 2MHz. Stability 0.002%/10 min. internal AM to 80% at 400Hz and 1KHz. Also external AM.
FM/AM SIG. GEN. Model 2002AS	10KHz to 72 MHz	0.1μv to 1v ±1 db, fully solid state, AM variable to 100%, FM deviation ±1KHz to ±50KHz max. dependent upon range. Incremental frequency controls with discrimination of 0.025% of carrier frequency and direct readout in KHz. Xtal calibrator 1MHz, 100KHz, 10KHz. Drift less than 30 ppm/15 minutes after warm-up. External frequency shift permits phase mod. or phase locking.
FM/AM SIG. GEN. (6625-913-7223) Model 995B	200 KHz to 220 MHz	0.1μv to 100mv. Calibrated, △F. Step attenuator, Crystal standardized; extremely stable. Deviation ±600KHz on top bands. Has simultaneous FM & AM. Special high sensitivity external FM mod. position with frequency/phase response suitable for stereo modulation. Also available for narrow band working FM spurious less than 25Hz. Model 995B/5.
MOBILE RADIO FM SIG. GEN. Model 1064B/6	30 MHz to 50 MHz 118 MHz to 185 MHz 450 MHz to 470 MHz	0.025μv to 10,000μv (100,000μv uncalibrated). Extremely stable; quick warm up. Direct reading FM to 15KHz deviation & Incremental Carrier Shifts to ±25KHz on all bands. Portable. IF plug-in xtals 290KHz to 16MHz.
FM SIG. GEN. (6625-929-4277) Model 1066B/1	10MHz to 470 MHz	0.1μv to 100mv. 50Ω, FM at 1KHz and 5KHz internal, deviation to ±100KHz, △F to ±100KHz, both meter monitored. Stability .0025% 10 min. Rack mounted available.
FM SIG. GEN. (6625-937-2801) Model 1066B/6	10MHz to 470 MHz	0.1μv to 100mv into 50Ω. FM modulation at 1KHz and 5KHz internal or 30Hz to 100KHz external. Deviations to 100KHz, 10MHz to 50 MHz, ±400KHz, 50MHz to 270MHz and ±300KHz. 270MHz to 470MHz. Modulation distortion 5% over telemetering band 215MHz to 265MHz, AM or FM less than 5% at max. deviation. Crystal calibrator gives check points at 1MHz and 10MHz.
AM SIG. GEN. (6625-812-9863) Model 801D/1	10MHz to 470 MHz	0.1μv to 1v, 50Ω. VSWR less than 1.2. Frequency accuracy 0.2%; xtal check. AM 0 to 90%, external pulse mod. 50Hz to 50KHz. Contactless range turret and ALC.
UHF FM SIG. GEN. Model 1060/3	470 MHz to 960 MHz	0.05μv to 223mv (minimum) into 50Ω. Stability ± x 10^{-5} per 10 minutes. FM at 1KHz internal, 30Hz to 100KHz external; deviations to ±300KHz monitored. AM or FM, less than 2% at max. deviation. AM preset 30% at 1KHz. Tests UHF systems both wide and narrow band.
SOLID STATE PRECISION FM SIGNAL GENERATOR Model 2006	4MHz to 1000MHz	Solid state precision FM unit accepts any 4 of 5 oscillators with bands 4 to 10MHz; 10 to 90MHz; 88 to 220MHz, 215 to 500MHz and 440 to 1000MHz. Stability 15ppm +1.5KHz per 15 minutes. Xtal calibrator, 10MHz, 1MHz, 100KHz. Output 0.1μv to 100mv into 50Ω. FM ±100KHz to ±300KHz max. dependent on frequency. Mod. frequencies 20Hz to 125KHz from internal tunable oscillator or external source.
SOLID STATE SIG. SOURCE Model 6055	850MHz to 2150MHz	Digital readout continuously tunable solid state microwave source. Scale accuracy 1%, residual FM 1ppm, harmonics 25 db down, output 30mW into 50Ω max. AM (square wave) 900Hz to 1.1KHz. FM model to special order.

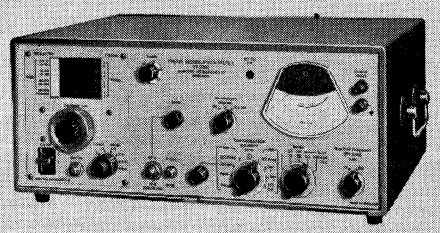
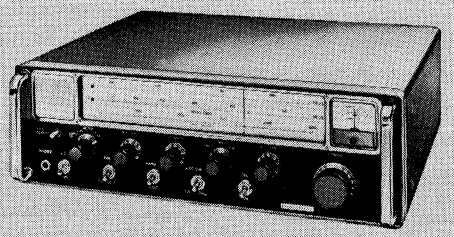
NEW



MODEL 2300 FM DEVIATION/AM MODULATION METER — Solid state instrument has xtal standardization, measures FM and AM, measures FM with up to 80% AM superimposed, sensitivity 20mv to 250MHz, 50mv to 500MHz, 100mv to 1000MHz. **Can be operated in both new telemetry bands using external oscillator.**



MODEL 990S EDDYSTONE RECEIVER — All solid state unit 230MHz to 870MHz with 6MHz and 1MHz AM bandwidth for AM video and 1MHz FM. 36.5MHz IF with 50mv IF output. Unit may be operated from 12v D.C. battery if desired. Panoramic adapter available.

FM DEVIATION METERS

DESCRIPTION	FREQUENCY	FEATURES
FM DEVIATION METER (6625-060-3320) Model 791D	4MHz to 1024MHz	Deviation ranges, ±5, ±25, ±75 and ±125KHz full scale. Accuracy 3%. Crystal standardized. Local oscillator can be xtal controlled for measuring deviations down to 10Hz.
FM DEVIATION/ AM MODULATION METER Model 2300	4MHz to 1000MHz	Wide range, mod. freq. up to 150KHz; deviation ranges ±5, ±15, ±50, ±150, ±500KHz. Local oscillator can be xtal locked, external oscillator can be used. De-emphasis 50μsec. 75μsec. switch selected. AM modulation two ranges 30% and 100% mod. freqs. 30Hz to 15KHz.

BRIDGES AND Q METERS

UNIVERSAL BRIDGE Model 1313A	1KHz and 10KHz 20Hz to 20KHz External	0.1μh to 110h, 0.1pf to 100μf, 0.003Ω to 110MΩ. Accuracy 0.1%. Built-in osc. and det. Direct reading; simplest possible operation. Uses adapter TM6113 for biasing inductors to 200ma.
PORTABLE UNIVERSAL BRIDGE Model 2700	1KHz internal 20Hz to 20KHz External	0.2μh to 110h, 0.5pf to 1100μf, 0.01Ω to 11MΩ. Accuracy 1%. Transistorized, simple. Measures incremental L, electrolytics & non-linear resistance using external bias supplies.
Q METER Model 1245A	1KHz to 300MHz	Q ranges 5 to 1000, △Q 25-0-25. Accuracy 5% to 100MHz, 20% to 300MHz. Calibrated capacitor 7.5 to 500pf, △C ranges ±1 and ±5pf. Extremely stable and easy to operate. Uses separate oscillators—see below. Dielectric and Series Loss Test Jigs available. Also HF & LF inductors.
POWER OSCILLATOR Model 1246	40KHz to 50MHz	For driving 1245A Q Meter, or 4v across 50Ω for general lab use.
POWER OSCILLATOR Model 1247	20MHz to 300MHz	For driving 1245A Q Meter, or 4v across 50Ω for general lab use.

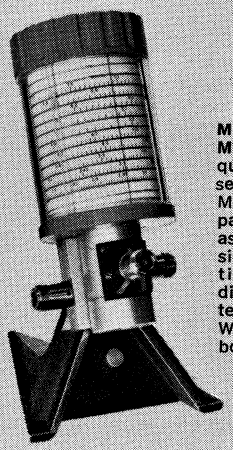
RECEIVERS FM/AM/CW/SSB

EDDYSTONE Model 850/4	10KHz to 600KHz	11 tube superheterodyne with top performance throughout VLF and LF bands. Three selectivities, 100Hz to 6KHz; 75 db image rejection. Has facility for eight xtal controlled spot frequencies.
EDDYSTONE Model 990R	27MHz to 240MHz	All solid state four range single conversion receiver for AM/FM. Two bandwidths of 30KHz and 125KHz. Local oscillator may be xtal locked to any of 8 internal customer selected crystals.
EDDYSTONE Model 990S	230MHz to 870MHz	Transistorized two range single conversion receiver for AM/FM. Bandwidth variable 6MHz an 1MHz. FM discriminator deviation to 250KHz.

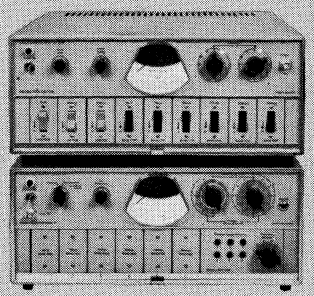
TELEVISION TEST EQUIPMENT

VIDEO SWEEP GEN. Model 1099	100KHz to 20MHz	3v max. level stabilized, 75Ω. Measurement accuracy 0.01 db. Includes 1MHz and 5MHz xtal markers. Tests color video tape recorders and video amplifiers. Accessory: 100 db step attenuator Model 1073A.
SINE² PULSE AND BAR GENERATOR Model 2905/5		Sine² pulse and bar generator for 525 line systems includes monochrome pulse and bar T/2, T and 2T. Also 10T and 20T with color burst, color sine² pulse and bar and sub-carrier added to staircase or sawtooth. External sub-carrier may be used.
LUMINANCE/CHROMINANCE GAIN & DELAY TEST SET Model TF2904/1		Measures gain and delay inequality with gain discrimination 0.5 db, delay discrimination 2 nanoseconds, visible display of misalignment with scope.
TV SIDEBAND ANALYZER Model TF2360	100KHz to 20MHz 30MHz to 90MHz 170MHz to 230MHz 470MHz to 960MHz	Provides a symmetrical or asymmetrical swept video signal for testing video amplifiers or transmitters using 625, 525 or 405 line systems, positive or negative modulation.
BLANKING AND SYNC MIXER Model TF2908		Reshapes blanking and sync pulses and mixes with video waveform (sine² pulse and bar, sweep, sawtooth, etc.). Permits sweep measurement with clamps or dc restoring circuits in normal operation. Output flat 0.2 db to 10MHz, 0.3 db to 20MHz.

NEW



MODEL 6049/1 FREQUENCY METER — Precision frequency meter has unique set of attaching accessories. May be used with standard passing coaxial attachment as absorption or transmission wavemeter or alternatively may be coupled directly into waveguide systems sizes WR-284, WR-229, WR-187 and WR-137 using bolt-on adapters.



MODEL 2090A NOISE LOADING TEST SET — This new unit measures Noise Power Ratio directly in db and pico-watts. A standardizing noise generator is built into the receiver to facilitate out of — band measurements. Band limiting and slot filters for all CCIR/CCITT and D.C.A. recommendations. Special frequencies to order.

INTERMODULATION AND BASEBAND TEST GEAR

DESCRIPTION	FREQUENCY	FEATURES
NOISE LOADING TEST SET TRANSISTORIZED (6625-670-0146) (AN/GSM 161) Model 2090A	12KHz to 12.388MHz (i.e. up to 2700 channels)	Solid state unit has built-in standardizing noise source in receiver for gain setting, out-of-band testing, etc. Includes noise generator, receiver and a choice of many different filters. NPR measurements can be made up to 75 db.
TWELVE CHANNEL NOISE GENERATOR (6625-948-4724) Model TM7816	300Hz to 3400Hz	Generates twelve non-related channels of Gaussian noise from twelve separate solid state sources. Output: each channel 1mW in 600Ω balanced, 300Hz to 3400Hz. Attenuation to −32 dbm in 2 db steps. Spurious noise in OFF channel (all other channels ON) is less than 10 dba (−75 dbm FIA weighted).
SSB SPECTRUM ANALYZER Model 1094A/3	100Hz to 30 MHz	60 db dynamic range, 2 db accuracy. 3 db selectivity at 6, 30 or 150Hz. Spectrum width variable 100 to 30,000Hz. If supplied without LF Adapter TM6448, range is 3 to 30MHz.
TWO-TONE SIGNAL SOURCE Model 2005	20Hz to 20KHz	Two continuously variable solid state oscillators 0.1% harmonic distortion, intermodulation −80 db, hum −80 db, monitored 111 db attenuator with balanced and unbalanced outputs. Recommended for SMPTE and CCIF two-tone testing.
SELECTIVE VOLTMETER Model 2330 (6625-168-0955)	20Hz to 50KHz	3 db bandwidth 6Hz; rejection ratio 65 db at 40Hz off tune. Sensitivity 30μv to 300 volts full scale. BFO output tracked in frequency and flat to 0.1 db. Includes RF detector for AM demodulation.
SOLID STATE DISTORTION FACTOR METER Model 2331	20Hz to 20KHz Fundamental 20Hz to 100KHz Max. Bandwidth	All transistorized unit measures distortion factor 0.05% to 100% in seven ranges from 0.1% to 100% f.s.d. Noise measurement to 100% in similar ranges. Switch bandwidth 100KHz or 20KHz with filters to give HF cut above 20KHz, LF cut below 400Hz and CCIF weighting characteristics. Voltage measurement 20Hz to 100KHz in ten ranges between 1mv and 30v f.s.d.

MICROWAVE TEST GEAR

FREQUENCY METER Model 6050/3	1GHz to 2GHz	Accuracy ±0.2% with 10MHz calibration increments. VSWR 1.5.1; sensitivity better than 4mv full scale; resonant dip 2.5 to 3.5 db.
FREQUENCY METER Model 6049/1	2.6GHz to 8.2GHz	Precision meter with ±0.1% accuracy; 5MHz increments to 5GHz, 10MHz increments to 8.2GHz. VSWR 1.5 for coax; 1.1 for waveguide attachments. Resonant dip 0.5 db coax.; 1 db waveguide.
FREQUENCY METER Model 6051	8.2GHz to 12.4GHz	Precision meter has accuracy ±2% and 10MHz frequency increments. Resonant dip generally greater than 1 db using re-entrant cavity. Scans complete X-band with four turns of control knob.
PRECISION ROTARY VANE ATTENUATOR Model 6052/3	8.2GHz to 12.4GHz	High accuracy unit with reduced overall length improved drive and clear readout. VSWR 1.15; insertion loss, 0.75 db max.; phase shift 2° max.; attenuation to —60 db. Accuracy 1% to —40db, 2% to —50 db, 3% to —60 db.
EDUCATION ANTENNA TEST BENCH MODEL 6452A	9 GHz	Unique test bench is ideal for advanced electronic students in studying microwave antenna properties. Plots polar diagrams. Includes dish, shunt slot linear arrays, fixed and radial horns, microwave experiments book. Write for further details.

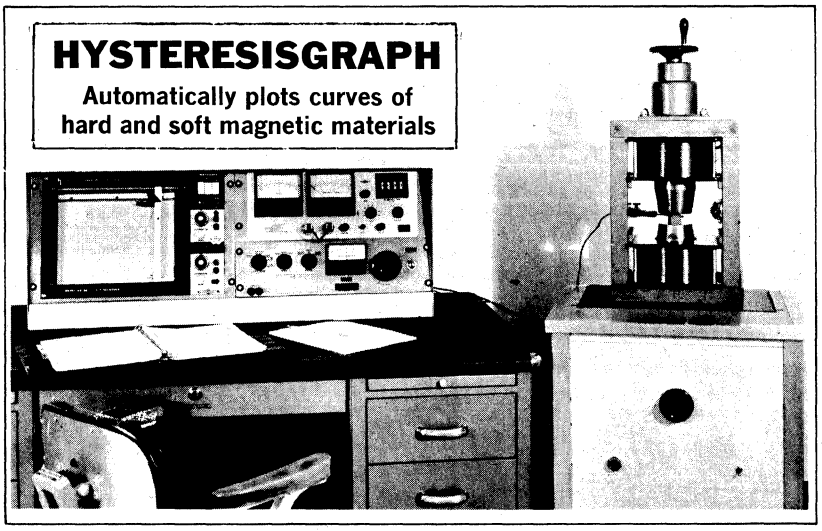
MAGNETIC MEASUREMENTS — ELECTRONIC INTEGRATORS

HYSTERESISGRAPH

Automatically plots curves of hard and soft magnetic materials



The Magnemetric Permeameter with laboratory accuracy and flexibility is so easy to operate that anyone can use it! The Hysteresisgraph accommodates to the sample and to the operator's choice of recording scales; it doesn't dictate them! It is designed to test a broad range of magnetic materials and sample sizes simply, efficiently and accurately.

CONDENSED SPECIFICATIONS

B-SENSOR: Solid state electronic integrating fluxmeter
Range — 10^5 to 10^9 Maxwell turns 10 MT increments
Accuracy — 1% of full scale or better

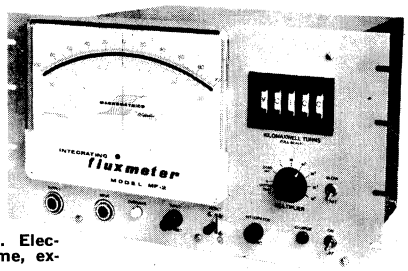
H-SENSOR: Solid state Hall effect Gaussmeter
Range — 10-30,000 Gauss in seven ranges
Accuracy — ¼% + Hall linearity and calibration error

RECORDER: 8½ x 11 paper size

CONTROL: Paper scale selector, scaling adjustment, built-in calibrator, metered drive control and hysteresis curve center finding adjustments.

INTEGRATING FLUXMETER MF-2

Fast, accurate, easy. Hysteresis loops of hard or soft materials plotted in minutes instead of hours as by ballistic galvanometer method. Easy evaluations of flux. Evaluates field uniformity as a true differential gaussmeter. Unit is all electronic.
Complete scales from 1 to 99.99 x 10^5 KMT. Output at full scale is ± 1 volt, 1% accuracy.



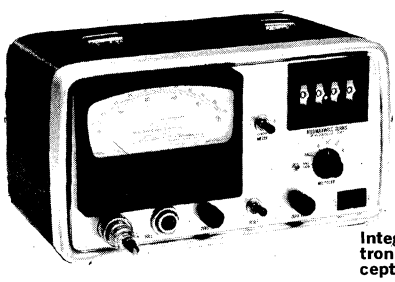
Integrating Fluxmeter MF-2. Electronic Integrator MI-2 — same, except for panel markings.

INTEGRATOR MI-2

For the physical or biophysical laboratory. Solves scaling problems by accommodating inputs from 10 microvolt seconds to 100 volt seconds. Full range .5 to 5000 microvolts of offset adjustment. Very high stability and 1% guaranteed accuracy.

INTEGRATING FLUXMETER MF-1

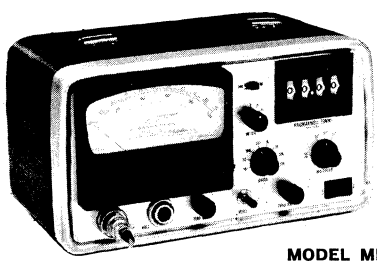
A high-speed instrument similar to the MF-2 but with less range, 10^2 to 99.99 x 10^4 KMT. All solid state, line and/or battery operated. Output ± 1 volt. Accuracy 1%.



Integrating Fluxmeter MF-1. Electronic Integrator MI-1, Same, except for panel markings.

INTEGRATOR MI-1

For applications requiring lower sensitivity and higher frequency limit than afforded by MI-2. Range from 10^3 to 10 volt seconds. Frequency limit 10^5 Hz. Made to the same high standard as the MI-2, 1% accuracy and high stability.



MODEL MF-1H

INTEGRATING FLUXMETER and HALL EFFECT GAUSSMETER

Combines an MF-1 Fluxmeter with a MG-1 Hall Gaussmeter. This is the essential cluster for most magnetic measurements including hysteresis curve tracing. Outputs are simultaneously available, panel meter is shared.

HALL GAUSSMETER MG-1

10-30,000 Gauss in 7 ranges
1/3 scale ratio
Accuracy ¼% + Hall probe error.
Full scale output ± 1 volt — also displayed on 5" mirror scale instrument.
Order suitable Hall Probe — HP-1 Transverse, HP-2 Axial.

All Magnemetric Integrating and Hall Effect instruments operate from 115 V line or self-container batteries. All have low impedance 1 volt full-scale output allowing for ample loading.

MAGNEMETRICS specializes in instrumentation for magnetic measurement. For more detail on the Hysteresisgraph or on integrating of Hall effect fluxmeters, and related devices, write or call **MAGNEMETRICS.**

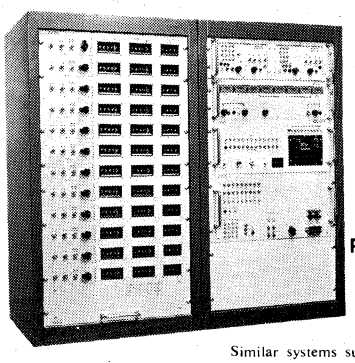
MASTECH, INC. Semiconductor Test Equipment

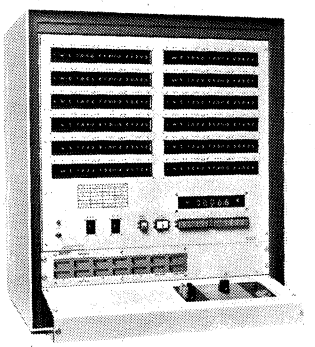
TRANSISTOR AND DIODE TEST SYSTEMS



MASTECH manufactures semiconductor test systems for use in incoming test, quality control and manufacturing lines.

Our high speed automatic go no-go type systems such as the Model 2600 are designed for use with mechanical loaders and segregators on transistor and diode production lines, including pellet check areas. Model 2600 employs a digital switch programmer, but other type programmers such as punched card readers and core memory devices can be used. All of the contact closures necessary for operation of the handling equipment are provided in the system, including the contacts for automatic bin selection. Type classification and priority selection is accomplished by insertion of pins into a diode pin matrix board.

Model 2600
Price $12,500 (12 Test)

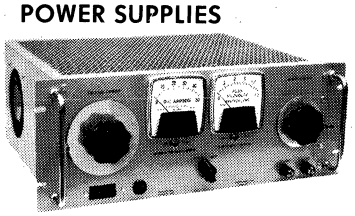


Model 2610
Price $9,500 (6 Test)

Similar systems such as the Model 2610 which feature a direct digital readout mode of operation have been designed for incoming test and quality control areas. These systems have the same programming means and high speed go no-go capabilities as the Model 2600 but in addition can be cycled on command to the go no-go balance point. At this point a direct digital display of the transistor or diode characteristic is presented.

All of these systems can be supplied with six, twelve or twenty-four test capability. Tests can be made in any desired combination or sequence and include hFE, breakdown or peak inverse voltage, sustaining voltage, leakage current, saturation or forward voltage drop and small signal beta. Other special sets designed to test PNPN devices, SCR's, and UJT transistors are available.

POWER SUPPLIES

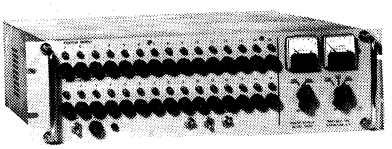


Model 1201C

Rectifier and diode aging and life testing requires power sources that deliver high forward currents and peak reverse voltages. The Model 1201 and Model 1401 Power Simulators provide this power efficiently and economically.

Model	Output Voltage & Current	Price
1201	0-750 Volts, peak, 0-100 Amps	$ 975.00
1201A	0-200 Volts, peak, 0-100 Amps	750.00
1201C	0-1500 Volts, peak, 0-100 Amps	1,400.00
1201D	0-1000 Volts, peak, 0-100 Amps	1,125.00
1401A	0-200 Volts, peak, 0-200 Amps	1,150.00

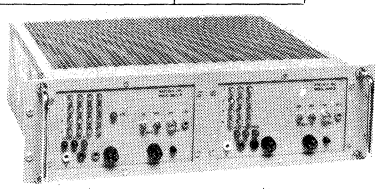
Model 2650



The Model 2650 series power supplies contain three identical precision regulated, power packs, two of which are connected to the output terminals. The third is used as a spare which can be switched in place of either of the other two. One power pack is connected to supply positive voltage to the loads and the other negative. There are fifteen separate outputs from both the positive and negative power packs, each of which is fused. The fuses are mounted on the front panel along with an indicator lamp which lights when the fuse is blown.

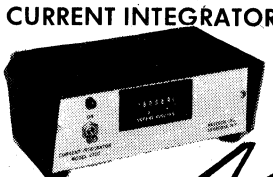
Model	DC Output Voltage & Current	Price
2650	24 Volts, 3 Amps	$1,050
2651	6 Volts, 9 Amps	1,190
2652	60 Volts, 3 Amps	1,800
2653	24 Volts, 9 Amps	1,650
2654	6 Volts, 3 Amps	1,000

Model 1602A&B
Price $900 each



Model 1602, Digital Programmed Power Supply, is used in our transistor test systems. It features fast response, remote programming in BCD code, gated output, built-in programming resistors, and excellent load and line regulation.

CURRENT INTEGRATORS



Model 2707
Price $285

Mastech Current Integrators are instruments which measure the product of time and current delivered by an energy source. They are useful wherever it is desirable to measure the quantity of electricity passed in an electrically energized circuit. The quantity can be measured in ampere-hours, ampere-minutes, or directly in coulombs, depending on the current and time involved. Models 2707 and 2708 measure ampere-minutes and ampere-hours respectively. Other models with different readouts are available on request. The instruments can also be furnished as voltage integrators.

Technical bulletins along with additional price and delivery information are available on request.

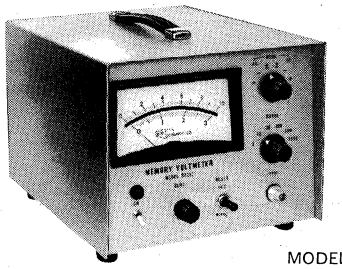
PRECISION VOLTAGE and CAPACITANCE TEST INSTRUMENTS

MICRO INSTRUMENT CO.

Write for your free copy of "Theory and Applications of Peak Voltage Measurements" or "Theory and Applications of Capacitance Measurements".

PEAK PULSE MEMORY VOLTMETERS AND SYSTEMS

Micro Instrument Co. offers a complete line of precision memory voltmeters and systems for industrial, commercial and aerospace measurement of peak pulse amplitude and one shot pulses. Features include: positive and negative readout of amplitude to 30 kV; digital or meter readout; strip-chart or printer operation; analog or digital outputs; continuous line monitoring with systems to 100 channels. For details on the complete line, contact your local representative or Micro Instrument Co. directly.



MODEL 5201C

MODEL 5203

DIGITAL READOUT MEMORY VOLTMETER — DUAL SHIELDING CABINET — MODEL 5203

The Model 5203 is a new 4-digit Memory Voltmeter, featuring digital readout of dc to 50 nanosecond single pulses with amplitudes to ±1000 volts in four ranges; it also has overrange capabilities, as well as an optional probe for measurements to 10 kV. It is a broad-band, dc to 50 MHz, all solid-state instrument that will measure any ac or dc coupled parameter that can be defined in terms of peak voltage; it holds the peak amplitude of one-shot or transient pulses, as well as repetitive pulses, until an input voltage of greater amplitude occurs, causing an increase in the reading, or until operator or automatic reset. Automatic reset permits using the digital Memory Voltmeter as a conventional RF digital voltmeter. Accuracy of wide band peak value will be displayed to 1% of full scale, with narrow band measurement ¼% of reading ±2 bits.
The Model 5203 is housed in a dual shielded cabinet to prevent radiated transient pick-up, ground loops or common mode errors; this also permits off-ground measurements to 1000v while maintaining the cabinet at ground potential for operator safety. The instrument's case is a 7 inch high half-rack cabinet for portable use or for rack mounting. Available features include: provision for remote programming of mode, range and reset; analog output; BCD output; sample-and-hold capability.

SPECIFICATIONS

Input: Single-ended. Ground isolated.
Voltage Range: 0.999, 9.99, 99.9 and 999V full scale. To 10 kV with optional H.V. probe.
Input Impedance: 1V range, 10K ohms; 10V range, 100K ohms; 100V range 1Mohms; 1000V range, 10Mohms. All ranges shunted by 100pF max.
Pulse Width Range: DC to 50 nanoseconds (wide band) DC to 400 microseconds (narrow)
Accuracy: 1% wide band; ¼%, ±2-bits narrow.
Readout: 4-digits in-line.
Price: $1,550.00

METER READOUT MEMORY VOLTMETER — DUAL SHIELDED CABINET — MODEL 5201C

The Model 5201C Memory Voltmeter is an all solid-state broad-band, dc to 20 MHz instrument, with amplitude memory. With ac and dc ranges from 0 to 1000 volts, the instrument will measure and store the maximum peak voltage applied. The voltage range may be extended to 30 kv; pulses as short as 50 nanoseconds duration will be recorded. Voltages of greater amplitude than the stored voltage will increase the reading, displaying the maximum voltage detected. In addition, a front panel switch permits automatic reset of the internal memory allowing operation as a standard peak-reading voltmeter that will follow the peak value of a varying waveform. The peak amplitude is displayed on a 5" taut-band, mirror-backed 1% panel meter. The instrument is housed in a dual shielded cabinet to prevent radiated transient pick-up. This construction also permits off ground measurement while maintaining the cabinet surface at ground potential for operator safety. The common side of the input is isolated from ground thus preventing ground loops in systems checkout work, or incorrect connection for power line monitoring applications. Portable cabinet standard, single or dual rack mount units available. Optional gate circuit available for sample and hold operation. Variable response control to reduce band width in 5 steps for added versatility.

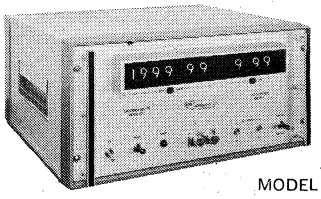
SPECIFICATIONS

Voltage Range: 0-3, 10, 30, 100, 300, 1000 v. Can be operated up to 1000 v above ground.
Input Impedance: 100k to 10 megohms (depending on range).
Pulse Width Range: DC to 50 nanoseconds.
Accuracy: ±3% of full scale.
Operating Modes: +, —, ± (dc or ac coupled).
Price: Model 5201C .....$ 750.00

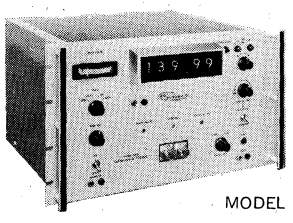
Single Rack Mount: Model 5201C-1 ..$ 800.00
Dual Rack Mount: Model 5201C-2 ...$1550.00
Gate Ckt. Option: .....$ 100.00
Hi Voltage Probes: (3, 10, 30kv) each$ 60.00

CAPACITANCE TEST INSTRUMENTS AND SYSTEMS

A complete line of capacitance test instruments are available from Micro Instrument Co. Included in the line are: 120 Hz, 1000 Hz and 120/1000 Hz; C and DF limit bridges and digital readout capacitance testers featuring true series capacitance measurements; high speed digital comparators; interface units for card punch and related BCD functions; digital capacitance ratiometer; capacitance-winder, auto-controller and systems for intermittency testing or for complete data logging. Contact your local representative or the factory for complete details.



MODEL 1212



MODEL 1206

1 MHz C & DF DIGITAL CAPACITANCE TESTER — MODEL 1212

The Model 1212 is the first instrument that simultaneously displays dissipation factor in digital form on a 1 MHz instrument along with the capacitance measurement. This all solid-state capacitance tester uses a true automatic bridge circuit for high accuracy measurements in ½ second. BCD output information is supplied for interfacing with printers, card punches, computers, etc. The conveniently located two and three-terminal (guarded) connections permit front panel component testing, while eliminating stray capacitance errors. A variety of test jigs and adapters are available to extend the rapid testing versatility of the unit.

SPECIFICATIONS

Capacitance Range: 0 to 1999.99 pF full scale.
Capacitance Accuracy: ±½% of reading ±3 digits.
Capacitance Readout: 6 in-line readout tubes.
D.F. Range: 0 to 9.99%
D. F. Accuracy: ±1% of reading ±3 digits.
Readout: 3-digit in-line readout tubes.
Single Level: 500 mV rms.
Test Time: 500 msec.
Display Time: Variable from 50 to 500 msec.
Stray Capacitance: 100 pF null control.
Trigger Operation: Input trigger pulse permits single readings to be displayed indefinitely; a repeat trigger pulse resets instrument to zero and displays next readings.
Outputs: 1-2-4-8 BCD (0 = 0V, 1 = +3.5v min. into 50K ohms)
Terminals: Guarded input test fixture provided with instrument for axial lead components.
Price: (rack mount).....$4,775.00

1 MHz HIGH SPEED DIGITAL CAPACITANCE TESTER — MODEL 1206

The Model 1206 is a new direct reading 1 MHz capacitance tester featuring high reliability integrated circuitry for fast test time of 50 milliseconds. The instrument also features a 50% over-range which minimizes switching at often used test values, permitting faster testing. The instrument provides direct digital readout of measurements from 0.001 pF to 1500 pF. The tester may be equipped with a wide range of comparators for high speed sorting. The instrument also provides low impedance, short circuit-proof output signals which will directly drive digital printers and can be interfaced to card punches, electric typewriters, etc. Automatic zero control circuit produces extreme stability and drift free operation.

SPECIFICATIONS

Ranges: 0.001 pF to 1500 pF.
Over-Range: Fifth digit 50% over-range.
Accuracy: ±¼% of reading ±1 digit.
Readout: 5-digit, in-line, readout, with blanking.
Signal Level: 0-100 pF range: 35mV rms max.
Test Time: 100 msec nominal.
Display Time: 25 msec adjustable from ¼ to 1 sec.
Maximum Frequency Variation: 1% (at full scale).
Low Q Tolerance: No accuracy loss for 10K ohms shunt resistance or greater.
DC Bias Supply: 0-100 vdc in two ranges.
Stray Capacitance: Front panel controls permit neutralization of up to 100 pF.
Off-Scale Indicator: Front panel light.
Off-Zero Indicator: Front panel light.
Outputs: 1-2-4-8 BCD (0 = 0v, 1 = +5v min). Source impedance 600 ohms maximum.
Terminals: Guarded input test fixture supplied.
Price: $3,000.00

LIFE TEST SYSTEMS, LIFE TEST POWER SUPPLIES and LIFE TEST CARDS

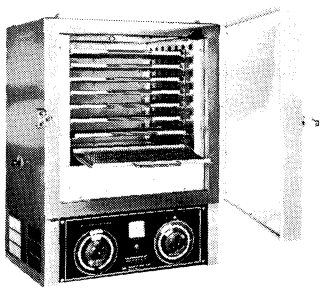
LIFE TEST SYSTEMS

LIFE TEST SYSTEMS

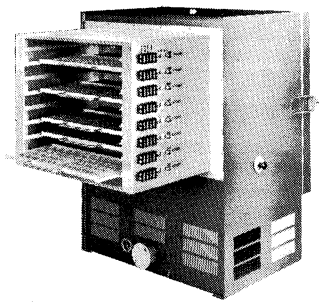
Micro Instrument Company offers, to the industry, the most versatile and reliable component power aging systems available. These systems have proven themselves through hundreds of thousands of hours of operation in customer facilities. Systems are available for testing resistors, capacitors, diodes, transistors, power transistors, rectifiers, and integrated circuits (both flat pack and TO-5 types). The power aging techniques employed include Reverse Bias Soak, Forward Bias Power Dissipation, Dynamic (AC Power Simulation) Operation for Diodes, DC and Dynamic Tests for Integrated Circuits, Resistor Power Dissipation, and Capacitor Voltage Soak. Systems are available for either ambient or elevated temperature testing.

STANDARD MODELS —

The Models 1024 and 1025 are modular systems, ideally suited for testing small components such as resistors, capacitors, signal diodes, and transistors. In these systems, the components to be tested mount on printed



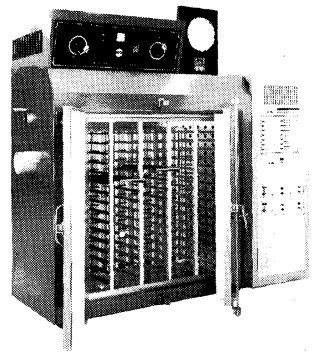
circuit cards with proprietary spring clips, or with printed circuit type transistor sockets. The systems have a capacity of eight cards, each mounting up to 200 axial lead or 100 3-lead components. Tests may be performed under reverse or forward bias conditions. The Model 1024 system connects each test device in series with a load resistor, which is installed on a connector assembly (resistor module) mounted on the outer wall of the test chamber. This system is used primarily for reverse



bias testing where parameter measurement at elevated temperature is not required. The Model 1025 system is similar to the Model 1024, but uses plug-in load cards for mounting the load resistors. The load card may be removed and a scanner head inserted for parameter measurement while the components are at elevated temperatures. The Models 1024 and 1025 provide exceptional versatility. Load resistor modules are readily changed, allowing easy conversion; for example, from a forward soak to a reverse bias test for diodes. Transistors may be operated with emitter and/or collector load resistors under power conditions or in a reverse bias circuit. Component mounting cards of many different circuit configurations are available for these systems. Variations of the basic systems are available with internal bias supplies.

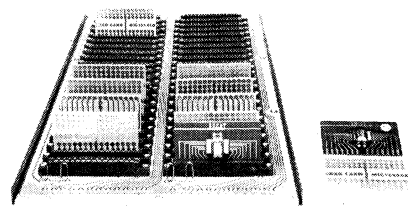
INTEGRATED CIRCUIT SYSTEM —

The Model 8500 Integrated Circuit Power Aging System consists of two interconnected assemblies: the temperature test chamber, and the power supply, pulse generator, and failure indicator console. The components to be tested are inserted in mother boards. The mother boards plug into rack connectors in the temperature chamber which distribute the various bias and signal drives. The mother board also contains monitor lines, and a signal mixing circuit to provide failure indication.



The Model 8500 is available in three basic sizes:

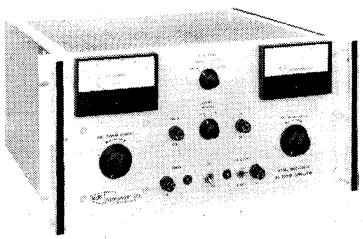
The -1 holds 32 mother boards
The -2 holds 48 mother boards
The -3 holds 80 mother boards



GENERAL INFORMATION —

Standard power aging systems operate in the temperature range of +40 to +150°C with overall accuracy including control, gradient, and drift of ±3°C. Special systems with temperature ranges to 325°C are available. Micro Instrument Company offers a wide variety of printed circuit cards and trays for holding components for various systems. Micro Instrument Company will be pleased to discuss any lift test requirement, suggesting possible test methods and system concepts.

SWITCHING TYPE LIFE TEST POWER SUPPLIES AND LIFE TEST SYSTEMS



SWITCHING-TYPE POWER SUPPLY — MODELS 9100-100, 9100-300

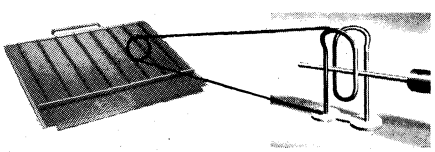
The Model 9100 Switching-Type Power Supply is used in life testing and power aging of semiconductor rectifiers. The output waveform consists of a half-sine wave adjustable from 0 to 15 volts peak (for forward conduction through the test rectifiers), and a half-sine wave adjustable from 0 to 1000 volts peak, depending on the model, (for reverse voltage stress on the test rectifiers). Both forward current and reverse voltage are indepedently adjustable. Forced-air cooled SCR's are used as switching elements; the SCR's are automatically turned off for over-load or over-temperature conditions.

SPECIFICATIONS

Average Rectified Forward Current (Io): 0 to 300 A (Model 9100-300). 0 to 100 A (Model 9100-100). Outputs in two equal channels.
Forward Voltage: 0 to 15 volts peak.
Forward Form Factor: 170° typical into rectifier & resistive load at max. forward volts.
Forward Current Metering: 0 to 150 A to (Model 9100-300. 0 to 50 A to (Model 9100-100).
Forward Current Interlock: Remote contact.
Forward Current Indication: Front panel light:
SCR Protection:
Peak Inverse Voltage: 0-200 volts (-2); 0-400 volts (-4); 0-600 volts (-6); 0-1000 volts (-10).
Peak Inverse Current: 350mA peak continuous.
Reverse Voltage Metering: 0-100, 300, 1000.
Transient Protection & SCR Protection
Input and Output: Terminal strips on rear.
Input Power: 208 or 230 volts, 60 Hz, single phase, 4500 VA (Model 9100-300), 120 volts, 60 Hz, single phase, 1800 VA (Model 9100-100).
Size: 17½" H (9100-300), 8¾" H (9100-100).
Weight: 275 lbs. (9100-300). 150 lbs. (9100-100).

Prices: In 1 to 4 quantities, complete including SCR's. Model 9100-300-2 (200v), $1703.00; -4 (400v) $1774.00; -6 (600v) $1884.00; -10 (1000v), $2168.00. Model 9100-100-2 (200v), $1276.00; -4 (400v) $1332.00; -6 (600v), $1395.00; -10 (1000v) $1620.00.

COMPONENT LIFE-TEST CARDS



These high-reliability epoxy-glass, printed circuit cards offer efficient power aging and testing to +150°C with low cost per position. The component mounting cards are available in a wide variety of configurations and sizes with mounting sockets or M.I.C. proprietary mounting clips. Automatic eyeletting and soldering insure uniformity of workmanship and high quality at low cost.

CARD TYPES — Many types of component cards are available, broadly categorized by connector pins (44 pin, 56 pin and 210 pin), by component type (two-lead and three-lead or combination), and by circuit (sensing, non-sensing, etc.).

SPECIAL CARDS — A wide variety of special designs are available, or can be made to customer requirements. Cost is comparable to standard designs except for an average one-time engineering charge of $150.00 to $250.00.

PRICES AND SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE.

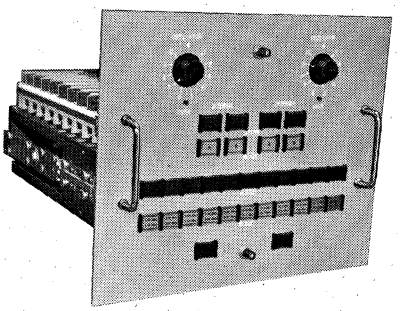
SIGNAL GENERATION SYSTEMS

● Hi-Stability ● Logic Control Switching ● Custom Applications



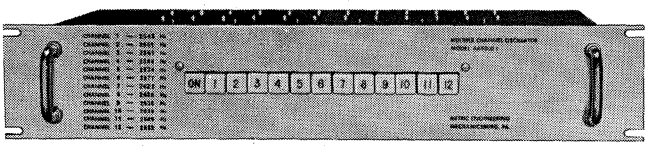
WIDE BAND TRANSMITTER EXCITER

- 2-30 MHz output frequency with inputs of 2 to 10 MHz
- Two internal 10 channel oscillators
- Logic Controlled switching and tuning
- ±.0005% Stability
- Harmonic distortion less than 1%
- Up to 1 watt output

Operates on 115 VAC or 230 VAC, 50 to 400 Hz

PURE SINE WAVE GENERATOR

- 12 Discrete frequencies in a 1KHz to 20KHz range
- Push Button Selectable
- Harmonic distortion less than .1%
- 1 VRMS into 600 ohm load balanced or unbalanced
- Individual level adjust and master level adjust



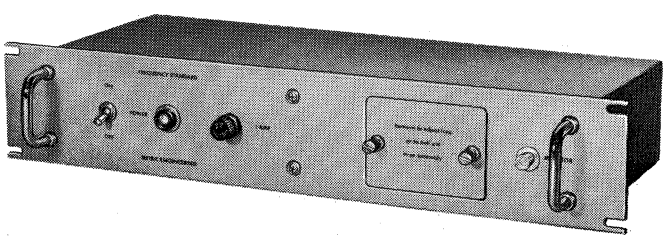
HI-FREQUENCY: HI-POWER

- 1 to 500 MHz frequency range
- Minimum of 5 watts into 50 ohms
- Turn-counting pot for output level adjust
- Less than 12 lbs. weight
- Stability to $\pm 1 \times 10^{-8}$

Operates on 117 VAC, 50 to 400 Hz

50 Hz, 60 Hz, or 400 Hz TIME STANDARD

- $\pm 1 \times 10^{-7}$ frequency stability
- 120 VRMS output voltage
- ±.5% output regulation
- 25 Watt output power
- Square wave or sine wave available
- Operates from 120 VAC, 50 to 400 Hz or 28 VDC



30 to 35 MHz TRANSMITTER EXCITER

- 1 VRMS output into 50 ohm load
- $\pm 5 \times 10^{-8}$ stability
- Sine wave
- Harmonic distortion less than 5%
- Remote keying capability

FCC approved in the 32 to 33 MHz range

DESIGN AND MANUFACTURE OF CUSTOM SYSTEMS IN SIGNAL GENERATION AND SWITCHING CONTROL ARE OUR SPECIALTY. LET *METRIC ENGINEERING* SOLVE YOUR PROBLEMS.

PRECISION LABORATORY INSTRUMENTS!

SPECIALISTS IN BATTERY OPERATED SOLID-STATE INSTRUMENTS

MV-928A, 1mV to 3V F.S. Freq. Resp. 10KHz to 1.2GHz, basic accy. ±3%, 10KHz to 100MHz ±3%. 100MHz to 400MHz ±5%. 400MHz to 1.2GHz ±10%. Battery or 115/230V. 50-450Hz **$775**

MV828A, Same specs as above, without battery operation **675**

MV28B, Same as MV828A, except vacuum tube model **625**

MV-38B, Same as MV28B except 3mV-3V F.S. **525**

MV-952A, Ultra Sensitive Solid State Micro-Volt-Ammeter. Measures 10uV to 1KV DC F.S. with 1% basic accy. Current 10pA to 10mA with 2% basic accy. 1 to 100 meg input, Shunts, 1 meg to 1 ohm. Battery operated and/or 115/230, 50/450Hz **695**

MV-852A, Same as MV-952A, except without battery operation **625**

MV-07C, Measures same as above, but tube model and operates on 115/230, 50/60Hz only **575**

MV-27E, 250uV to 1KV, F.S. DC, 14 ranges, imp. 10-100 megs, 1% accy. **425**

MV-127B-L, 100uV to 1KV, F.S. DC, 15 ranges, inp. imp. 1-100 megs, 1% basic accy. **475**

MV-11E, 100pA to 10A, F.S. DC, 23 ranges, shunts 10 meg. .001 ohms, 1% basic accy. **425**

MV-111B-L, 100pA to 250mA, F.S. DC, 20 ranges, shunt 1 meg .004 ohm, 1% basic accy. **475**

MV-77B, 1mV-1KV, 1uA-1A, F.S. 1 ohm-5K meg. Input imp. 10-100 megs, 1, 2, 2% basic accy. **475**

MV-964A, Solid-State Multimeter, 100uV to 1KV, DC F.S. Current 100nA to 1A F.S. Ohms 1 to 100 megs center scale. Input imp. 10-100 megs. Shunts, 10K to .01 ohms. Basic accy. volts 1% current 2%, ohms 5 & 10%. Battery operated and/or 115/230, 50-450Hz **525**

MV-864A, Same as MV-964A, except without battery operation **445**

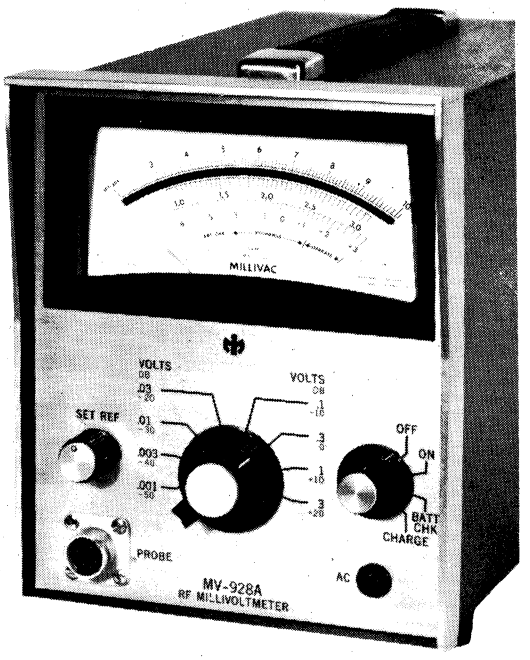
MV-279C, Direct reading Linear Scale ohmmeter, 1 ohm-10 megs F.S. 15 ranges Rx drop 10mV. 1% accy. **550**

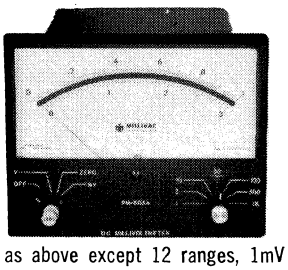
MV-276B, Wheatstone Bridge, 1 milliohm to 1000 megs, .05%, basic accy. Lead resistance cancellations and calibrated 1% unbal. Max. dissipation 1mW **1050**

MV-45A, 10uV to 1KV, F.S. AC, 17 ranges inp. imp. 10K to 3.3 meg, AC amp output 40db, 3% basic accy. **425**

VS-68B, Hi-Impedance Hushed Transistor Amplifier, 10K, 100K and 50 meg input. Transistorized **575**

VS-64A, Same as above except 10K and 100K input only **425**





PANEL MOUNTED ELECTRONIC VOLTMETERS

PM-504A, DC Voltmeter measures 100uV to 1KV, F.S. in 15 ranges. 100uV, 3%, All others 2% F.S. accuracy. Operates on 115/230V. 50/60 Hz, 10 megs input **$375**

PM-503A, Same as above except 12 ranges, 1mV F.S. to 1KV F.S. **$350**

PM-502A, Same as above except 11 ranges, 10mV, F.S. to 1KV F.S. **325**

PM-520A, Solid-State RF Millivoltmeter. Freq. Resp. 10KHz to 1.2GHz; Basic accy. ±3%, Measures 3mV to 3V F.S. in 7 ranges to 300V with 100/1 Divider. 10KHz to 100MHz, ±3% accy. 100MHz to 400MHz ±5% accy. 400MHz to 1.2GHz ±10% accy. 115/230V. 60 Hz **425**

PM-301A, VTVM, 10mV F.S. to 1KV F.S. in 11 ranges, 3% accuracy, 10 meg input, 115/230V 60Hz **280**

PM-311A-1, AC Voltmeter, 10mV F.S. to 300V F.S. in 10 ranges. Accuracy 1% 50Hz to 100KHz, 3% from 20Hz to 250Hz. Input 5 megs shunted by 25pF, −40 to 50db, 115/230V 50-400Hz **250**

PM-311A, Same as above, except 3, 4 and 5% accuracy **200**

PM-300-1, DC Multi-Range Voltmeter. 1V to 1KV F.S. in 7 ranges. 1% accuracy. 115/230V 50-400Hz. Input 10 meg **155**

PM-300, Same as above except 3% accuracy **120**

Also available, 4½" square single range AC or DC. Panel Mounted Meters

"Designed for Application"® OSCILLOSCOPES AND ACCESSORIES

MODULE OSCILLOSCOPES

Miniature, packaged panel mounting cathode ray module oscilloscope indicators for monitoring. Designed to be built into equipment. Require minimum panel space. Use separate module power supply.
No. 90901 uses 1CP1 fixed focus cathode ray tube. Smallest and most economical of the module oscilloscopes. Panel 2⅜" square.
No. 90911 uses type 1EP1 flat face 1¼" cathode ray tube. Balanced deflection. Blanking input. Sharp focus. Panel 2⅜" square.
No. 90912 uses type 2BP1 two inch cathode ray tube. 3" x 5" panel.
No. 90912-R uses type 3UP1 2⅛" x 1-9/16" cathode ray tube.
No. 90913 uses type 3XP1 3" x 1½" rectangular cathode ray tube.
No. 90914 uses type 4KP1 3½" square cathode ray tube.
No. 90943 uses type 3KP1 Three inch C-R-T. Contains power supply.
No. 90945 uses type 5BP1 Five inch C-R-T. Contains power supply.

BASIC OSCILLOSCOPES

Rack mounted inexpensive basic oscilloscopes including cathode ray tube circuit, power supply; intensity, focus, and centering controls, magnetic shielding, safety features, switches, etc.
No. 90902 uses type 2BP1 two inch cathode ray tube. 3½" x 19" panel.
No. 90902-M designed to meet military specification MIL-T-945.
No. 90903 uses type 3KP1 three inch cathode ray tube. 5¼" x 19" panel. Power requirement — 105-125 volts 60 cycles — 19 watts.
No. 90903-R uses type 3XP1 3" x 1½" rectangular cathode ray tube.
No. 90905 uses type 5UP1 five inch cathode ray tube. 7" x 19" panel.
No. 90905-B uses type 5ADP1 five inch flat face precision tolerance cathode ray tube. Balanced deflection. Blanking input. 35 W at 117 V.
No. 90905-D for balanced direct coupled deflection. Uses 5ADP1.
No. 90905-R uses type 5BXP1 4⅝" x 2⅝" rectangular C-R tube.

COMPACT COMPLETE OSCILLOSCOPES

Extremely compact oscilloscopes complete with amplifiers, linear low frequency sweep, and power supplies. Balanced deflection for minimum distortion. High accelerating potential for good resolution.
No. 90923 uses type 3XP1 3" x 1½" rectangular cathode ray tube. 3½" x 19" panel. 0.4 V. p to p per cm. defl. d.c. to 275 kc.
No. 90923-C uses 3RP1. 5¼" x 10½" panel. 50 mv p to p per cm.
No. 90925 uses type 5BXP1 4⅝" x 2⅝" rectangular C-R tube. 3½" x 19" panel. 0.16 V. p to p per cm. defl. DC to 550 kc.
No. 90925-A Vertical amplifier is 50 mv. p to p per cm. to 2.5 mc.
No. 90925-B Low frequency linear sweep 3 seconds per sweep to 22 kc.

PORTABLE FIELD OSCILLOSCOPES

Especially suitable for use in factory, laboratory, and the field for design, installation, maintenance, and service. Well shielded against magnetic fields. Excellent linearity. Sharp focus. Compact.
No. 90915 uses 5AQP1. Frequency response either amplifier DC to 200 kc. Completely insulated front panel and case. Double shielded.
No. 90952 Synchroscope or Oscilloscope. 7½" x 5⅝" x 13"
No. 90954 uses 4KP1 3½" square CRT. 7½" x 9½" x 13½" insulated case. 23 pounds. Response DC to 1.2 mc. 0.1V. per cm.

MONITOR OSCILLOSCOPE

No. 90932 Amateur Band Monitor Oscilloscope is a complete oscilloscope for monitoring the modulated r-f output of a transmitter. Built-in link-coupled tuned circuits cover all amateur bands 3.5 to 54 mc. All circuits and accessories are built in. The monitor will display the r-f envelope and/or the trapezoidal monitoring pattern.

AMPLIFIER/SWEEP UNITS

Amplifier/Sweep Units are accessories which may be used with any basic or module oscilloscope. They contain a vertical amplifier, a horizontal amplifier, a sweep generator and power supplies.
No. 90921 Inexpensive rack mounted unit. 5¼" x 19" panel.
No. 90921-A DC to 1 mc. Vert. amp. Balanced deflection. 0.3V./cm.

POWER SUPPLIES

Compact high voltage and low voltage power supplies for oscilloscopes etc. 1⅞" x 2⅛" x 4⅝". Input 117 volts 50/60 cycles. Supply accelerating and centering potential for oscilloscopes.
No. 90202 is a plug-in supply for high voltage and heater power for any of the MILLEN Module Oscilloscopes. Output 750 volts dc at 3 ma.
No. 90202-M designed to meet military specification MIL-E-16400.
No. 90203 supplies B+ and heater to three amplifiers and a sweep.
No. 90203-A has external filter capacitors for military applications.

MODULE ACCESSORIES

The MILLEN Module Oscilloscope Amplifiers and Sweep are compact plug-in units designed to provide the required deflection voltages for the MILLEN series of Module and Basic Oscilloscopes.
No. 90924 A-C coupled unit. Use as pre-amplifier or deflection amp.
No. 90926 Plug-in linear sawtooth sweep generator. Controls on top.
No. 90927 Several versions of direct coupled deflection amplifier.

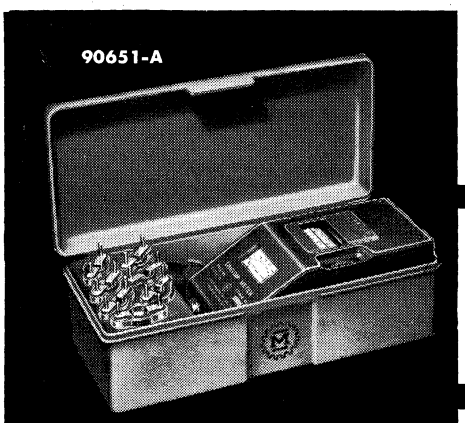
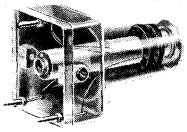
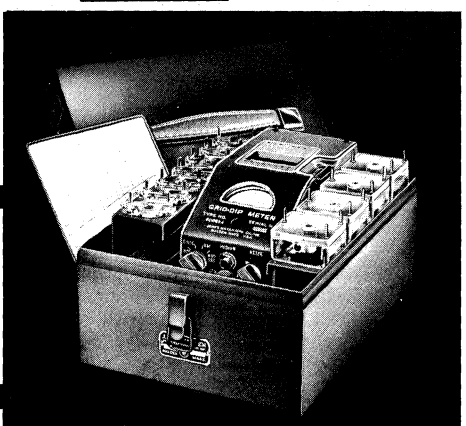
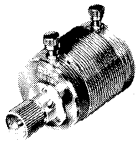
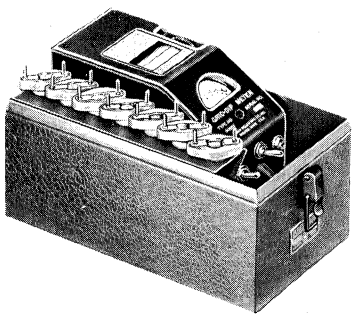
MAIN OFFICE AND FACTORY
150 EXCHANGE ST., MALDEN, MASSACHUSETTS, U. S. A.

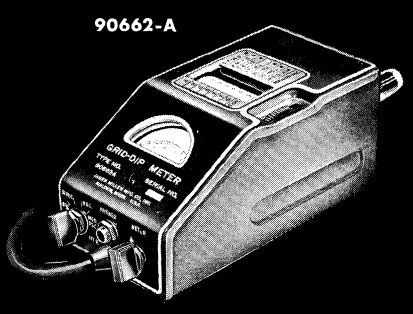


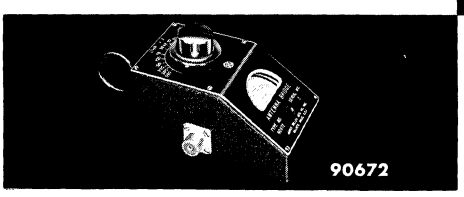


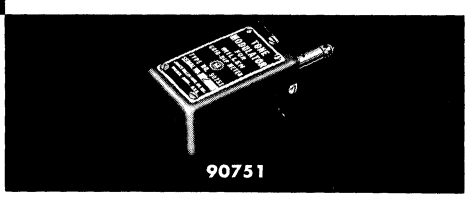












GRID DIP METERS

No. 90651-A GRID DIP METER

The No. 90651-A Grid Dip Meter has a transistor d.c. amplifier to increase sensitivity. It provides full scale meter reading at all frequenies from 1.7 to 300 mc. It has a modern, taut band meter to eliminate any possibility of meter ever becoming "sticky". These additions are made while still maintaining all of the features which have made the MILLEN No. 90651 Grid Dip Meter so thoroughly reliable it has become the standard of the industry. It uses the same stable oscillator without spurious dips, it has a transformer-type power supply, it has seven coils protected by form-fitting molded covers, etc.

No. 90651 STANDARD GRID DIP METER

The No. 90651 Grid Dip Meter is complete with a convenient polypropylene carrying case which keeps the coil/probes with the Grid Dip Meter and protects both. Frequency coverage is 1.7 to 300 mc. with the seven coil/probes furnished. Additional coils for extending the calibration to 160 kc. are available. See below.

No. 90662-A LABORATORY AND INDUSTRIAL GRID DIP METER

The No. 90662-A Industrial and Laboratory Grid Dip Meter is hand calibrated from 225 kc. to 300 mc. Calibration accuracy is +0.5%. Additional features are a d.c. amplifier for excellent sensitivity at all frequencies, modulation, easily read dial, three wire grounding-type power cord and suitable carrying case.

No. 90662 INDUSTRIAL GRID DIP METER

The No. 90662 Grid Dip Meter covers the frequency range of 225kc. to 300mc. and is hand calibrated with calibration accuracy of +0.5%. It is supplied with a carrying case, three wire grounding-type power cord and a plug-in modulator. The d.c. amplifier and internal modulator are not supplied.

No. 90661 INDUSTRIAL GRID DIP METER

The No. 90661 Grid Dip Meter covers the frequency range of 1.7 to 300 mc. and is hand calibrated with calibration accuracy of +0.5%. It is supplied with a carrying case and three wire grounding-type power cord. DC amplifier, modulator and L-F coils are not supplied.

ACCESSORIES

No. 90672 ANTENNA BRIDGE

The No. 90672 Antenna Bridge is an r-f bridge which uses a Grid Dip Meter as a source of signal. It is a sensitive bridge for measuring impedance in the range of 5 to 500 ohms for unbalanced impedances.

No. 90751 TONE MODULATOR

The No. 90751 Tone Modulator plugs into the 'phone jack of a Grid Dip Meter to provide 800 cycle modulation.

No. 46721 PROBE — Used where it is difficult to couple directly.
No. 46701 COIL KIT — Coil form and cover for Grid Dip Meter. No coil.
No. 46702 LOW FREQUENCY COIL/PROBE — 925 to 2000 kc.
No. 46703 LOW FREQUENCY COIL/PROBE — 500 to 1050 kc.
No. 46704 LOW FREQUENCY COIL/PROBE — 325 to 600 kc.
No. 46705 LOW FREQUENCY COIL/PROBE — 220 to 350 kc.
No. 46706 LOW FREQUENCY COIL/PROBE — 160 to 225 kc.
No. 46672-10 BALUN — Reactances tuned out for 10 meters and C.B.
No. 46672-15 BALUN — Reactances tuned out for 15 meter amateur band.
No. 46672-20 BALUN — Reactances tuned out for 20 meter amateur band.
No. 46672-40 BALUN — Reactances tuned out for 40 meter amateur band.
No. 46672-80 BALUN — Reactances tuned out for 80/75 meter band.

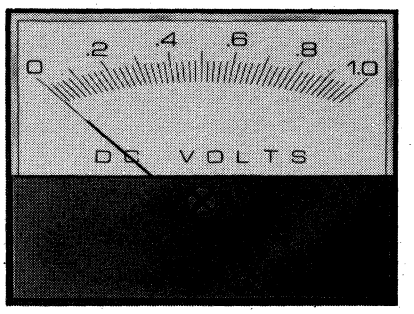
MODUTEC
TAUT BAND PANEL METERS

The Modutec family of precision, self-shielded, permanent-magnet / moving coil panel meters combines state-of-art movements with advanced, functional styling.
Each of the four Modutec series is available in a full range of five sizes.

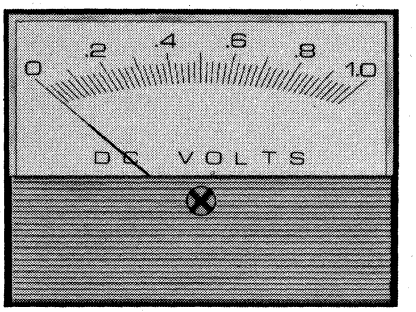
FEATURES AND SPECIFICATIONS

Movement — High torque, frictionless taut-band suspension assures long life and dependable high accuracy.
Scale — 100° long, linear, low-profile scales provide easy, accurate reading.
Accuracy: ±2% for DC meters; ±3% for AC meters (60 Hz sine wave).
Tracking: ±1.5% for DC meters; ±2% for AC meters.
Modutec meters meet or exceed the performance requirements of USA Standard C-39-1.



S SERIES
SURFACE MOUNT BLACK COVER

The handsome aspect ratio and clean cut detailing of these meters will add distinction to any instrument or control panel. Available in five sizes and a wide variety of ranges, this series provides new latitude for the equipment designer.



C SERIES
SURFACE MOUNT CLEAR COVER

This series features a case front of clear acrylic, polished on the outside and closely ribbed on the inside surface. The visual effect of this is to greatly reduce contrast between the meter and the adjacent panel, resulting in a very pleasing overall appearance.

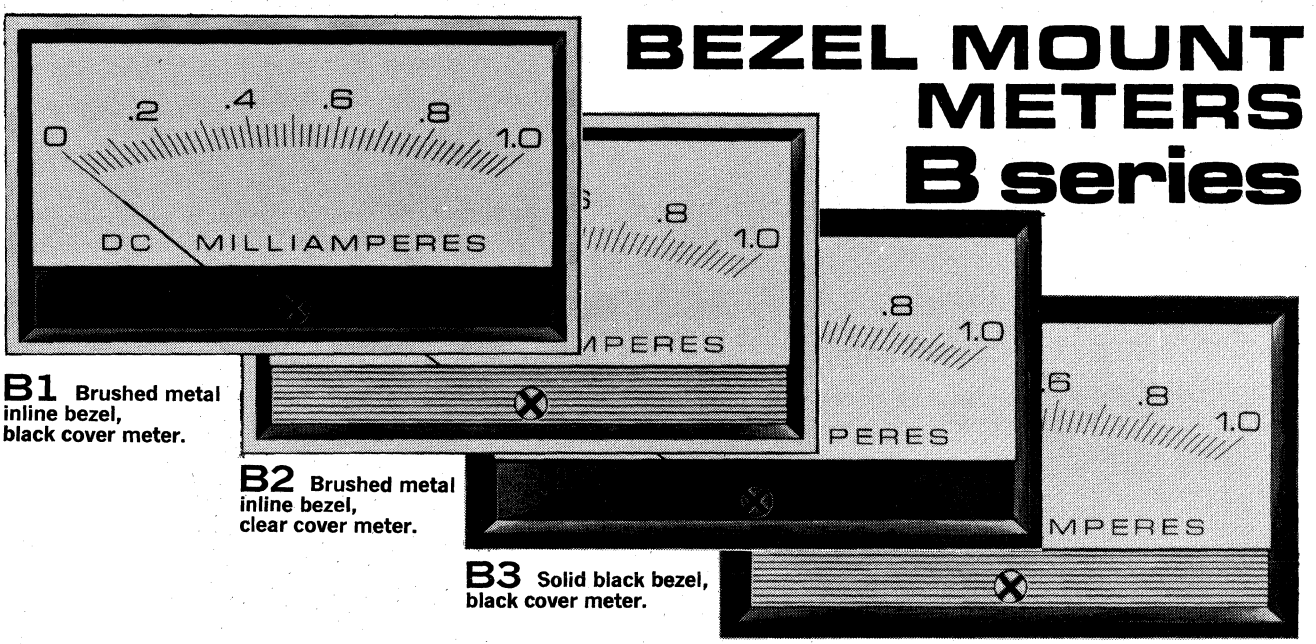
BEZEL MOUNT METERS
B series



B1 Brushed metal inline bezel, black cover meter.

B2 Brushed metal inline bezel, clear cover meter.

B3 Solid black bezel, black cover meter.

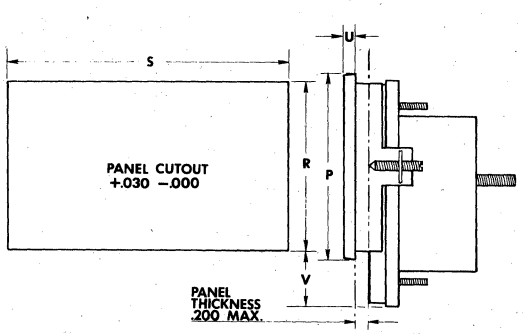
B4 Solid black bezel, clear cover meter.

Cast metal bezels are available for behind-panel mounting of S series or C series meters in all sizes. The cleanly designed bezel features minimum depth and cross-sectional area consistent with function, and is supplied in solid black finish or with brushed metal inline, as shown below.

When you order a bezel mount meter you are, in effect, ordering a complete package, comprising meter, bezel, hardware, template, and mounting instructions. To order, substitute "B" for the letter in the model designation, and add suffix "B1", "B2", "B3", or "B4". For example, 3B-DVV-025-B2 specifies a 3½" DC voltmeter, range 0-25 VDC, bezel mount with brushed metal inline over a clear cover meter.

Prices: Prices of bezel mount packages are obtained by adding to the basic meter prices (on the preceding page) as follows:

1½" — $1.75 3½" — $1.85 5½" — $1.95
2½" — $1.80 4½" — $1.90



METER SIZE	P	R	S	U	V
1½"	1.51	1.37	2.25	.08	.39
2½"	1.74	1.59	3.00	.09	.64
3½"	2.30	2.16	3.72	.09	.72
4½"	2.90	2.75	4.81	.10	1.10
5½"	3.29	3.14	5.86	.10	1.20

OPTIONS

The optional features listed below can be promptly incorporated in any standard meter. To order, add the appropriate suffix to the catalog number of the meter, and add the indicated charge to the list price before applying the quantity discount (see next page).

Improved Accuracy

Calibration	Add'l. Charge	Suffix
±1% tracking, ±1% accuracy	$4.00	A1
±0.5% tracking, ±2% accuracy	7.50	A2
±0.5% tracking, ±1% accuracy	10.00	A3

Colors Available as follows, additional charge $1.00

Color	Suffix	Color	Suffix
White	C1	Forest green	C6
Beige	C2	Tan	C7
Technical grey	C3	Dark brown	C8
Edgewater blue	C4	Ebony (gloss) black	C9
Apache red	C5		

Mirror Scale — M suffix, add'l. charge $1.00.

Illumination — K suffix. An accessory to provide illumination to Bezel Mount or Windo-Mount meters. Prices:
1½", 2½", 3½" meters $2.75
4½" and 5½" meters 3.00

Blank Dial — D suffix, add'l charge $0.50.

Closer Resistance Tolerance — R suffix, add'l. charge $1.00. Provides for improving tolerance to ±5%.

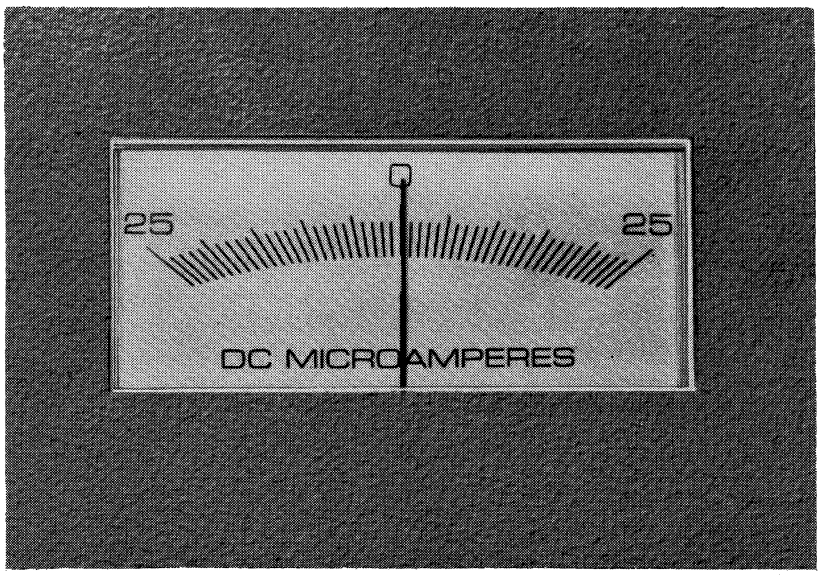
Sealed Case — S suffix, add'l. charge $2.50.

Temperature Compensation — T suffix, add'l. charge $3.50. Provides for extending the range to 25±30°C (it also increases resistance by 25%).

High Resistance Voltmeters — V suffix, add'l. charge $3.00. Increases resistance/sensitivity of DC voltmeters to 10K ohms/volt.

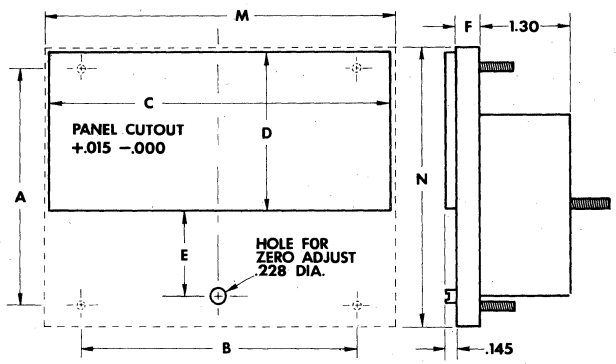
new, exclusive WINDO-MOUNT® METERS W series

TAUT BAND



If you want your panel to be the last word in sophisticated styling, specify Windo-Mount® meters! You see only the meter dial, through what appears to be a flush window in the instrument panel. Available in all standard Modutec sizes — concessions need be made to neither function nor appearance.
For illumination, see "Options" on preceding page. Mounting to panel can be done in several ways; for information request applications bulletin AB6-1 from your Modutec rep or from factory. Price: Add $0.75 to the prices given for S series meters (preceding overleaf).

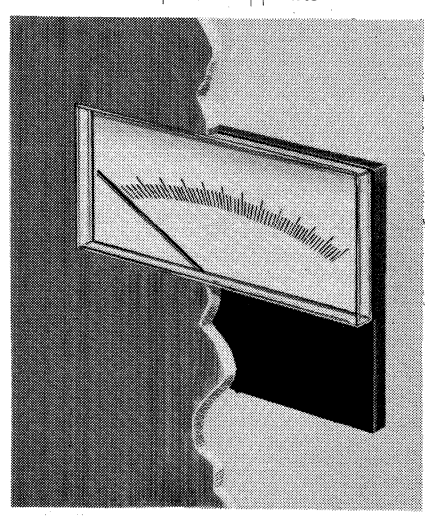
METER SIZE	A	B	C	D	E	F	M	N
1½"	1.31	1.31	2.145	.930	.535	.275	2.26	1.77
2½"	1.88	1.88	2.895	1.265	.638	.295	3.01	2.29
3½"	2.250	2.250	3.593	1.590	.804	.32	3.73	2.90
4½"	3.560	4.00	5.005	2.330	.856	.37	5.18	4.06
5½"	3.00	5.25	5.775	2.588	1.278	.37	5.97	4.60



MODIFICATIONS

Certain modifications of catalog meters, the specifications of which are normally detailed by the customer, can be accomplished quickly at Modutec factory modification centers, at costs proportionate to work required. Typical modifications:

Custom Dials or Scales — These can be produced from artwork supplied by Modutec or by customer.
Custom Colors — Meter covers can be finished with paint supplied by the customer.
Suppressed Zero — Up to 60% of the normal range may be suppressed.
Zero Right — Meters with zero-right movements and custom scale can be supplied.
Single-Point Calibration — Can be furnished to an accuracy of 1%.
Special Marking — Case or cover can be hot stamped with customer's name, trade-mark, etc.



SPECIALS

If your application demands special requirements beyond the listed options and modifications, communicate with us. Some of the areas of capability are:

Damping factor variation	VU meters
Response time variation	Multiple range meters
Special cases, covers	Externally adjustable
High sensitivity movements	(dead set) pointer

DISCOUNT SCHEDULE:

0-9 pcs. net; 10-24 pcs. 20%; 25-49 pcs. 25%; 50-99 pcs. 30%. Applies to options, modifications, and specials, except for one-time and setup charges.

Standard meters shipped from stock. For fast service, contact your nearest Modutec representative, or call direct.

(PRICES EFFECTIVE JULY 1, 1969)

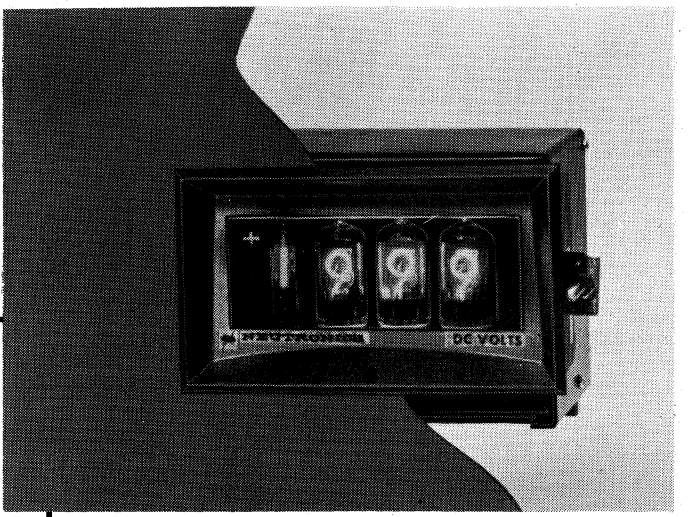
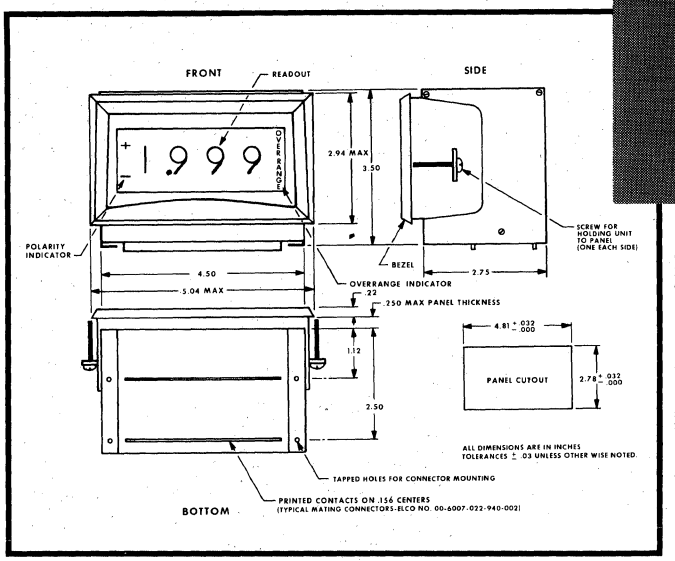
NEUTRONIC MODEL 100 SERIES DIGITAL PANEL METERS





FEATURES

- COMPACT: Physically interchangeable with most conventional 4.5″ Bezel Mount Panel Meters (3.5″ High x 4.5″ Wide x 2.75″ Deep).
- VERSATILE: Capable of measuring AC or DC Volts, Current (with DC Zero Suppression), or Ohms.
- TTL BCD DIGITAL OUTPUTS, REMOTE ENCODE AND ISOLATED ANALOG AND DIGITAL GROUNDS STANDARD: Ideally suited for Data Logging System requirements.
- AC OR DC OPERATION: Permits either stationary or mobile use.
- HIGH ACCURACY: ±0.1% of Reading ±01.% of Full Scale.
- HIGH INPUT IMPEDANCE: Greater than 1,000 Megohms on 0.2 Volt Range.
- 100 MICROVOLT RESOLUTION
- AUTOMATIC POLARITY AND OVERRANGE INDICATION
- NON-BLINKING WIDE ANGLE DISPLAY
- OVERLOAD PROTECTION

DESCRIPTION

The Neutronic Model 100 Series Digital Panel Meters were designed primarily as a high performance, low cost, 3½ digit instrument. They are direct replacements for most conventional 4.5″ bezel mount panel meters, thereby permitting instrument and system manufacturers to use interchangeably that meter which best suits their specific requirements.

MODEL 2000

RESISTANCE LIMIT BRIDGE

FEATURES

- 0 TO 1.2 GIGOHM RANGE
- ±0.005% ACCURACY AVAILABLE
- 1 PPM SENSITIVITY ON ALL RANGES
- LINEAR, DIRECT READING PERCENT DEVIATION
- AUTOMATIC DEVIATION METER RANGING
- NO DEVIATION METER ZERO OR CALIBRATION ADJUSTMENTS
- LOW OVERLOAD RECOVERY TIME
- TEST VOLTAGE PER MIL-R-93
- COMPLETELY FLOATING, GUARDED AND SHIELDED
- ALL SILICON SOLID STATE CIRCUITRY

DESCRIPTION

The Neutronic Model 2000 Resistance Limit Bridge is a human engineered, completely self-contained instrument, designed for use in the manufacture of resistors whenever control of a trimming process is required. The instrument incorporates a unique "Active Guarded Bridge" which permits features heretofore unobtainable in Resistance Limit Bridges. Namely, perfectly linear direct reading percent deviation, without any requirement for meter zeroing or calibration prior to use on any range.

ADDITIONAL NEUTRONIC PRODUCTS DETAILS ON REQUEST

Resistance Deviation Bridges • Automatic Resistance Bridges • Digital Clocks • Time Code Generators • Totalizing Counters • Preset Counters • AC & DC Power Supplies • Solid State Relays

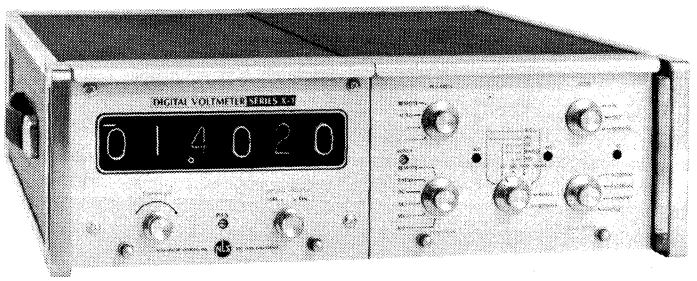
New Concepts in Electronics

POST OFFICE BOX 625, ST. LOUIS, MISSOURI 63042 / 314/739-8817

NON-LINEAR SYSTEMS, INC.

ORIGINATOR OF THE DIGITAL VOLTMETER

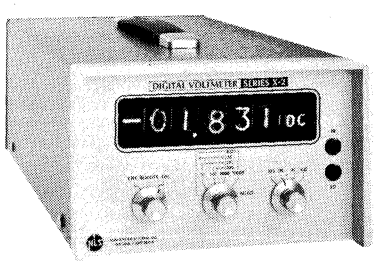


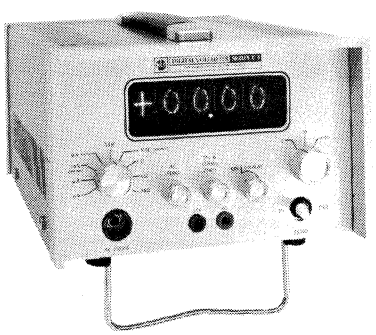
SERIES X-1 DIGITAL VOLTMETER

- Five digits plus sixth digit 20% over-range
- High speed—16 ms readings
  .001% linearity and resolution
- High Common Mode Rejection
- Prewired to accept plug-in options
- Options include—AC Converters, Ohms Converter, Millivolts Preamp, Active Filter, Ratio, Remote Trigger and Printout
- Automatic Ranging
- Automatic Polarity Indication
- Systems Compatible

EIGHT RANGE OHMMETER

- This special version of the X-1 has extended resistance measuring capability in 8 ranges from 11.9999 to 119.999 Megohms with extremely low test currents. Also measures DC volts, Millivolts and includes Active Filter.





SERIES X-2 DIGITAL VOLTMETER

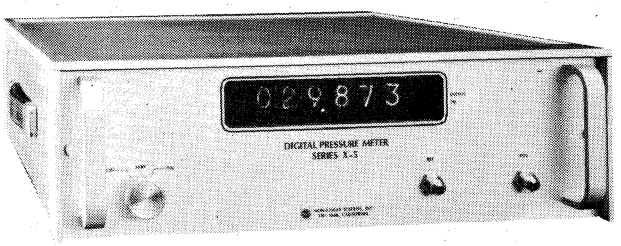
- Popular 4-digit model with 5th digit 20% over-range.
- Compact portable unit
- High Common and Normal Mode rejection
- Options include: AC Converter
  Ohms/Millivolts Converter
  Precision Preamp
  Automatic Ranging
  Ratio
  Printout
- Systems Compatible

SERIES X-3A DIGITAL MULTIMETER

- Wide Capability:
  DC Volts—10 μV to 1 KV in six ranges (to 30 KV with optional HV probe)
  AC Volts—0.5V to 300V in three ranges
  Ohms—10 milliohms to 2000 Megohms in nine ranges
  Current—10 picoamps to 200 milliamps in eight ranges (to two amps with optional shunt)
- 2000 digits per range (0.05% resolution)
- Fully protected inputs
- Automatic polarity and overload indicators scaled
- Analog output

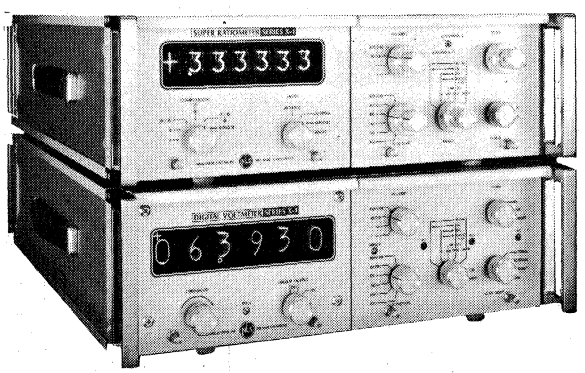
DEL MAR, CALIFORNIA
(714) 755-1134 / TWX: 910-322-1132

NON-LINEAR SYSTEMS, INC.



SERIES X-5 DIGITAL PRESSURE METER

- Direct digital readout of pressure in PSI or Inches of Mercury.
- Non Position Sensitive—reading is affected only 0.001% of full scale per degree of tilt.
- High Speed Operation—solid state electronics and only one moving part provide more than 30 readings/minute for improved production.
- Digital and/or Analog Data Outputs Available—to drive recorders or printers for permanent calibration and measurement records.
- Complete Portable Single-Package Construction—transducer and all electronics enclosed in a 5¼" high unit which is rack mountable for systems compatibility.
- "Take It With You"—unaffected by gravitational or barometric gradients.



SERIES X-6 SUPER RATIOMETER

- Measures and Computes Ratio ($\frac{A}{B}$), Difference (A—B), and Deviation ($\frac{A-B}{B}$) of any two analog inputs.
- Multifunction DC volts, AC volts, Ohms, Millivolts and Ratio (independent selection of each input function)
- Common Signal Path on both inputs
- Employs proven, high speed X-1 DVM

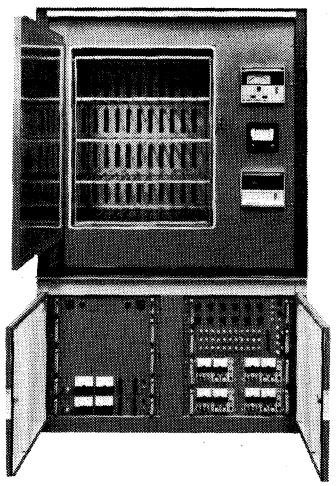
NEW
SERIES X-4 DIGITAL VOLTMETER

- Compact, miniaturized utility meter
- Three digits plus fourth digit 100% overrange
- Four ranges available: 0 to 1.999 VDC; 0 to 19.99 VDC; 0 to 199.9 VDC and 0 to 1000 VDC
- Digital (BCD 8-4-2-1) output available on rear connector
- Auto polarity indication
- Overload indicator
- Fast 60 readings/second
- Additional ACV, Ohms, Current, and Millivolt adapters available

S-1 DATA ACQUISITION SYSTEMS

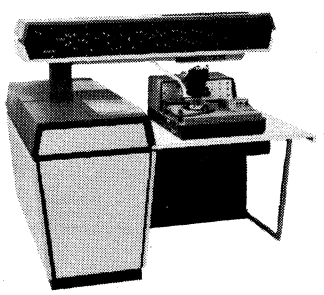
- Handles up to 1000 3-wire inputs
- Built around a .001% accuracy X-1 DVM
- Flexible modular construction
- Choice of input and output configuration to meet your requirements
- Programmable Function and Range Selection
- Field Expandable
- Wide selection of modules:
  - Scanners—crossbar or reed relay up to 1000 channels
  - Comparators—Hi, Lo, Go output
  - Digital Clocks—
  - Parallel-to-Serial Converters
  - Digital Printers
  - Incremental Mag Tape
  - Various output devices
  - Special interface units

NON-LINEAR SYSTEMS, INC.



MODULAR AGING SYSTEMS

- Especially designed to age MOS LSI devices
- Low cost-per-device
- High density device storage
- Quick change socket configuration
- Triple safety temperature control
- Low temperature gradients
- Expandable modular construction
- Programmable multiphase clock
- Over-voltage and short-circuit protection
- Real time data excitation
- Handles up to 40 lead devices



ARRAY TEST SYSTEMS

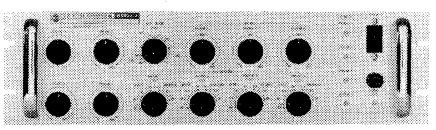
Non-Linear Systems manufactures LSIC Array Test Systems to completely exercise and test functional and DC parameters of LSI devices.
Operation is fully automatic for testing complex wafers or packaged units. Contact factory with your specific requirements.

Non-Linear Systems maintains a world-wide staff of experienced applications engineers to serve you. Please call the factory *collect* for address of your local NLS sales office.

NON-LINEAR SYSTEMS, INC.
DEL MAR, CALIFORNIA 92014
[714] 755-1134/TWX: 910-322-1132

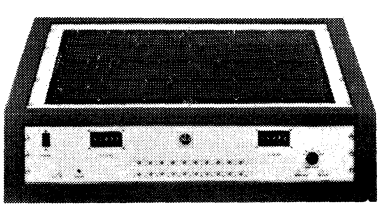
S-2 DATA ACQUISITION SYSTEMS

- Four digit X-2 DVM
- Compact, portable 10½" high
- Mag tape output
- 32 channel 4-wire Scanner
- Expandable with modules listed under S-1
- Low Cost



C-4A FOUR PHASE CLOCK PULSE GENERATOR

- Four clock pulses with independent amplitude, phasing and width controls.
- Common Rep Rate Control—from 100 H_Z to 3 MH_Z
- Linear Phase Tracking with Frequency
- Overload protection
- Amplitude continuously variable from 0 to —30 volts on each phase.



MODEL 22-1 WORD GENERATOR

- 22 Separate channels
- Word length variable from 10 to 100 bits/channel
- Rapid, simple programming
- Precision programmable level controls
- Bi polar outputs, plus or minus 15 V
- 2 MH_Z Clock

NORTH ATLANTIC industries, inc.

AC PHASE SENSITIVE

Resolver/Synchro Simulators & Bridges

Most instruments offer a dual mode capability, permitting a single model to work with both resolvers and synchros. All units feature input/output isolation, and also direct in-line readout of angle, i.e., 359.999°, thus eliminating operator confusion, reading error and fatigue. All dual-mode units are also available as single-mode resolver or synchro units.

Series 530—Resolver/Synchro Simulators

These simulators provide the ideal outputs for driving resolvers and synchros at 11.8, 26, 90 and 115 V line-line voltages. These line-line voltages are all available with either 26 V or 15 V 400 Hz excitation, and feature isolated input and output. Accuracy is 2 arc-seconds. Standard resolutions are .0001°, .001°, 1° and 5°, with standard units 3½" full-rack. Optional half-rack mounting for 1° and 5° resolution models.

Model 530/20, 540/20 Broadband Resolver/ Synchro Simulator & Bridge

These broadband instruments operate over the frequency range from 50 Hz to 10 KHz, and provide accuracy to 10 arc-seconds. Their flat frequency vs. accuracy characteristic makes either unit an ideal choice for test facilities requiring maximum utility from all instruments. Both the Simulator and the Bridge provide selectable resolver-and-synchro-modes for all standard line-line voltages in a 5¼" high full-rack unit. Angle is displayed as a non-ambiguous in-line readout from 0° to 360°.

Model 532—Miniature Synchro Simulator

Model 532 is a miniature synchro simulator offering precision performance in a small panel-mounted unit suitable for production test, ground support and similar systems. Direct simulation of 11.8 V 400 Hz line-line synchro transmitters (CX) is provided, with dial reading in 30° segments plus 5° increments selectable by sealed thumb-wheel switches and accurate to 30 arc-seconds. A similarly packaged Resolver Simulator, Model 531, is also available. Units can be supplied with several options, including 90 V line-line output.

Series 540—Resolver/Synchro Bridge

These bridges permit direct measurement of resolver and synchro transmitters. They feature a constant null gradient output voltage, isolated input and output, input impedance over 500K, and 400 Hz accuracy of 2 arc seconds. Standard resolutions are .0001°, 1°, and 5°, and are provided in a 3½" full-rack panel unit. Optional half-rack mounting for 1° and 5° resolution models.

Model 541/10—Miniature Resolver Bridge

This Miniature Resolver Bridge is designed for panel-mount applications in production and field test equipment. It measures the angular position of 400 Hz resolver transmitters with an accuracy of 5 arc-seconds. Manual balance is by coarse and fine sealed thumbwheel switches, with readout in 45° segments plus 5° steps. A Miniature Synchro Bridge, Model 542/10, is available in an identical package.

RTS-573

An integrated 400 Hz Resolver/Synchro Test Console for complete resolver and synchro testing. Tests include Phase Shift, TR, Angular Accuracy, Electrical Zero, Phasing, Total and Fundamental Nulls, Input Current.

Angle Position Indicators

High-speed performance 400 Hz servos for field test and production test measurement of synchro and resolver transmitters. The half-rack API-8025 provides accuracy of 6 arc minutes, repeatability of 30 arc seconds, and slew speed of 25°/second with a digital readout display. Optional retransmit components, dual-mode, and two-speed operation. Also available for operational use, 2" and 3" diameter units.

Model 545—Automatic Angle Position Indicator

This instrument is offered with .01° resolution and accuracy or with .001° resolution and 10-second accuracy for all line-to-line voltages from 11.8 to 90 V at 400 Hz. The digital angle is both displayed and available in BCD format at the rear connectors. Remote or front-panel selection of resolver or synchro input, line-line voltage range and operating mode. Operating modes selected as Track (the instrument continuously follows the input data), Update (the instrument tracks for 200 msec, then holds until receipt of another command), and Auto-Update (repetitive track/hold sequences) with a Variable Display Time of .5 to 3 seconds. Optional remote readout, analog d-c null output, data freeze command, signal frequencies 50 Hz to 4.8 KHz, multiplexed and multi-speed.

AC Ratio Boxes

These precision inductive voltage dividers provide ideal characteristics for use in ratiometric measurements. They feature high input impedance, low output impedance, and accuracy over a wide frequency band. All units have direct in-line non-ambiguous readout and occupy a minimum of panel space.

RB-503, RB-504—AC Ratio Boxes

For production test use, the RB-503 features 10 ppm accuracy from 50 Hz to 5 KHz, Zin 300K, Zo 3.5Ω, 0.35f volts input rating and a ratio range from 0 to 1.111110. RB-504 features 1 ppm accuracy from 300 Hz to 2 KHz, Zin 200K, Zo 8.5Ω, 0.7f volts input rating, and a ratio range from −0.111110 to +1.111110.

RB-503T, RB-504T—Inverting AC Ratio Boxes

Both models feature isolated input with full inversion capability. Ratio range is ±1.111110 with 0.35f volts input rating. The accuracy is 10 ppm and 3 ppm respectively for each model over the entire ratio range. Higher accuracy and input voltage rating is included through a built-in direct-input mode.

INSTRUMENTS, RATIO BOXES, AND ANGLE POSITION INDICATORS.

Model 503/10—AC Ratio Box

This broadband unit has a ratio range 0 to 1, operates from 50 Hz to 10 KHz with 10 ppm accuracy from 50 Hz to 3 KHz, and 100 ppm from 3 KHz to 10 KHz. This 3½" high full-rack unit is environmentally qualified for temperature, humidity, altitude, shock, and vibration.

RB-521—Miniature Ratio Box

For field use, this instrument features drip- and splash-proof construction while providing 10 ppm accuracy. Zin 250K, Zo 3.5Ω, 0.35f volts input rating.

Phase Angle Voltmeters

These multifunctional instruments combine phase-sensitive modes with the functions of a conventional a-c voltmeter operating over the range of 10 Hz to 100 KHz. They provide direct-reading voltage measurement of the total, fundamental, in-phase and quadrature components of an a-c signal to 2% full-scale, as well as phase angle to 1°. They feature calibrated voltage ranges of 300 μV (or 1 mV) to 300 V rms full-scale, built-in or plug-in harmonic-rejection filters, high quadrature overload capability, and operate with a wide range of reference voltages.

Model 214A, 214B, 214C—Four-Frequency Phase Angle Voltmeter

For production test use, these solid-state instruments provide phase sensitive operation at 1, 2, 3, or 4 frequencies 30 Hz to 20 KHz. Features include ±5% bandwidth without adjustment, adjustable meter scaling for go/no-go applications, and 300 μV to 300 V full-scale ranges. Rapid field change of frequency modules accomplished with simple one-control recalibration procedure. Available as Model 214A (no isolation), 214B (reference isolation), and 214C (signal and reference isolation). Optional rear connectors, 10 μV full-scale range.

Model 240, Model 245—Phase Angle Voltmeters

For field support use, these transistorized Phase Angle Voltmeters are designed for operation at a specified frequency from 30 Hz to 20 KHz. Similar performance to the Series 214 with operation at a fixed reference level. Optional d-c voltmeter function.

VM-202—Phase Angle Voltmeter

The original Phase Angle Voltmeter designed for production test use, provides phase-sensitive operation at a single-specified frequency 30 Hz to 10 KHz. Optional signal and/or reference isolation. Also available in 2- or 3-frequency Model VM-204.

Model 301A—Broadband Phase Angle Voltmeter

For production test and laboratory use, this broadband instrument is designed for continuous phase sensitive operation from 10 Hz to 100 KHz with a phase angle accuracy of 0.25° from 30 Hz to 30 KHz. Harmonic rejection filters are available and simply plugged in behind the swinging meter panel.

Model 215C—Militarized Phase Angle Voltmeter

Provides over-all functions of and similar performance to the Model 214C Phase Angle Voltmeter in a configuration qualified to MIL-T-21200, and designed for operation from 0° to 75°C. Construction includes drip-proof front panel, booted toggle switches, panel meter per MIL-M-10304B, sealed controls and RFI gaskets.

NORTH ATLANTIC industries, inc.
TERMINAL DRIVE, PLAINVIEW, NEW YORK 11803 • 516—681-8600

Model 212A, 212B, 212C—Transistorized Phase Angle Voltmeter

This solid-state instrument, successor to the famous VM-202, provides phase-sensitive measurement at a single pre-specified frequency from 30 Hz to 10 KHz with full-scale measurement from 300 μV to 300 V. Three basic models are available: Model 212A (no isolation), Model 212B (reference isolation), and Model 212C (signal and reference isolation).

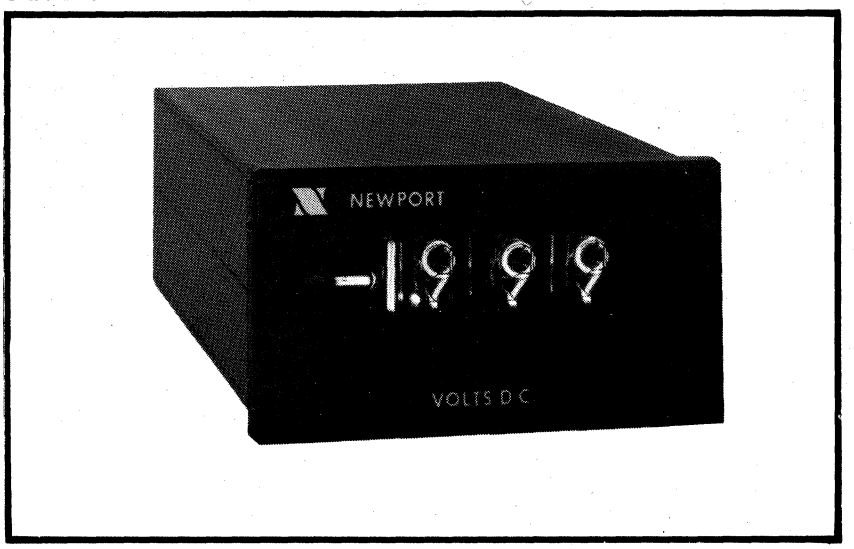
Phase Sensitive Converters

PSC-419—Phase Sensitive AC/DC Converter

For automatic test systems, this programmable instrument converts 400 Hz signal components to high-level d-c with 0.1% linearity and 0.003% scale factor change from −40° to +75°C. Input sensitivity 10 mV full-scale for 10 vdc full-scale output with 100 msec response time. Output impedance 0.2Ω. Accessory panel available to provide rack mounting and manual input controls. Optional operation at other frequencies to 10 KHz.

Phase Sensitive Converter—Model 431

Designed as a building block for the GPATS (General Purpose Automatic Test System), this special purpose Phase Sensitive Converter measures total, fundamental, in-phase and quadrature voltages, and reads angles directly. It operates in multiple frequency bands from 60 Hz to 15 KHz.



DIGITAL PANEL METERS

AC, DC, voltage, current, ratio

BCD ELECTRICAL OUTPUT & CONTROL

1999-count meters only

EXTERNAL CONTROL, all F options

Measurements may be externally controlled as desired by use of the Measurement Enable input. While the Measurement Enable input is maintained true, measurements occur at 60 readings per second. While it is false, the last measurement is held in memory. This mode of external control is standard, but an internal storage element may be activated on request to allow control by pulses or transitions.

Measurement Enable input

	voltage level	loading effect
False:	+3.5v to +6v	0.1 ma max. into DPM
True:	—1v to +0.5v	1.5 ma max. from DPM

DATA READY SIGNAL, all F options

The Data Ready signal goes true upon completion of a measurement, and remains true until the next measurement is started. During this time, the BCD outputs constitute a valid reading available for use by an external device. The Data Ready signal normally remains true for at least 6 ms, and may be held true indefinitely by holding the Measurement Enable signal false. Data Ready signal characteristics are

True: +4.5v to +6.5v — 22K source resistance
False: 0v to +0.5v — 5 ma current sink

DIGITAL OUTPUTS, options F2 and F3

The BCD electrical output includes overrange and polarity bits, as well as the magnitude of the reading. Signal characteristics are

True: +4.5v to +6.5v — 22K source resistance
False: 0v to +0.6v — 3 ma current sink

GENERAL SPECIFICATIONS

Please consult the factory regarding non-standard ranges, programmable ranges, and non-standard settling times.

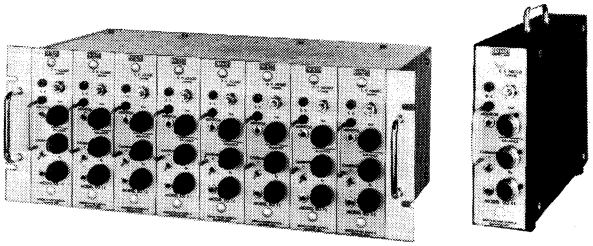
SIGNAL CONDITIONERS



The SG-11 series of Transducer Bridge Signal Conditioning Units are self-contained plug-in instruments designed to be used with various strain-gage transducers. Each consists of a highly regulated, adjustable power supply and the balance, calibration and monitoring circuitry to be used with four, six and eight wire shielded systems. The power supply circuit exhibits very high temperature and time stability and provides line and load regulation of 0.01%; excitation voltage is continuously adjustable from 0 to 16 volts at 0 to 150 mA. The all-silicon transistor circuitry features a self-restoring current limit circuit. These units can be wired for constant-current operation.

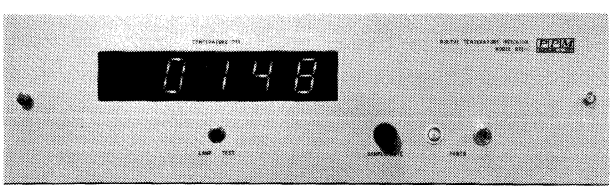
Extreme care has been taken to provide very high isolation to line — less than 0.03 pF coupling capacitance from power line to D.C. output — so that the instrument's performance approximates that of battery operation.

The BALANCE, CALIBRATION, and E. V. COARSE and FINE adjust controls are on the panel for easy adjustment and are all ten-turn potentiometers of very high resolution. A single shunt is used for calibration.

Two types of enclosures are available: a relay-rack mounting enclosure that permits the mounting of eight units side-by-side in a 19-inch rack and a portable enclosure, accepting a single plug-in unit. A plug-in power supply, only, is also available.

MODEL SG-11 PLUG-IN UNIT (eight shown in rack) **$187.50** each
MODEL SG-11-R RELAY-RACK MOUNTING ENCLOSURE (as shown) with solder terminals only **$90.00** each
MODEL SG-11-RC RELAY-RACK MOUNTING ENCLOSURE with MS connectors (mating connectors included) **$250.00** each
MODEL SG-11-P PORTABLE ENCLOSURE (as shown) **$39.50** each

Write for Bulletin SG and Application Notes.
Models for conditioning other transducers are also available.

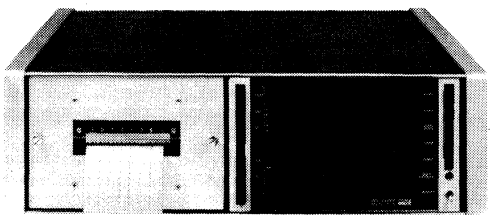


The Digital Temperature Indicator, Model DTI-1 series, accepts signals from various thermocouples, amplifies and linearizes these signals, and displays temperature in digital form. BCD outputs are available for external printers or comparators. Bulletin DTI.

ALPHA-NUMERIC DISPLAYS

We design and build a wide variety of data displays for commercial and industrial use. Digits up to 20 in. high — readable 500 feet away — with solid state control circuitry. Ask for quotation to meet your display requirements.

DATA LOGGERS



The Model DL-2 Data Logger is a complete data acquisition system in a compact, portable package. It will scan up to 100 differential signals, digitize them, and print out their values to four places, also printing range, polarity and channel number. All data is displayed in the form of ⅛ inch high characters on the printer wheels.

Data Logger with 10 Channels **$1995.00**
Data Logger with 100 Channels **$2445.00**

PPM offers custom systems and Systems Components for data acquisition and process control. PPM Data Acquisition Systems will accept as many as 1000 individual signals; these signals are scanned, digitized, and recorded in printed form or on punched or magnetic tape. Alarm outputs are available for signals falling outside of preset limits. For systems applications we offer several Systems Components, such as:

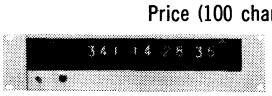
COUPLERS to drive various output devices such as card or paper tape punches, magnetic tape recorders, PPM (or other) printers, and electric typewriters.

PRINTERS to accept most data codes are available up to 30 columns wide (see Data Logger above). Bulletin DP.

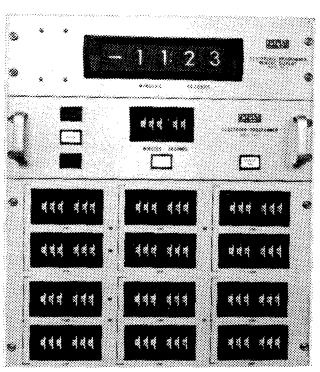
COMPARATORS to provide GO - NO GO comparison between digital data and preset limits or between two sets of digital data.

SCANNERS reed relay and low level, are available with a wide choice of options. These include programming pinboards, analog channel output, and others. Bulletin SN.

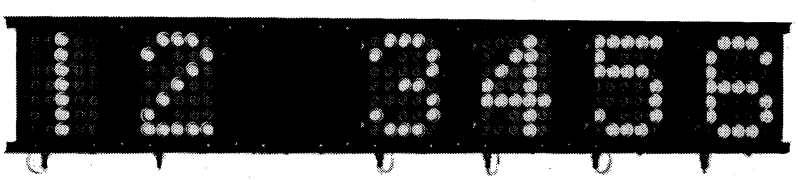
Price (100 channel 2-pole reed-relay scanner)..**$995.00**



↑ DIGITAL CLOCK
Modular construction affords flexibility in meeting your special requiremens. Options, include crystal oscillator time base, additional digits, and time interval output. Bulletin DC.
Price (6 Digit DC-4).....**$650.00**



ELECTRONIC PROGRAMMER →
The Model EP-1 provides relay contact operation at programmed start and stop times. Bulletin EP.



All priced equipment available from stock.

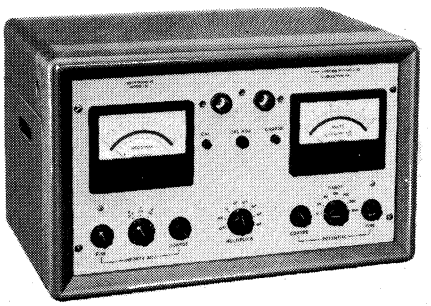
ultra high resistance testers

Meet the "MEGATROMETER"... for Measuring Resistance to 75,000 Million Megohms



ADVANTAGES:

Fast and Simple Operation — just as easy to us as an Ohmmeter!
Direct Reading — no nulling needed.
Low Cost — prices from $960.

USES:

Resistance measurements of ultra-high magnitude.
Insulation resistance measurements of ceramics and other materials.
Analyzing the effects of temperature, humidity, surface leakage and other critical characteristics of semiconductors and insulators.
Remote resistance measurements using extension cables and a Faraday Cage.

The "Megatrometer" is a self-contained test device capable of measuring resistances from 14,000 ohms to 7.5 x 10^{16} ohms. The test potential is continuously variable with ranges of 0-1,000 VDC or 0-1,500 VDC. It is accurate enough (±3% upper half scale) for general laboratory and engineering development, yet simple and rugged enough for use in production testing.

The unique circuitry of the "Megatrometer" employs an extremely small grid current which permits the determination of ultra-high resistance measurements. It is completely portable, no external AC supply is required as the unit uses mercury "D" cells and BC batteries. Battery life under normal usage is approximately six months. The "Megatrometer" is safe under all operating conditions, and can not be damaged by short circuits or severe mechanical shock.

SPECIFICATIONS:

Resistance & Test Potential Ranges

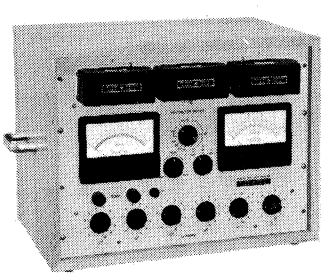
Model No.	Resistance Range	Test Potential
710	14,000Ω to 5 x 10^{15}	0-1,000 Volts, DC
710H	140,000Ω to 5 x 10^{16}	0-1,000 Volts, DC
710V	140,000Ω to 7.5 x 10^{16}	0-1,500 Volts, DC

Measurement Range for Various Test Potentials:

VOLTAGE	RANGE IN OHMS		
	710	710 H	710 V
3	14K – 5 x 10^{12}	140K – 5 x 10^{13}	140K – 5 x 10^{13}
10	50K – 5 x 10^{13}	500K – 5 x 10^{14}	500K – 5 x 10^{14}
25	4 x 10^{5} – 1.2 x 10^{14}	4 x 10^{7} – 1.2 x 10^{15}	4 x 10^{7} – 1.2 x 10^{15}
50	5 x 10^{6} – 2.5 x 10^{14}	5 x 10^{7} – 2.5 x 10^{15}	5 x 10^{7} – 2.5 x 10^{15}
100	1 x 10^{7} – 5 x 10^{14}	1 x 10^{8} – 5 x 10^{15}	1 x 10^{8} – 5 x 10^{15}
250-1000	2 x 10^{7} – 5 x 10^{15}	2 x 10^{8} – 5 x 10^{16}	2 x 10^{8} – 5 x 10^{16}
1500	–	–	2 x 10^{8} – 7.5 x 10^{16}

Accuracy: ±3% upper ½ scale. (Higher accuracies obtainable by using front panel calibration adjustment and plug-in resistor standards.)
Calibration: Built-in 10 Megohm 0.2% calibration standard. Push button on front panel permits fast, easy calibration.
Meters: Precision, fan-type with mirror scale.
Power Supply: 8 mercury "D" cells. (The internal transistorized power supply impedance at 1,000 volts is sufficiently high to preclude the possibility of shock so common to low impedance-type power supplies.)
Guard Circuit: A guard ring network intercepts all leakage current flowing across the electrode insulators and by-passes it around the electrometer circuit.
Dimensions: 21½" W x 13⅛" H x 15⅛" D in cabinet. Rack panel can be removed and mounted in a standard 19" relay rack.
Weight: Net approx. 40 lbs., shipping approx. 45 lbs.
Prices: Model No. 710 — $ 960. FOB Southampton, Pa.
Model No. 710H — $1,500. " "
Model No. 710V — $2,100. " "
Options: Volume Resistivity Jig — Plug-in design for rapid comparative measurements of resins, thin tapes, etc. up to 7.5 x 10^{17} ohms/cm³. Tests can be made in ten seconds. Dimensions: 5" x 2" x 2¼" . . . $85. **Extension Cables**—Dual, 6-ft., Teflon-insulated cables terminating in Faraday boxes at each end . . . $98.

Presenting the Precision Model 801 RESISTANCE STANDARD BRIDGE



ADVANTAGES:

High Accuracy — 0.04%!
Continuously Variable Test Potential — 0-1,000 VDC.
Plug-In Ratio Standards — 9 units serve as bridge arms.

USES:

Primary calibration laboratories.
Voltage coefficient analysis for matching of components.
Calibration of high Megohm resistors to close tolerances.

The Model 801 Resistance Standard Bridge is a self-contained precision instrument of exceptionally high resolution for resistance measurements from 1,000 ohms to 1.1 x 10^{14} ohms. Calibration is traceable to the National Bureau of Standards. The test potential is continuously variable up to 1,000 VDC. Six decades are included and battery operation assures the highest accuracy and stability as well as portability.

SPECIFICATIONS:

Resistance Range: 1,000 ohms to 1.1 x 10^{14} ohms.
Ratio Standards: 9-plug-in laboratory standard resistors supplied to serve as bridge ratio arms.
Meters: Precision, fan-type with mirror scale.
Power Supply: Batteries (internal).
Housing: Oak case, designed so it can be mounted in a standard relay rack.
Dimensions: 20½" W x 16" H x 14" D (with handles width is 24").
Weight: Net approx. 40 lbs., shipping approx. 45 lbs.
Price: $2,550 . . . FOB Southampton, Pa.

PENN AIRBORNE PRODUCTS COMPANY

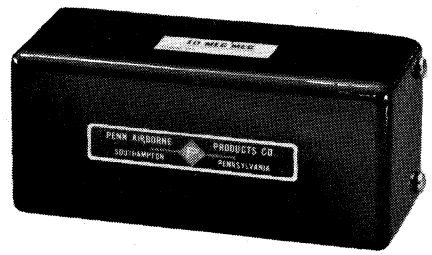
FORMERLY MANUFACTURED BY MID-EASTERN ELECTRONICS, INC.

ultra high resistance standards

Certified RESISTOR STANDARDS with 1% or 0.2% Certification



ADVANTAGES:

Ultra-High Values — from 10 to 10 million Megohms.
Traceable to the National Bureau of Standards.
Economical!

USES:

As primary laboratory standards.
Calibration of test equipment for military specifications on resistance and leakage.
Extending the range of the "Megatometer," and the Resistance Standard Bridge.

Three basic types of Certified Resistance Standards in the ultra-high resistance range of 10 Megohms to 10,000,000 Megohms are available:

1). **Reference Series** — with resistance values selected to within 10% of listed values, measured to within 0.1%, and certified to within 1%.

2). **Precision Series** — with resistance values selected to within 10% of listed values, measured to within 0.02%, and certified to within 0.2%.

3). **Exact Series** — with resistance values selected to within 1% of listed values, measured to within 0.02%, and certified to within 0.2%.

Each Resistor Standard is the culmination of months of meticulous processing, ageing cycles, measured, labeled, stored, shelf aged and measured again. This process is repeated until stability in terms of long term drift is less than 0.2% during the first year.

Resistors are mounted in a specially designed Faraday Box which plugs into the terminals of the "Megatrometer," Standard Resistance Bridge or with special mounting for use with compatible instruments. Teflon insulation is used exclusively and surface leakages are virtually eliminated through a special silicone treatment.

SPECIFICATIONS:

Resistance Values Available & Prices:

RESISTANCE IN MEGOHMS*	UNIT PRICE		
	REFERENCE	PRECISION	EXACT
10	$ —	$ 72.00	$115.00
100	34.00	98.00	126.00
1,000	36.50	110.00	139.00
10,000	42.50	117.00	148.00
100,000	49.00	165.00	198.00
1,000,000	58.00	—	—
10,000,000	72.00	—	—

Voltage Coefficient: Approx. 0.001%/volt. The precise coefficient is given for each resistor of the Precision and Exact Series.

Temperature Coefficient: 10 Megohm units approx. 15PPM/°F; high Megohms approx. 0.2%/°F. The Precision and Exact Series supplied with temp./resistance curves.

Stability: The greatest portion of long term drift occurs during the first year after delivery — less than 0.2% for high Megohm units. Recalibration and recertification is recommended. Use Penn Airborne complete calibration facilities for prompt service.

Leakage: Teflon insulation employed and a guard terminal is used which connects to the guard ring electrode of a Megatrometer or Bridge.

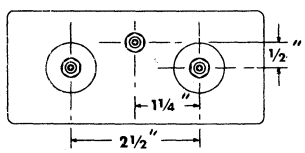
Certification: Reference Series resistors are certified to within 1%. The resistor's temperature coefficient is supplied on the certificate. Precision and Exact Series units are certified to within 0.2%, and a certificate plus a temp./resistance curve are furnished with each unit.

Dimensions: 5" W x 2¼" H x 2" D, with banana plugs extending 1" beyond the 2" dimension.

Standard Mounting:

Special Mounting: Consult Factory.

Weight: Shipping approx. ¾ pound per unit.



RECERTIFICATION of RESISTOR STANDARDS with RAPID Turnaround!

Even Exact Series resistors are subject to long term drift and eventual recalibration and recertification is necessary. At Penn Airborne we are equipped and staffed to provide fast recertification of not only our own ultra-high Resistance Standards, but also others.

Simply return your units with a purchase order. The units will be re-certified as stated under Certification.

Prices: Reference Series Resistors: **$25.** Precision or Exact Series Resistors: **$50.**

Turnaround: Normally within two weeks, with emergency aid available.

OTHER PENN AIRBORNE PRODUCTS...

As you probably surmise from our name, we do manufacture other equipment. Our original products are instruments for aerospace applications, including Liquid Oxygen quantity indicators, Exhaust Gas Temperature indicators and special control panels. We regularly work to quality control Mil-Q-9858A. Simply contact us for specifics.

DC Non-Destructive Hipot and Insulation Testers

SERIES H, H-AC/DC, and SL

Extremely reliable, widely used DC test sets for non-destructive qualitative laboratory or production testing of dielectric materials requiring accurate leakage measurements. Expressly designed for sensitive current measurement and detection of microampere leakage in insulation. High internal impedance and microamp overcurrent cutout promotes non-destructive testing and safety for operating personnel. Solid state rectifiers and surge protection provide extended life and reliability. Series "S" sets feature higher current and voltage capacity.

OPTIONS

MEMORY VM	$45
0 - 1/10/100μa CM	$45
GUARDED RETURN	$25
AUDIBLE ALARM	$30

FEATURES

High sensitivity — 50 μa F.S. current-meter

RANGES 0-50/500/5000 μa.

Accurate metering — directly at output.

Safety — high impedance, low current.

Interlocks — zero start, external.

Electronic high speed overload relay.

Long life, reliability — All solid state circuitry and surge protection.

GENERAL SPECIFICATIONS

Input	115-volt, 60-Hertz, 1-phase, 3-conductor grounding-type cord.
Output	Continuously adjustable — — 6-foot HV and grounded return cables.
Regulation	Approx. 25% N.L. to F.L.
Ripple	Approx. 2% at full load.
Overcurrent	Relay — continuously adjustable 10 - 5000 μa.
Metering	Dual-scale, VM 4½", 2% full-scale accuracy, 3 range CM. Taut Band, Mirror Scale.
Polarity	Negative output, positive grounded.

Standard Portable DC and AC Hipot Testers

SERIES S (DC) and P (AC)

Low-cost, self-protecting units for production testing of insulation materials; resistors, capacitors, harnesses, transformers, and relays. Built-in protective features automatically limit short-circuit current to a safe value. Also used for testing completed electrical appliances. Series S units are excellent for DC hipot tests, impulse testing or capacitor charging. Taut Band Meters.

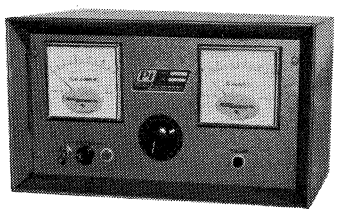
P20	0-20 KV	250

Model S2



FEATURES

Simplicity — extremely simple controls for use by production personnel.

Reliability — small number of components; short-circuit protected.

Accuracy — direct metering of output.

Safety — self-protecting; output voltage merely drops to zero when output is shorted . . . is immediately reestablished when short is removed.

Arc detector — for breakdown or fault detection, in addition to currentmeter.

Continuously variable output by means of powerstat.

Totally enclosed dead-front construction.

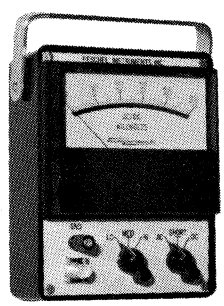
GENERAL SPECIFICATIONS

Input	115-volt, 60 Hertz, 1-phase, 3 conductor grounding-type line cord.
Output	Continuously adjustable — 6 foot leads with clips, rear of cabinet. Short circuit current 5 ma (DC), 10 ma (AC).
Metering	Single-scale, 3½", 2% DC, 4% AC accuracy. Currentmeters scaled 0-5 ma (DC) 0-10 ma (AC).
Polarity	DC negative, unless specified positive.

OPTIONS

DC output shorting solenoid	$25
Adjustable Audible overload alarm	30
Dual range meters	25

NEW AC/DC KILOVOLTMETERS



Portable triple-range AC/DC Kilovoltmeters designed for versatility in research, development, production or maintenance measurements. Features include high overload capacity, fast spike bypass, ±2% full-scale accuracy (on DC or ±4% on AC) and maximum circuit loading of less than 100 μa Taut Band, Mirror Scale.

GENERAL SPECIFICATIONS

Accuracy	2% F.S. DC or 4% AC.
Circuit Loading	Less than 100 μa
Ranges	Triple
Modes	AC, DC, and short
Size (case)	5½" x 7" x 3".
Weight (case)	2 lbs.
Movement	Taut band

OPTION — COWHIDE LEATHER CASE FOR METER — $12

Model AP100-5

PORTABLE DC TEST SETS

Series AP

Lightweight air-insulated 2-piece units designed for plant or field use. Excellent for testing cables, insulators and rotating machinery . . . or for lab applications in electrostatic, ionization, or dielectric studies. Small formica suitcase houses control section; fiberglass case, the high-voltage section. Test sets provide true portability — 50 KV at 1 ma in a total weight of only 17 lbs, including controls. Test sets can be ordered as stackable units in stages of 50 or 100 KV.

Note: All units include shorting stick. Stacking sections @ $600 for 50 KV and $900 for 100 KV (5ma).

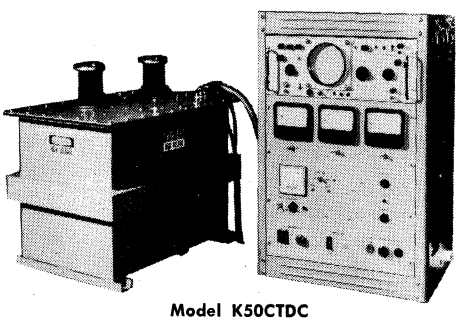
* HV on and off switches and pilot light not used on AP50-1 or AP100-1.

FEATURES

- Lightweight portability.
- Rugged construction — for field use.
- Sensitivity — 50 or 100 μa currentmeter for accurate leakage detection.
- Safety — high output impedance, surge-limiting resistor; no flammable oil.
- Ground relay prevents mis-use
- Low internal leakage.
- Surge protected meters and transformers.
- Long-life selenium rectifiers.

GENERAL SPECIFICATIONS

Input	115-volt, 60-Hertz, 1-phase; available with inverter for 6- or 12-volt DC input for field use.
Output	Continuously adjustable from zero.
Regulation	Approx. 20% N.L. To F.L.
Ripple	Approx. 2% rms.
Overload	Fused primary.
Metering	Multi-scale, 2% accuracy, Taut Band, Mirror Scale.
Polarity	Negative, unless specified positive.



Model K50CTDC

HIGH-VOLTAGE AC TEST SETS

SERIES K

Completely redesigned high-capacity units with elaborate control circuits for maximum convenience and safety. For testing in accordance with ASTM, MIL and IPCEA standards. Widely used by wire and cable manufacturers, laboratories, electric utilities, service organizations and schools. Convenience and safety features include fully interlocked controls, multiple overload devices, accurate dual-scale metering and function or status indicators, High-voltage transformer is ruggedly designed for testing service, with low end of secondary grounded. KVA ratings are standard one hour, intermittent testing. Available as corona test sets.

FEATURES

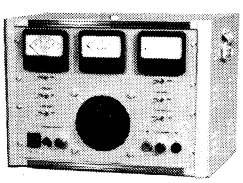
- Dual Output — both AC and DC, continuously adjustable.
- Simplified controls.
- Accuracy — meters directly at output.
- Safety — instantaneous overload circuit breaker.
- Reliability — dry-type rectifiers, surge protection.

GENERAL SPECIFICATION

Input	115-volt, 60-Hertz, 1-phase, 3-conductor grounding-type cord.
Output	Continuously adjustable, 8-foot HVDC leads and AC bushings.
Regulation	(DC) approx. 25% N.L. to F.L.
DC Capacity	Current rated ½ AC cap.
Ripple	(DC) approx. 5% rms.
Overload	Instantaneous circuit breaker.
Metering	Separate KV meter for DC and for AC rms; 2% DC & 4% AC F.S. accuracy. Common AC/DC milliammeter in ground lead of HV output; 4% full-scale accuracy. Taut Band, Mirror Scale.
Polarity	(DC) negative output, positive grounded.

HIGH-VOLTAGE AC/DC TEST SETS

SERIES KS



Dual output designed for both AC and DC dielectric or insulation testing, as well as power supply use. Simplified controls reduce cost . . . simplify use by inexperienced personnel . . . promote long trouble-free operation. Smaller units and lower voltage units in table top cabinets. Larger or higher voltage units in floor cabinets or as 2-piece units with HV section in oil tank. Optional extras include dual-scale meters ($50) and automatic output shorting on DC $25-45, (depending on voltage rating) — a recommended accessory for cable or capacitor testing.

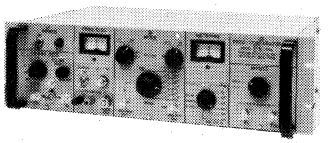
PROMINENCE
IN FREQUENCY MEASUREMENT AND CONTROL

FREQUENCY COMPARATORS FOR
SHORT-TERM FREQUENCY AND PHASE STABILITY ANALYSIS, MEASUREMENT AND TROUBLESHOOTING

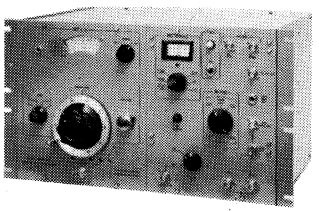
MODELS 103A, 104A, 105A AND 106A FREQUENCY COMPARATORS



MODEL 106A FREQUENCY COMPARATOR
Error multiplication for direct digital display, resolution to 1 part in 10^{12} in 1 second.

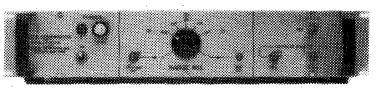
- **Six Selectable Decade Stages of Error Multiplication to 1,000,000**
- **Built-in Frequency Discriminator Gives Analog Frequency Difference Indications on Front Panel Meter and External Chart Recorder**
- **Built-in Phase Detectors with Resolution Greater Than 0.3 Degree Peak to Peak at Equivalent Frequency of 1GHz**
- **Allows Quick Accurate Measurement of Both Short and Long Term Performance of Frequency Sources, Active and Passive Networks, etc.**
- **Can Be Used with Peripheral Equipment to Make An Extremely High Resolution, Low Noise, Very Wide Dynamic Range Spectrum Analyzer**

MODEL 109 WIDE RANGE FREQUENCY EXTENDER.

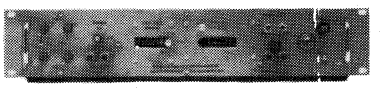


EXTENDS FREQUENCY RANGE OF P.R. FREQUENCY COMPARATORS

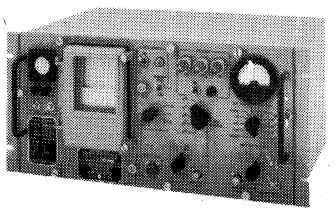
- **Frequency comparison or calibration methods of operation**
- **Accepts any frequency from 1 MHz to 108 MHz in comparison mode of operation and 0.6 to 220 MHz in calibration mode of operaton**
- **Resoluton better than 1 part in 10^{11} peak-to-peak in 1 second**
- **Allows short term phase stability of networks to be measured at any frequency from 1 to 108 MHz**



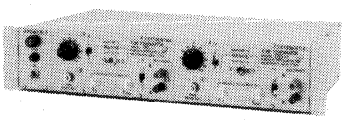
MODEL 091 FREQUENCY COMPARATOR
Error Multiplication to 1000



MODEL 112 TIME DIFFERENCE MONITOR

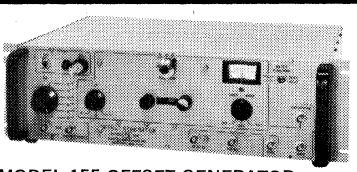


AN/URM-115A
FREQUENCY DEVIATION METER
Approved frequency comparator for military field use



MODEL 113
DIFFERENTIAL TIME COMPARATOR
Resolution of 0.1 nanosecond;
21 input frequencies

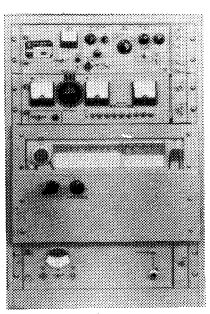
OFFSET GENERATORS FOR TIME SCALE CONVERSION



MODEL 155 OFFSET GENERATOR

- **Steps of 5 parts in 10^{10}**
- **Automatic Conversion of One Time Scale to Another, Such As A.1 to UT.2, without Affecting the Original Standard**
- **Enables Comparison of Two 1 MHz Signals Offset Beyond a Frequency Comparator's Frequency Range**

QUARTZ CRYSTAL MEASURING SYSTEM



- **Up to 1 part in 10^8 frequency accuracy**
- **Up to 1 part in 10^9 frequency reproducibility**

The Parzen Research Model 302 Universal Precise Crystal Measuring System is a highly advanced, state-of-the-art instrument which, when used in conjunction with immitance bridges allows the precise measurement of the properties of quartz crystals or similar devices over the frequency range 500 kHz to 216 MHz.

FREQUENCY DISTRIBUTION AMPLIFIERS AND SYSTEMS MODEL 120 SERIES

- **Low noise—less than 1 part in 10^{12} degradation**
- **Up to 40 isolated outputs**
- **High isolation**
- **10, 5, 1, and .1MHz frequency outputs**

PARZEN RESEARCH has internationally recognized competence in the field of precise frequency control, including ultra-stable frequency generation and synthesis, low-noise frequency multiplication and division, frequency source combination, standard frequency distribution, and highest-resolution frequency, phase, and time comparisons. Particular effort has been expended on the problems associated with excellent short-term stability.

OTHER PRODUCTS

- **MULTICOUPLERS, ANTENNA TUNERS, RF SWITCHING MATRICES, AUDITORY TRAINING EQUIPMENT, FREQUENCY SYNTHESIZERS**
- **VECTOR DYNAMICS DIVISION—SERVO SYSTEMS, DC MOTOR DRIVES AND INDUSTRIAL CONTROL SYSTEMS**

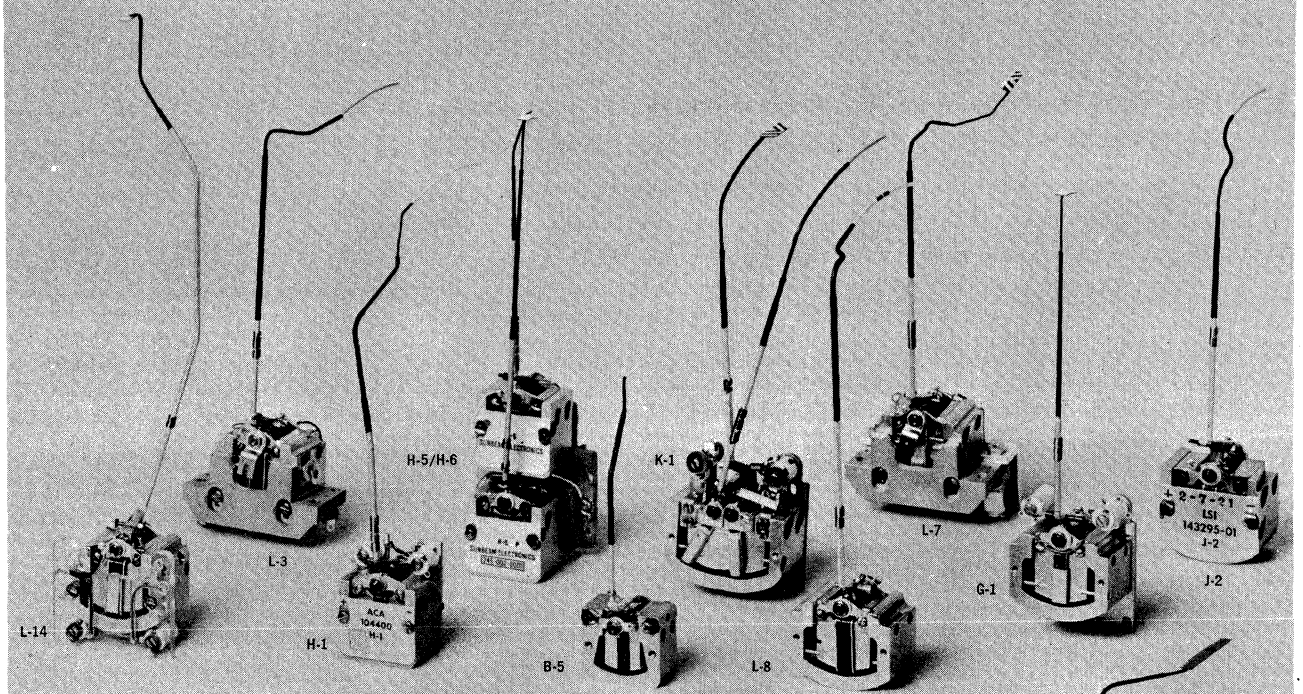
Avionic Mechanisms



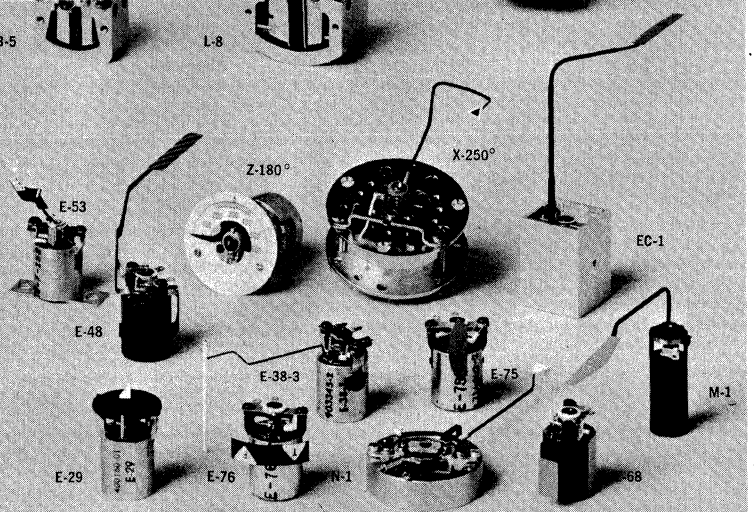
Capabilities in Depth

This comprehensive presentation of Phaostron pointer and flag mechanisms for prime flight instruments is indicative of Phaostron's highly specialized capability in the design and production of precision permanent magnet moving coil mechanisms for military, commercial and general aircraft markets.

Phaostron designs are production realities and are presently flying on numerous aircraft programs such as Boeing 747, C-5, C-141, P-3 Orion, AFFAS, etc. in such prime flight instruments as HSI, ADI, BDHI, attitude control indicators, two and three axis attitude indicators, DME, Ground Speed, VOR/LOC, Glide Slope, altimeters, etc.

Phaostron mechanisms are designed to satisfy severe environmental and exacting performance requirements such as:

Temperature	−55 to +125°C.
Vibration/Shock	5-500 cycles — 3G operational, 6G survival.
Ballistics	critical damping, fast response time.
Linearity	±5% or better as may be required.
Sensitivity	as required: 150-0-150 microamperes typical.
Pointer Length	up to 7" for environments as above.
Construction	self shielded magnetic circuits, telescopic pointer tubing, magnesium flag supports, die-cast balance crosses to provide maximum strength to thickness ratio.



B-5	Course Deviation Bar Pointer Display
E-29	Elevator and Aileron Flags
E-38-3	Course Deviation Bar Display
E-48	Glide Slope Warning Flag
E-53	Deviation Warning Flag
E-68	Deviation Indicator
E-75	Glide Slope Failure Flag
E-76	To-From Flags
EC-1	Glide Slope Warning Flag
G-1	Rate of Turn Pointer Display
H-1	Pitch Steering-Vertical Pointer Display
H-5/H-6	Rate of Turn/Glide Slope Pointer Displays
J-2	Pitch Steering-Vertical Pointer Display
K-1	Radar Altitude and Roll Steering-Dual Pointer Displays
L-3	Pitch Steering, Vertical Pointer Display
L-7	Radar Altitude Pointer Display
L-8	Roll Steering-Horizontal Pointer Display
L-14	Rate of Turn Pointer Display
M-1	Miniature, 7/16" diameter, Symbol Indicator Flag
N-1	Shallow Edgewise, 0.5" thick, Monitor Indicator Display
X-250°	250 degree Roll Pointer Mechanism
Z-180°	180 degree Mechanism

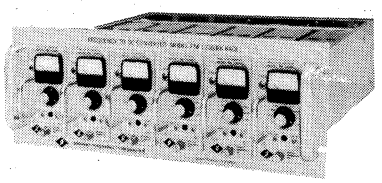
INSTRUMENTS FOR MEASUREMENTS AND CONTROL

frequency to dc converters

The Nation's Most Complete Line



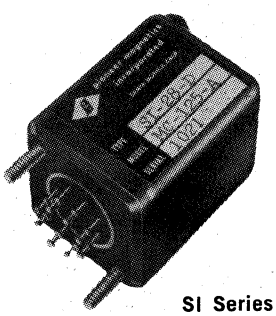
PM 1300 Series

INDUSTRIAL

Relay rack, cabinet plug-in module with built-in power or plug-in board.

SPECIFICATIONS:

Input Frequency: 15Hz to 100KHz Full Scale.
Input Voltage: 10 millivolts to 150 volts RMS.
D.C. Output Voltage: 0 to 5v or 0 to 10v.
Output Impedance: Less than 0.2 ohms.
Output Ripple: 5mv.
Linearity: ±0.025% (B.S.L.).
Temperature Coef.: ±0.005%/°F.
Temperature: 0 to 150°F.
Standard Options: Multiple ranges, improved ripple, temperature coefficient to ±.0005%/°F, expanded scale, monitor meter.



SI Series

RUGGEDIZED

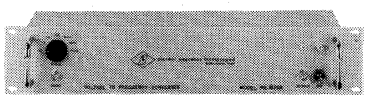
Several series of megacyclers are available for military and space applications. Highly dependable and accurate. Designed for compatibility with flowmeters, tachometers, radiation detectors, magnetic pickups.

SPECIFICATIONS:

Input Frequency: 15Hz to 100KHz Full Scale.
Input Voltage: 5 millivolt to 150 volts RMS.
D.C. Output: 0 to 5v or 0 to 10v.
Linearity: To ±.025% (B.S.L.).
Temperature Coef.: Standard ±.01%, ±.005% and ±.001%/°C.
Temperature: −60°C to +100°C.
Standard Options: Increased sensitivity, expanded scale, high power, higher frequency, monitor meter.

dc to frequency converters

The Nation's Most Complete Line



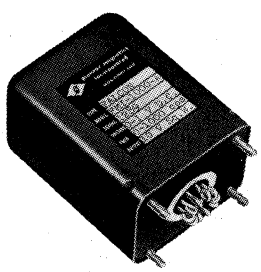
PM 1290 Series

INDUSTRIAL

Relay Rack, cabinet, plug-in module, or plug-board. A wide range of standard modules.

SPECIFICATIONS:

Input Ranges: 0.1 VDC to 1000 VDC Full Scale
Input Polarity: Unipolar or bipolar.
Output: Standard Full Scale frequencies from 500Hz to 1MHz.
Linearity: To ±.025% (B.S.L.).
Temperature Coef.: ±.005%/°F.
Temperature: 0 to 150°F.
Standard Options: Multiple ranges. Temperature coef. to ±.0005%/°C square wave output, internal calibration, expanded scale, polarity indication.



FMI Series

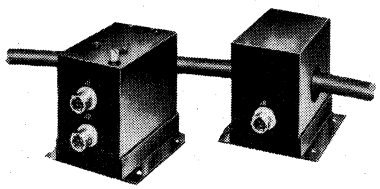
RUGGEDIZED

For space, military and adverse environment use. Designed for telemetering, digital measurement of analog quantities, speed and position control. Several series available for specific requirements.

SPECIFICATIONS:

Input Range: 0.1 VDC to 1000 VDC Full Scale.
Input Polarity: Unipolar or bipolar.
Output: Standard Full Scale frequencies from 10Hz to 1MHz.
Linearity: To ±.025% (B.S.L.).
Temperature Coef.: ±.005%/°C.
Temperature: −60°C to +100°C.
Standard Options: Temperature coef. to ±0.001%/°C square wave output, internal calibration, expanded scale.

current sensors



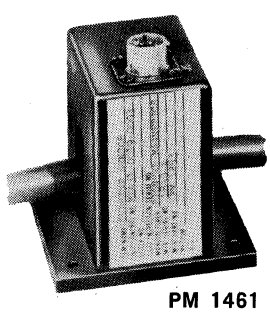
PM 1460 Series

INDUSTRIAL

Output signal directly proportional to cable current. DC output signal completely isolated from ground and power supply. Full power consumption lower than 50MV shunt.

SPECIFICATIONS:

D.C. Current Ratings: 1A to 2000A.
Output Voltage: 0 to 5 Volts DC.
Ripple: Less than 20mv.
Output Impedance: Less than 1000 ohms.
Linearity: ±1.0% of full scale (B.S.L.).
Response: Less than 10 milliseconds.
Isolation: 100 megohms, output to input and supply.
Options: Improved linearity, ripple and response; expanded scale; lower output impedance; remote sensor.



PM 1461 Series

RUGGEDIZED

Designed for major N.A.S.A. Aerospace project. Allows cable integrity intact while measuring current in DC bus line. Features accuracy, modest weight, economy.

SPECIFICATIONS:

D.C. Current Rating: 100mA to 1000A.
Output Voltage: 0 to 5 Volts DC.
Ripple: 20mv.
Output Impedance: Less than 1000 ohms.
Linearity: ±1.0% of full scale (B.S.L).
Response: Less than 10 milliseconds.
Environment: Full Military and Specs includes high shock, vibration, and −60°C to +100°C ambient.
Options: Lower ripple, faster response, remote sensor, AC models, expanded scale.

Quan-Tech LABORATORIES, INC.

WAVE AND SPECTRUM ANALYZERS

1 Hz to 100 KHz • ALL SOLID STATE

Model 304-TD

LOW FREQUENCY TRACKING WAVE AND SPECTRUM ANALYZER

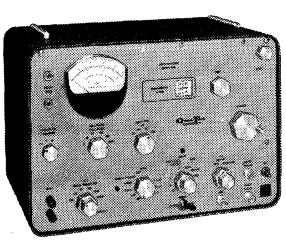
Frequency range: 1 Hz to 5 KHz. **Frequency readout:** 5 place electronic digital display. **Bandpasses:** Flat-topped, 1, 10, and 100 Hz at −3 db. **Skirt selectivity:** 24 db per ½ bandwidth. **Sensitivity:** 30μV to 300 V, FS. **Tuning:** Electronic, six selectable modes: manual, manual plus AFC, automatic sweep, tracking, search and track, external. **Outputs:** BFO, restored signal, sample of automatic sweep, analogs of meter reading and frequency setting, phase outputs for phase plot. Built-in master-slave capability for multi-channel analyzer systems. **Price:** $3575.

Model 304-T

Same as Model 304-TD except with 5000 division linear frequency dial in place of electronic display. **Price:** $3025.

Model 304

Same as model 304-T except without AFC, tracking, or master-slave capabilities. **Price:** $2700.



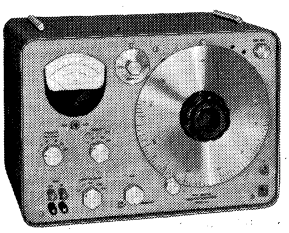
Model 305

TRACKING WAVE AND SPECTRUM ANALYZER

Similar to Model 304-TD except: **Frequency range:** 10 Hz to 50 KHz, 5000 division linear frequency dial. **Bandpasses:** 10, 100, and 1000 Hz. **Price:** $2800.

Model 305-D

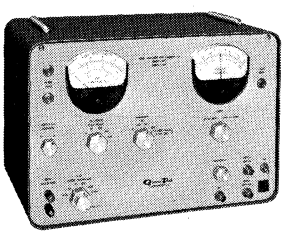
Same as Model 305 except 5 place electronic digital frequency readout instead of frequency dial. **Price:** $3350.



Model 303

WAVE AND SPECTRUM ANALYZER

Frequency range: 30 Hz to 100 KHz, semi-log frequency dial. **Bandpasses:** 10, 30, 100, and 1000 Hz at −3 db (100 and 1000 Hz bandwidths flat topped). **Sensitivity:** 100 μV to 300 V, FS. **Price:** $1700.



Model 1304

SLAVE ANALYZER AND PHASEMETER

For use with Model 304-T or 304-TD in multi-channel phase locked analyzer systems. The Model 1304 has a built-in phasemeter but no tuning controls. Mechanical impedance and transfer function analysis is simplified. Bandwidths and sensitivity are the same as for the Model 304-TD. **Price:** $2050.

Model 1305

Similar to Model 1304, but for use with Model 305 or 305-D. **Price:** $2050.

Model 3304

CROSS SPECTRAL DENSITY ANALYZER

For use with the Models 304T and 1304 for computing cross spectral density. Values of Cxy, Qxy, and Gxy are presented on front panel meters. **Price:** $1800.

Model 3305

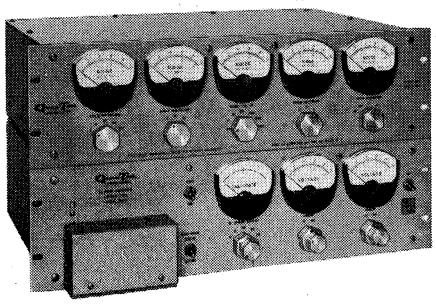
Similar to Model 3304, but for use with Models 305 and 1305. **Price:** $1800.

All prices shown are F.O.B. Whippany, N. J. Prices and specifications subject to change without notice.

43 SOUTH JEFFERSON ROAD, WHIPPANY, NEW JERSEY 07981 • PHONE (201) 887-5508 • TWX 710-986-8251

Quan-Tech LABORATORIES, INC.

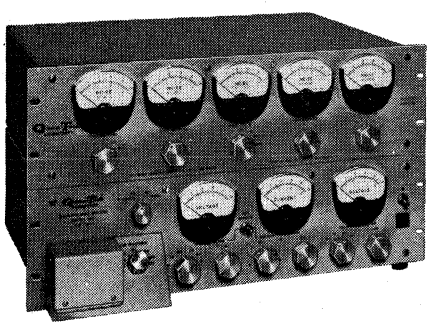
- TRANSISTOR NOISE ANALYZERS
- INTEGRATED CIRCUIT NOISE ANALYZER



Model 2283-2181 INTEGRATED CIRCUIT NOISE ANALYZER

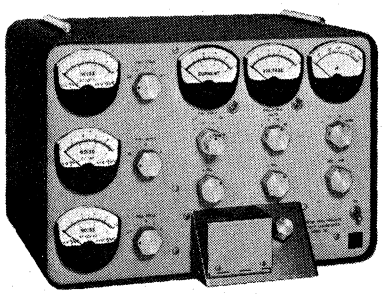
This extremely versatile noise measuring system was designed primarily for measuring noise in linear IC's and Op Amps. **Bias voltages:** plus and minus 12V fixed, plus and minus 0 to 30V independently variable at 100 ma. **Noise spectral density:** 3 to 3000 nanovolts. **Filter frequencies:** 10 and 100 Hz, 1, 10, and 100 KHz measured simultaneously.

Price: Model 2283 Control Unit $1600.
Model 2181 Filter Unit $2500.



Model 2173C-2181 TRANSISTOR NOISE ANALYZER

The most versatile unit available. Measures noise current and voltage at 10 and 100 Hz, 1, 10, and 100 KHz simultaneously. **Noise spectral density range:** 3 to 3000 nanovolts FS. **Base resistance range:** 0, 500, 1K, 10K, 100K, and 1M ohms plus external position. **Collector voltage range:** 0.3 to 60 volts. **Collector current range:** 0.3 μa to 30 ma. Also measures FET's. **Price:** $4995.

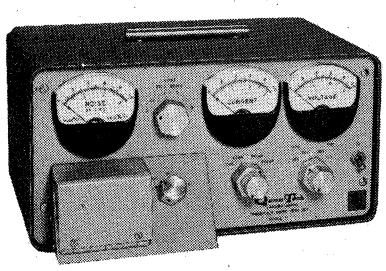


Model 310 TRANSISTOR NOISE ANALYZER

Measures noise current and voltage at 100 Hz, 1 KHz and 10 KHz as well as I_{cbo}, I_{ebo} and beta. **Noise spectral density range:** 0.01 to 3 μV, FS. 1 to 300 pa, FS. **Collector current range:** 0.05 to 30 ma. **Collector voltage range:** 0.1 to 30 V. **Base resistance range:** 0, 500, 1K, 10K plus external position. **Price:** $2725.

Model 311 TRANSISTOR NOISE ANALYZER

Similar to above, except that collector current range is from 5 to 1000 μa for noise measurement in low-collector-current devices. Measures Gm instead of beta. Also measures FET's. **Price:** $2725.



Model 512 TRANSISTOR NOISE TEST SET

Measures broadband noise figure directly in db. **Noise bandwidth:** 15.7 KHz (—3 db at 10 Hz and 10 KHz). **Noise figure range:** 0 to 62 db. **Collector voltage range;** ±3 to 30 volts. **Collector current range:** 10 μa to 1 ma. **Base resistance range:** 50, 500, 1K, 10K ohms plus external position. Also measures FET's **Price:** $1375.

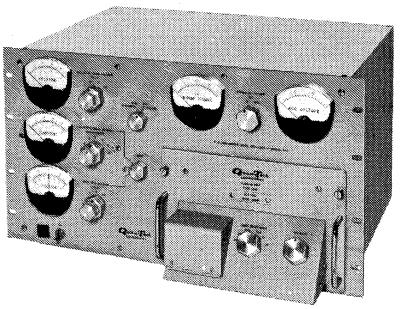
All prices shown are F.O.B. Whippany, N. J. Prices and specifications subject to change without notice.

43 SOUTH JEFFERSON ROAD, WHIPPANY, NEW JERSEY 07981 • PHONE (201) 887-5508 • TWX 710-986-8251

Quan-Tech LABORATORIES, INC.

- R.F. NOISE ANALYZERS
- RESISTOR & DIODE NOISE ANALYZERS
- SPECIAL INSTRUMENTS & SYSTEMS

Model 340 R.F. TRANSISTOR NOISE ANALYZER



Measures noise figure directly of transistors and FET's at radio frequencies. Plug-in heads available for test frequencies between 1 MHz and 60 MHz. **Noise figure range:** 0 to 40 db. **Base resistance range:** 50, 100, 200, 500, 1K, 2K, 5K ohms. **Collector voltage range:** ±1 to 30 volts. **Collector current range:** 30 μa to 30 ma. **Price:** $2500

Model 1340 MODEL 1340 TRANSISTOR TEST HEADS FOR USE WITH MODEL 340

1340 — 1 MHz	**Price:** $1400
1340 — 2 MHz	**Price:** $1800
1340 — 10.7 MHz	**Price:** $1400
1340 — 45 MHz	**Price:** $1800
1340 — 60 MHz	**Price:** $1800

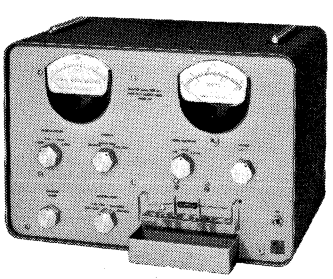
Model 1341 LINEAR I.C. TEST HEAD

For use with **Model 340.** Measures noise in integrated circuits at 10.7 MHz. Test sockets and associated circuitry are mounted on plug-in printed circuit boards and inserted in the front panel test jig. **Price:** $1800.

Special Instruments

Quan-Tech manufactures a great many "specials", ranging from one unit only to production quantities on an OEM basis. Our engineering department is extremely flexible and equipped to handle anything from minor modifications of standard instruments to the design and construction of an extremely complicated fully automatic noise measuring system. We are proud of our ability to meet difficult specifications that challenge the state of the art for low noise, stability, and accuracy. Your inquiry will receive a prompt reply.

Model 315 RESISTOR NOISE TEST SET

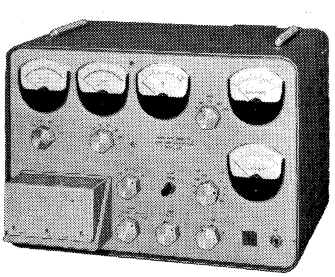


Measures noise in resistors in conformance with specifications recommended by NBS and Method 308 of MIL STD 202B. **Test-resistor range:** 100Ω to 22 megΩ. **Measurement range:** 0.6 μV in a decade to 1000 μV in a decade. **Outputs:** Sample of noise voltage; analogs of meter readings. External cable supplied for remote location of test jig. **Price:** $2375.

Model 2136 RESISTOR NOISE TEST SET

Similar to above, but measures resistors down to 10 Ω. **Price:** $2550.

Model 327 DIODE NOISE ANALYZER



Measures noise in back-biased semi-conductor diodes at 10 Hz and 1 KHz simultaneously. **Noise spectral density range:** 0.03 μV to 1 mV. **Test Voltage:** 0 to 500 V, continuously variable. **Test current:** 0 to 100 ma, continuously variable. Internally supplied ramp automatically sweeps test current and/or voltage within maximum ratings. A wide variety of outputs for data logging, external monitoring, actuating external equipment, etc. **Price:** $3250.

All prices shown are F.O.B. Whippany, N. J. Prices and specifications subject to change without notice.

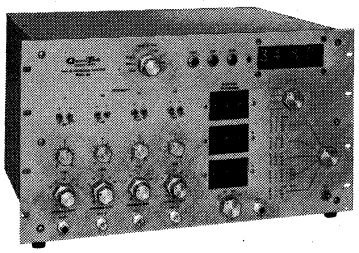
Quan-Tech LABORATORIES, INC.

- SOLID STATE AMPLIFIERS
- AMPLITUDE DISTRIBUTION ANALYZERS
- RANDOM NOISE GENERATORS



Model 318

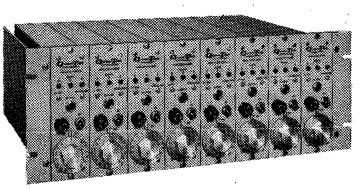
IMPULSE DISTRIBUTION ANALYZER

Determines amplitude & width of random or repetitive pulses, and stores the number of times that pulses occur within pre-selected amplitude or width ranges. 4 input channels, 4 amplitude threshold level controls, 3 adjustable time gates and 4 memory banks. Sampling time is selectable. **Frequency Response:** Dc to 15 MHz. **Amplitude Threshold sensitivity:** −10dBm to −60dBm, adjustable each channel, positive and negative inputs. **Input Impedance:** 75Ω, 135Ω, 600Ω switch selected. **Signal width Analysis:** 100 nanosecs to 99.9 millisecs in 4 decade ranges. Adjustable width thresholds 0-t_1; 0-t_2; 0-t_3; 0-∞. **Sampling times:** 1 sec; 1 min; 1 hr; manual timing, Ext. program. **Data Readout:** 4 digit visual; BCD printer output. **Price:** $4,500.

Model 206B

SELECTABLE GAIN AC AMPLIFIER

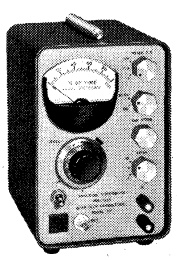
Bandwidth: 1 Hz to 100 KHz (within 0.5 db); — 3 db at 500 KHz. **Typical noise spectral density:** 5 x 10^{-9} V and 3 x 10^{-12} A at 1 KHz. **Gain:** 10, 100, & 1000, selectable at front panel; **Power:** 105-125 V AC or optional self-contained battery pack (automatically recharging). **Price:** $200. Batteries $35.



Model 2220

INSTRUMENTATION AMPLIFIER

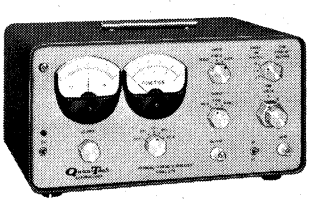
Modular amplifiers mount 8 units in a 7" rack panel. **Voltage gain:** 0 to 80 db in 5 db steps. **Controlled frequency characteristics:** (selected by plug-in cards) voltage gain flat 10 Hz to 100 KHz or 10 Hz to 20 KHz, rising 3 db/octave 10 Hz to 100 KHz or 6 db/octave 10 Hz to 20 KHz. **Price:** $590



Model 317

AMPLITUDE DISTRIBUTION ANALYZER

Determines amplitude-probability distribution of random signals. **Amplifier response:** 3 db down at approx. 12 Hz and 1 MHz; **Switching rate:** 5 MHz. **Amplitude ranges:** 100%, 10%, 1% FS; Normal or "inverted" operation; provision for external sweep of level. **Price:** $495.



Model 317B

PROBABILITY DENSITY ANALYZER

Measures manually or plots automatically amplitude probability density or cumulative probability functions of random, complex, and repetitive signals. **Frequency Range:** DC or 10 Hz to 1.75 MHz. **Sweep:** −3 sigma to +3 sigma, automatic or manual. Gated clock pulse for low probability density. **Price:** $990.

Model 420

RANDOM NOISE GENERATOR

Stable "white" noise output having true gaussian amplitude distribution. **Frequency range:** DC to 100 KHz; **Output spectral density:** 0.01 to 1000 μV, continuously variable, calibrated; **DC offset:** less than 10 mV at max. output. **Price:** $700

Model 421

RANDOM NOISE GENERATOR

Similar to Model 420 but covering higher frequencies. **Frequency Range:** 10 KHz to 12.5 MHz flat ±0.5 db. **Output Spectral Density:** .02 to 300 μV, continuously variable, calibrated, into 75 ohms. (1.34V RMS maximum for full bandwidth) **Price:** $1100.

All prices shown are F.O.B. Whippany, N. J. Prices and specifications subject to change without notice.

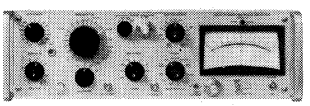
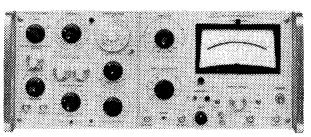
PRECISION INSTRUMENTS FOR ENGINEERING • DEVELOPMENT • RESEARCH

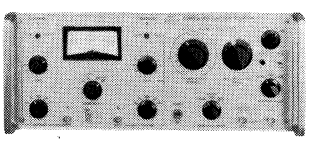
Lock-In Amplifiers: P.A.R. manufactures a full line of Lock-In Amplifiers which measure changes in amplitude or phase of coherent signals buried in noise. Input signal to the system is modulated at some reference frequency and phase-sensitive detection techniques are used to correlate the detected signal against the reference signal. Instruments are available with a minimum equivalent noise bandwidth as small as .00125 Hz. The maximum frequency range of PAR™ Lock-In Amplifiers extends from 1.5 Hz to 150 kHz. Maximum sensitivity is as high as one nanovolt full scale. Accessories include low-noise preamplifiers, light choppers, photomultiplier housings and power supplies. Prices range from $925 to $2,450.



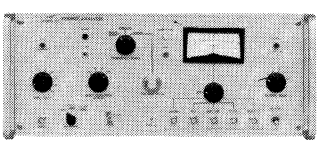
Signal Averagers: Two types of signal averagers are available from P.A.R. Boxcar Integrators extract pulses as small as 10 nanoseconds in duration from noise. Complete waveforms may be observed by automatic scanning of single time gate across repetitive signal. Waveform Eductors™ utilize fast analog techniques to provide a 100 channel signal averaging capability. Digital interface accessories are available to permit operation on signals of low repetition rates, and to provide interconnection with digital read-out and data processing equipment. Prices range from $1,950 to $4,200.



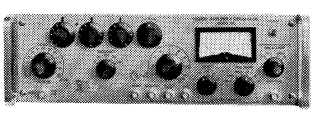
Correlation Function Computers: Perform autocorrelation to separate unknown signals from noise and crosscorrelation to determine degree of conformity between two signals. A combination of analog and digital techniques are utilized to simultaneously compute 100 points of the correlation function and provide real-time analysis. Delay ranges (or computation periods) extend from 50 microseconds to 207.5 seconds. Frequency range is from dc to 1 MHz. Prices range from $8,500 to $12,900.



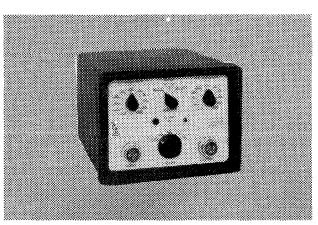
Fourier Analyzer: Extends the usefulness of Correlation Function Computers by transforming the correlation function from the time domain into the frequency domain to provide power density spectrum. The autocorrelation function is transformed into power density amplitude versus frequency and the crosscorrelation is resolved into the amplitude of cross spectral density plus phase angle as a function of frequency. Price is $2,950.



Tuned Amplifier/Oscillator: Combination Wave Analyzer, Distortion Analyzer, Low-Distortion Oscillator and Low-Noise Preamplifier. Frequency range is 1 Hz to 110 kHz with Q adjustable from 1 to 100 over the complete frequency range. Gain is continuously variable to 80 dB. Price is $1,350.



Preamplifiers: Extremely low-noise amplification for use ahead of other signal processing instruments or as general purpose instruments. The frequency range covered is from 1 Hz to 1 MHz with gains ranging to 10^4. Various input impedances are available. Models available provide transformer coupled input, high impedance inputs for photomultipliers, built-in adjustable high pass and low pass filters, and differential input capabilities. They are available in many configurations; battery-powered or line-operated; freestanding or modular. Prices range from $275 to $495.



RIM: Research Instrument Modules offer ease of assembly of signal processing instruments for general engineering applications. More than 20 modules are available: Lock-In Amplifier, Selective Amplifier, Preamplifiers, Variable Frequency Light Chopper, High Voltage Photomultiplier Power Supply, Four-Quadrant Analog Multiplier, Operational Amplifier, Power Amplifier, DC Photometer. All modules are designed in accord with specifications developed by the AEC for Nuclear Instrumentation Modules; thus the flexibility of a standardized modular instrument system previously available only to nuclear researchers has been extended to engineers and scientists in other fields of activity. Prices range from $325 to $1,075.

Price	$7450.	$7450.	$7900.

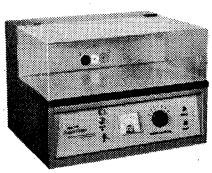
Model 1000 Potentiometer with accuracy of ±3 ppm to 2.3 V. Plant or field use. Self calibration and easy to read digital presentation.
Price: **$2100.**

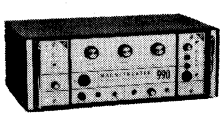
Model 485 Null detector, self-contained electronic galvanometer of all solid state design. Four ranges full scale ±10nA to ±10,000nA. Resolution and sensitivity better than 0.5nA.
Price: **$350.**

Model 170. A basic DC standard for use with laboratory potentiometers. Output is 1 volt with full-scale ranges of 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 20, 50, 100, 200, 300, 500 and 1000 volts. Limit of error is within ±10 ppm. Input sensitivity 1000 ohms/volt.
Price: **$1075.**

Magnet Chargers and Treaters

Model 2470-350
Variable output voltage with energies up to 440 watt-seconds for saturating up to 4 lbs. of Alnico V using wire-wound fixture. Accessory Booster available for doubling output.
$1,145.





Model 990
Magnetreater®
Completely solid state demagnetizer for stabilization of permanent magnets. Power continuously variable from less than 1VA to in excess of 80,000VA. Resolution, 0.1%. Can be programmed for automatic or semi-automatic operation.
$695.

Model 1500
Produces 225 watt-seconds for large Alnico meter magnets plus cobalt platinum and barium ferrite materials. Wire-wound fixtures plug into front panel through safety interlocks. **$1,170.**

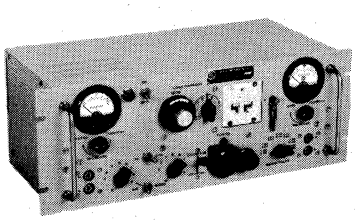
Model 942
Saturate Alnico magnets to 34 lbs. and high coercive force barium ferrite compounds of any shape or number of poles. Outputs to 3,600 watt-seconds. Safety interlocked.
$2,140. to $2,740.

Model 3260
First all solid state impulse charger variable output to 54 watt-seconds. Capable of magnetizing a wide range of materials and configurations. **$775.**

Model 107A
Saturates most medium size and instrument magnets, including core types, using variety of fixtures. Two output ranges: Maximum 18 watt-seconds. Booster unit also available.
$695.

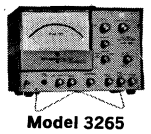
Crystal Impedance Meters

Model	Frequency Range	Impedance Range	Price
459A	800KHz-15 MHz	0-9,900 ohms	$1175.
531	10-140 MHz	10-150 ohms	825.
541C	2.5-1100 kHz	200 ohms-0.5 megohms	1175.
991	2.5 or 50 MHz	100-200 ohms	1795.
1207	75-200 MHz	10-125 ohms	1295.



Reference standards for measuring resonance and anti-resonance of quartz crystals in determination of capacitance, inductance and performance index. Meet U.S. MIL-C-3098C and U.K. Defence DEF-5271 A.

Gaussmeters



Model 3265

Model 220, a low cost unit ranging from 0.05 gauss to 20 kilogauss in 13 full-scale ranges. Measures permanent magnet, DC and AC fields 20 Hz to 800 Hz, up to 30 KHz with accessory readout. Built in probe calibration and zero center mode for determining polarity. Accuracy: ± 1% Price: **$540.00**

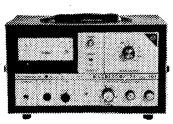
Model 750, a wide range device for flux density measurements from .02 gauss to 50 kilogauss in 24 full-scale ranges. Measures permanent magnetic fields, DC and AC from 20 Hz to 400 Hz. Easy to read 7" meter. Line or battery operation for field use. Accuracy: ± 1%① Price: **$640.00**

Model 3265, three-in-one gaussmeter capable of measuring absolute flux densities from .02 gauss to 50 kilogauss (DC and AC to 400 Hz). In the expanded scale mode, measurement to a resolution of 1 ppm and a differential mode for simultaneous measurement of two separate fields or field gradients. Accuracy: ± 1%① Price: **$995.00**
①Plus accuracy of reference.
Gaussmeters are solid state, Hall effect instruments that yield laboratory accuracy traceable to NBS.

Probes — Are InAs elements for temperature stability. Choice of flat, axial or tangential in various sizes to fit most gaps. Flat ranges from .006" thick x .135" wide x .625" long. **$95.00 to $470.00**

Reference Magnets — Traceable to NBS with 5 gauss to 20K gauss fields and gaps from .040" to .343" are standards for probe calibration. **$45.00 to $500.00.** AC reference magnet (1000 gauss peak-to-peak) also available at **$105.00**

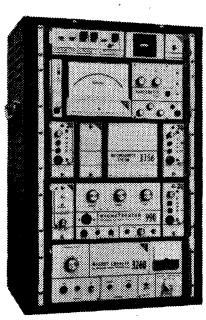
Magnetometer



Model 101

Solid state low level magnetic flux density measurements from 1 gamma to 100,000 gamma (1 oersted). Temperature compensation is provided to enable virtual drift-free operation.
Price: **$560.** — Standard Probe: **$105.**

Automagnetic® Systems



A combination of RFL standard magnetizing, measuring and demagnetizing equipment permits interconnection for semi-automatic and completely automatic systems, designed for individual requirements. Processing includes TWT, BAR and C shaped magnets, DC meters, Torque motors, accelerometers and other designs embodying permanent magnets.

COMPONENTS DIVISION

Custom Service/Engineering Consultation

The RFL Components Division offers a custom service with virtually unlimited coil winding capabilities. High quality coils are wound to meet special design requirements or to complete any inductive circuit application.

The goal of our Components Division is to provide a personalized service with quick delivery and competitive prices. Key engineers are always available for consultation either at RFL or your plant to help with any individual problem relating to coil design and manufacture.

Applications

In addition to the wide range of coil combinations available, a large variety of mechanical and mounting configurations may be specified. These components are adaptable to chassis or circuit board applications. They are used for filters, magnetic amplifiers, blocking oscillators and low signal, high frequency devices.

Proven Reliability and Quality

RFL has designed more than 7,000 different coil combinations to date in support of our long established product line. Mean-time-between-failure figures and field experience in industry, military and aerospace over the years have attested to the reliability and built-in quality of every RFL manufactured component.

All inductors are precision wound under strict quality control supervision using the finest materials available. Typical sizes range from under ¼" to over 2" outside diameter. Inductances range from 0.06mH to 10.4H over wide frequency ranges.

RCA

SOLID-STATE REGULATED DC POWER SUPPLIES

Type WP-700A and WP-702A

FEATURES

- **All solid-state circuitry**
- **Continuously adjustable voltage output — from zero to 20 volts and at full 200 mA correct capacity over this range**
- **Electronic short-circuit protection — a dead short across the output terminals won't harm either supply**
- **Front-panel overload-indicator lamps signal when maximum current condition is approached**
- **Exceptionally low ripple — .0005 rms volt max.**
- **Excellent line and load regulation**
- **Negative feedback regulator circuit maintains constant output voltage with low ripple**
- **Compact and lightweight**

DESCRIPTION

The WP-700A (single unit) and WP-702A (dual unit) are solid-state constant voltage dc power supplies. These versatile bench-type supplies are ideally suited for use in circuit design, servicing, industrial and educational applications. Typical applications include developmental transistor or integrated circuit projects, production line testing of dc operated equipment, industrial maintenance, life testing of devices that require a dc supply, classroom use, battery elimination for radio/phono service, component testing.

The WP-700A and WP-702A are identical, except that the WP-702A is a dual unit, with separate controls, output terminals, and meters for each section. The two sections of the WP-702A are electrically isolated from each other.

Output voltage of the WP-700A and WP-702A is continuously adjustable from 0 to 20 volts, at current levels up to 200 milliamperes. The power supply circuit automatically limits the current to prevent damage due to overload. The supplies will not be damaged even if connected to an external short circuit. A special overload indicator lamp is provided on the panel. The lamp will begin to glow when the current level approaches the 200 mA rating, and will glow brightly if the current exceeds 200 mA.

A meter is provided to indicate either output voltage or current level. The meter function is selected by a convenient panel switch.

All-silicon transistors and diodes are used in the WP-700A and WP-702A. Circuit design features include a negative feedback regulator circuit to maintain constant output voltage with low ripple regardless of varying line voltage or load resistance.

Three convenient five-way output terminals (+DC, −DC, and GND) are provided. The units are equipped with a three-wire AC power cord to permit grounding the external circuit to the power line ground, using the "GND" terminal.

The WP-700A and WP-702A are compact and lightweight, with attractively designed functional panels. The WP-700A measures 4 inches by 6½ inches by 3 inches, and weighs only 3 pounds. The WP-702A measures 6 inches by 12 inches by 3 inches, and weighs 3 pounds, 10 ounces. Both supplies have rugged aluminum cases, finished with blue-gray hammertone enamel.

SPECIFICATIONS

Output	0 to 20 volts, at 0 to 200 mA
Input	105-135 V AC, 50-60 Hz
Line Regulation	Less than 30 mV change in output voltage with power-line variation of 105-135 V AC
Load Regulation	Less than 50 mV load change for a 200 mA load change
Ripple	Less than 500 μV RMS
Meter Functions	0-20 volts 0-200 mA (function selected with panel switch)
Controls	Continuously variable voltage adjustment
Output Terminals	Three; DC+, DC−, GND. Positive or negative output can be obtained
Short Circuit Protection	External short circuit load will not damage supply
Overload Indicator	Panel lamp glows when current level nears 200 mA rating
Power Cord	3-wire power-line cord
Dimensions	WP-700A: 4 in. x 6½ in. x 3 in. WP-702A: 6 in. x 12 in. x 3 in.
Weight:	
Unpacked	WP-700A: 2 lbs. WP-702A: 3 lbs., 10 ozs.
Shipping Weight	WP-700A: 2 lbs., 11 ozs. WP-702A: 4 lbs., 13 ozs.

415 So. 5th Street, Harrison, N. J.

RCA ELECTRONIC COMPONENTS

RCA 5-INCH DUAL BAND OSCILLOSCOPE
Type WO-91C

SPECIFICATIONS

FEATURES

- Front-panel switch selection of wide-band or high-sensitivity operation
- Built-in voltage calibration — large 5-inch screen with VTVM-type voltage scales for fast, simultaneous peak-to-peak measurements and waveshape display
- Flat response (±1 db) from 10 Hz to 4.5 MHz — excellent performance on color TV waveforms
- 0.018 rms volt per inch maximum sensitivity for use at low signal levels
- 0.1 microsecond rise time for accurate display of fast, critical waveforms
- Two-stage TV type sync separator — preset TV "V" and "H" front-panel sweep positions for speedy, automatic lock-in at "Vertical" and "Horizontal" frequencies
- Continuously adjustable (to 100 kHz) sweep oscillator has excellent linearity
- Vertical polarity reversal control for "upright" or "inverted" trace display
- Z-axis input for direct modulation of CRT grid permits use of timing and calibration markers on trace
- Solid-state power supply circuit
- Provisions for connecting signals directly to the vertical deflection plates of the CRT
- Six methods for synchronizing on incoming signal — all selectable from front-panel
- Frequency-compensated 3-to-1 step attenuators provide overlapping display and voltage measurement ranges
- High-impedance, low-capacitance probe (10 megohms at only 11 pf) minimizes loading in critical circuits — assures more accurate display
- Shielded vertical-input connector and cable minimizes hum and stray-field pickup
- Compact, portable — measures 13½" high, 9" wide, 16½" deep — weighs 30 lbs.

DESCRIPTION

The RCA WO-91C 5-inch Oscilloscope incorporates several features that increase its versatility and greatly speed up TV testing and servicing. For example, simultaneous display and peak to peak voltage measurement of waveforms are made easily and accurately by means of a graph-screen scaled directly in volts to correspond to settings on the "V" range switch. Frequency-compensated V-range switch is calibrated in 3-to-1 steps instead of 10-to-1 for VTVM-type voltage measurements. Voltage calibration holds for all settings of range switch.

Choice of wide-band or narrow-band (high sensitivity) operation is provided by a front panel switch which changes the bandpass of the vertical amplifier. In the wide-band position, frequency response is flat within ±1 db from 10 Hz to 4.5 MHz, and in the narrow-band position, −1 db from 10 Hz to 0.5 MHz, and −6 db at 1.5 MHz. Sensitivity is 0.5 peak-to-peak volt per inch (0.018 rms volt) in the narrow-band position; 0.15 peak-to-peak volt per inch (0.053 rms volt) in the wide-band position.

RCA SUPER-PORTABLE 3-INCH OSCILLOSCOPE
Type WO-33A
(Available in wired or kit form)

100 V	0 to 3000 ohms
1 V	Approx. 900 ohms
.1 V	Approx. 91 ohms
.01 V	Approx. 9 ohms

Sine Wave

Output Voltage (100 k ohm, 75 pf load) 10v rms or more

Maximum Total Harmonic Distortion (30 Hz to 15 kHz) 0.25%

Square Wave:

Rise and Fall Time (Maximum output) ....less than 1.0 μS

Maximum Tilt .....less than 5.0%

Output Voltage .....10v p-p or more

Power Supply

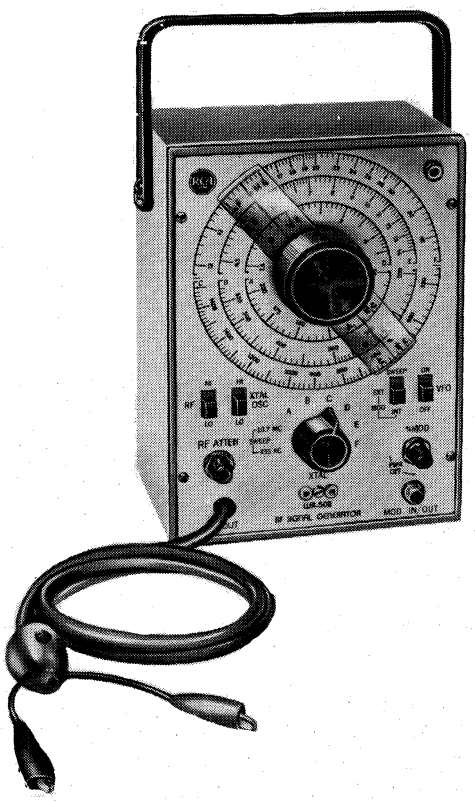
Voltage .....105-130 volts, 50-60 Hz

Average Power Consumption Approx. 8 watts

MECHANICAL

Height	7¾ inches
Width	5⅜ inches
Depth	4¾ inches
Weight	3 lbs.

RCA RF SIGNAL GENERATOR WITH SWEEP FEATURES



Type WR-50B

SPECIFICATIONS

(Performance figures with line voltage at 120 volts, 60 cps)

Sweep Output:
455 kc, center-frequency
10.7 Mc, center-frequency
Sweep width approximately 10% of center frequency

Variable Oscillator:
Six Ranges (fundamental frequencies)

A	85 kc to 200 kc
B	200 kc to 550 kc
C	550 kc to 1600 kc
D	1.5 Mc to 4.5 Mc
E	4.5 Mc to 14 Mc
F	12 Mc to 40 Mc

RF Output (all ranges)[1] 0.05 volt rms (minimum)

Dial Calibration Accuracy .....±2%

Internal Modulating Frequency .....Approx. 400 cps

Percent Modulation....Adjustable up to 30%

Audio Output.....At least 8 volts rms across 15K load

External Modulation .....Modulating frequency, 15 kc max.

[1] Open-circuit value.
[2] With WR-50B tuned to 1 Mc.

Voltage Required for 30% Mod. Using 400 cps[2].....Approx. 10 volts rms

Impedance at AF IN/OUT Connector (400 cps)[3] .....Approx. 10K

Crystal Oscillator[4]
Maximum Output .....0.02 volt rms
Internal Mod. Percentage.....Approx. 20%
Frequency Range 100 kc to 15 Mc (Fundamental)

Attenuator
VFO and Sweep Output.....2-step 10-to-1 attenuator switch with potentiometer for fine adjustment
Crystal Oscillator Output..Additional 7-to-1 attenuator switch

Tube Complement.....2 RCA 12AT7

Power Supply
Voltage Rating....105-130 volts 50/60 cps
Power Consumption .....15 watts

Dimensions:

Height	7¾"
Width	5⅜"
Depth	4¾"
Weight	5 lbs.

[3] With % MOD control at maximum.
[4] Varies with crystal cut and activity.

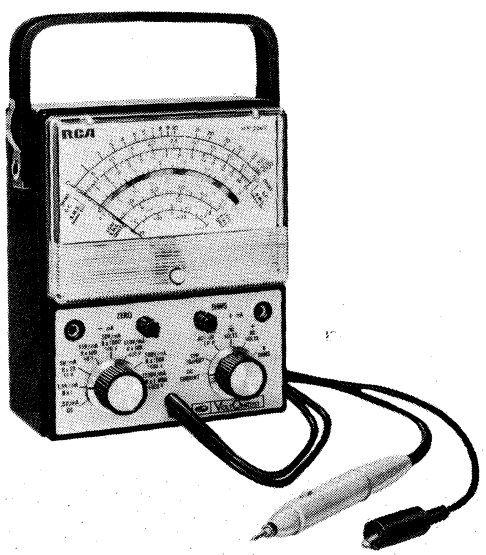
2 RCA VS102 22½ Volts

RCA ALL SOLID-STATE, BATTERY OPERATED VOLTOHMYST®

Type WV-500B



SPECIFICATIONS

FEATURES

- All solid-state circuitry
- Battery operated — completely portable
- Eight overlapping dc current ranges from 2 microamperes to 1500 milliamperes (1.5 amperes)
- Seven overlapping resistance ranges,
- Eight overlapping dc voltage ranges from 0.02 volt to 1500 volts (including special 0.5 dc volt range)
- Seven overlapping ac (rms) voltage ranges from 0.1 to 1500 volts
- Measures ac peak-to-peak voltages of complex waveforms from 0.5 to 4200 volts
- Frequency response — 30 Hz to 250 MHz with WG-301A crystal-diode accessory probe — ±1 db 30 Hz to 3 MHz (1.5 and 5-v ac ranges)
- 11 megohm resistance on all dc ranges
- Calibrated zero center scale
- Sturdy, wired-in single-unit dc/ac ohms probe with fully shielded flexible input cable
- Also includes leads or current measurement
- Mirror scale meter — movement electrically protected against burnout
- Compact, lightweight — measures 6⅞" x 5¼" x 3⅛"; Weight, 3½ lbs.

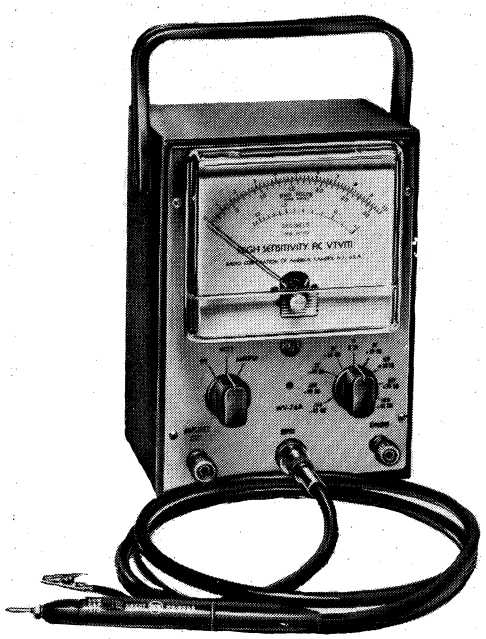
DESCRIPTION

The WV-500B VoltOhmyst is a solid-state, battery-operated electronic voltmeter. The instrument measures dc voltages from 0.01 to 1500 volts, dc current from 2 microamperes to 1500 milliamperes, ac (rms) voltages from 0.1 to 1500 volts, ac peak-to-peak voltages from 0.5 volts to 4200 volts, and resistance values from 0.2 ohms to 1000 megohms.

Seven overlapping ranges are provided for ac rms and resistance measurements, and eight ranges are provided for dc voltage and current measurement. Accuracy for the dc and ac rms functions is ±3% (of full scale reading).

RCA HIGH SENSITIVITY AC VTVM

Type WV-76A



SPECIFICATIONS

The calibration of the WV-76A is based on pure sine-wave input signal voltage.
(Performance figures are based on a line voltage of 120 volts)

ELECTRICAL

Frequency Range:
With WG-300B in "Direct" Position ±1 db 10 cps to 1.5 Mc
With WG-300B in "Low-Cap" Position ±1 db 10 cps to 500 Kc
AC-Voltage Measurements (with WG-300B in "Direct" Position):
Ranges.....0 to 0.01, 0.3, 0.1, 0.3, 1 volt; 0 to 3, 10, 30, 100 volts†
Accuracy.....±5% (full scale)
DB Measurements* (With WG-300B in "Direct" Position):
Ranges (nine).....−40, −30, −20, −10, 0, +10, +20, +30, +40 db
Accuracy .....±5%
Input Characteristics:
At Input Connector 1 meg shunted by 58 $\mu\mu$f
With WG-300B in "Direct" Position 1 meg shunted by 95 $\mu\mu$f
With WG-300B in "Low-Cap" Position 10 megs shunted by 13 $\mu\mu$f
Preamplifier:
Output Voltage.....0.8 output volt for 0.1 input volt
Output Impedance.....Less than 400 ohms
Gain.....38 db on 10 millivolt range
Power Supply:
Frequency .....50 to 400 cps
Voltage .....105-125 volts
Consumption .....35 watts
Tube Complement .....1 RCA 6AN8, 1 RCA 6BK7A

MECHANICAL

Width .....5⅜"
Height .....7⅜"
Depth .....4¾"
Weight (Net) .....5 lbs. (approx.)

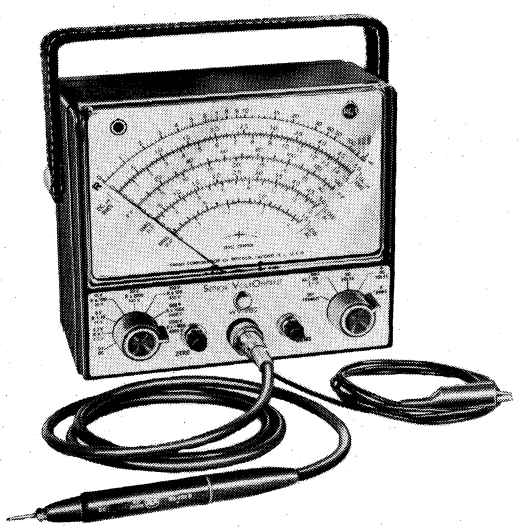
EQUIPMENT SUPPLIED

1 WG-300B Direct/Low-Capacitance Probe, 1 "Slip-On" Alligator Clip, 1 Clip Insulator, 1 Instruction Booklet

† When the WG-300B is set to the "Low-Cap" position, up to 500 volts or +56 db may be measured.
* Zero db = 1 milliwatt into 600 ohms.

RCA SENIOR VOLTOHMYST®

Type WV-98C



SPECIFICATIONS

ELECTRICAL

NOTE: Performance figures are for line voltage of 120 volts, 60 cps.
DC Voltmeter:
Ranges....0 to .5, 1.5, 5, 15, 50, 150, 500, 1500 volts
Input Resistance (With switch on WG-299D set to "DC"):
All Ranges .....11 Megohms
Over-all Accuracy .....±3% of full scale
AC Voltmeter:
Ranges
RMS Values of Sine-Waves....0 to 1.5, 5, 15, 50, 150, 500, 1500 volts
Peak-to-Peak Values of Sine-Waves and Complex Waves.....0 to 4, 14, 42, 140, 420, 1400, 4200 volts
Over-all Accuracy .....±3% of full scale (Accuracy of RMS ranges based on use of sine-wave signals having less than 0.5% total harmonic content.)
Input Resistance and Capacitance (With switch on WG-299D set to "AC-OHMS"):
1.5, 5, 50, 150-volt Range 0.83 meg, shunted to 70 $\mu\mu$f
500-volt Range 1.3 meg, shunted to 60 $\mu\mu$f
1500-volt Range 1.5 meg, shunted to 60 $\mu\mu$f
Frequency Response (1.5, 5.0 and 15 volts AC Ranges) ±1 db 30 cps to 3 Mc
Maximum Input Voltages:
DC Voltages with no ac voltage present .....1500 volts
AC Voltages with no dc voltage present:
RMS for Sine Waves.....1500 volts
Peak-to-Peak for Sine Waves..4200 volts
Peak-to-Peak for Complex Waves .....2000 volts
Combined AC and DC Voltages:
Sum of DC Voltage and AC Peak Voltage .....2000 volts
Ohmmeter:
Ranges, Seven .....0 to 1000 megohms
Meter Movement:
DC Current for Full-Scale Deflection .....200 microamperes
Power Supply:
Voltage Rating .....110-130 volts
Frequency Rating .....50-60 cps
Power Consumption (Approx.) .....6 watts
Battery .....1 RCA VS036
Tube Complement .....1 RCA 6AL5, 1 RCA 12AU7A

EQUIPMENT SUPPLIED

DC/AC-OHMS Probe and Cable (Type WG-299D), 1.5-Volt Battery (Type VS036), Slip-on Alligator Clip, Insulator, Instruction Booklet and Registration Card.

ACCESSORIES

Available on Separate Order
For Measuring AC Voltages at Frequencies from 50 KC to 250 Mc:
Crystal-Diode Probe .....Type WG-301A
For Increasing DC Voltage to 50,000 Volts:
High-Voltage Probe .....Type WG-289
Multiplier Resistor .....Type WG-206

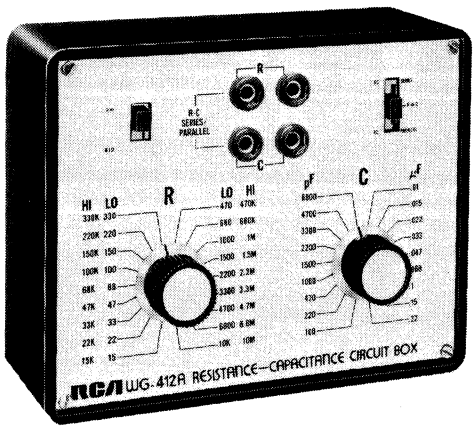
415 So. 5th Street, Harrison, N. J.

RCA ELECTRONIC COMPONENTS

RCA RESISTANCE-CAPACITANCE CIRCUIT BOX

Type WG-412A

SPECIFICATIONS



DESCRIPTION

The RCA WG-412A provides a convenient selection of standard resistor and capacitor values available either separately or in series or parallel R-C combinations. The unit includes 36 resistors ranging in value from 15 ohms to 10 megohms and 18 capacitors from 100 picofarads to .22 microfarads.

Both resistors and capacitors have a 10% tolerance. The resistors have a power rating of one watt. The capacitors have a voltage rating of approximately 600 volts.

Some uses of the R-C Circuit Box include component substitution in servicing and circuit design applications and establishing R-C circuits for checking impedance, resistance, and frequency characteristics. The unit is also useful for classroom applications to demonstrate Ohm's Law, capacitive reactance, and other circuit effects caused by introducing various resistance and capacitance combinations.

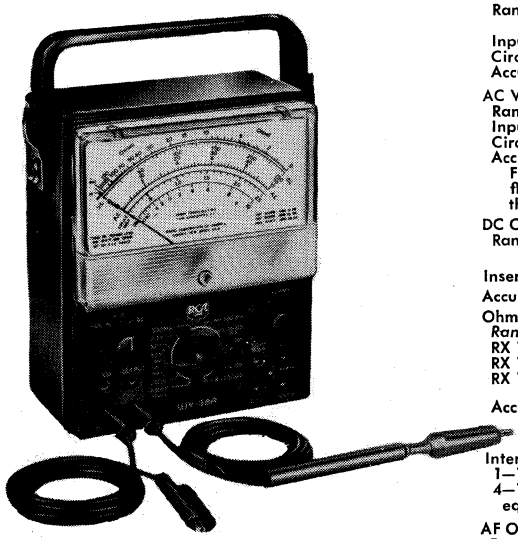
The R-C Circuit Box is provided with plug-in test leads with convenient alligator clip connectors (WG-413A). The unit measures 6⅞ inches by 5⅜ inches by 2⅞ inches and weighs approximately one pound, 12 ounces.

FEATURES

- 36 resistors in standard values from 15 ohms to 10 megohms (1 watt power rating, Tolerance ±10%)
- 18 capacitors from 100 pF to 0.22 uF 600V rating, (Tolerance ±10%)
- Simplified switching for separate R or C, or series or parallel R-C
- Standard ¾" terminal-jack
- Spacing accommodates dual banana-plug
- Complete with plug-in test leads and alligator-clip connectors
- Measures 6⅞" x 5⅜" x 2⅜" . . . Weighs 1 lb. 12 oz.

RCA VOLT-OHM-MILLIAMMETER

Type WV-38A



SPECIFICATIONS

ELECTRICAL

DC Voltmeter (at full scale):
Ranges ..... 0 to .25, 1.0, 2.5, 10, 50, 250, 1000, 5000 volts
Input Resistance ..... 20,000 ohms-per-volt
Circuit Loading ... 50 microamps. bleeder current
Accuracy ..... ±3%

AC Voltmeter (at full scale):
Ranges ..... 0 to 2.5, 10, 50, 250, 1000, 5000 volts
Input Resistance ..... 5000 ohms-per-volt
Circuit Loading .. 200 microamps. bleeder current
Accuracy ..... ±5%
Frequency Response (reference 1000 cps) flat within ½ db from 10 cps to 50 kc on the 2.5, 10, and 50 volt ranges.

DC Current (at full scale):
Ranges ..... 0 to 50 μA, 1 MA, 10 MA, 100 MA, 500 MA, 10 Amp.

Insertion Loss ..... 0.25 volt

Accuracy ..... ±3%

Ohms:

Ranges	*Scale Ends*	*Center Scale*	*Full Scale Currents*
RX 1	0-2000	12 ohms	120 MA
RX 100	0-200,000	1200 ohms	1.2 MA
RX 10,000	0-20,000,000	120,000 ohms	0.06 MA

Accuracy ..... ±3° of pointer position for exact value
Meter movement protected against burn-out.

Internal Batteries (not supplied):
1—1.5V "D" size cell, RCA VS 036 or equivalent
4—1.5V Penlight cells, RCA VS 034A or equivalent

AF Output (at full scale):
Ranges ..... 0 to 2.5, 10, 50, 250 volts
Input Resistance ..... 5000 ohms-per-volt
Circuit Loading ..... 200 microamperes
An internally connected 0.1 μf DC blocking capacitor permits output measurements in presence of DC voltages.

Decibel Levels (Zero DB is 1 milliwatt in 600 ohms):
2.5 V. Range ..... —20 to +10 DB
10 V. Range ..... —8 to +22 DB
50 V. Range ..... +6 to +36 DB
250 V. Range ..... +20 to +50 DB
(May be read on Output or AC positions)

MECHANICAL

Dimensions—(less handle):
Height ..... 6⅞"
Width ..... 5¼"
Depth ..... 3⅛"
Weight ..... 3½ lbs

Information furnished by RCA is believed to be accurate and reliable. However, no responsibility is assumed by RCA for its use; nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of RCA.

EQUIPMENT SUPPLIED

1—Red Test Lead and Probe
1—Slip-on Alligator Clip and Red Insulating Boot
1—Black Test Lead with Alligator Clip and Black Insulating Boot
1—Instruction Book
(Batteries not supplied)

ACCESSORIES AVAILABLE

WG-297	High Voltage Probe, less resistor
WG-210	Resistor 900 Megohm for H.V. Probe (10 x multiplier for 5000 V. range)
WG-211	Resistor 495 Megohm for H.V. Probe (100 x multiplier for 250 V. range)
WG-352A	RF Diode
WG-270A	Vinyl Carrying Case, includes convenient storage compartment for test leads.

415 So. 5th Street, Harrison, N. J.

RCA ELECTRONIC COMPONENTS

RCA IN-CIRCUIT/OUT-OF-CIRCUIT TRANSISTOR TESTER

Type WT-501A

FEATURES

- Battery operated — completely portable
- Tests both high-power and low-power transistors
- Tests for collector-to-base leakage (1_{CBO}), collector-to-emitter leakage (1_{CEO}), and DC Beta
- Adjustable collector current permits most transistors to be tested at their rated current level
- A complete DC forward current transfer ratio curve can be plotted up to 1 amp.
- Front panel NPN and PNP sockets for convenient matching in complementary symmetry applications
- Three color-coded test leads for in-circuit testing
- Special low-impedance circuitry assures reliable in-circuit testing of transistor current gain
- Includes zero control to cancel the effect of leakage on Beta reading
- Precision resistors insure accurate test results
- Tests relative front-to-back ratio of diodes at appropriate current levels
- Color-coded panel for simplified operation
- Mirrored scale
- Compact, lightweight — measures 6⅞" x 5¼" x 3⅛"; Weight — 2¾ lbs.
- Comes complete with 20-page instruction manual and latest RCA transistor manual

USES

The RCA WT-501A is designed to test transistors both in-circuit and out-of-circuit. Applications ranging from a quick check of dc beta to an extensive analysis of transistor performance make the versatile WT-501A valuable for use in the service shop, factory, or laboratory.

The sockets provided on the WT-501A will accommodate most low-power transistors with conventional terminal locations. In addition, the socket has an extra base pin for use with transistors having "in-line" terminals. The test leads provided for in-circuit testing can be used to connect transistors that do not fit the panel socket.

(NOTE: MOS and FET type transistors require a test similar to that used for vacuum tubes and cannot be tested with the WT-501A.)

DESCRIPTION

Completely portable and requiring no external power source, RCA's WT-501A tests transisors both in-circuit and out-of-circuit, tests both low and high-power transistors, and has both NPN and PNP sockets to allow convenient transistor matching for complementary symmetry applications. Three color-coded test leads are provided for in-circuit testing. Special low-impedance circuitry assures reliable in-circuit testing.

The instrument is designed to test transistors for dc beta from 1 to 1000, collector-to-base leakage (I_{CBO}) as low as two-microamperes, and collector-to-emitter leakage (I_{CEO}) from 20 amperes to one-ampere. Collector current is adjustable from 20 microamperes to one-ampere in four ranges, permitting most transistors to be tested at their rated current level. Power transistors can be tested with I_c up to one-ampere. A dc forward current transfer ratio curve can be plotted. The instrument can also test the relative in-circuit dc current gain of a transistor.

A 100 microampere meter movement is used in the measuring circuits for the various test functions, and precision resistors are used to insure accurate test results. Normal maintenance includes only replacing the batteries as necessary.

The instrument has two internal 1.5 volt "D"-size batteries. One of these batteries is used during in-circuit tests to provide voltage in reverse polarity to cancel the effect of circuit leakage. The batteries can be tested with the instrument itself using a simple procedure outlined in the instruction manual.

The WT-501A is also a convenient device for making a check of the relative front-to-back ratio of diodes. An important feature is the ability to check the diode at an appropriate current level.

Additional features of the WT-501A include a color-coded front panel for simplified operation, a mirror-scale meter which reduces the error in readings due to parallax, and handle clips for convenient storage of the test leads.

SPECIFICATIONS

DC BETA (hFE)
- Range ..... 1 to 1000
- Accuracy ..... ±5%

COLLECTOR CURRENT (I_c)
- 100 μA to 1 Amp. in four ranges; (0 to 1 mA, 10 mA, 100 mA, 1 A.)

COLLECTOR-TO-BASE LEAKAGE
- (I_{CBO}) ..... 0 to 100 μA

COLLECTOR-TO-EMITTER LEAKAGE
- (I_{CEO}) ..... 0 to 1 Amp.

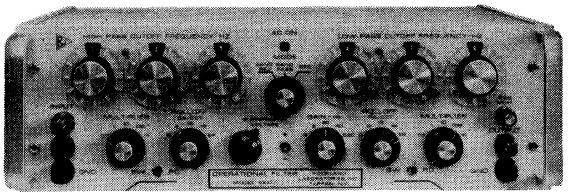
BATTERY VOLTAGE
- 1.5-volts, two "D" cells

METER SCALES ..... Beta
- Beta Cal (I_c) (Multiplier)
- Leakage Current (I_{CBO} & I_{CEO})

DIMENSIONS (less handle)
- Height ..... 6⅞ inches
- Width ..... 5¼ inches
- Dept ..... 3⅛ inches

WEIGHT (unpacked) ..... 2¾ pounds

PRECISION INSTRUMENTS
by Rockland Laboratories, Inc.



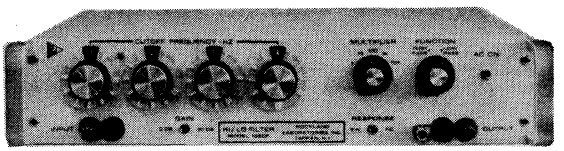
OPERATIONAL FILTER®

FILTERS The RLI line of solid-state, active filters covers the band .001 Hz to 100 KHz. The OPERATIONAL FILTER series features low pass, high pass, band pass and band reject response functions with variable roll-off (up to 24 db/octave), variable gain (up to 40 db) and AC or DC operation. The HI/LO and DUAL HI/LO FILTERS serve as either high pass or low pass filters with fixed rolloffs of 24 or 48 db/octave, 0 db and 20 db gain, and AC or DC operation. See Section 2700 for further details.

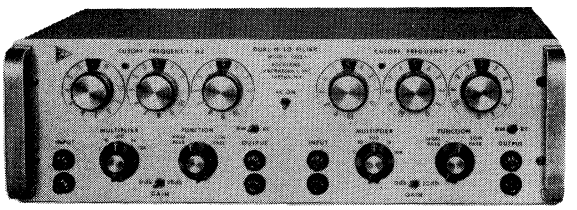
TILTMETERS A sensitive, two-axis tilt indicator consisting of a sensor and an indicator electronics console. The sensor is an inverted pendulum, with two degrees of freedom, equipped with orthogonal capacitor displacement transducers for simultaneous measurement of tilt about two perpendicular axes. The electronic circuitry provides visual meter readouts and analog outputs for continuous recording. Full scale settings of 1 arc sec, 10 arc sec, 1 arc min and 10 arc min are selectable by front panel switch. In the most sensitive scale setting, the tiltmeter resolution is .0005 arc sec which is adequate for recording earth tide or long-term tilts associated with tectonic crustal deformation. The lower sensitivity scales are suitable for recording tilts of gyro test piers, launch pads, dams, buildings, etc. AC or DC

MULTICHANNEL EVENT ANALYZERS For direct measurement of distribution functions for transient events distributed randomly in amplitude and time. The RLI Multichannel Event Analyzer is basically a pulse height analyzer and totalizer with 5 selectable threshold voltage levels. Hold times, i.e., the minimum time interval between counts, are adjustable by front panel control. Total counts are displayed by visual readout in 5 separate registers. An analog voltage proportional to total count is available for monitoring and telemetry purposes.

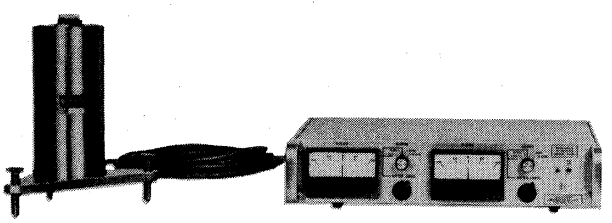
ELECTRONIC GALVANOMETERS Consists of a low noise preamplifier followed by an adjustable low-pass filter whose output is applied to a 1-sec galvanometer. The filter corner period and preamplifier gain are adjustable to obtain over-all responses equivalent to those of long-period galvanometers (from 10 sec to over 100 sec). This instrument is intended to replace mechanical galvanometers presently being used in photographic recording. Analog outputs suitable for tape recording are provided.



HI/LO FILTER®



DUAL HI/LO FILTER®



TILTMETER

operation. Integral motor drives for automatic leveling, automatic caging and uncaging, and special purpose casings are available for adaptation of the system to remote operation. Base Price $2750.00.

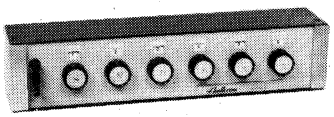
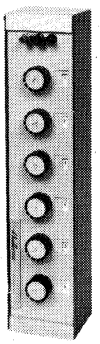
PRECISION RESISTANCE DECADES

SERIES 6800





Series 6800 precision resistance decades feature exceptional quality, operational ease, and styling. A simple slide mechanism permits in-line viewing with vertical or horizontal readout.

SPECIFICATIONS

D-C accuracy at terminals:
±0.02% — 10 ohms and above,
±0.003 ohm — below 10 ohms.

Zero Resistance:
4 milliohms per decade maximum. Each instrument is supplied with exact reading.

Power Rating per step:
0.50 watt — 1 ohm and greater
0.25 watt — 0.1 ohm steps
0.16 watt — 0.01 ohm steps
Maximum current per step marked on knobs.

Maximum Voltage:
1500 volts d-c. Individual resistor power ratings must not be exceeded.

Stability:
±0.005% per year at rated power, 10°C. — 30°C.

Temperature Coefficient:
0±10ppm/°C. (10 ohms and above)
0±20ppm/°C. (under 10 ohms)

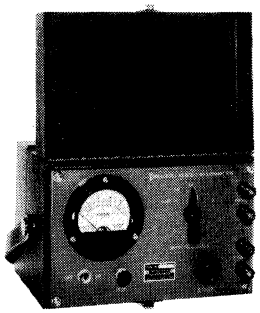
Shallcross VALUES IN RESISTANCE MEASUREMENT



SERIES 670 LOW RESISTANCE TEST SETS

These portable test sets offer the facility and operating speeds necessary for efficient production line measurement of low resistances. Applications include testing welding bond resistance, switch contact resistance, etc. A pistol grip probe and fixed clamp are standard accessories for production line tests.

Price (Without accessories): $195

676B Fixed Clamp: $20 271 Test Standard: $20

657B Pistol Grip Probe: $30

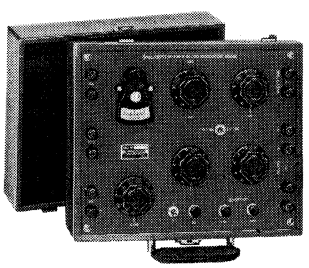
6100 WHEATSTONE-FAULT LOCATION BRIDGE

This all-purpose portable instrument is ideal for laboratory and field resistance measurements. Circuits are included for Murray, Varley, Hilborn, and Fisher loop tests. Reads resistances from 1.0 ohm to 1.011 megohm with ±0.1% accuracy. Includes 4.5 volt (3 cells) internal supply and sensitive galvanometer. Binding posts allow use of external power source and/or galvanometer. Weatherproof metal case is approximately 9"x8"x6". Price $240. Model 6101 wheatstone bridge is identical except that it does not include loop-test features. Price $200.

638-R KELVIN-WHEATSTONE BRIDGE

A portable Kelvin-Wheatstone Bridge offering exceptional versatility and practicality.



Wide measurement range:
0.001 ohm to 10 ohms (Kelvin). Accuracy ±0.75%.
1 ohm to 11 megohms (Wheatstone). Accuracy ±0.2%.

Power Source:
Internal, 4.5 volts (three 1.5 volt cells).
Binding posts for high-current source for Kelvin Bridge and high voltage source for high resistance measurement.

Galvanometer:
One microampere per millimeter scale division supplied. Binding posts for external galvanometer.

Case:
Polished wood, approximately 13" x 11" x7".

Price: $325.

SERIES 617 PERCENT LIMIT BRIDGE

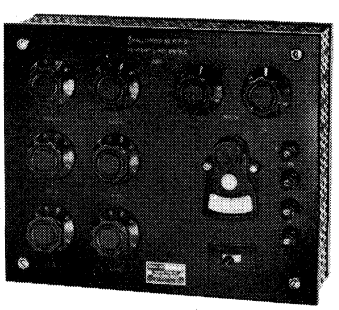
The series 617 bridges are designed for rapid production testing of resistors to each of six specified percentage tolerances from 0.25% to 10%.

- Six dial rheostat arms
- Individual plus and minus percentage selector dials
- May be used for conventional wheatstone measurements.

Model 617A
Resistances to 111,111 in 0.1 ohm steps — $275

Model 617I
Resistances to 1,111,110 in 1.0 ohm steps — $290

Model 617N
Resistances to 11,111,100 in 10 ohm steps — $339



Prices subject to change without notice.

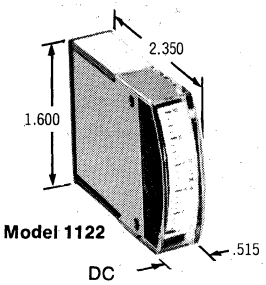
SIGMA

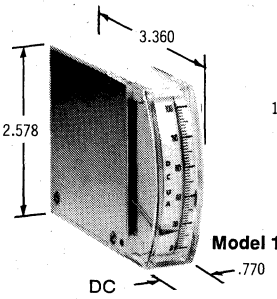
EDGEWISE PANEL METERS

Where compact panel size is essential, three International edgewise meters can be horizontally or vertically flush stacked in less space than one conventional-type meter. International edgewise meters feature D'Arsonval movements, Alnico V magnets, sapphire jeweled pivots and internal magnetic shielding. Cases have clear plastic front covers for maximum ambient illumination. All models are available in a wide variety of current or voltage ranges and can be supplied as db or VU meters.



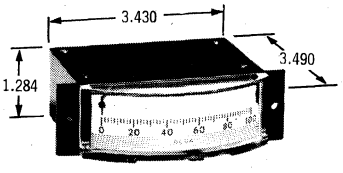
Model 1122

DC
0-100 ua to 0-3 amps
0-50 mv to 0-100 volts
AC (Rectifier-Type)
0-10 to 0-100 Volts

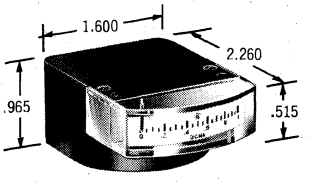


Model 1136

DC
0-50 ua to 0-15 amps
0-10 mv to 0-500 volts
AC (Rectifier-Type)
0-50 to 0-500 volts



Model 1145



Model 1120

Standard Ranges

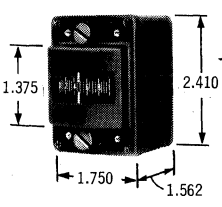
DC
0-100 ua to 0-3 amps
0-50 mv to 0-100 volts
AC (Rectifier-Type)
0-10 to 0-100 volts

DC
0-100 ua to 0-15 amps
0-50 mv to 0-500 volts
AC (Rectifier-Type)
0-10 to 0-500 volts

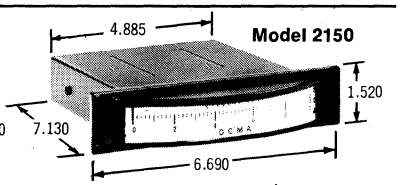
Military Models

International military-type panel meters conform to applicable sections of MIL-M-10304. All models are rugged, sealed, watertight and can be supplied either illuminated or non-illuminated. Designed for horizontal or vertical mounting.

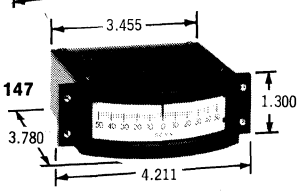
Model 2120

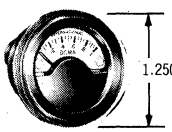


Model 2150

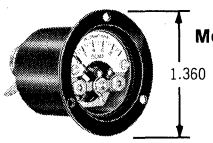


Model 1147

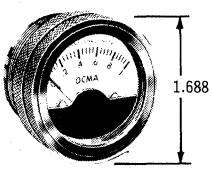




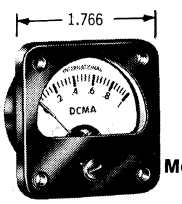
Model 100



Model 104



Model 150



Model 153

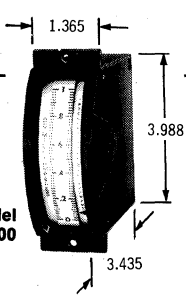
Miniature Meters

For use where minimum size, light weight and high reliability are essential. Scale lengths from 0.760 to 1.3" with initial accuracy of ±3%, D.C.
Standard ranges for International miniature meters:
DC: 0-100 ua to 0-15 amp; 0-50 mv to 0-500 volts; AC (Rectifier-Type): 0-10 to 0-500 volts. Also VU and db ranges.

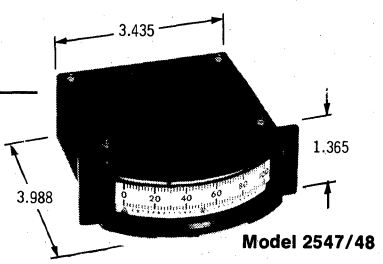
VOM-22

VOM-22 Miniature Multi-tester

Compact, rugged. Accuracy: ±3%, DC; ±5%, AC. Dust-tight, printed circuit rotary range-selection switch. 20,000 ohms/volt DC, 15,500 ohms/volt AC. 18 measurement ranges. Full-wave bridge rectifier. Leather case available.



Model 2500



Model 2547/48

Electronic Control Meters

For continuous indication of any quantity which can be represented by an electrical signal. Choice of horizontal or vertical mountings, special scales, AC and DC voltage ratings.

Sigma also markets a complete line of relays (see section 4500) and a wide range of precision snap switches (see section 5100).

Simpson®

PANEL INSTRUMENTS • CONTROLLERS • DIGITAL INSTRUMENTS • CHART RECORDERS • TEST EQUIPMENT • PORTABLE STANDARDS

260®

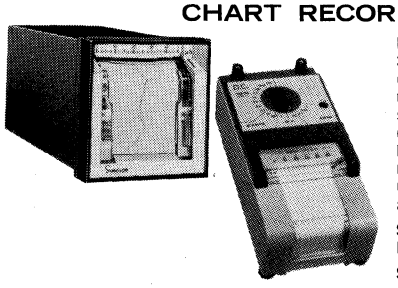
TEST EQUIPMENT

Select from 25 VOMs . . . including the world famous 260® and new solid-state model 313. Special VOMs have built-in temperature and AC current ranges. Also in Simpson's wide selection of test equipment: VTVMs, oscilloscopes, temperature testers, and plug-in accessories.

SEE LISTINGS IN RADIO-ELECTRONIC MASTER or write for bulletin 2078.

Simpson portable and multi-range standards are also listed in RADIO-ELECTRONIC MASTER, or write for bulletin 368.

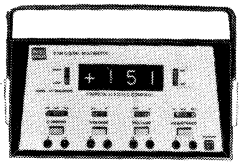
CHART RECORDERS



Model 2750 panel mounts in just 3¾ x 3¾" of space — yet records for over a month completely unattended. 43 electrical ranges stocked. Model 2755 has 10 event channels in the same size package. Model 2760 has temperature ranges. Multi-range models 604 and 605 provide electrical recordings at low cost-per-range.

SEE LISTINGS IN RADIO-ELECTRONIC MASTER or write for bulletin 368.

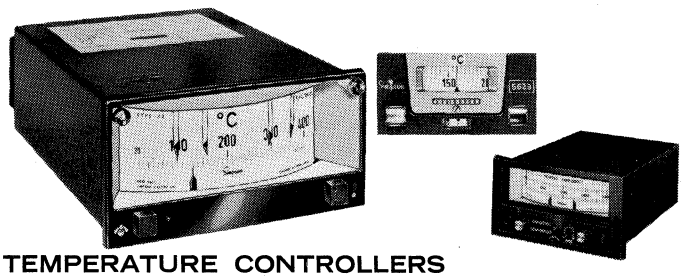
Simpson also has a wide selection of fast response potentiometric recorders and XY recorders. Write to Simpson with your requirements, or call your local Simpson Representative.



DIGITAL INSTRUMENTS

2700 Digital System has 4 full-time digits, automatic polarity selection, and ±0.05% accuracy. 5 plug-in modules provide DC voltage, resistance, AC voltage, DC current, and other ranges. Other Simpson digitals include the model 2725 20-MHz counter, and model 2701 digital VOM.

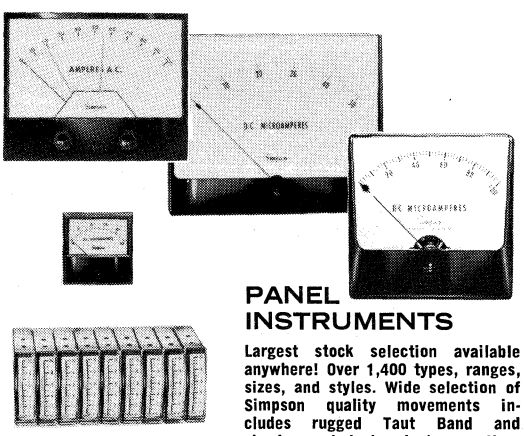
SEE LISTINGS IN RADIO-ELECTRONIC MASTER or write for bulletin 368.



TEMPERATURE CONTROLLERS

Simpson can meet your control needs with "off the shelf" delivery of stock ranges — or our Sales Engineers can custom design controller specifications for your application. Model 5623/RO-1 is just 17⅞" high — controls ±0.5% accuracy — and has built-in proportioning. Other models have 4 control points, SCR control, and plug-in mounting.

WRITE FOR COMPLETE INFORMATION or call your local Simpson Representative. See the Yellow Pages under "Controllers, Controls & Control Systems."



PANEL INSTRUMENTS

Largest stock selection available anywhere! Over 1,400 types, ranges, sizes, and styles. Wide selection of Simpson quality movements includes rugged Taut Band and shock-mounted jewel types. Your special panel instrument need may be stocked by Simpson . . . or your local Simpson Representative can give you fast, efficient help on special order types.

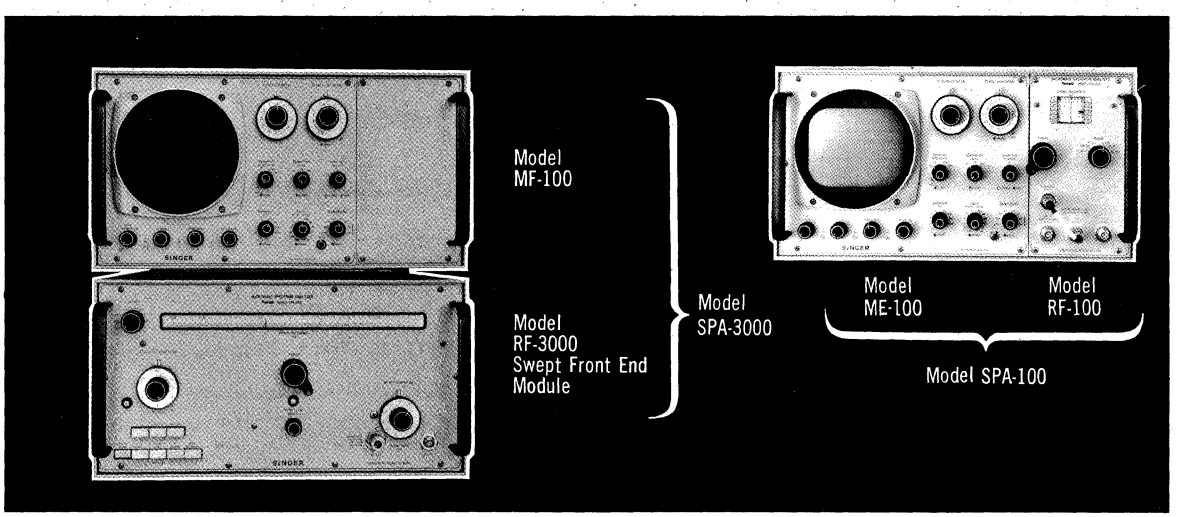
Microwave Spectrum Analyzers



Model SPA-100

0.01 to 40 GHz

Model SPA-100A

1 to 40 GHz

Swept Front End Analyzer 3-GHz Dispersion

Model SPA-3000

0.01 to 40 GHz

Features

- RF sensitivities up to —105 dBm (S+N=2N @ 1-kHz bandwidth)
- Up to 3-GHz dispersion (to 9 GHz) and greater than 2-GHz dispersion to 40 GHz
- No in-band multiple responses negates the need for expensive external preselectors which degrade sensitivity and flatness
- 60-dB calibrated log scale usable at all dispersions and bandwidths
- Synchroscope capability for time domain analysis
- Built-in fool-proof phase lock and signal identification circuitry
- X-Y outputs
- Provisions for external remote programming, display and automated control
- Modular design and construction allows extensions of capability and ease of service.

Applications

CW, AM, FM, PM, pulse and random waveform analysis ☐ Intermodulation distortion measurements ☐ Accurate modulation index and deviation measurements of FM signals ☐ Stability measurements of r-f sources ☐ Simplified tuning of frequency multipliers ☐ RFI and EMC spectrum surveillance ☐ Direct reading of pulse spectrum power points and nulls.

Description

The PANORAMIC Model SPA-100 Microwave Spectrum Analyzer is a broadband instrument with accurate calibration capabilities. Of solid-state design and modular construction, the SPA-100 provides a full dispersion capability of 100 MHz over the entire 10 MHz to 40 GHz frequency range. This wide dispersion, even down to 10 MHz, is achieved through the use of an up-converter in the 10 MHz to 1 GHz band. (The up-converter is not incorporated in the SPA-100A.)

The high sensitivity, low distortion and wide range of bandwidths of the SPA-100 provides a large dynamic range display for all types of signals. The calibrated 60 dB log scale accuracy is constant for pulse spectra using the 1 MHz bandwidth as well as for CW, MCW, FM and AM signals, thus permitting accurate amplitude measurements. An extended time base with internal synchronization and the wide bandwidths permit time domain analysis of pulsed signals.

The modular construction of the analyzer allows the user to incorporate additional wide dispersion, higher or lower frequency or automated modules as required.

The PANORAMIC Model SPA-3000 Swept Front End Microwave Spectrum Analyzer combines the basic IF, video, sweep and display circuitry of the SPA-100 system main frame with the Model RF-3000 Swept Front End add-on module. This configuration provides calibrated display dispersions up to 3 GHz.

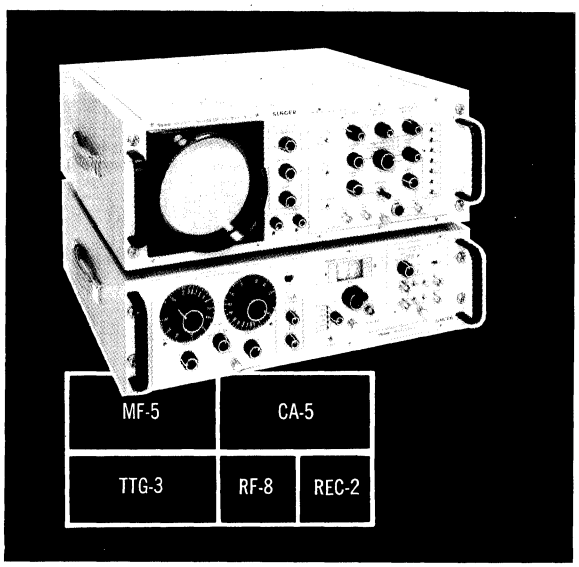
INSTRUMENTATION

High Resolution Communications System Analyzer



Model SSB-50-1

70 dB Dynamic Range ☐ 5 μv Sensitivity

Model SSB-50

60 dB Dynamic Range ☐ 20 μv Sensitivity

Features

Wide dynamic range (70 dB for Model SSB-50-1; 60 dB for Model SSB-50) ☐ 10 Hz resolution over entire tuning range (10 Hz - 40 MHz . . . useable to beyond 200 MHz) ☐ Extended frequency range permits AF and IF tests and and analysis of base-band and multiplexed signals ☐ Steep skirt selectivity and freedom from internal hum enables ±60 or ±50 Hz hum sidebands to be measured down to —60 dB ☐ Five pre-set sweep widths with resolution and scan rate automatically optimized ☐ Variable scan rates also provided.

Applications

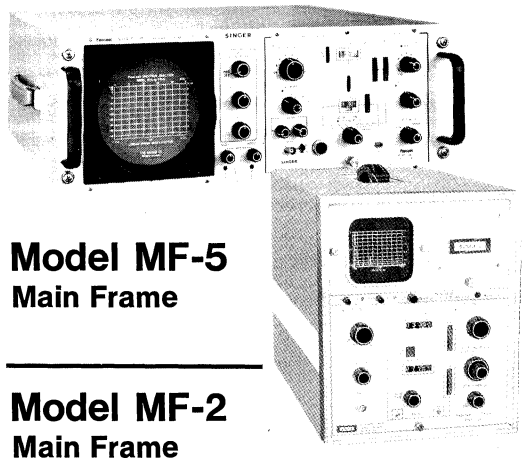
Best method known for set-up, operation, and maintenance of SSB, AM, FM and multiplexed communications equipment ☐ Measures transmitter linearity by two-tone intermodulation distortion test ☐ Hum sideband analysis ☐ Precise measurements of carrier suppression, residual sidebands, spurious hetrodyning products, parasitics, etc.

Description

The system offers the quickest and most convenient method of signal analysis of SSB, AM, FM and multiplexed communications equipment. It provides an exceptionally stable jitter-free display offering high resolution and excellent skirt selectivity. Operation is simple, with pre-set controls and variable mode controls. Among the built-in checkmarks are crystal controlled marker signals which check, at a glance, reading accuracies.

Request Application / Data Bulletin SA-10

Universal Spectrum Analyzers



Model MF-5
Main Frame

Model MF-2
Main Frame

Either Main Frame accepts any or all these Plug-in Modules

Module	Frequency Range
AL-2	20-35,000 Hz plus log scan
UR-3	100 Hz to 700 kHz
VR-4	1 kHz to 27.5 MHz
CA-5	450 to 550 kHz; 2 to 40 MHz with external VFO

Features

Plug-in modules for sonic through RF measurements are intergrangeable in either or both rack mount frame or portable frame ☐ Ideal for in-plant and on-site comparison measurements ☐ Directly calibrated displays and digital frequency readout for foolproof operation.

Applications

Fast swept band analysis of levels vs. frequency ☐ Monitoring audio, base-band and multiplex signals in communications systems ☐ Measuring telephone carrier channel equalization, measuring slope, noise and distortion ☐ Telemetry sub-carrier analysis ☐ VLF, video and RF band measurements.

Description

There are two main frames and a choice of four plug-in modules. The modules are interchangeable and vary in frequency coverage from 20 Hz to 27.5 MHz.
The Model MF-5 rack mount main frame requires only 7″ of panel height in standard 19″ rack cabinets.
The portable frame, Model MF-2, operates from internal or external batteries or from any AC line, 95-130/190-260V, 50-1000 Hz. Terminals on the rear of the frame also allow operation from DC power sources, 12 to 28 volts. The analyzer, including a module and internal battery pack, weighs 40 pounds. The modules are:
Model AL-2 (20 Hz to 35 kHz plus log scan) Sonic Module — Calibrated in absolute values in both frequency and level, and is a true swept band frequency voltmeter, reading in volts and dBm.
Model UR-3 (100 Hz to 700 kHz) Ultrasonic Module — covers the sonic, ultrasonic and low RF frequency range.
Model VR-4 (1 kHz to 27.5 MHz) Video Module — provides rapid broadband scans in its frequency range and precise, high-selectivity narrow-band displays.
Model CA-5 Panalyzer provides an untunable display centered at 500 kHz. Built-in mixer allows display of signals in 2 to 40 MHz range with external VFO.

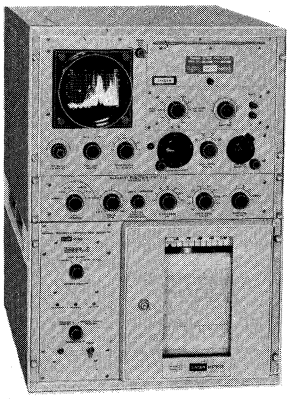
Sonic Analysis Systems



SY Series

Panoramic Sonic Spectrum Analysis Systems

Features

Quick-look wide band directly calibrated log frequency scan from 5 Hz to 20,000 Hz ■ High resolution linear scans ■ Preset optimum resolution ■ Calibrated linear and 40 dB log amplitude scales ■ 60 dB dynamic measuring range ■ Jitter-free — less than 5 Hz/hour ■ Adjustable selectivity, smoothing filter, manual scan for random and discrete signals

Applications

Swept band vibration and noise analysis with graphic readout ■ Plotting of level vs frequency for random and discrete signals ■ Power and voltage spectral density plots ■ Harmonic and IM distortion analysis to –60 dB ■ Accoustical and speech spectrum measurements ■ Medical and geophysical analysis

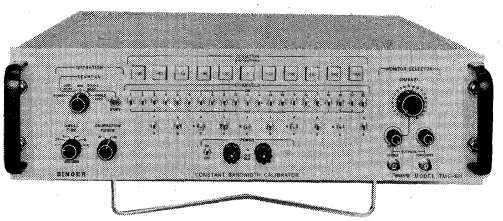
Description

The Sy System concept is based on the reliable time proven Model LP-1 aZ Sonic Spectrum Analyzer. With the addition of various accessories the critical parameters of if bandwidth and sweep width are controlable over a wide range. An optional chart recorder supplies a permanent record, and provides sweep times up to 16 hours. The system can be further extended to include a companion sweep generator for frequency response plotting of filters, amplifiers, etc. Sy Systems are unparalled for ease of operation, drift free analysis and exceptional selectivity . . . 2 Hz.

System	Applications
SY-1	Accoustics, complex vibrations and other random and discrete signal analysis. CRT and chart readouts, 5 Hz to 22.5 Hz with 2 Hz selectivity.
SY-2	Same as SY-1 plus addition of unit for power spectral density analysis of random signals. For tape loop data and for long term averaging.
SY-3	Same as SY-1 with CRT readout only. Scan intervals are 1 sec, 10 sec and manual
SY-4	Spectrum analysis and frequency response plots 20 Hz to 22.5 kHz. For tracing responses of filters, telephone networks, amplifiers, loudspeakers, etc. Aux. Unit C-2 provides added sweepwidths, variable selectivity and smoothing filter for convenience in narrow bandwidth tests.
SY-5	Same as SY-4, less Aux. Unit C-2

Request Detailed Catalog Sheet

Telemetering Subcarrier Calibrators



Model TMC-611

Constant Bandwidth
21 Channels — 11 Points

Model TMC-411E

Proportional Bandwidth
18 Channels — 5 Points

Model TMC-505

Proportional Bandwidth
18 Channels — 5 Points

Features

A selected single channel output and a composite output (available at both front and rear of unit) can be used independently and simultaneously ■ Manually selected dwell times ■ Manual random access deviation selection with illuminated push-button switches ■ Model TMC-611 provides a choice of either 3 or 11 deviation points associated with 21 standard IRIG ±2 kHz constant bandwidth "A" channels as well as optional IRIG ±4 kHz "B" channels (you can also select 5 ± 9 kHz "C" channels) ■ TMC-611 has provisions for remote computer control of deviation and channel selection ■ Models TMC-411E and TMC-505 provide output signals capable of testing 18 standard proportional bandwidth channels at 11 and 5 points respectively

Description

Precise, discrete frequencies are needed for the calibration and alignment of overall systems response, including subcarrier discriminators used on IRIG standard FM/FM Telemetering Systems. Panoramic Telemetering Simultaneous Calibrators, provide both a composite spectrum of frequencies and a selectable single channel frequency; they cover the range of telemetering calibrator requirements, which includes: a reasonable range of prices, diversification of equipment capable of meeting both the needs of constant and proportional bandwidth considerations.

All output signals are provided jitter free, with negligible switching transients, at an accuracy of 0.002%. Harmonic distortion and other unwanted outputs are at least 40 dB down. Modular design permits changes to be made to meet customer applications at minimum cost.

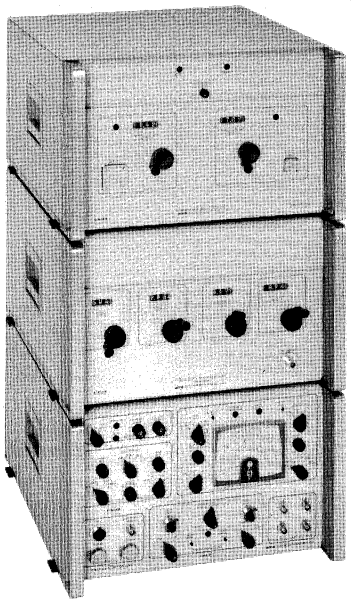
Noise and Field Intensity Analyzer/Surveillance Receiver



Model EMA-910

1 to 26.5 GHz

Features

- First solid-state noise and field intensity analyzer to provide such excellent characteristics over the full 1 to 26.5 GHz range
- Automatic scanning sweep over the entire frequency range or any portion, with automatic bandswitching over all four bands of the frequency selection unit from 1 to 10.5 GHz.
- Automatic scanning sweep over the entire frequency range or any portion of either of the two bands of the frequency selection unit of 10.0 to 26.5 GHz.
- Remotely programmable
- Programmable for frequency selection and/or sector scanning
- Choice of four bandwidths; operator can identify unknown signals as broadband or narrowband
- Analog frequency and amplitude outputs for X-Y recording
- Automatic signal level discrimination alerts operator to signal levels above predetermined value.

Description

The Model EMA-910 Noise and Field Intensity Measuring System consists of one or two Frequency Selection Units, a Data Evaluation Unit and accessory equipment. One Frequency Selection Unit, Model EMA-910-10, covers the 1 to 10.5 GHz range. The second, Model EMA-910-12, covers the 10.0 GHz to 26.5 GHz range. The Model EMA-910-11 Data Evaluation Unit is a solid-state instrument which accepts signals, as converted IF, from the Frequency Selection Units. It conditions and filters the signals through detection and weighting circuits and then supplies this information to readout devices.

The system provides for automatic continuous sector sweep over the entire range of any portion of it for the Model EMA 910-10. Bandswitching of the four bands is automatic and can be remotely programmed.

System sensitivity is typically minus 92 dbm over the frequency range of 10.0 to 26.5 GHz and minus 100 dbm over the frequency range of 1 to 10.5 GHz for S + N to noise ratio of 3 db.

Applications include EMI and field strength measurements for all commercial, military and federal requirements, as well as general surveillance work.

Instruments In The System

Model EMA-910-11 Data Evaluation Unit
Accepts converted IF signals from Frequency Selection Units for processing and readout.

Model EMA-910-10
Frequency Selection Unit
1-10.5 GHz range, in four tuning bands

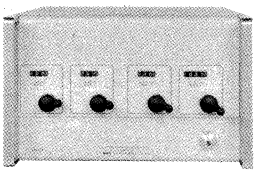
Model EMA-910-12
Frequency Selection Unit
10.0 to 26.5 GHz range, in two tuning bands.

Model 3100 Digital Display Unit
Provides simultaneous dual channel digital readout of frequency and signal amplitude on Nixie tubes. Compensation for r-f attenuation insertion is automatic, before display. The instrument also holds data for manual notation, digital recording or computer input.

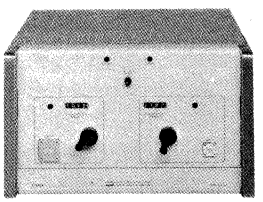
Model 8010 Frequency Call-Up Unit
Provides automatic remote tuning for spectrum surveillance of any of 10 pre-selected frequencies. Simple push buttons command the basic analyzer system to automatically scan to the selected frequencies.

Accessory Antennas

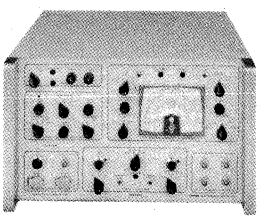
A complete line of calibrated antennas covering the entire 1 to 26.5 GHz frequency range of the Model EMA-910 is available. Included are a conical spiral antenna for surveillance in the 1 to 10.5 GHz range as well as horn antennas for each tuning band.



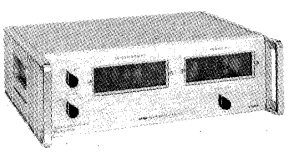
Model EMA-910-10
Frequency Selection Unit
1 to 10.5 GHz



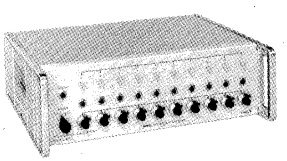
Model EMA-910-12
Frequency Selection Unit
10.0 to 26.5 GHz



Model EMA-910-11
Data Evaluation Unit
for signal processing



Model 3100
Digital Display Unit
for direct frequency and signal amplitude readout



Model 8010
Frequency Call-up Unit
Provides remote tuning of any of 10 pre-selected frequencies

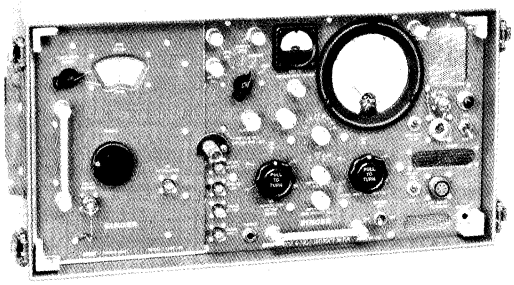
Noise and Field Intensity Meters



Model NF-105

14 kHz to 1000 MHz

Features

For over a decade, The Model NF-105 has been the standard instrument for measuring RFI in accordance with commercial and military requirements

- Output signal amplitude meter reads dB above 1 microvolt/MHz for broadband measurement and eliminates the need for charts or computations
- The frequency range is covered in five separate tuning units which can be purchased separately for economy and flexibility
- Tuning units can be changed in seconds.

Description

The Empire Model NF-105 Noise and Field Intensity Meter is the proven standard for electromagnetic compatability measurements. Hundreds are currently in use in mobile vans, aircraft and permanant installations throughout the world. It is a rugged and compact instrument that achieves light weight (70 lbs.) through the use of five quickly interchangeable tuning units. These interchangeable tuning units permit limited frequency requirements to be economically satisfied by the purchase of individual heads as required. Each unit contains RF and IF circuits. All tuned circuits are well tracked, permitting quick frequency scanning by means of single knob tuning.

An impulse generator producing a flat spectrum throughout the frequency range of the instrument, is used for fast and accurate calibration of both CW and broadband measurements.

A complete range of Calibrated Pickup Devices are available which permit the determination of field strength of narrow band signals in microvolts per meter and that of broadband signals in microvolts per MHz (kHz) per meter

The five available tuning units and their frequency ranges are: Model T-X/NF-105, 14 kHz to 150 kHz (3 bands); Model T-A/NF-105, 150 kHz to 30 MHz (6 bands); Model T-1/NF-105, 20 to 200 MHz (2 bands); Model T-2/NF-105, 200 to 400 MHz (1 band): Model T-3/NF-105, 400 to 1000 MHz (2 bands)

For Measurements In Accordance With These Specifications:

FED-STD-222 (Federal), Approved
MSFC-279 (NASA), Category A
MSFC-280 (NASA), Approved
MIL-STD-285 (DOD)
MIL-STD-449A (DOD)
MIL-STD-461

Model NF-315A and Model NF-315

20 Hz to 15 kHz (Narrow Band)
20 Hz to 250 kHz (Broad Band)

Features

- Equipment circuitry is completely solid-state
- Time tested tuning techniques are employed to ensure reliable short and long term stability plus complete freedom from instabilities due to external effects. The inherent stability eliminates the need for equipment recalibration when tuning to a new frequency.
- The equipment is ruggedly constructed for field use and contains rechargeable nickel-cadmium batteries
- Measurements utilizing the Model NF-315A can be made to any military or commercial specifications.

Description

The Model NF-315A is a highly versatile Noise and Field Intensity Meter which combines both a tunable narrow band superheterodyne receiver and a complete wide band video receiver. The equipment can be used in either of two basic modes — tunable narrow band (measurement) mode or a fixed tuned wide band (surveillance) mode — with two bandwidths provided for each mode. On the tunable narrow band mode, The Model NF-315A covers the frequency range from 20 Hz to 15 kHz with a selectable 7 Hz or 70 Hz bandwidth, thereby providing rapid measurement, precise signal identification and optimum sensitivity.

In the fixed tuned wideband mode of operation, The Model NF-315A measures the composite strength of all signals within the frequency range from 20 Hz to 20 kHz or 20 Hz to 250 kHz as selected by the operator. The Model NF-315A offers the capability of sector scanning in conjunction with peak dumping circuitry to permit automated measurement and recording of applied signals. The Model NF-315 does not contain the sector scan capability but is otherwise identical to the Model NF-315A.

For Measurements In Accordance With These Specifications:

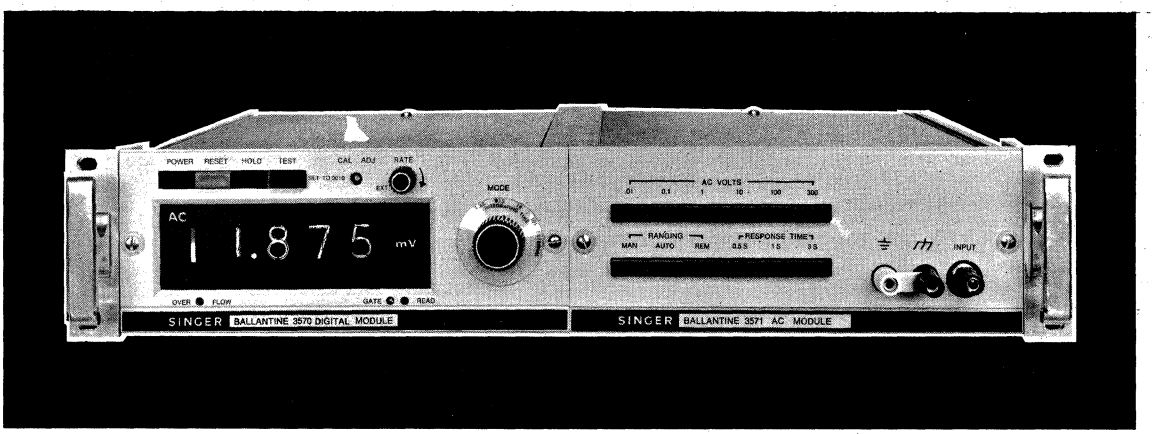
Wideband–Sensitive AC/DC Digital Voltmeters



Ballantine Model 3570 Series Digital Voltmeter
30 Hz to 10 MHz Response

A fully programmable sensitive voltage measuring system consisting of a Digital Display Module and associated AC and DC Converter Modules.

Features

System

- Front panel functions remotely programmable
- Modular printed circuit construction assures ease of maintenance
- Modules are 3.5 inches high and can be combined side-by-side for standard 19 inch rack-mount operation . . . or over-and-under for portable use.

Model 3570 Display Module —

- Four digit Nixie Readout with Overrange
- Dual-slope Integration with four panel selectable integration times
- System Compatability assured — all information available in digital form
- Optional 20 MHz Frequency Counter capability
- Auto-ranging option

Model 3571 AC Converter Module —

- 30 Hz to 10 MHz frequency coverage — unsurpassed by any instrument currently available
- 10 millivolt full scale sensitivity for low-level measurements
- 10 megohm input impedance
- Selectable Filter Time Constant for smoothing dc input to display
- Auto-ranging capability with Model 3570

Model 3572 DC Converter Module—

- 100 millivolt to 1000 volt full scale decade ranges
- Input resistance 10 megohms . . . 1000 megohms — panel selected on 100 millivolt and 1 volt ranges
- Auto-ranging capability with Model 3570
- External thermal potentials can be bucked-out by front panel control

Description

Ballantine, the recognized leader in AC voltage measurements now offers the FIRST Automatic Digital Voltage measuring system to 10 MHz. The digital display module in combination with associated converter modules forms a system with exceptional voltage and frequency coverage. Unique system features make it ideally suited for Automated Production Test Stands — High Accuracy Laboratory Applications — Data Acquisition Systems — Process Monitoring and Control.

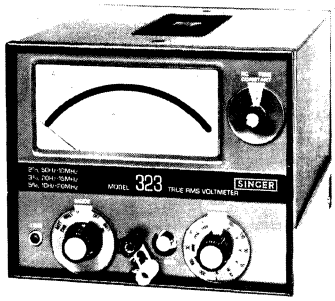
Broadband AC Voltmeters



Ballantine Model 323
Broadband True RMS AC Voltmeter (300μV to 350 Volts)

Features

- Measures True RMS of sine waves, square waves, noise voltages and a range of pulses
- Exceptional frequency coverage from 10 Hz to 20 MHz
- Unmatched accuracy — 2% of indication . . . 50 Hz to 10 MHz
- Up to 20 hours of operation from rechargeable batteries or operation from power line
- Logarithmic voltage scales for uniformly high accuracy and resolution for all readings

Description

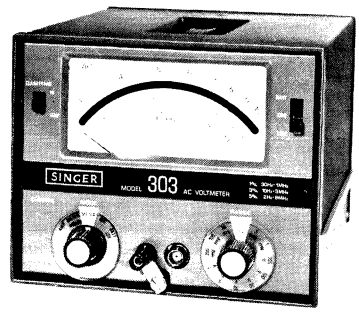
The Ballantine Model 323 True RMS Voltmeter is a solid state compact, portable, general purpose ac voltmeter. The instrument operates from either line power or internal rechargeable batteries.

Among the electrical features are high sensitivity wide voltage range, wide frequency range, high accuracy, high input impedance, and high stability.

The signal-rectifier response is TRUE RMS and should not be confused with AVERAGE or PEAK responding instruments calibrated to provide rms indication on sine waves only. Thus this instrument indicates the rms value on all types of waveforms which fall within its frequency and crest factor specifications.

The logarithmic meter provides the same high accuracy of indication at all points on the scale, while the associated linear decibel scale permits automatic conversion of voltage ratio to decibel units without recourse to charts or tables.

When desired, several time constants may be selected by means of a front panel control.



Ballantine Model 303
Broadband Average Responding Voltmeter (100μV to 350 Volts)

Features

- An all solid-state unit that provides UNEQUALED broadband coverage from 6 MHz down to 2 Hz
- Unexcelled 1% Accuracy
- Rechargeable Battery provides up to 30 hours operating time — Can be operated from line while recharging
- Signal Ground isolated from case ground for assignments where heavy ground currents or strong fields exist
- Fully overload protected

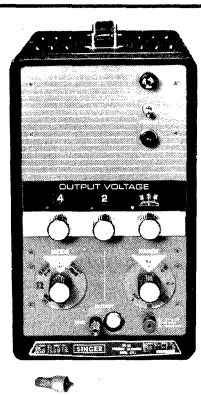
Description

The Model 303 is an all solid-state broadband AC Voltmeter designed to operate from a rechargeable battery or from line power. No other solid-state voltmeter provides frequency coverage from an unequaled low frequency of 2 Hz up to 6 MHz.

A 1% mid-band accuracy, coupled with a mirror-backed, five-inch, 10 dB logarithmic indicator allows unmatched reading ease. Voltages can be measured over a range from 300 μV to 350 V with the same accuracy at any point on the scale. Resolution is also constant at any point on the scale — a displacement equivalent to pointer width represents less than a 1/4% change in indication.

The Model 303 may be used in its METER +10 dB mode for increased sensitivity. Indications down to 100 μV over a frequency range of 10 Hz to 1 MHz can be made.

An amplifier mode is also available for low-noise, hum-free preamplification of low level signals.



Calibrators and AC Voltage Reference Standards

The Model 421A AC/DC Voltage Calibrator with associated Model 2421 Error Computer provides quick and accurate calibration of voltmeters, oscillators, recorders . . . with readout directly in % error — Micropotentiometer Model 440 provides a reference standard for developing an accurately known voltage up to 1 Volt at frequencies up to 900 MHz — High Frequency Transfer Voltmeter Model 393 provides accurate measurement of AC voltages (1 V-100 V) from 25 Hz to 30 MHz — Ballantine Model 390 A-T Voltmeter is a laboratory reference standard to calibrate signal generators and voltmeters from 0.5 to 300 volts, 10 MHz to 1000 MHz.

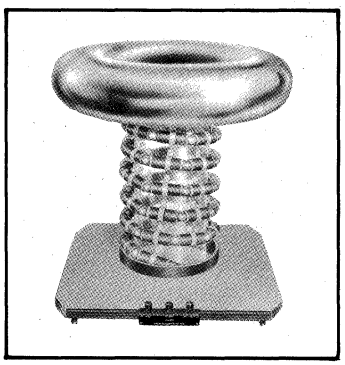
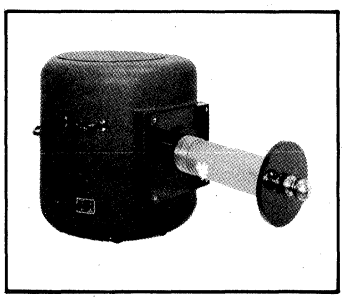
Electrical Metrology Instruments



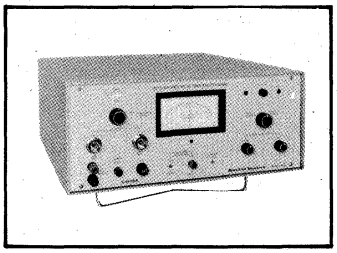
High Voltage Dividers
Model PARK DC Voltage Divider useable up to 100 KV with ratio accuracy 0.05%. Readout on any high input impedance voltmeter such as a digital voltmeter. Ratio 100 kv to 1 volt.
Other dividers available at lower & higher accuracies.



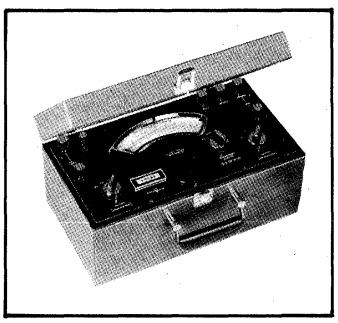
Portable & Panel Electrostatic Voltmeters
For use on both DC and RMS AC in ranges from 120 volts to 140,000 volts. Input impedance to 10^9 megohms on DC. Accuracy as high as 0.5% and accessories available to permit positive and negative peak measurements.

AC and DC Voltmeters and Ammeters
Model D Voltmeter provides high accuracy true RMS AC or DC measurements with 0.25% accuracy. An electro-dynamometer mechanism provides exceptional repeatability. The instrument can be used for making transfer measurements.

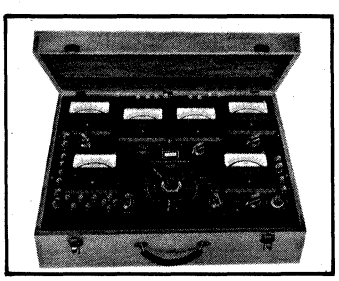
DC Portable Measuring Instruments
Model C, has a wide selection of ranges for DC measurement from 2 millivolts to 1500 volts and from 10 microamps to 50 amps. Accessories available to extend these ranges



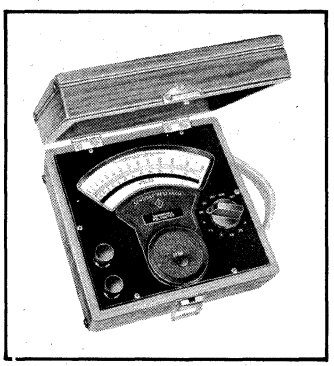
Self Balancing Primary AC-DC Transfer Standard & RMS to DC Converter
Model ATS Permits .01% true RMS measurements .25 to 1000 volts to 20 kHz in only a few seconds. It is a true Broad Band AC-DC Transfer Standard with high DC transfer accuracy from 2 Hz to 30 MHz.
DC output equals AC input over the full range to 1000 volts



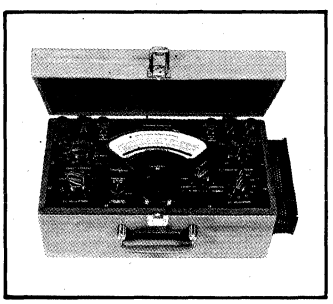
Portable & Panel AC & DC Wattmeters
Model VAW power analyzer permits measurement of voltage, current, power and power factor from 25 to 800 Hz in one economical unit. Voltage ranges to 500 volts with current ranges to 20 amps at unity Power Factor — useable to 50% P.F. Other wattmeters available at accuracies to 0.1% and Power Factors to 20% (Refer to Selection Chart)



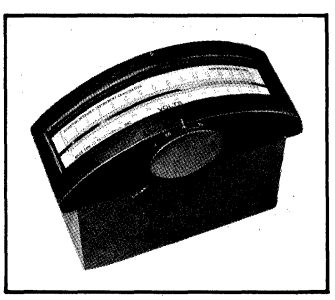
Magnetic Testing Instruments
Designed to make Epstein Sample measurements of magnetic properties of steel in accordance with ASTMA341-49 and A343-60T.



AC-DC Thermocouple Instruments
Accuracis to 0.5% with ranges 0.2 volts to 1500 volts and 1.0 ma to 100 amps at frequencies up to 20 MHz.



Portable & Panel Polyrangers
(Volt-Ammeters)
Both DC and AC/DC Versions available in a wide variety of range combinations of voltage and current in one self contained instrument.



AC & DC Panel Instruments
Most Portable designs can also be supplied in either edgewise or square flush design panel instruments for DC and AC Voltage Current & Watt Measurements to 0.25%. DC Ranges from 1 millivolt to 6000 volts and 1.5 microamperes to 50 amps. AC from 0.2 volts to 6000 volts and 1.0 milliamps to 50 amps.

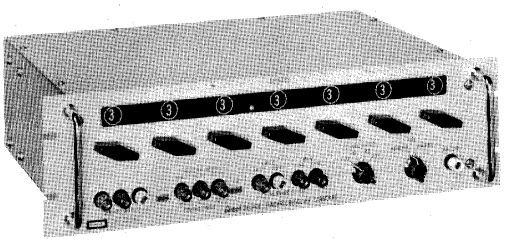
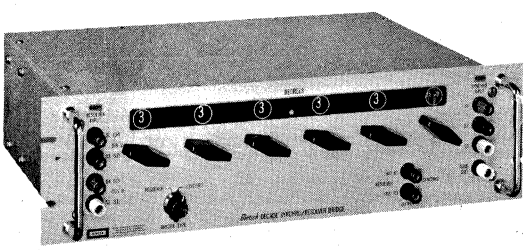
Synchro and Resolver Test Instruments



Model DSRS-5DR

Decade Synchro/Resolver Standards

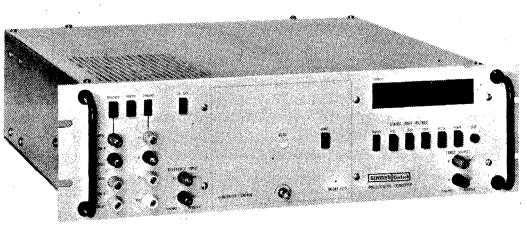
The DSRS series provide all of the features of a high-resolution Synchro Standard, and a high-resolution Resolver Standard in the space normally required by one. Two-second accuracy is provided by the time-proven Ratio RatioTran technique developed by Gertsch over a decade ago. The Synchro/Resolver Standards, simulating a perfect component, feature low unbalance impedance, permitting severe loading without introducing error. Use of this instrument for testing CT's, CDX's, RD's and RC's eliminates the need for master components, Dividing Heads and Bridges normally used for this application. Units with 5° resolution are also available.



Model DSRB-5CD-8R

Decade Synchro/Resolver Bridges

The DSRB series provide all of the features of a high-resolution synchro bridge, and a high-resolution resolver bridge in the space normally required by one. Two-second accuracy is provided through the use of a unique circuit, and the time-proven RatioTran technique. These rugged instruments are ideal for any application where both synchros and resolvers are used. In addition, they are completely passive and immediately ready for use, without any pre-use calibration or warm-up. Units with 5° resolution are also available.



Model ADC-1 / CC-1

Features

- 250 millisecond nulling and readout time
- 0.0005 degree resolution
- 0.001 degree accuracy
- All silicon, solid-state switching
- Nixie tube display of angular position
- Front and rear terminals
- Plug-in control unit
- Isolated sets of binding posts for the synchro and resolver inputs
- Bridge error voltage output — binding posts
- "Hold" control for continuous display of a selected angular readout
- Selectable resolution (0.1 to 0.0005 degree)

Synchro/Resolver-to-Digital Converters

This new angle-to-digital converter consists of a multi-purpose main frame (Model ADC-1) and a plug-in converter control module (Model CC-1). Together, these units function as a synchro or resolver-to-digital converter. The angular position is displayed on a set of Nixie tubes and supplied as an I.C. compatible true BCD output on the rear panel.

The Model ADC-1 main frame consists of a high-resolution synchro/resolver bridge with solid-state switching.

When the main frame is equipped with the CC-1 converter control, the successive approximation method is used to automatically null the bridge to the angular position of the incoming signal. The null setting of the bridge provides the angular output signal and display.

Gertsch RatioTran techniques are used in the bridging circuits to provide high accuracy and reliability. The automatic control systems are all solid-state with IC's used to improve reliability. Plug-in circuit boards are used to further minimize maintenance.

Precision Measuring Equipment

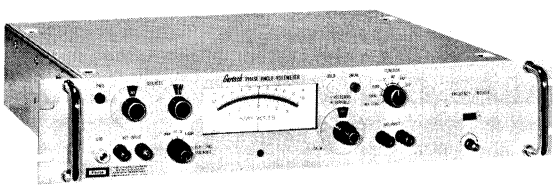
Phase Angle Voltmeters

Continuous, broad frequency coverage in this new Gertsch Model PAV-4 Phase Angle Voltmeter has extended its use to many new fields: transfer function analysis, filter analysis, and operational amplifier tests.

A unique, phase-lock oscillator circuit eliminates precise tuning (a light on the front panel indicates lock). When locked, the meter operates as a phase-sensitive voltmeter at the incoming reference frequency. Phase angle measurements, phase-sensitive null indications, inphase and quadrature voltage measurements, are provided in addition to fundamental voltage measurements and use as a standard AC voltmeter.

10 megohm input impedance (25 pf) is one of the features which minimizes loading effects. Both the signal and reference inputs may be isolated for differential measurements. Frequency coverage in the standard voltmeter and phase sensitive modes is 30Hz to 300KHz. Plug-in modules allow use as a variable or fixed frequency unit. The fixed frequency modules are designed for production lines and feature the elimination of operator calibration. Variable frequency modules are designed for broader applications.

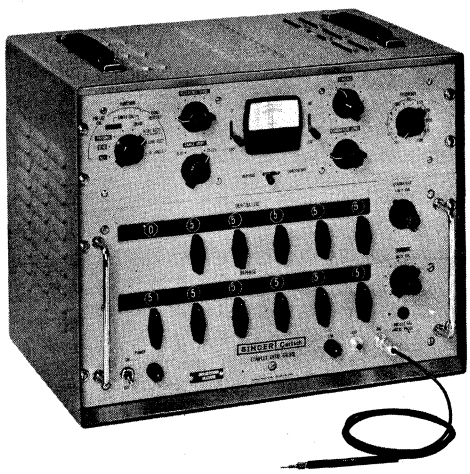
Model PAV-4



Complex Ratio Bridge

Model CRB-8 provides a highly accurate means of measuring in-phase and quadrature voltage ratios of three- or four-terminal networks such as transformers, synchros, AC transducers, resolvers, tach-generators, amplifiers, gyros, etc. Operating frequency range is 350 to 5100Hz. In-phase ratio accuracy as good as .001% is obtained over the entire range by means of a continuously tuned null amplifier which eliminates the need for any plug-in filters or networks. The in-phase and quadrature voltage ratios are read from the RatioTran voltage divider dials as rectangular coordinates (R + jX), or phase angle between signal and reference may be read directly in degrees. Virtually all solid-state circuitry is employed.

Model CRB-8

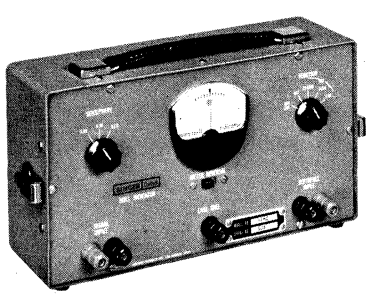


Null Indicators

Models NI-2, NI-3R, and NI-4R are small-size, phase sensitive, completely transistorized null indicators, that may be combined with any Gertsch Ratio Transformer to form an AC ratio bridge. Three ranges of sensitivity are provided: 10 uV, 100 uV, and 1000 uV. A maximum sensitivity of 10 microvolts allows excellent resolution for bridge circuit operation.

The NI-5 features a variable phase reference, a continuously adjustable full-scale sensitivity, and a linear meter scale.

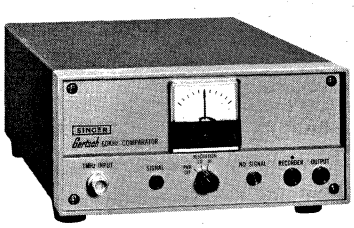
Model NI-2



Low Frequency Standards Receiver

The Gertsch Model RLF-1 VLF Comparator is a complete 1 MHz calibrating system, providing a means for referencing frequency standards and 1 MHz oscillators against the standards broadcast of WWVB, and for comparison of oscillators and other 1 MHz frequency devices against available, in-house 1 MHz standards. Calibration and comparison are fast and accurate with the Model RLF-1 Receiver.

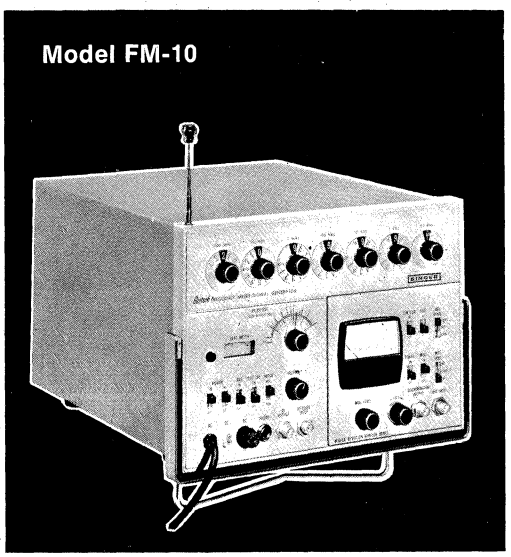
Model RLF-1



SINGER
INSTRUMENTATION

The Singer Company, Instrumentation Division, Gertsch Operation / 3211 S. LaCienega Blvd., Los Angeles, Calif. 90016 / (213) 870-2761

Frequency Measuring Equipment



Model FM-10 Heterodyne Frequency Meter (100 kHz to 50 MHz)

The Model FM-10 is a heterodyne frequency meter covering the range from 100 kHz to 500 MHz with direct dial readout. The instrument provides a calibrated R.F. output over an 80 db range which may be modulated in either AM or FM modes.

Accuracy of this instrument is one part per million per year, over a wide temperature range with provisions of upgrading the time base oscillator as technology advances. The 10 MHz time base oscillator is of the TCXO type and requires no oven or warm-up time. Greater accuracy of the time base oscillator may be achieved over a narrower temperature range.

The unit is completely portable, light-weight and operates from a 12 volt vehicular battery or standard AC power. A built-in antenna is provided to enable "off the air" measurements of frequency and modulation.

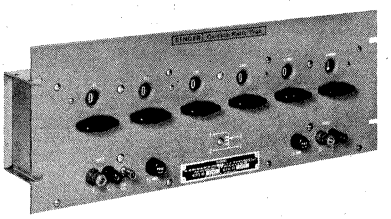
Plug-in modules are provided to increase the versatility of the unit. These include two FM deviation modules with either meter or oscilloscope presentations. Additional plug-in units that will be available will provide amplitude modulation and measurement, SSB and interference analysis and other special measurements.

Ratiotrans and Special Transformers

"RT" Series
Standard Ratio Transformers

The RatioTran precision variable AC voltage divider provides extreme accuracy and high resolution in the measurement and generation of voltage ratios. Instruments are available in a variety of functional types and form factors for use in such applications as checking resolvers and servos, voltmeter calibration, computer testing, transformer turns, ratio measurements, and ratio arms of bridges.

Model RT-5R

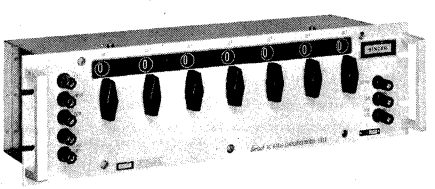


Ratio Standards

Many years of experience in the building of precision ratio transformers enable Gertsch to offer what they consider to be the ultimate in ratio standards.

This series of RatioTran precision voltage dividers was designed for instrument standards and calibration laboratories, or any applications where maximum accuracy is required.

Model 1011R



Coaxial Ratiotrans

Gertsch Coaxial RatioTrans, are precision AC voltage dividers designed for applications where panel space and weight must be kept to a minimum.

Model CRT-3

HIGH RESISTANCE MEGOHMMETER

MODEL 29-U

20,000,000 MEGOHMS

Direct Reading: Unusual stability, fast in operation, high accuracy.

11 Ranges: From 300,000 ohms to 20 million megohms.

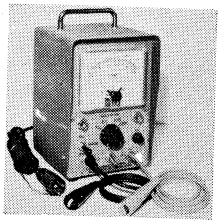
Power Supply: 115 volts AC, 60 cycles.

Test Potentials: 100 volts DC and 500 volts DC. Also: 0.5 volts to 1000 volts by external supply.

Bulletin 1029U

Precision Linear Ohmmeter

. . . . for accurate resistance testing



SERIES **203**

0.1 to 5000 Ohms Range

LINEAR RESISTANCE SCALES . . . CONTINUOUSLY SELF-CHECKING . . . GO/NO-GO LIMIT STYLE WITH BUZZER REJECTION SIGNAL.

High Energy Coil Tester

SURGE TESTS COILS FOR . . SHORTS . . GROUNDS . . OPENS

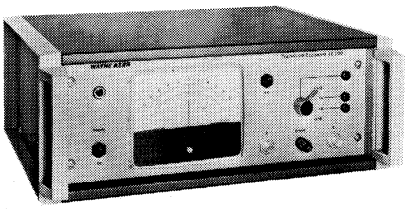
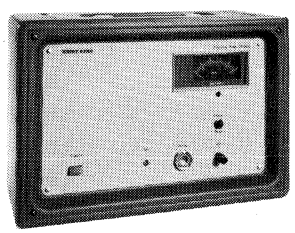
Innovations in Instrumentation... Wayne Kerr

THE MOST ADVANCED LINE OF TRANSDUCER EQUIPMENT FOR MEASURING DISTANCE, THICKNESS, VIBRATION, PRESSURE, TEMPERATURE, WEIGHT, FORCE



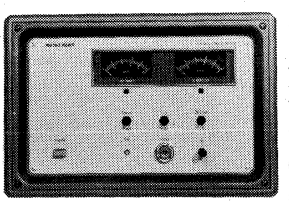
TE200 This capacitive transducer equipment provides two channels of measurement and also has a summing amplifier which can give an output of the readings A+B and A–B. Thru a 4 position selector switch the meter will read A, B, A+B or A–B to an accuracy of 1%. Linearity is .5%. Transducers can be provided to read from 50μ inch to .5 inch and can be located up to 100 feet from the TE200. Frequency response is 1 KHz. Applications include: In process (non-contacting) gaging, rotating component instrumentation, Vibration analysis, strain gaging and measurement of dielectric constant.

Price: $1690



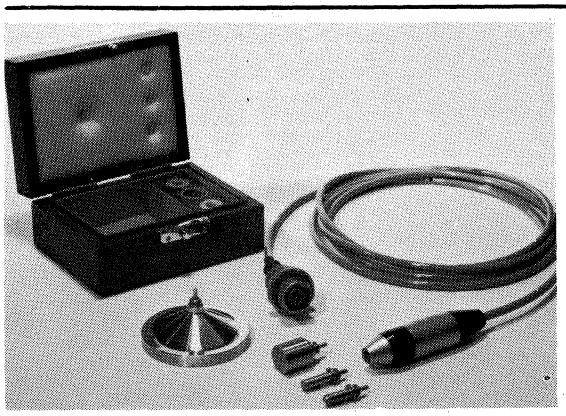
DM100B This single channel unit has the same basic specifications as the TE200 with the exception that its frequency response is 10 KHz and that without calibration the transducer must be no more than 10 feet from the equipment.

Price: $990



The B731A Vibration Meter and the DM100 Distance Meter are two versions of the same basic design. However, the B731A displays both peak-to-peak vibration amplitude and displacement (distance) directly on front-panel meters. The DM100 displays only displacement on a single front-panel meter.

Price: $1250



TRANSDUCER NUMBER	RANGE INCHES	OA LENGTH	O.D.	PRICE
MA1	.001	1.5	.312	$95
MB1	.005	1.5	.312	$95
MC1	.010	1.5	.312	$95
MD1	.050	1.5	.687	$95
ME1	.100	1.5	.812	$95

CAPACITIVE TRANSDUCERS — Wayne Kerr's capacitance probe consists of three concentric metal elements, electrically isolated from one another. The center-most element is one plate of a capacitor whose second plate is a grounded conductive object under observation. Variation in the thickness of the air gap between the sensing tip and the test object causes a linear change in the output voltage of the detection circuit. The second element is required to assure a uniform field between the sensing tip and the test object. Grounding the second element will make the detection circuit inoperative. To eliminate this problem, and to facilitate mounting, the third element is used. Information on probes suitable for temperatures to 1400°F. is available on request.

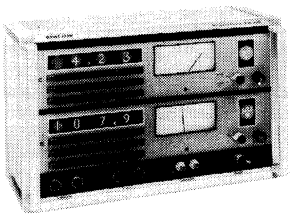
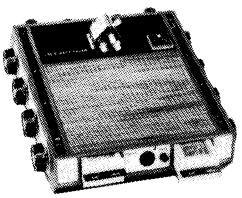
PRECISION IMPEDANCE BRIDGES AND ACCESSORIES



B331 Mk II Reads C, R, L & G to .01% – This autobalance bridge features Push-Button simplicity which allows readings by unskilled operators within 30 seconds. Read out includes 4 digit in line numeric display and center zero meters plus units display, thereby making GO – NO GO readings easy. Can provide 2, 3 or 4 terminal measurements of components within a network.

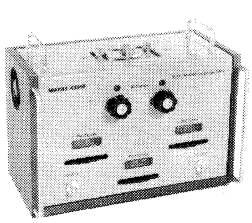


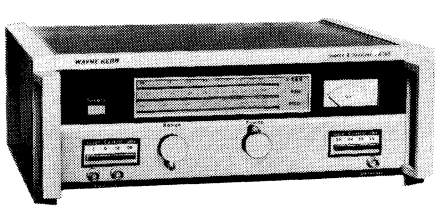
B201 Designed for highly precise simultaneous in-circuit measurement of capacitance and conductance over an extremely wide range. Applications include checking capacitors and components of printed circuits and encapsulated assemblies; impedance measurement of lines, filters, aerials and equalizing circuits.

Transformer – Ratio-Arm Bridges – the most accurate and convenient means ever developed for measurement of the basic electrical parameters – were pioneered and developed by Wayne Kerr. Advantages of these instruments include:

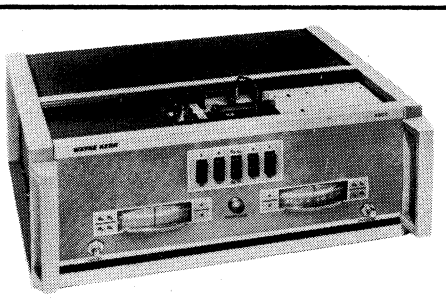
- Widest impedance ranges available at any frequency.
- 20 cps-250 MC range with only four instruments.
- Simultaneous readings of both resistive and reactive components with equal accuracy.
- Components measured without removal from circuit. Third terminal eliminates shunt impedances.
- 2, 3, and 4-terminal measurements, balanced and unbalanced.
- Direct measurement of components with superimposed DC, without zero adjustments, or substitutions.
- Extreme simplicity of operation.

MODEL	TYPE	FREQUENCY RANGE	MEASUREMENT RANGES	ACCURACY	PRICE
B201	RF	100 KC-5 MC	C: .001 to 100,000 pf G: 0.1μmho to 1 mho	0.1%	$1470
B221 Mk III	AF (L, C, R)	1592 cps Internal 200 cps to 50 KC External	C: 0.002$\mu\mu$F to 11μF R: 10ohm to 10,000 megohms L: 1mH to 10^{3}H	0.1%	$1280
B221Q Mk III	with Q221 Adaptor		C: 0.002$\mu\mu$F to 100,000μF R: 25μohms to 50,000 megohms L: 5mμH to 10^{3}H	0.1%	$1450
B331 Mk II	Push-Button Autobalance AF	1000 or 1592 Internal 50 cps to 20 KC External	C: 1pF to 10μF R: 10ohm to 100megohms	.01%	$3670
B541C Mk II	Autobalance Capacitance	1000 cps	(76 ranges) C: 0.01$\mu\mu$F-11μF	0.1%	$840
B601Z	with Z601 Adaptor	15KC - 5MC External	C: 0.01$\mu\mu$F-5,000μF R: 0.001ohm-10 megohms L: 0.001μH-50mH	1%	$895
B601	RF (L, C, R)		C: 0.01$\mu\mu$F-20,000$\mu\mu$F R: 10ohm to 10 megohms L: 0.5μH-50mH		
B602	RF (L, C, R)	100 KC to 10 MC	C: 1pF to 10nF R: 10ohm to 100 Kohms L: 1μH to 10mH	1.%	$1475
B641	Push-Button Autobalance AF	1000 or 1592 Internal 50 cps to 20 KC External	C: 1pF to 10μF R: 10ohm to 100 megohms L: 1mH to 10kH	0.1%	$1700
B801B	VHF Admittance L, C, R	1-100 MC External	C: ±0.5$\mu\mu$F to ±230$\mu\mu$F R: 10ohms-10Kohms L: 0.1μH-50mH	2%	$1210
B901	VHF Admittance L, C, R	50-250 MC External	C: ±0.1$\mu\mu$F to ±75$\mu\mu$F R: 10ohm-10kohm L: 5MμH-20μH	2%	$990





B801B This VHF Admittance Bridge is shown with the SR268 combined Source/Detector. The bridge features ease of operation in measuring antennas, cables, transmission lines, VHF amplifiers and receivers, VSWR and a wide variety of components, including shunt capacitance of coils. For semi conductor parameter measurements, the Q801A Transistor Adaptor is used in conjunction with the CU681 DC Control Unit and the bridge. The SR268 features simultaneous, single dial tuning from 100kHz to 100 MHz in 9 ranges.



B602 Features extreme simplicity in making measurements in all four quadrants of the complex plane over a wide RF frequency range. Employs the well known transformer ratio arm principle which was pioneered by Wayne Kerr. The B602 is used in conjunction with the SR268 Source/Detector and the Q602 Transistor Adaptor.

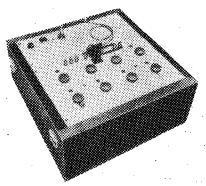
TINSLEY PRECISION MEASURING INSTRUMENTS

SMITH BRIDGE No. 3 — Type 4162B



This high precision instrument is based on the pattern originally described by F. E. Smith. It is used with a four terminal Platinum Resistance Thermometer (Type 5187H).

Accuracy of comparative resistance measurement is 0.0001 1μ equivalent to 0.001°C using a thermometer of ice-point resistance 25Ω, range −200°C to +700°C (73°K to 973°K).

The bridge is oil-immersed and temperature controlled by a temperature regulator at 25°C.

Two standard models are available: Type 4162B/25 for use with thermometers of ice-point resistance 25Ω (fundamental interval 10Ω) and Type 4162B/25/100 for use with thermometers of ice-point resistance 25Ω and 100Ω.

Dimensions: 36″ x 36″ x 23″. **Weight:** 350 lb.

GALVANOMETER — Type 5656

A new Tilt Scale Galvanometer available with or without built-in optical magnifier.

The scale rotates so that the instrument may be easily read from the operator's position.

Any of the Tinsley 4500 range of galvanometer suspensions can be fitted to this galvanometer.

Front panel zero adjuster and sensitivity switch.

Fitted with galvanometer clamp for transit.

Lamp easily replaceable without upsetting optical line up.

TABLE OF SENSITIVITY

Type 5656A Galvanometer with optical magnifier

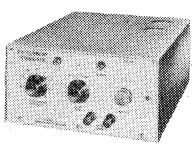
	Periodic time 2 sec.					
Resistance Ω	3	5	10	50	140	450
Sensitivity mm/μA	18	58	85	190	330	900
mm/μV	6	11	8.5	3.8	3.8	2
Damping resistance Ω	20	120	450	2,500	4,500	30,000

Type 5656B Galvanometer

	Periodic time 2 sec.					
Resistance Ω	3	5	10	50	140	450
Sensitivity mm/μA	8	25	36	80	146	390
mm/μV	1.6	5	3.6	1.6	1	0.8
Damping resistance Ω	20	120	450	2,500	4,500	30,000

Dimensions: 6¼″ x 6¼″ x 10″. **Weight:** 6 lb.

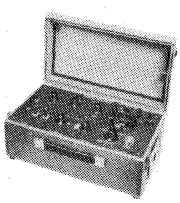
LOW CURRENT STABILIZER — Type 5751



The basic principal of operation is similar to that of the automatic current controller. The stabilizer is self-contained, the constant voltage transformer being built in, together with a Mallory reference cell which provides the reference voltage. Seven current ranges are provided and are selected by a switch on the front panel, a trim control is also provided and will modify the output current up to −4% of the selected value.

The current ranges are 0.1 μA, 0.5 μA, 1 μA, 10 μA, 20 μA, 50 μA, 100 μA.

PORTABLE POTENTIOMETER — Type 5597



Complete with self-contained reflecting galvanometer, standard cell and batteries, housed in a teak case with lid and anodized cover panel. Automatic compensation is provided for the temperature coefficient of the standard cell.

Three ranges:

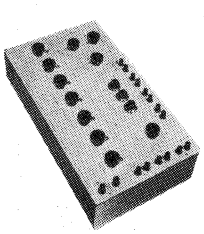
x 1 range: 1.9 V in steps of 0.1 mV
Limit of error: ±(0.01% +0.2 mV)

x .01 range: 0.19 V in steps of 10 μV
Limit of error: ±(0.01% +20 μV)

x 0.01 range: 0.019 V in steps of 1 μV
Limit of error: ±(0.01% to 2 μV)

Dimensions: 16½″ x 9½″ x 7½″. **Weight:** 12 lb.

STABAUMATIC POTENTIOMETER — Type 5545 and 5545A



A seven-dial potentiometer designed to be used with the Type 5750A Tinsley Automatic Current Controller. The Potential circuit consists of one fixed resistor only.

Switches operate in parallel on high value resistors outside the potential circuit thus eliminating thermo-electric effects. The instrument may also be used as a Resistance Bridge with six ranges. Three external measuring circuits are provided.

Type 5545A is supplied with connections for printer or read-out.

Ranges: voltage;
0 to 2.111 11 V in steps of 1 μV
0 to 211.111 mV in steps of 0.1 μV

Calibrated accuracy: ±(0.001% of reading +1 μV)

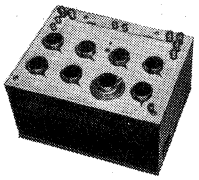
Long term limit of error:
±(0.003% of reading +1 μV)

Resistance: 0.01Ω to 21 MΩ, smallest step 0.000 1Ω

Dimensions: 22½″ x 12½″ x 9″. **Weight:** 25 lb.

"Stabaumatic" is a registered trademark.

PORTABLE KELVIN-WHEATSTONE BRIDGE — Type 2620

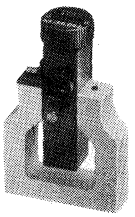


Built-in spot galvanometer. An external battery may be used for large currents when required.

Any one of four internal low resistance standards may be chosen by means of a selector switch when operated as a Kelvin bridge.

Measuring ranges: Kelvin bridge 10 μΩ to 10Ω (limit of error between 3% and 0.05%).
Wheatstone bridge 1Ω to 100kΩ (limit of error between 0.5% and 0.05%)

SUSPENSIONS FOR PORTABLE GALVANOMETERS



Suspensions are normally supplied complete with magnets. If a suspension 'without magnet' is required this is termed a 'spare suspension'.

Non-sticking Coil Stops can be fitted to Type 4500 suspensions at extra cost. These are adjustable over a wide range to limit angular deflection.

The values of resistance given in the tables below are nominal values only and the sensitivity may vary by ±10% — see List 175, sheet 2018 for sensitivity figures of suspensions when fitted into Portable Galvanometer boxes.

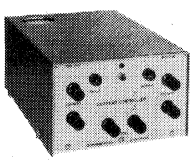
Type 4500 A very sensitive suspension with a light rectangular coil on silver gilt suspension strip.

	Periodic time 2 sec					
Resistance Ω	3	5	10	50	140	450
Sensitivity at 1 meter scale distance mm/μA	30	95	140	300	550	1,500
Damping resistance Ω	30	120	450	2,500	4,500	30,000

	Periodic time 2 sec					
Sensitivity at 1 meter scale distance mm/μA	9	24	30	65	147	380
Damping resistance Ω	8	44	130	650	1,800	6,000

Other suspensions are available.

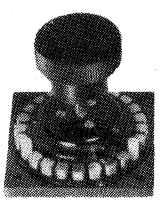
PRECISION CURRENT STABILIZERS (d.c.) — Type 5750



The automatic current controller (see page 16) may be used to supply a constant d.c. current for precision measurements and calibration of scientific apparatus. Model 5750 may be supplied for any single current range with a maximum value of 50 mA.

The stabilizer operates directly from the mains through a constant voltage transformer Type CV 25E, no intermediate batteries are used. Under the best conditions the current can be held stable to 1 part in a million for a period of several hours.

SWITCHES — Types 5500, 5501, 5502, 5503, 5504



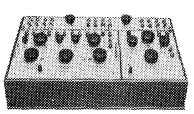
A wide range of instrument switches is available, from an 11 position minimum switch, Type 5501, to a 102 way switch, Type 5503.

Each model is available in many combinations of positions and poles. Units may be ganged if required.

All switches are molded in high insulation material and have been life tested to ensure reliable performance over long periods.

Type 5500, 5502 and 5504 are fitted with dust covers. Illustrations show switch with dust cover removed.

PRECISION a.c. and d.c. POTENTIOMETER — Type 4600



A co-ordinate potentiometer employing Type 4580 as the 'in-phase' potentiometer enables measurements to be made to a precision of 1 part in 10,000.

The instrument may be used in three ways:

1. As a d.c. potentiometer to E.S.M. accuracy.
2. As a co-ordinate potentiometer at power frequencies.
3. As a polar co-ordinate potentiometer at power frequencies using a phase-shifting transformer (Type 4165) with a two-phase primary and secondary to supply the current to the potentiometer.

"In phase" potentiometers: 1.6 V in steps of 0.000 1 V. 0.16 V in steps of 0.000 01 V. Limit of error: (a.c.) 0.05%. Limit of error: (d.c.) 0.1″.

"Quadrature" potentiometer: 1.8 V in steps of 0.1 V with slidewire readable to 0.2 mV. 0.18 V in steps of 0.01 V with slidewire readable to 0.02 mV. Limit of error: 0.1%.

Dimensions: 31″ x 18½″ x 9″. **Weight:** 86 lb.

Takeda Riken

Universal Counter, Digital Voltmeter, Digital Integrator, Electrometer, Frequency Counter, Frequency Synthesizer, Frequency Standard, Data Acquisition System, Operational Amplifier.

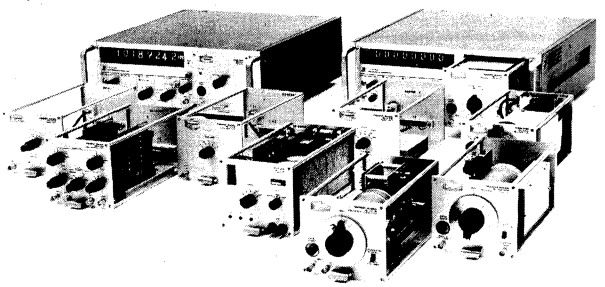
Electronic Counters

The ***-TR-5589L*** and **5589K** have the unique ANS (Automatic Noise Suppressor) circuit in their frequency measuring inputs for eliminating the disturbance of noise as well as improving the input sensitivity and dynamic range.

According to the wider direct counting range, it becomes inavoidable the effect of undesirable frequency supperimposing on a signal frequency. It is a quite normal condition for a very high speed counter something like ***-TR-5589L*** or **5589K** that the two or more different frequencies are fed into the counter input simultaneously, and resulted incorrect counting.

But the unique ANS feature rejects the effect of the supperimposed higher frequency noise up to 40% of the signal level, and results correct counting.

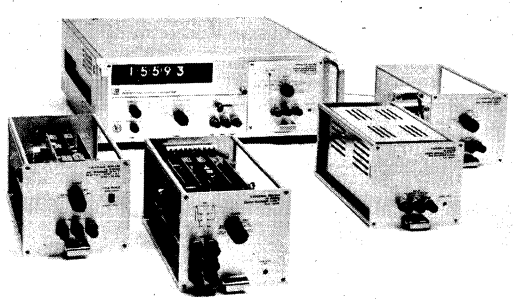
This provides convenient measurements of frequencies for communication system radar of transmitter tests and adjustments.



Electronic Counter Selection Guide

Model *1	Features	Frequency Range	Measurement *2	Registration	BCD Output	Time Base Stability (Gate Time)
-TR-3788C	Portable, 500 MHz direct counting	10 Hz to 500 MHz	F.	8-digit in-line		3×10^{-9}/day (4 ms to 4 s)
-TR-3787				7-digit in-line		5×10^{-8}/day (4 ms to 4 s)
-TR-5589L	Plug-in, multipurpose, high stability, 9-digit display ANS circuit included	10 Hz to 250 MHz Up to 12.5 GHz *3	F, P, R, TI, T, V.	9-digit in-line	Standard	5×10^{-10}/day (1 ms to 10 s)
-TR-5589K						3×10^{-9}/day (1 ms to 10 s)
-TR-5578C	Economical 82 MHz Counter with plug-in versatility. AC/DC Coupling.	DC to 82 MHz Up to 12.5 GHz *3	F, P, R, TI, T, V.	8-digit in-line	Standard	3×10^{-9}/day (1 ms to 10 s)

* 1: ***-TR-3000*** series; Frequency Counter, ***-TR-5000*** series; Universal Counter
* 2: F; Frequency, P; Period, R; Ratio, TI; Time Interval, T; Totalizing, V; DC Voltage.
* 3: With Frequency converter plug-in



Digital Voltmeters

The criteria used in selecting a digital voltmeter is, under actual operating conditions, to find out how the measured results are guaranteed. Especially, the measured results of voltage current, and resistance measurements are of basic importance in quality assurance.

To assure their quality, Takeda Riken inspects all measuring functions of all digital voltmeters produced under a highly accurate standard quality control system based on ETL (Japan Electrical Testing Laboratory) and NBS (USA National Bureau of Standards).

In selecting a digital voltmeter, it is necessary to analyze such factors as accuracy, resolution, sensitivity, stability, response speed, and noise rejection on the basis of quality assurance. For example, a ramp type digital voltmeter or comparison type digital voltmeter has high response speed, high accuracy, and high stability, but these types cannot reject noise effectively and therefore noise can not be removed when measurement is performed in a place where large noises are present. Takeda Riken manufactures digital voltmeters having high accuracy, high sensitivity, high resolution, and high noise rejection ratio by using a floating and guarded input circuit of the integrating type.

Digital Voltmeter Selection Guide

Model	Features	Ranges	* Measurements	Registration	Input impedance	BCD Output	Voltage Accuracy	Dc Voltage Resolution
-TR-6515 Integrating Digital Voltmeter	Plug-in versatility High input impedance. 1000MΩ /100V High accuracy. Autorange provided	± 300mV to 1000V full scale 5-ranges.	Vdc. (HSV, HV, Vac, R with plug-in unit)	5-digit in-line	Greater than 1000MΩ/300mV 3V range. (1000MΩ/300mV to 100V when plug-in unit used)	Std.	± 0.01% of rdg ± 1 digit (at + 20°C to + 30°C)	10μV (1μV when plug-in unit) used)
-TR-6715B Integrating Digital Voltmeter	Best suited for system application. Autorange provided.	± 300mV to 1000V full scale 5-ranges.	Vdc.	5-digit in-line	Greater than 1000MΩ/300mV, 3V ranges	Std.	± 0.01% of rdg ± 1 digit (at + 20°C to + 30°C)	10μV
-TR-6155M Digital Multimeter	5 functions in one.	± 0.1V to 1000V full scale, 5-ranges.	Vdc, F, R, Vac, Idc.	5-digit in-line	10MΩ /100, 1000V ranges	Std.	± 0.1% of full scale ± 1 digit	10μV
-TR-6834 Digital Volt-ohmmeter	High sensitivity. High performance. Portable, moderate price	± 39.99mV to 1000V full scale, 7-ranges.	Vdc, R (Idc with current unit)	4-digit	Greater than 1000MΩ/39.99 mV to 20.00V ranges		± 0.05% of rdg ± 1 digit	10μV
-TR-6334 Digital Volt-ohmmeter	Compact and light weight. Economical	± 1.8V to 1000V full scale, 4-ranges.	Vdc, R (Idc with current unit)	3-digit	Greater than 1000MΩ/1.8, 18V ranges		± 0.1% of rdg ± 1 digit	1mV

* Vdc: DC Voltage, F: Frequency Vac: AC Voltage, R: Resistance, HV: High Input Impedance, HSV: High sensitivity DC Voltge, Idc: DC Current.

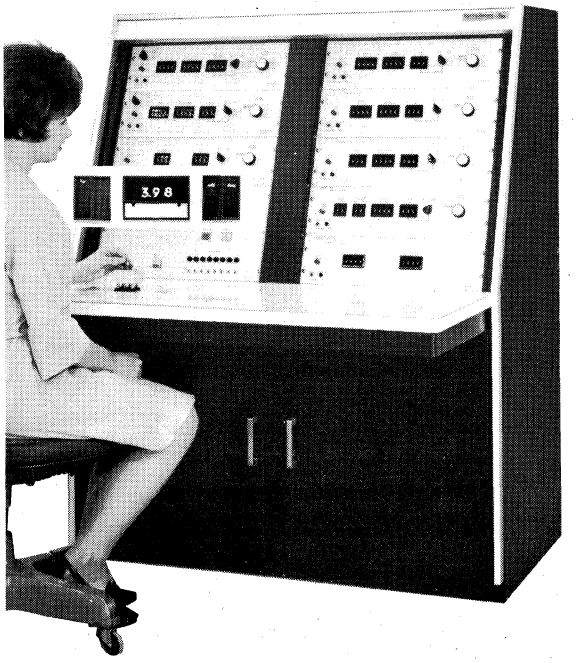
Model 67 SCR/TRIAC Test System

New low-cost system gives you full parameter testing automatically!

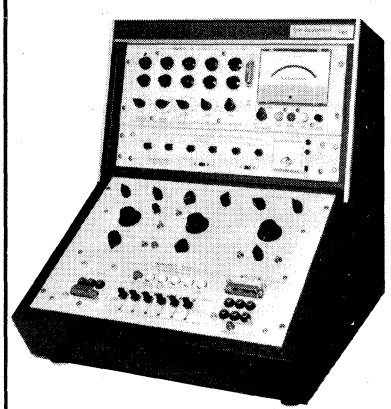


The new Test Equipment Corporation Model 67 is the *first* commercially available high speed automatic SCR/TRIAC test system. It offers full parameter testing with extreme accuracy, yet is priced economically for incoming inspection, production and quality assurance applications. You may specify a choice of up to eight parameter tests.

Wide test capabilities of the Model 67 include a 0-2000 v blocking voltage, 300 amp forward current and linear dv/dt to a maximum rate of 1000 v/μsec. Easy-to-read visual display (inset photo) gives the operator all test data, or tests may be performed GO/NO-GO. Simple digital thumbwheel switches provide for fast, accurate programming of test conditions.

The Model 67 may be customized to particular user requirements to include tape programming, punched out data, etc.

TEC offers test system design and engineering capabilities and on request will quote systems to meet specific user requirements.



MODEL 1

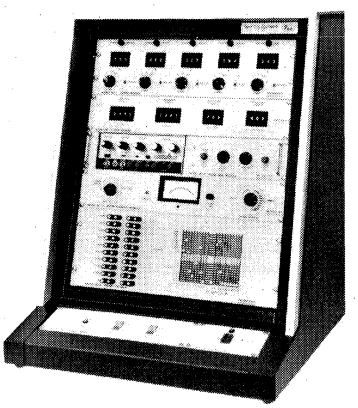
MODEL 1 SEMIAUTOMATIC TRANSISTOR AND DIODE TESTER — an economical and most versatile transistor and diode tester.

The availability of a full line of TEC accessory equipment makes the Model 1 a practical basic instrument for an expanded test system. Its versatility makes it ideally suited for most test applications.

Incoming Inspection—Automatic sequencing, ease of operation and GO/NO-GO limits.

Research & Development — Direct reading measurements with ±1% accuracy.

- **19 dc tests**
- **BV up to 1000 v**
- **1 na leakage full scale**



MODEL 80 INTEGRATED CIRCUIT TESTER

Versatile low cost unit tests all digital and linear IC's.

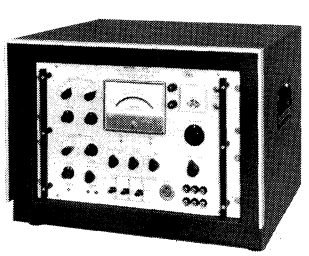
The low cost Model 80 IC tester from Test Equipment Corporation gives you the capability to test all digital and linear integrated circuits. *Application Notes describing the various tests are available on request.*

The Model 80 performs all static tests on digital IC's and most dynamic tests required for linear circuits. Dynamic tests on linear IC's include open and closed loop gain, input and output impedance, gain bandwidth, maximum output voltage swing, and others.

Its low cost makes the Model 80 an excellent choice for incoming inspection, engineering evaluation or production testing. Its modular construction offers additional versatility to allow selection of specific capabilities as required. If desired, the Model 80 may be used for a single test to sort devices on a GO/NO-GO basis.

MODEL 1-21 100 AMP PULSED TRANSISTOR AND DIODE TESTER—may be used independently or in a system with the TEC Model 1 semiautomatic tester to give automatic sequencing and GO/NO-GO limits. It measures pulsed H_{FE}, V_{be} (sat) and V_{ce} (sat) with a 330 μsec pulse at 2% duty cycle.

- **I_c Variable** 10 ma to 100 a
- **I_b Variable** 2 ma to 30 a
- **I_c Variable** 0.1 to 30 v



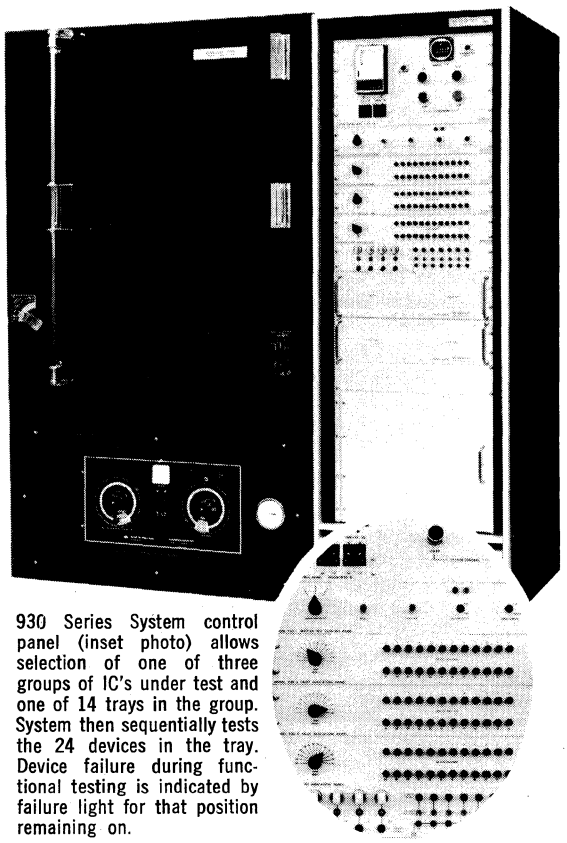
MODEL 1-21

Test Equipment CORPORATION

P.O. BOX 20215, DALLAS, TEXAS 75220 • 214/357-6271

930 Series Automated IC Burn-in System

New, completely automatic system functionally tests each device during burn-in cycle.



930 Series System control panel (inset photo) allows selection of one of three groups of IC's under test and one of 14 trays in the group. System then sequentially tests the 24 devices in the tray. Device failure during functional testing is indicated by failure light for that position remaining on.

The Test Equipment Corporation 930 Series Automated IC Burn-in System can test individually more than 1,000 IC's during the burn-in cycle. It is capable of life test and burn-in of linear and/or digital IC's under electrical stress at ambient temperatures of +40° to +200°C.

The 930 Series System's temperature chamber accommodates three groups of 14 trays. Each tray provides 24 universal sockets to accept flat-packs, TO-5's and DIPs. Bias and circuit components for individual devices may be changed easily as long as the devices in the three groups are the same (*either all digital or all linear*). The chamber itself is protected by an over-temperature control system.

A computer may be coupled to the 930 Series System to log functional data, device identification and time of failure. Typical data includes time, oven number if in a system, group and socket numbers. Only data from failed devices need be logged.

Quotations on variations of this or other TEC burn-in systems to your specific requirements are available on request.

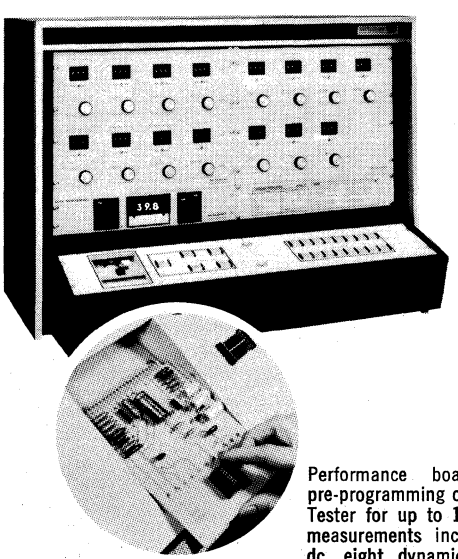
Semiconductor Power Aging and Life Test Systems

Test Equipment Corporation has for years designed and developed sophisticated environmental test equipment. This experience plus TEC total "in-house" manufacturing capabilities makes possible extremely fast turn-around, thus saving valuable time and money.

For further information, please write for descriptive "burn-in capabilities" brochure.

Model 79 Linear IC Tester

New automatic Linear IC Tester offers versatility at low cost.



Performance boards allow pre-programming of Model 79 Tester for up to 15 different measurements including five dc, eight dynamic and two customer-specified tests.

The wide range of automatic testing capabilities and low cost of the new Model 79 Linear IC (LIC) Tester from Test Equipment Corporation make it ideally suited for production, engineering and quality control applications.

TEC's Model 79 "LIC" Tester is completely automatic with the exception of test limits and range selections and is pre-programmed on performance boards for up to 15 different test measurements. It provides five dc and eight dynamic tests. In addition, two auxiliary positions are available for customer-specified tests.

The Model 79 also features voltage/current crossover power supplies capable of 100 v/100 ma operation. The Tester is capable of low current measurements to 999 pa full scale, low voltage measurements to 99.9 μv full scale, and test time typically 100 ms or less per test. It accepts all IC package configurations.

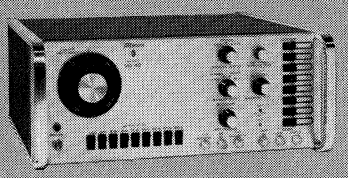
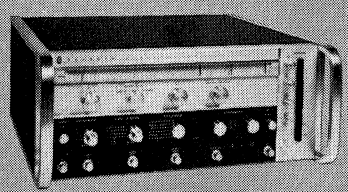
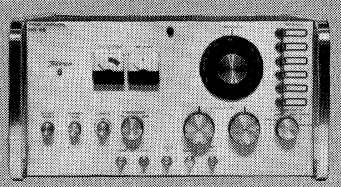
Texscan CORPORATION SWEEP SIGNAL GENERATORS



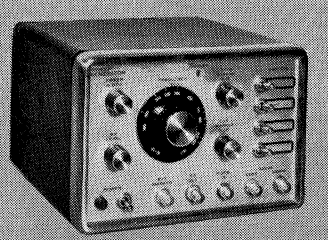
VS SERIES



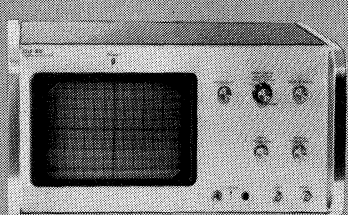
RS SERIES



HS SERIES



LS SERIES



DU SERIES

Texscan manufactures solid state sweep/signal generators which cover the frequency range of 500 Hz to 2300 MHz. Texscan's product line consists of five different types of instruments, each type being a complete line of instruments. Depending on the customer's application, he may require all the versatility that the RS series provides or he may be able to perform the required test with the lower VS series generator.

The VS instruments are designed so that warm up drift is negligible and component life is almost unlimited. Each unit has extended sweep rate capability including line, variable, manual and external.

The HS series are high power, wide tuning range units which provide more than 4 watts of leveled output over the frequency range of 20 MHz to 1000 MHz and offer a choice of four modes of operation: swept RF, modulated swept RF, CW and modulated CW.

MODEL NO.	FREQUENCY RANGE	SWEEP WIDTH	SWEEP RATE RANGE	LINEARITY	RF OUTPUT	PRICE
VS-20	500 Hz to 25 MHz	500 Hz-25 MHz	1 Hz to 60 Hz	1%	1v	$1095

Texscan CORPORATION RF TEST EQUIPMENT

The Texscan Corporation Component Division manufactures a broad line of coaxial components. These components include devices for both O.E.M. and laboratory use. The index below contains Texscan's standard components and will be useful for determining availability of a particular component.

Many modifications of Texscan's standard products have been produced for special applications and inquiries for specials are cordially invited.

Telequipment Oscilloscopes

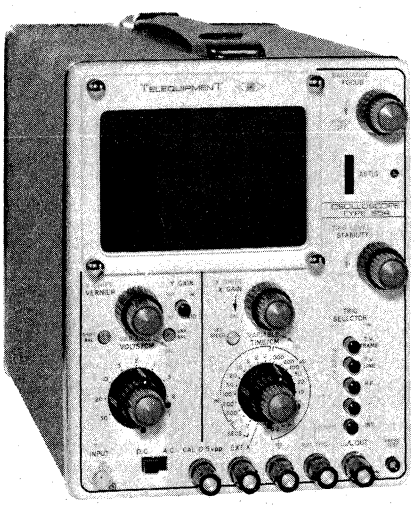
The Telequipment line of low-cost oscilloscopes is designed and manufactured in England, sold and serviced through the Tektronix marketing organization.

These instruments meet the requirements for affordable waveform measurements in education, service, and industry. The performance features include triggered sweep, 1-2-5 sequence step attenuators for vertical and horizontal deflection controls, calibration outputs, and 5-inch CRT's.

All Telequipment instruments are warranted against defective parts or workmanship for one year. Service and replacement parts are available through Tektronix field offices.

Below are examples of the Telequipment products, which also include plug-in oscilloscopes and bandwidths to 25 MHz.

The long-form catalog with full specifications and prices is available on request.



Type S54 Solid-State Oscilloscope

- Triggered sweep operation with TV frame or line capability
- DC to 10 MHz bandwidth
- 0.1 V/cm deflection factor, increasing to 10 mV/cm with X10 gain (DC to 4 MHz)
- Vertical attenuator and horizontal timing accurate within 5%
- 5-inch CRT, 6 x 10 cm illuminated graticule

Type S54 ..... **$395**

US Sales Price — FOB Beaverton, Oregon

Type D52 Double-Beam Oscilloscope

- Triggered sweep operation with internal source from either channel plus TV sync capability
- Double-beam — two identical, independent vertical channels
- DC to 6 MHz bandwidth
- 0.1 V/cm deflection factor, 10 mV/cm with X10 gain (DC to 1 MHz)
- Vertical attenuators and horizontal timing accurate within 5%

Type D52 ..... **$395**

US Sales Price — FOB Beaverton, Oregon

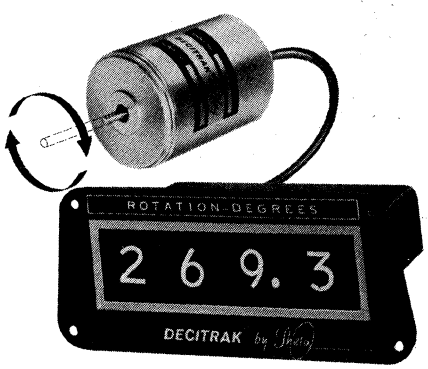
Theta DECITRAK® FOR REMOTE DIGITAL DISPLAY AND CONTROL

DECITRAK is the only complete system that transforms shaft-rotation, synchro/resolver outputs, and analog voltages into digital format for remote display, set-point control, computer interfacing, and data logging.

These sophisticated systems are assembled from shaft encoders, servos, and deceptively-simple modular circuits. Sophisticated... but still lower in price than anyone believed possible.

DECITRAK® SHAFT ENCODERS

- Available in 3-Digit to 6-Digit Versions
- Many Codes
- Really Low Cost
- Extraordinary Life
- Rapid Delivery
- Choice of 523 Solid-state Accessories



STANDARD MODELS

Shaft Revolutions for Full Range	Numerical Readout

Built-in Models Perform:

- A/D Conversion
- Code Conversion
- Parallel/Serial Conversion
- Logic
- Relay Output
- Peak-Data Sensing
- Memory
- Set-Point Control
- Digital Subtraction

SYNCHRO-TO-DIGITAL CONVERTER

Here is a synchro/resolver-to-digital converter which is accurate, electrically versatile, and inexpensive. Electrical outputs from remotely located synchros and resolvers are converted into continuous digital display with provision for computer input and set-point control. Available in single-speed or dual-speed versions.

Theta PANEL-MOUNTED, PRECISE DIAL ASSEMBLIES

Patents Pending

Hundreds of style and size combinations to suit every need.

- Easy to mount on any panel
- Built-in adaptors
- Fine settings with vernier control
- Continuous rotation
- Many scales: 360°, ±180°, 1000, etc.

Immediate Delivery

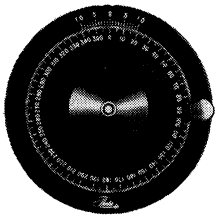
MINI-DIAL®

$50

100:1 vernier ratio. High setability. Only 3/16" square. 0.2° accuracy. Zero backlash. MIL construction.

MODEL DA

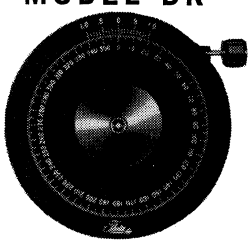
$85



Accuracy, 0.1°; 10:1 vernier ratio; 5" O.D. Built-in flexible coupling.

MODEL DR

$115



Accuracy 0.1°; 1440:1 vernier ratio for highly precise setability; 5" O.D.

VISI-DIAL®

$300

Digital in-line display of angle! Size, only 4 in. by 3½ in. Accuracy, 6 min.-of-arc. Resolution, ½ min.-of-arc. Vernier ratio, 36 to 1.

MIDGI-DIAL®

$300

- Digital display
- Only 2½ in. square.
- Accuracy, 6 min.-of-arc
- Resolution, 6 min.-of-arc
- Vernier ratio, 36 to 1

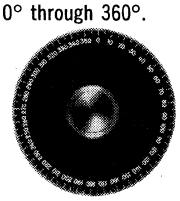
DIAL, MODEL D-1

$12

180 divisions; accuracy, ±12 min.-of-arc. 2½ In. Dia.

DIAL, MODEL D-2

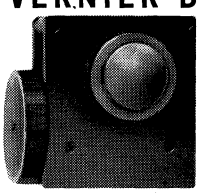
$12



360 divisions; accuracy ±6 min.-of-arc. 4 In. Dia.

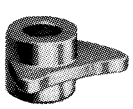
VERNIER DRIVE

$35



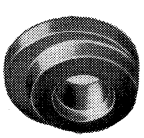
For fine positioning of tuning devices, pots, synchros. 100 turns of vernier drive produces 1 turn of output shaft. Has coarse control for 1:1 drive. Zero backlash. Self-locking. Drives 10 in.-oz.

SERVO CLAMPS TO HOLD MOTORS, SYNCHROS, POTS



LOW, LOW COST
ALUMINUM CLAMPS

- Maximum Gripping Surface
- Iridite Finish



QUICK RELEASE
STAINLESS STEEL CLAMPS

- Maximum Strength Under Shock
- Locks and Unlocks Without Removal of Screw (Simply Loosen)
- Passivated Finish

Holds Component Size	Screw Size Required	THETA Part No.	Quantity	Price Each
8, 10, 11	#3	A-1183-1	100	19¢
15, 18	#3	A-1183-2	500	15¢

Theta **INSTRUMENT CORPORATION**

Fairfield, New Jersey 07006 • (201) 227-1700

Theta PHASE GENERATORS

- Direct reading of phase shift
- Phase shifts 360° continuously
- Accuracy to 20 min.-of-arc
- Constant amplitude output
- Reliable, passive construction
- Stable temperature characteristics
- Easy panel-mounting

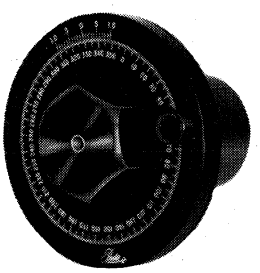
FOR PHASE SHIFTING AND MEASURING

Apply an AC input and it is phase shifted, continuously without amplitude change, at the turn of a dial. Read the exact value of phase shift from the dial face.

TYPICAL CHARACTERISTICS AT 400 cps

Input	115 Volts
Output	35 Volts
Input Impedance	9,000 ohms @ 45°
Output Impedance	7,000 ohms

MODEL PG-3



$350

Phase accuracy, 30 min.-of-arc. Dial readability, 6 min.-of-arc. Coarse knob ratio, 1:1. Vernier knob ratio, 10:1. Dial diameter, 5 in.

MODEL PG-9

$230

Phase accuracy, 1.5°. Dial readability, 1°. Coarse knob ratio, 1:1. Vernier knob ratio, 100:1. Dial size, 3 1/16 inch by 3 1/16 inch.

PHASE GENERATOR FOR LAB USE

$550

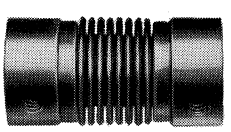
Phase Generator, Model PG-3, is mounted in a portable case. Built-in amplifier and attenuator completely isolates the Phase Generator from its load. Has switch which reverses the output by 180 degrees. Phase accuracy, 30 min.-of-arc. Variable output from 0 to 35 V by means of 10-turn pot. Operates into any load, 10KΩ or greater, without affecting accuracy or zero shift.

PRECISION BELLOWS COUPLINGS

Specifically Engineered for use with

- **POTENTIOMETERS**
- **RESOLVERS**
- **SYNCHROS**
- **ENCODERS**

Lowest Prices! High Accuracy!



$7.50

Substantial quantity discounts are offered.

Also available with clamp-type hubs at small additional price.

PERFORMANCE FACTORS

- One min.-of-arc. twist-error per in.-oz. torque
- Maximum rated torque, 15.5 inch-ounces

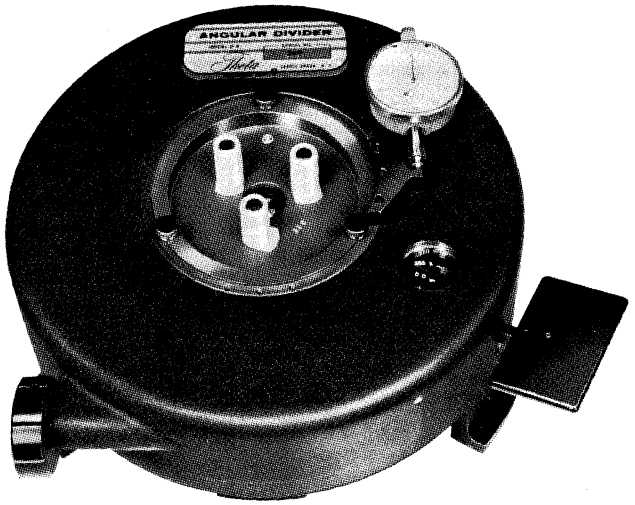
Theta **INSTRUMENT CORPORATION**

Fairfield, New Jersey 07006 • (201) 227-1700

Theta TEST EQUIPMENT FOR SYNCHROS AND RESOLVERS



PRECISION ANGULAR DIVIDERS

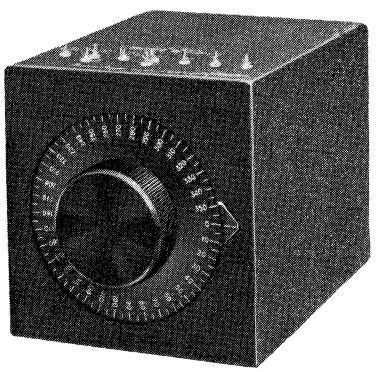
Positions synchros, resolvers, pancakes with less than 15 sec-of-arc error in accordance with Specification MIL-S-20708 B.

$1,500 From Stock

- Used and accepted by synchro manufacturers and government organizations.
- Unconditional two-year guarantee on performance and accuracy.
- Easy to operate — faster than any other device.
- Rugged — can take production line use and abuse without affecting performance.
- Adaptable — any size servo component accommodated by simple replacement of housing adapter and collet.

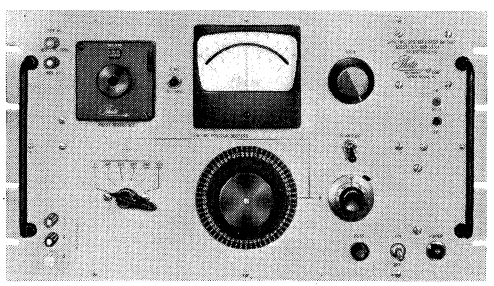
PLUS

a Full-Line of Equipment for MIL-Spec Testing



Panel-Mounted Synchro and Resolver Bridges

Measures electrical error at 5° intervals. Six basic models from $550. Immediate delivery.



Precision System Error Bridges®

For error measurement of systems which contain synchros or resolvers. Continuous measurement of error, 0° through 360°. State-of-the art accuracy: 7 sec.-of-arc with synchro/resolver source impedance as high as 7500 ohms. Models from $990. Delivery from stock.

Let Triplett Quality Standards be your guide...

Pioneers in the most advanced lines of Panel Instruments, Portable Instruments and Test Equipment (Electronic and Electrical) since 1904. Triplett's famous Bar-Ring movements set the standard of quality for the industry. This special rugged construction provides Self-Shielding, More Torque, Lower Terminal Resistance, Faster Response, and Greater Accuracy.

Triplett leadership in test equipment is marked by the world's most complete line of Volt-Ohm-Milliammeters.

All standard Triplett products are available nationally through authorized distributors.

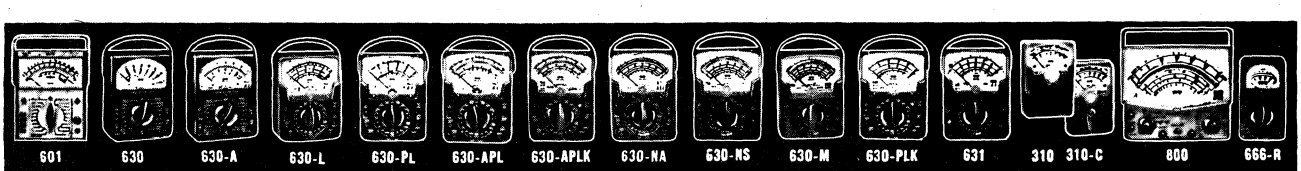
BLUFFTON, OHIO



THE WORLD'S MOST COMPLETE LINE OF V-O-M's • AVAILABLE FROM YOUR TRIPLETT DISTRIBUTOR'S STOCK

Trymetrics offers a complete product line of four digit DVM's accepting a wide range of multi-function plug-in heads; and a series of unitized four digit DVM's with multimeter functions and DC voltage measuring capabilities.

All models feature full four digit resolution with accuracy better than ±0.01% of reading ±1 digit.

MODEL 4000 AND 4000P
- Full Four Digit Readout
- Accepts Wide Range of Plug-ins
- Manual and Automatic Ranging
- 20% Overscale Readout
- Automatic Polarity Indication
- High Accuracy: .01%
- Printer Output Option

MODEL 4100 AND 4100P
- Full Four Digit Readout
- Ultra-Stable Stored Display
- Accepts Wide Range of Plug-ins
- Manual and Automatic Ranging
- 20% Overscale Readout
- Automatic Polarity Indication
- Integrated Circuit Design
- High Accuracy: .01%
- Printer Output Option

MODEL 4230/4240
- Full Four Digit Readout
- Ultra-Stable Stored Display
- Unitized Construction
- Three or Four Manual DC Ranges
- 20% Overscale Readout
- Automatic Polarity Indication
- Integrated Circuit Design
- High Accuracy: .01%
- Printer Output Option

MODEL 4250A
- Full Four Digit Readout
- Ultra-Stable Stored Display
- New Modern Design
- Unitized Construction
- Five Automatic DC Ranges
- 20% Overscale Readout
- Automatic Polarity Indication
- Integrated Circuit Design
- High Accuracy: .01%
- Dual Switchable Inputs
- Printer Output Option

MODEL 4243
- Full Four Digit Readout
- Ultra-Stable Stored Display
- Unitized Construction
- Multimeter Functions DC-AC-OHMS
- 20% Overscale Readout
- Automatic Polarity Indication
- Integrated Circuit Design
- High Accuracy: .01%
- Printer Output Option

.01% four digit digital voltmeters

DC-AC-OHMS

Digital Voltmeters with Interchangeable Plug-in Heads

Unitized Digital Voltmeters and Multimeters

Check these TRYMETRICS *features:*

PORTABLE high voltage testers

PORTABLE HIGH VOLTAGE POWER SUPPLIES
UVC standard portable power supplies, series "BAP" as shown (Photo A), offer the desirability of light weight, compact packaging and the flexibility of complete control instrumentation for field hi-pot testing. Availability is up to 32 KVDC and 40 milliamperes continuous duty on most models. Each supply is furnished with single range kilovolt meter and milliammeter; high voltage on and off pushbutton function with indicator lights; primary protective fuses and a fixed overload circuit.

At voltage ratings in excess of 32 KVDC, two packages are furnished, each offering the advantage of easy portability. These supplies are available at ratings up to 60 KVDC and utilize air insulation.

For non-destructive breakdown testing such as is required for coaxial cables, strain gauge equipment, capacitors and semi-conductors, UVC has introduced a line of multi-range, crow bar protected, suitcase style packaged portable power supplies (Photo B) at voltage ratings up to 45 KV. Each supply provides four modes of operation, selectable by means of a front panel control and the high voltage rises in each mode as an approximate ramp function up to its preset crest. Leakage current is also selected by means of a front panel control and should a preset value of current be exceeded, a crow bar circuit will be activated with response time in the order of less than 5 microseconds after initiation of breakdown. The kilovolt meter will hold the voltage reading at the point of breakdown indefinitely until the equipment is manually reset.

KILOVOLT METERS - HIGH VOLTAGE DIVIDERS
For precise high voltage measurement, UVC offers a complete line of 1% and 3% accuracy kilovolt meters (Photo C); 0.1% high voltage dividers as well as specially designed frequency compensated dividers (Photo D). Availability is up to 1000 KVDC.

STOCK AND CUSTOM TERMINATION HARDWARE
UVC offers specially designed termination hardware to minimize the effects of corona discharge. Standard shapes include cap nuts, toroids, spheres and cylinders (Photo E). These hardware items are used in all UVC high voltage and extra high voltage power supplies to reduce spacing requirements, and offer a more reliable high voltage design. Mounting tap sizes, materials and shape are not restricted to the standard configurations shown. We welcome the opportunity to discuss your special termination requirements.

UNIVERSAL VOLTRONICS
27 Radio Circle Drive, Mt. Kisco, N.Y. 10549 · 914-241-1300

VirTronics SHORT FORM SELECTION CHART

		FUNCTION	Meter Face	Price
PORTABLE INDICATORS ▲	50-DC 50-AC	Portable single probe temperature indicator in specified range Converts to 12 position indication with 50-SB-12 Switch box. Field case available Bezel available	3 in. wide	DC $49.00 AC $69.00
	50-DC-6 / 50-AC-6	Portable 6 probe temperature indication in specified range. Convert to 17 probe indicator with 50-SB-12 Switch box.	3 in. wide	DC $74.00 AC $94.00
	 54-DC / 54-AC	Portable, single position temperature indicator with the same function as 50-DC and 50-AC models, except extended scale readability on larger meter face.	4½ in. wide	DC $79.00 AC $99.00
PANEL INDICATORS ▲	 51-AC	Panel mounted single position temperature indicator with circuit enclosed in extended meter case. Perfect OEM application. Use with 51-SB-12 for multiple point applications.	3 in. wide	$64.50
	 55-AC	Panel mounted version of 54-AC extended scale meter. Perfect for OEM applications where readability is a factor. Use with 51-SB-12 for multiple point applications.	4½ in. wide	$94.00
SWITCHES ▲	 50-SB-12	Companion Switch box to convert any portable indicator to position temperature indication. Field case available Bezel available	none	$34.50
	51-SB-12	Same as 50-SB-12 except panel mounted in a 3 x 3 inch area for minimum space OEM applications.	3 in. bezel	$32.00
CONTROLLERS ▲	51-TC	Temperature Controller with adjustable calibrated knob to set control point. Red indicator light "on" below set point "off" above set point. OEM Designed.	3 in. bezel	$59.00
	 55-MR-TC	Panel mounted Meter-Relay with continuous temperature indication and control. Large meter face (4½) for extended readability. OEM Designed.	4½ in. wide	$175.00

▲ Standard Ranges Available from Stock

All A.C. instruments (ie. 50-AC) are powered by 115 volts A.C. 50/60 cycles and will accept a ±10% deviation of line voltage with no effect on meter accuracy. All D.C. instruments (ie. 50-DC) are powered by two (2) 1½ volt batteries. An adjustment for normal battery decay is provided.

Center scale readability for 3 inch meters is 0.5% full scale. The 4½ inch indicator center scale readability is 0.25% full scale.

When ordering individual probes on separate order, or with the purchase of a new instrument, give the exact temperature range of the indicator for which the probe is to operate as its calibration is specific for each temperature scale. Probes calibrated for the same specific range may be interchanged regardless of their configuration. All probes are supplied with six (6) feet of number 26 ga. teflon insulated multitet cable. Several feet*of standard lamp cord may be used to extend this length with no recalibration required. OEM quantity discounts on all instruments and probes will be quoted on request.

* Up to 200 feet of No. 18 stranded copper.

STANDARD PROBES

Special probe styles will be quoted on request.

Description & Application	Catalog No.	Price
 **LIQUID IMMERSION** — Teflon covered for applications requiring chemical inertness. Solvent and acid baths. General laboratory measurements.	50-1-Specify Range	$12.50
 **GENERAL PURPOSE** — Stainless Steel sheath, may be used for liquid immersion, surface, or gas applications.	50-2-Specify Range	$12.50
 **IMMERSION** — Stainless Steel, with adjustable ss pipe fitting. For measuring temperature inside pipes or closed vessels.	50-3-Specify Range	$24.50
 **SURFACE MOUNTING** — Copper terminal connector with thermistor potted in shank. Mounted on surfaces with screw or tape.	50-4-Specify Range	$11.50
 **SURFACE MOUNTING** — Epoxy coated. For applications requiring minimum size such as small surfaces or vials. Cannot be immersed above coating in conductive liquids.	50-5-Specify Range	$10.50

VIRTIS COMPANY, INC. • GARDINER, NEW YORK 12525 • TEL: 914-255-5000

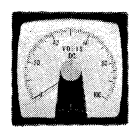
VOLTRON PRODUCTS, INC.

SIGNAL CONDITIONING INSTRUMENTATION

Voltron's established leadership in the field of meter technology is the result of a concerted effort to bring you a complete line of precision measuring instruments designed to the highest attainable standards of quality and accuracy. An innovative program of research and development constantly seeks ways to adapt the latest advances in materials and manufacturing technology to the improvement of our product. As a result of this far-reaching effort, Voltron introduced the only new concept in switchboard instrumentation to combine three developments in modern meter technology — the taut-band, axial air gap and transducer approach. □ At Voltron, reliability is designed-in. Our complete Quality Assurance facility, utilizing the latest in testing methodology, ensures the consistently superior performance of every Voltron instrument. From initial concept to finished product, our concern is to give you a product you can trust. □ To be sure of the best in precision measuring instrumentation in today's wide-ranging applications, call on Voltron.

FULL-SCALE TAUT-BAND PANEL METERS (90°, 200° and 240° arcs)

Incorporating VOLTAUT® taut-band suspension for frictionless, shock-proof operation.



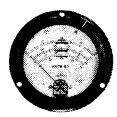
AC AND DC VOLTMETERS AND AMMETERS

AC and DC Current Ranges:	10 μA F.S. to 5 mA F.S. self-contained; over 5 mA with external components.
AC and DC Voltage Ranges:	to 300V F.S. self-contained.
Accuracy:	±1% F.S. basic.
Cases:	90° and 240° movements available.

WRITE FOR BULLETIN 4030.

EXPANDED-SCALE AND SPECIAL-PURPOSE PANEL METERS

With the precision and wide deflection capabilities inherent in the exclusive VOLTAUT® taut-band suspension system.



EXPANDED-SCALE VOLTMETERS AC AND DC

Center-Scale Ranges:	10-300 VDC, 6-300 VAC; down to 1V with external power; above 300V with external resistors.
Spans:	±4% to ±20% of center scale; ±1% to ±4% of center scale available.
Accuracy:	±0.5% of center scale at 25 ± 5°C, ±1% from 0° to 40°C; ±0.1% at 25 ±5°C, ±0.25% from −55° to 85°C available.

WRITE FOR BULLETIN 4040 (DC) AND 4050 (AC).

EXPANDED-SCALE FREQUENCY METERS

Supplied with external transducer, saturable-core discriminator or tuning-fork comparator.

Center-Scale Frequencies:	60 Hz or 400 Hz; any center-scale frequency from 50 to 5000 Hz available.
Spans:	±1% to ±10% of center scale; dual-scale models available; typically, ±1% and ±10% of same center frequency.
Accuracy:	tuning-fork type, ±0.05%.

WRITE FOR BULLETIN 4100.

TRANSISTORIZED VOLTMETERS AC, DC, AND PHASE-SENSITIVE

Ranges:	0.01, 0.03, 0.1, 0.3, 1.0, 3.0, 10, 30, 100 and 300V.
Accuracy:	±2% of F.S.
Input Impedance:	1 megohm for averaging type; 5 megohms for phase-sensitive type.

WRITE FOR BULLETIN 7000.

AC AMMETERS LINEAR AND LOGARITHMIC

Range:	10 mA to 10 Amperes F.S. self-contained; to 1000 Amperes F.S. with external transformer.
Accuracy:	±2% of F.S. from 300 to 2000 Hz.

WRITE FOR BULLETIN 4070.

POWER-FACTOR METERS

Range:	0-1-0 PF, other ranges available.
Nominal Frequency:	any one from 50-2000 Hz available.
Accuracy:	0.04 PF.

WRITE FOR BULLETIN 4130

WATT-VAR METERS

Ranges:	25 W/vars F.S. to 100 kW/kvar F.S.
Inputs:	120/208V ±10% at 400 ± 100 Hz; ±100 mA to 5 A.
Accuracy:	±2% of F.S. at 22°C, ±5% of F.S. from −55° to 71°C.

WRITE FOR BULLETIN 4120.

LOAD METERS

Measure I cos θ.

Scale:	0-125% load.
100% Load:	1 HP at 115 or 230 V, self-contained; other HP/load ratings with external current transformer.
Phases:	Single phase, 3-phase/3-wire, 3-phase/4-wire.

WRITE FOR BULLETIN 4140.

AM AND FM MODULATION METERS

Modulation Range:	0-2% AM or FM.
Modulation Definition (with sinusoidal modulation):	$\%AM = 100\,\frac{E\,max - E\,min}{E\,max + E\,min}$; $\%FM = 100\,\frac{F\,max - F\,min}{F\,max + F\,min}$
Accuracy:	±5% of F.S. (±0.1% of modulation).
Modulation Frequency Response:	1-75 Hz.

WRITE FOR BULLETIN 4160.

MINIATURE EDGEWISE METERS

Stackable ½" high panel meters for instrumentation applications.

Functions Available:	AC or DC Volts, Amps and Milliamps.
Scale Length:	1 5/16".
Accuracy:	±2% in standard versions; ±5% in expanded scale models.
Sensitivity:	100 μA up to 1 A.

WRITE FOR BULLETIN 4170A AND 4175.

VOLTRON PRODUCTS, INC.

SIGNAL CONDITIONING INSTRUMENTATION

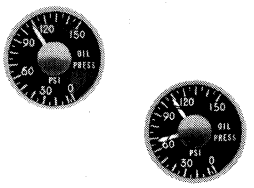
AIRCRAFT INDICATING INSTRUMENTS

Featuring the exclusive VOLTAUT® taut-band movement for accurate, frictionless operation — 10 to 20 times the sensitivity of equivalent jeweled movements. The extremely rugged construction of these instruments makes them useable in any position; they are not affected by heavy overloads, shock or vibration. Available for single or dual scales with any combination of color bands.

Available in MS-33639 or ATI 1", 1½", 2" and 3", single and dual configurations. Illuminated and non-illuminated.

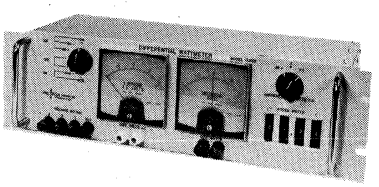
FUNCTIONS AVAILABLE

DC VOLTS	AC LOAD
DC AMPS	AC VARS
DC LOAD	AC WATTS
AC VOLTS	FREQUENCY
AC AMPS	TEMPERATURE
DIFFERENTIAL TEMPERATURE	
EXHAUST GAS TEMPERATURE	
ENGINE TACHOMETER	



WRITE FOR BULLETIN 4180A.

LABORATORY INSTRUMENTS



DIFFERENTIAL WATTMETER

Full Scale Range:	0-30 watts (available up to 100 watts and above with external transformers).
Differential Watt Range:	10, 100, and 1000 milliwatts.
Full Scale Accuracy:	±1% of reading, ±20 mW.
Differential Accuracy:	±0.04, 4.0 and 40mW.
Frequency Range:	200-3000 Hz at stated accuracy.

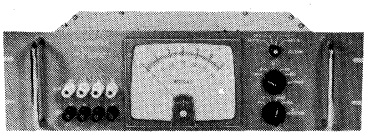
Input voltage can be any single voltage (single phase, 2-phase, 3-phase, 3- or 4-wire) from 10 to 120 V rms as specified by customer.

WRITE FOR BULLETIN 3021.

LOW-POWER LABORATORY WATTMETER

Models for single or polyphase low-power measurements where wattmeter burden must be extremely small.

Frequency Range:	50-2000 cps.
Accuracy:	±1% of full scale.
Current-circuit voltage-drop:	negligible.
Power Drain:	<than 0.2% of indicated power at unity PF.
Meter:	accurate to 10% PF without reconnection.
Full Scale Ranges:	(26 VAC) 0 to 1.2/3/12/30 watts F.S. (115 VAC) 0 to 1.2/3/12/30/120 watts F.S.



WRITE FOR BULLETIN 3020.

MINIATURE PORTABLE INSTRUMENTS TYPE E-11

Designed for use in laboratories, schools, workshops, field, etc., where high accuracy and extreme ruggedness are required. Featuring Voltron's unique taut-band suspension system for frictionless, shock-proof operation.

AC AMMETERS AND VOLTMETERS
DC AMMETERS AND VOLTMETERS
WATTS VARS
FREQUENCY POWER FACTOR
TEMPERATURE

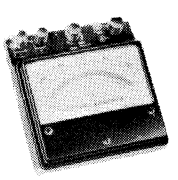
Accuracies:	±1% F.S. for DC instruments; ±1.5% F.S. for AC instruments.
Frequency:	choice of 60 or 400 Hz.
Scale length:	approximately 3½".
Sensitivity:	to 30 μA for DC; 300 μA for AC.

Expanded scale ranges available for accuracy of ±0.25%.

WRITE FOR BULLETIN E11.

ELECTRONIC GALVANOMETER TYPE E11.501

For fast and accurate null readings in DC systems.



Voltage Sensitivity:	10 μV/div. (approx. 5 μV/mm).
Response Time:	approximately 3 seconds.
Common Mode Rejection:	140 dB at DC, 50/60 Hz.
Input Resistance:	approximately 9 kohms.
Power Source:	9V transistor radio battery.
Battery Life:	approximately 300 hours, continuous.

AC CURRENT TRANSDUCERS

Accuracy: 0.5%.
Frequency Range: 50-3000 Hz.
Temperature Coefficient: <.01%/°C.
Input Current: 0-1, 2.5, 5 and 10 A.

WRITE FOR BULLETIN 5020.

WATT TRANSDUCERS

Accuracy: 0.5% with ±25% line voltage and 1 to 0.5 PF.
Frequency Range: 50-3000 Hz.
Response Time: .25 second to 99%.
Input Elements: one (500W), two (1000W) and three (1500W).
Adjustable: 60 to 120%.

WRITE FOR BULLETIN 5030.

PF TRANSDUCERS

Accuracy: 0.1 PF at nominal voltage and 60% current.
PF Ranges: 0-1-0, 0.3-1-0.3, 0.5-1-0.5, and 0.7-1-0.7.
Nominal Frequency: 50-3000 Hz.
Input Voltage: 120V ±20%.
Input Current: 0-5 A.
Phases: Single and 3-phase.

WRITE FOR BULLETIN 5040.

FREQUENCY TRANSDUCERS

Accuracy: 0.5%
Input Frequency: 55-65, 58-62, 350-450 and 380-420 Hz.
Voltage: 100-130V.
Overload: 1.5 X rated input, continuous; 2 X rated input, one second.
Hipot: 1200 VAC.

WRITE FOR BULLETIN 5050.

VOLTRIP GO/NO-GO LIMIT-DETECTOR

A precise, stable voltage-sensing device that signals, by means of a contact closure, when the voltage, current or other parameter being monitored reaches a pre-determined value. Also available to sense frequency and watts.

Completely solid state except for relay.
External resistors extend functions to current and resistance.
Dual limit models available.

MIL versions available for −55° to 71°C operation.
Voltage Range: 5 to 500V rms, 50 to 2000 Hz.
Auxiliary Power Required: 3 watts at 115V, ±10%, 60-1200 Hz.
Response Time: 50 ms.

WRITE FOR BULLETIN 6033.

4½" SWITCHBOARD INSTRUMENTS

Featuring Voltron's unique taut-band, axial air gap transducer approach for a wide range of functions:

DC AMMETERS AND VOLTMETERS
AC AMMETERS AND VOLTMETERS
WATTMETERS AND VARMETERS
FREQUENCY METERS
SYNCHROSCOPES
TACHOMETERS

Accuracies: ±1% of F.S. (±.01 for PF; ±2% for Frequency and Tachometers).
Frequency Range: 50-500 Hz.
Full Scale Deflection Angle: 250° (360° for synchroscopes).
Full Scale Length: approx. 7.25".
Weight: approx. 0.9 to 3.7 lb.

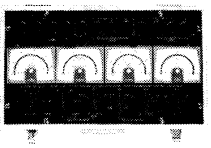
WRITE FOR BULLETIN SB68.

POWER ANALYZER

Requires no recalibration.

A versatile, portable test set offering high accuracy and low power consumption for general purpose use. Ideal for 50, 60 and 400 Hz measurements without recalibration or correction factors. Featuring large, easy to read 4½" — 200° rectangular meters with frictionless taut-band suspension systems for accuracy and protection against shock and vibration.

Accuracy: ±1%.
Phases: Single, 2-phase/3-wire or 3-phase/4-wire.
Size: 12" x 20" x 7".
Weight: 40 lb.



CHECKOUT RANGES:

Current: 0 to 125/250/500 A.
Voltage: 0 to 125/250/500 VAC.
Frequency: 45-55, 55-65, 375-425 Hz.

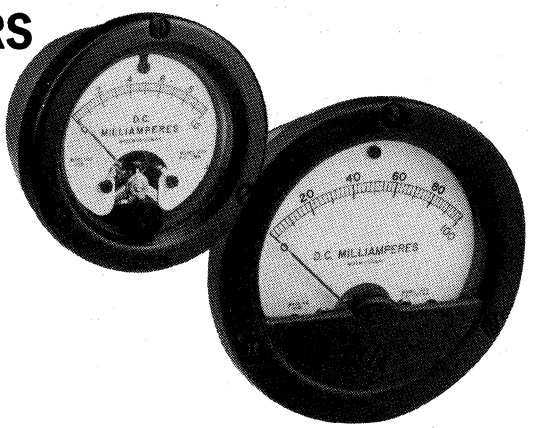
SEALED/RUGGEDIZED MILITARY & COMMERCIAL METERS



Many of the meters and accessory products described in these pages have been designed to conform to the requirements of the applicable military meter specifications or the unusual requirements of the environments in which they are to be used. This also provides significant benefits to those with industrial applications which commercial-grade meters do not fully satisfy.

GENERAL SPECIFICATION:

MOVEMENTS
D'Arsonval; U magnet, core magnet; moving iron vane, high strength ALNICO magnets standard.

ACCURACY
Standards as shown to the right, special accuracy ±1% or better available.

CASE/FINISH
5/8" and 1" aluminum with anodized finish. 7/8, 1½, 2½, 3½, 4½ steel cadmium-plated, iridite-treated.

MOUNTING
Standard hardware and mounting dimensions to appropriate military specifications.

SEALING
Watertight gasket sealing standard, epoxy or solder sealing available on some models.

TERMINALS
1/4-28 brass stud and solder lug construction.

SCALE/FINISH
Aluminum with black markings on white enameled background.

POINTER
Knife edge standard, lance or sword pointers available.

SHIELDING
Magnetically shielded construction for use on magnetic or non-magnetic panel.

WINDOW
High strength glass. Plastic or RFI shielded furnished on special applications.

RESISTANCE
Standard tolerances ±10%, special to ±1%.

PIVOTS & JEWELS
Springbacked jewels, osmium pivots standard.

SPECIAL METER DESIGNS

For special applications, WacLine offers a wide selection of custom design meters. Special features include:

Custom scale markings & logos • Mirrored scale • Self-contained multi-range designs • Expanded scale AC & DC Voltmeters • RFI shielding • Edge lighting • Dual meter configurations • Special terminal resistances • Special movement designs • Non linear movements • Suppressed zero ranges • High resistance Voltmeters • Vu & Db Meters.

Consult factory for Technical assistance on your custom design requirements.

The most widely used meters are described in the chart above to assist in the selection of the correct meter for each application.

Sizes and mounting dimensions meet requirements of MIL-M-10304 and MIL-M-17275 where applicable.

The availability of both round and square configurations in the most popular sizes offers greater flexibility in selecting a meter compatible with your styling requirements.

Write or call today for additional information on anyone of the models described.

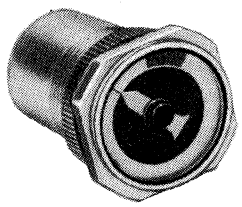
MINIATURE SEALED METERS

5/8 INCH



SERIES KOB

SMALL SIZE

One of the smallest meters available featuring true D'ARSONVAL movement. Requires less than 1/2 sq. in. of panel mounting space.

LIGHTWEIGHT

Complete meter including mounting hardware weighs less than 1 oz. Good application where weight and size are factors.

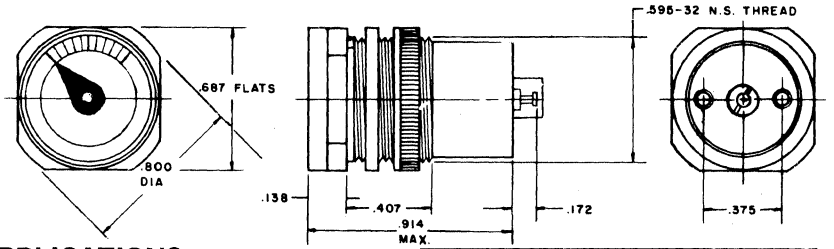
APPLICATIONS:

- **Position Indicators**
- **Null Indicators**
- **Voltage & Current**
- **Signal Strength**
- **Battery Condition**

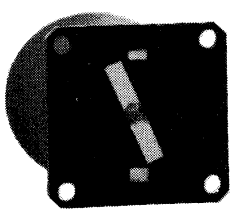
Low power requirements of this miniature meter makes it ideally suited for use in portable battery operated equipment.

STANDARD D.C. RANGES	WACLINE PART NO.	STANDARD RESISTANCE
0-100 ua	KOB6-M001	4500Ω
0-200 ua	KOB6-M002	3000Ω
0-500 ua	KOB6-M003	760Ω
0-1 ma	KOB6-M004	170Ω
0-5 ma	KOB6-M007	14Ω
0-10 ma	KOB6-M009	7Ω
0-100 mv	KOB6-M015	20Ω

Additional voltage and amperage ranges available using external resistors and shunts.



7/8 INCH



SERIES F33

SPACE-SAVING

Mounts from panel front or rear. Rugged construction of D'ARSONVAL movement suits this meter particularly for airborne or ground-support equipment in most environments.

APPLICATIONS:

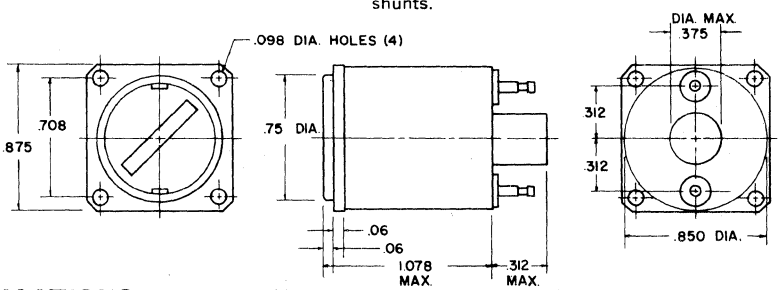
Rotating disc type dial provides maximum display for monitoring a wide variety of applications including:

- **Warning flags**
- **Position indicators**
- **"On"-"Off" Indicators**

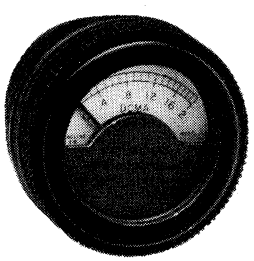
Masking of the display area permits hidden condition indication, such as Power Failure.

STANDARD D.C. RANGES	WACLINE PART NO.	STANDARD RESISTANCE
0-100 ua	F337-7011	2200Ω
0-200 ua	F337-7012	1000Ω
0-500 ua	F337-7013	300Ω
500-0-500 ua	F337-70C14	150Ω
0-1 ma	F337-7014	150Ω
0-100 mv	F337-7025	20Ω

Self-contained voltage ranges up to 6 volts are possible. Current ranges up to 20 milliamperes. Additional voltage and amperage ranges available using external resistors and shunts.



1 INCH



SERIES CIB2

ROUND, RUGGEDIZED

Meets requirements of MIL-M-17275. Core magnet design permits use on magnetic or non-magnetic panels. Watertight construction.

APPLICATIONS:

- **Military communications equipment**
- **Portable test equipment**
- **Airborne direction finders**
- **Vu & Db Meters**
- **Null indicators**

STANDARD D.C. RANGES	WACLINE PART NO.	POWER CONSUMPTION
0-100 ua	CIB2-E43	125 mv (max)
0-500 ua	CIB2-E41	75 mv (max)
500-0-500 ua	CIB2-E42	15 mv (max E.S.)
0-1 ma	CIB2-E20	30 mv (max)
0-50 mv	CIB2-E39	6 ma (max)

In addition to the standard ranges specified by MIL-M-17275 WacLine produces many additional ranges in this style meter. Consult factory for additional information.

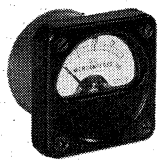
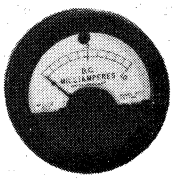
MILITARY METERS Conform to MIL-M-10304

1½ INCH



SERIES BCD
MR13 TYPE

Built to conform to requirements of MIL-M-10304, this ruggedized and sealed meter is widely used in communication equipment and aircraft applications where its small size, yet reliable performance, are a necessity.



SERIES CCD

The ruggedized movement and sealed case of this meter were designed to meet applicable portions of MIL-M-10304, even though the case style is not covered by Military Specification. Standard calibration is for non-magnetic panels.

STANDARD RANGES 1½" METERS

External resistors are required for all A.C. and all 2½" D.C. Voltmeters 500 volts or above, and 3½" D.C. Voltmeters 1000 volts or above. Appropriate resistors are normally included with each A.C. Voltmeter, but are not included with D.C. Voltmeters, except on special order.

External 50 MV shunts are required for all D.C. ammeters 15 amperes or above, and external 5 ampere current transformers are required for all A.C. ammeters 50 amperes or above for 2½" and 80 amperes or above for 3½" sizes. Shunts and transformers are furnished only on special order.

POINTERS—The standard meters listed in this catalog are normally supplied with black tubular aluminum knife edge pointers. Lance or sword pointers are also available on special order. Lance-type pointers are standard with fluorescent or self-luminous dials. When pointers other than black are desired to match special scaleplates, a small additional charge is usually made.

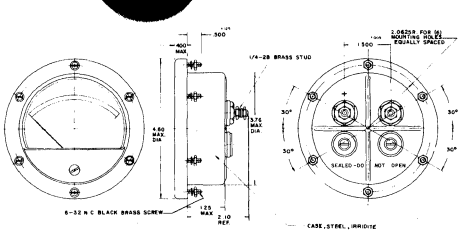
TERMINALS—Three standard terminal types are available on all WacLine meters at no additional charge. The fourth digit of each WacLine part number changes according to the terminal type. For example, meter number ADD3-2033 has a type 3 terminal. Unless otherwise specified, type 3 terminals will be provided on all meters.

TYPE 1
10-32 brass stud with attached shakeproof solder terminal lug 2120-10-00, hex nut AN941-10, washer AN961-10.

TYPE 3
1/4-28 brass stud, 2 loose nuts and 2 loose washers with each stud.

TYPE 5
4-40 screw 3/16 long, attaching shakeproof solder lug.

4½ INCH
SERIES AFD
MR46 TYPE



The 4½ inch meter offers all the features of sealed and ruggedized meters produced by WacLine in other sizes. In addition, greater scale area provides improved readability and opportunity for multiple arc presentations. This style meter is widely used in multi-function portable test sets for military applications. Only two ranges are covered by Military specifications, but WacLine has the capability of producing most standard ranges in this meter size.

Note: Zero center ranges may also be supplied.

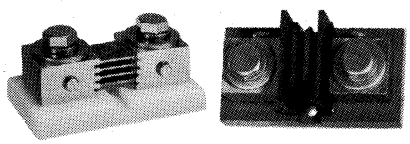
SPECIAL DESIGN METERS & ACCESSORIES

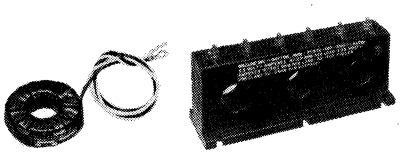
SHUNTS

Lightweight military shunts to meet MIL-S-61 for direct current values to 1200 amperes. Special commercial and aircraft designs also available.



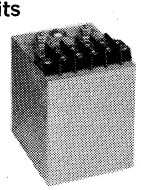
CURRENT TRANSFORMERS

Only two of a wide variety of current transformers produced by WacLine are shown. Single phase and three-phase models are offered. These transformers extend useful ranges for AC measurement of current and power.



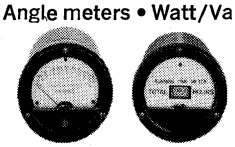
CONVERTERS & TRANSDUCERS

- Hall-generator Watt Converters
- Meter relays
- Frequency converters
- Power Factor & Phase Angle
- Control Relay circuits



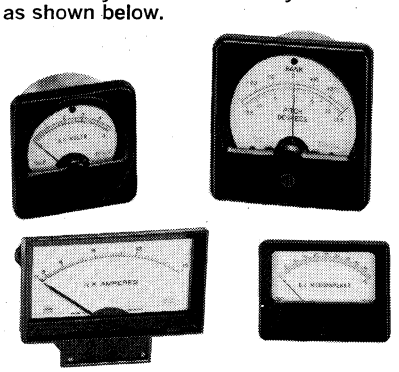
EXTENSION—CASE METERS

A full line of self-contained electronic meters includes: • Expanded scale AC Voltmeters (True RMS and Average sensing) • Expanded scale DC Voltmeters • Expanded scale frequency meters • • Elapsed Time Indicators • Power Factor & Phase Angle meters • Watt/Var meters



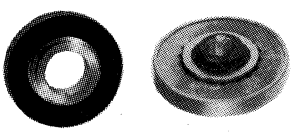
COMMERCIAL PANEL METERS

All of the sealed and ruggedized meters produced by WacLine for military applications have commercial application. The same quality and reliability which is built into our military meters is offered in a variety of commercial styled meters as shown below.



TACHOMETER GENERATORS

Pancake-style self-generating Tachometer Generators in a variety of sizes, 1" to 6". Output signals of up to 500 volts/1000 RPM. Linear output when used with high impedance loads. Custom designs available.



FLIGHT INSTRUMENTS

WacLine has produced for a number of years a complete line of aircraft cockpit meters for both commercial jet airliners and general aviation aircraft. Past accomplishments in such techniques as integral lighting and self-contained electronic circuitry to measure a wide variety of signals has recently been further advanced by introduction of the new Panoramic low parallax instrument.

components for systems

production test equipment

standards labs components and instruments

Attenuation measurements. SWR measurements. Phase measurements. Insertion loss measurements. RF components.

Instruments and components which combine state-of-the-art design with human engineering.

New products that continually advance the state-of-the-art in microwave measurements. New components that you didn't imagine we made. That help you build high performance, high reliability systems. Instruments that will save you time and money on your production line that make your measurements so much more accurate. That give your standards and calibration labs the necessary traceability and accuracy. That make your Q.C. and inspection departments so much more efficient.

Standard "old" products that have been industry standards for years and years. Products that are synonymous with the name Weinschel.

See what Weinschel products can do to help your operation today. Write on your letterhead for a full catalog. Or call us—we've got people ready and able to solve your microwave measurement problems.

Waveforms

Precision in **miniature**

VOLTMETERS [5Hz to 4MHz] ▪ OSCILLATORS [½Hz to 12MHz] ▪ TRANSMISSION SETS [30Hz to 400kHz]

SWEEP GENERATORS [5Hz to 5kHz] [20Hz to 20kHz] ▪ FREQUENCY RESPONSE METERS [20Hz to 20kHz]

400 SERIES OSCILLATORS – A family of stable, low-distortion bridged-T sine and sine/square wave oscillators. Standard with all 400s are large vernier driven dials, built-in attenuators and sync output. Models differ in frequency range, output power, square wave option, etc.

470 SERIES OSCILLATORS – *Precision-plus* counterparts of the 400 series featuring 1% dial accuracy, 0.1% distortion at 1 kHz and ±0.5 dB flatness.

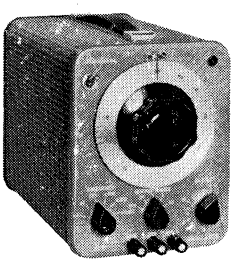
452 SERIES TRANSMISSION SETS – The complete "Gain Set" with oscillator and VTVM built-in, Models for audio and carrier bands. Direct reading in power (dBm), model 452A is calibrated within 0.25 dB from 30 Hz to 15 kHz. Level range (both send and receive) –70 dBm to +20 dBm. Rack mount (7" high) model 452A. Portable (with carrying case) model 452-A-C, add $50.00 to 452A price.

461 SERIES TWO-TONE GENERATORS For intermodulation testing in SSB, microwave and troposcatter radio systems. Tones are individually tunable. Built-in hybriding circuit with cross-modulation products 60 dB below output. Custom built to your choice of frequencies, levels and impedances.

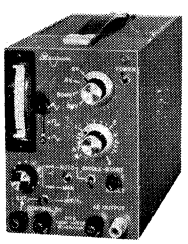
512F POWER OSCILLATOR – A unique, miniaturized laboratory sine-wave generator including the triple benefits of high power (50 V; 2 W), high signal purity (0.1% THD) and low source impedance (6Ω). Nearly a constant voltage source for filter and transformer measurement.

OPTIONAL FEATURES – Prices, weights and dimensions above are for portable instruments. Instruments of the 512, 401 and 402 type available with special decade ranging for non-recurring set-up charge of $200. Frequency response may be held closer than ±½ dB over a portion of the range – eliminating the need for metering the output in production testing of amplifiers, etc.

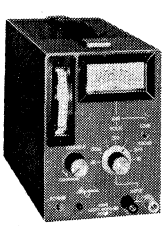
Send us your specifications for quotation.



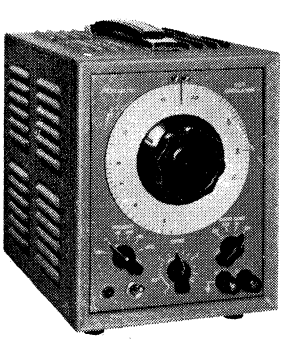
Model 401F Oscillator



Model 610B Sweep Generator



Model 620B
Frequency Response Meter



Model 512F
Sine-wave Generator

MINIATURE FLY-AWAY & SYSTEMS MODULES – An exciting family of instrument modules all with 6" by 4¼" front panels. May be carried in a field engineer's briefcase. Up to four may be mounted in a rugged carrying case that fits under your plane seat. Perfect for systems and test stands. Up to four can be mounted in 7" of rack height.

510 SERIES FLY-AWAY OSCILLATORS Wide tuning range, low distortion and log attenuator. 510B calibrated in volts, 510C calibrated in dBm. Bolt-on balancing transformers available.

511A FLY-AWAY AUDIO-VIDEO GENERATOR – This remarkable solid state instrument generates sine wave from 10Hz to 12 MHz and square waves from 10 Hz to 1 MHz. The perfect generator for audio and data recorders, telephone carrier systems, etc. 80 dB continuously variable attenuator. 1/8th the size of comparable instruments.

520 SERIES FLY-AWAY A-C VTVMs – 12 ranges from 1 mV to 300 V full scale; 10 MΩ input impedance; 4 MHz bandwidth. Two linear models: 520A with voltage scales uppermost, and 520D with dB scale uppermost. Model 520L has a logarithmic meter.

610 SERIES FLY-AWAY SWEEP GENERATORS – The world's first miniature sweep generator. All electronic and complete with all the features and properties found in instruments 20 times as large. Models 610B (20 Hz to 20 kHz) and 610C (5 Hz to 5 kHz) are standard. May be operated as externally programmed VCO over 6 frequency decades.

620B FLY-AWAY FREQUENCY RESPONSE METER – Used alone or with the 610B sweeper, model 620B provides automated frequency response plotting. Model 620B contains a log level meter and log frequency meter with front panel readout of both functions. DC analog outputs, fed to x and y of scopes and recorders draw log/log response curves of audio devices.

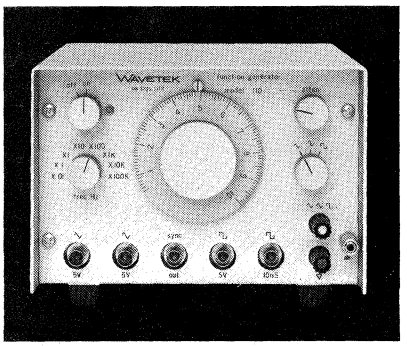
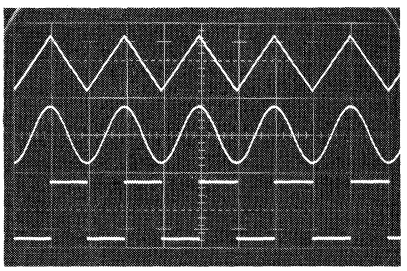
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007





The Wavetek Model 110 Function Generator is a calibrated, high-purity source of sine, square and triangle waveforms. It is an all transistorized unit featuring complete plug-in printed circuit board construction, utilizing silicon semiconductors throughout. The Model 110 provides six simultaneous outputs over a dynamic frequency range of 0.005 Hz to 1 MHz. All outputs may be shorted simultaneously and the generator will continue to oscillate internally with less than 0.5% change in frequency. Its rugged construction, compact size and precision operating characteristics make the Model 110 a portable laboratory of test signals in one economical package.

VERSATILITY

Waveforms

Sine ∿, square ⊓, triangle △ and sync pulse.

Dynamic Frequency

0.005 Hz to 1 MHz (3.3 min. to 1 μsec).

Ranges

X.01 = 0.005 Hz to 0.1 Hz
X0.1 = 0.05 Hz to 1 Hz
X1.0 = 0.5 Hz to 10 Hz
X10 = 5 Hz to 100 Hz
X100 = 50 Hz to 1 kHz
X1K = 500 Hz to 10 kHz
X10K = 5 kHz to 100 kHz
X100K = 50 kHz to 1 MHz

Six Simultaneous Outputs

1. ∿, ⊓ or △ selectable with variable amplitude. Specs apply from 10% to 100% of max. amplitude setting.
   50-Ω output impedance (600-Ω output impedance available by removing one jumper wire, with corresponding decrease in output amplitude).
   30 V p-p max into 600-Ω load.
   10 V p-p max into 50-Ω load.
   Short circuit output current ±100 mA.
   Model 110B: 5 V p-p into open circuit, 600-Ω output impedance.
2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ∿ 5 V p-p.
5. △ 5 V p-p.
6. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 through 5 are 500-Ω output impedance. Output voltage stated is into open circuit.

HORIZONTAL PRECISION

Dial Accuracy

±1% of full scale to 100 kHz.
±2% of full scale 100 kHz to 1 MHz.

Note: Dial is a high-quality composition pot, allowing true continuously variable frequency control.

Frequency Stability

Short term: Drift less than ±0.05% of setting for 10 min.
Long term: Drift less than ±0.25% of setting for 24 hr.
No critical components requiring internal oven.

Jitter

±0.025% cycle-to-cycle stability.

VERTICAL PRECISION

Frequency Response

Amplitude change with frequency less than 0.1 db 0.005 Hz to 100 kHz and 0.5 db 100 kHz to 1 MHz.

Peak-to-Peak Voltage Accuracy

±1% for outputs 3, 4 and 5.
±1% for output 1 at 30 V out.
±10% for output 2.

Amplitude Stability

Short term: ±0.05% of max p-p values for 10 min.
Long term: ±0.25% of max p-p values for 24 hr.

Symmetry

All waveforms are symmetrical about ground within ±1% of max p-p amplitude (zero adjust rear-panel control provided for output 1).

DC Offset Stability

Short term: ±0.05% of max p-p amplitude for 10 min.
Long term: ±0.25% of max p-p amplitude for 24 hr.

PURITY

Sine Wave Distortion

Less than:
0.5% 0.005 Hz to 10 kHz.
1.0% 10 kHz to 100 kHz.
2.0% 100 kHz to 600 kHz.
3.0% 600 kHz to 1 MHz.

Triangle Linearity

Greater than:
99% 0.005 Hz to 100 KHz.
95% 100 kHz to 1 MHz.

Square Wave Rise and Fall Time

Less than 10 nsec, output 2.
Less than 15 nsec, output 3.
Less than 100 nsec, output 1.

Total Aberrations

Less than 5% (overshoot, preshoot, etc.) when properly terminated.

Tilt

Less than 0.5%.

Time Symmetry (All Waveforms)

99.5% 0.005 Hz to 100 kHz.
99% 100 kHz to 1 MHz.

ENVIRONMENTAL

Temperature

All specifications listed, except stability, are for 25°C ±5°C.
For operation from 0°C to 55°C, derate all specifications by a factor of 2.

MECHANICAL

Dimensions

Model 110: 7¾ in. w, 5¼ in. h, 7½ in. d.
Model 110B: 7¾ in. w, 5¼ in. h, 11½ in. d.

Weight

7 lb net, 10 lb shipping.

Color

Clear anodized aluminum.

Controls

On-off power switch, frequency range switch, frequency dial, function selector switch, amplitude attenuator. Rear dc zero adjustment, 110; charge rate adjustment, 110B. All-silicon semiconductors, modular plug-in construction.

Power

Model 110: 105 V to 125 V or 200 V to 250 V, 50 Hz to 400 Hz. Less than 10 watts.
Model 110B: dc rechargeable ni-cad batteries provided with built-in charger. Fifteen hours of operation on batteries for every 16 hours of charge; simultaneous operation and charge. 105 V to 125 V or 200 V to 250 V, 50 Hz to 400 Hz. Less than 15 W.

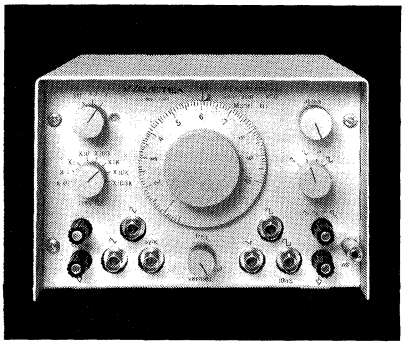
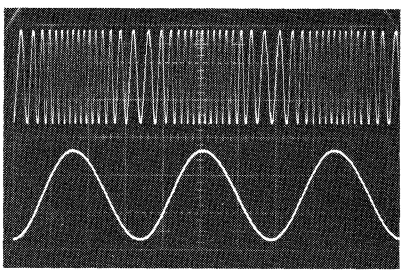
Model 111 VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007





The Model 111 VCG is a precision source of sine, square, triangle and ramp waveforms. It offers control of frequency by external voltage—either dc programming or wideband ac frequency modulation. The instantaneous frequency of these waveforms is determined by the combination of the dial setting and the externally applied voltage. The VCG input is in parallel with the frequency dial. Set the dial at mid-frequency and increase the frequency with positive voltage or decrease it with negative voltage. Set the dial at the lowest point and increase frequency with positive voltage. Set the dial at the highest point and decrease frequency with negative voltage. Actually, the Model 111 VCG is a portable oscillator, square-wave generator, FM modulator, frequency shift keyer and sweep generator—all in one economical package.

VERSATILITY

Waveforms

Sine ∿ , square ⊓ , triangle △ , ramp ◿ , and sync pulse.

Dynamic Frequency

0.0015 Hz to 1 MHz (10 min to 1 μsec). In 8 ranges X.3 range multiplier.

Seven Simultaneous Outputs

1. ∿ , ⊓ , △ or ◿ selectable with variable amplitude. Specs apply from 10% to 100% of max amplitude setting.
   50-Ω output impedance. (600-Ω output impedance available by removing one jumper wire, with corresponding decrease in output amplitude.)
   30 V p-p max (15 V ◿) into 600-Ω load. 10 V p-p max (5 V ◿) into 50-Ω load. Short circuit output current ±100 mA.
   Model 111B: 5 V p-p into open circuit, 600-Ω output impedance.
2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ∿ 5 V p-p.
5. △ 5 V p-p.
6. ◿ 0 V to −2.5 V ramp; 50% duty cycle.
7. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 thru 6 are 50-Ω output impedance. Output voltage stated is into open circuit.

VCG — Voltage-Controlled Generator

Over 20:1 frequency ratio (selectable in ranges of 3:1, allowing excellent range overlap). 4.75 V input for 20:1 frequency ratio (0.5 V per major dial division ±1%). Input impedance 10 kΩ.

HORIZONTAL PRECISION

Dial Accuracy

±1% of full scale to 100 kHz.
±2% of full scale 100 kHz to 1 MHz.

Electronic Frequency Vernier

One turn for one minor dial division.

Typical VCG Linearity

±0.1% frequency vs input voltage (frequency error 0.1% of total deviation—best straight-line method). 0.0015 Hz to 100 kHz generated frequency. From 10% to 100% of max dial frequency.

VCG Bandwidth

100 kHz.

Frequency Stability

Short term: Drift less than ±0.05% of setting for 10 min.
Long term: Drift less than ±0.25% of setting for 24 hr.

Jitter

±0.025% cycle-to-cycle stability.

VERTICAL PRECISION

Frequency Response

Amplitude change with frequency less than 0.1 db 0.0015 Hz to 100 kHz and 0.5 db 100 kHz to 1 MHz.

Peak-to-Peak Voltage Accuracy

±1% for outputs 3 through 6.
±1% for output 1 at 30 V out.
±10% for output 2.

Amplitude Stability

Short term: ±0.05% of max p-p values for 10 min.
Long term: ±0.25% of max p-p values for 24 hr.

Symmetry

All waveforms, except ramp, are symmetrical about ground within ±1% of max p-p amplitude (zero adjust rear-panel control provided for output 1).

DC Offset Stability

Short term: ±0.05% of max p-p amplitude for 10 min.
Long term: ±0.25% of max p-p amplitude for 24 hr.

PURITY

Sine Wave Distortion

Less than:
0.5% 0.0015 Hz to 10 kHz.
1.0% 10 kHz to 100 kHz.
2.0% 100 kHz to 600 kHz.
3.0% 600 kHz to 1 MHz.

Triangle and Ramp Linearity

Greater than:
99% 0.0015 Hz to 100 kHz.
95% 100 kHz to 1 MHz.

Ramp Fall Time

Less than 250 nsec.

Square Wave Rise and Fall Time

Less than 10 nsec, output 2.
Less than 15 nsec, output 3.
Less than 100 nsec, output 1.

Total Aberrations

Less than 5% (overshoot, preshoot, etc.) when properly terminated.

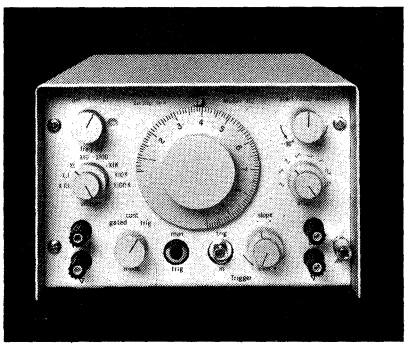
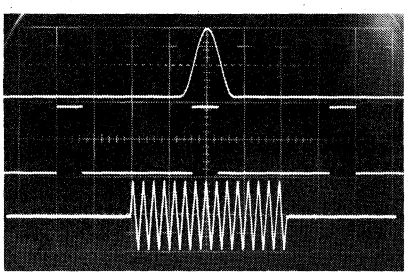
Model 112
Triggered VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007





The Model 112 Triggered VCG offers precision control of frequency by external voltage—either dc programming or wideband ac frequency modulation. It also triggers from a manual front-panel control or from an external pulse or gate. One cycle is generated on command. If a gate signal is applied, the generator will operate until the gate is removed. The trigger start-stop point is adjustable over 360°. Trigger level and polarity may be selected from front-panel control. The Model 112 generates sine, square, triangle and ramp waves simultaneously in fixed-phase relationships. The frequency of these waveforms is determined by the combination of the dial setting and the externally applied voltage. The VCG input is in parallel with the frequency dial. The Model 112 Triggered VCG is a portable oscillator, square-wave generator, FM modulator, frequency shift keyer, sweep generator, and tone-burst generator. The Model 112 is a versatile, general-purpose instruments for laboratory and field use.

VERSATILITY

Waveforms

Sine ∿ , square ⊓ , triangle ∧ , ramp ◿ , and sync pulse.

Dynamic Frequency

0.0015 Hz to 1 MHz (10 min to 1 μsec). In 8 ranges X.3 range multiplier.

Nine Simultaneous Outputs

1. ∿ , ∩ , ⊓ , ⊓ , ∧ , ∩ , ◿ or ◹ selectable with variable amplitude.
   30 V p-p max (15 V ◿) into 600-Ω load.
   10 V p-p max (5 V ◿) into 50-Ω load. Short circuit output current ±100 mA.
   Model 112B: 5 V p-p into open circuit, 600-Ω output impedance.
2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ∿ 5 V p-p.
5. ∧ 5 V p-p.
6. ◹ 0 V to −2.5 V ramp; 50% duty cycle.
7. ∩ , ⊓ , ∩ , or ◿ selectable. 5 V p-p differential output 180° out-of-phase with outputs 2 through 6.
8. ∿ 2.5 V p-p offset +1.25 V.
9. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 thru 7 are 50-Ω output impedance. Output voltage stated is into open circuit.

Trigger

Input impedance is 10 kΩ.

Trigger mode: Manual or external voltage of ±0.5 V will generate one cycle.

Gated mode: Discrete number of cycles may be generated by application of ±0.5 V gate.

Up to 100 V may be applied without damage to input circuitry.

Trigger level and slope are adjustable by front-panel controls. (These controls are similar to trigger adjustments of an oscilloscope.)

The start-stop point of the generated waveform is adjustable through 360°. Haversine is available by adjusting trigger start control to the −90° position and using offset sine wave output 8.

VCG—Voltage-Controlled Generator

Over 20:1 frequency ratio (selectable in ranges of 3:1, allowing excellent range overlap). 4.75 V input for 20:1 frequency ratio (0.5 V per major dial division ±1%). Input impedance 10 kΩ.

Stability*

Short term: ±0.05% for 10 min.

Long term: ±0.25% for 24 hr.

*Percentages apply to amplitude, frequency and dc offset.

HORIZONTAL PRECISION

Dial Accuracy

±1% of full scale to 100 kHz.

±2% of full scale to 1 MHz.

Electronic Frequency Vernier

One turn for one minor dial division.

Typical VCG Linearity

±0.1% frequency vs input voltage (frequency error 0.1% of total deviation—best straight-line method). 0.0015 Hz to 100 kHz generated frequency. From 10% to 100% of max dial frequency.

VCG Bandwidth

100 kHz.

Jitter

±0.025% cycle-to-cycle stability.

VERTICAL PRECISION

Frequency Response

Amplitude change with frequency less than 0.1 db 0.0015 Hz to 100 kHz and 0.5 db 100 kHz to 1 MHz.

Peak-to-Peak Voltage Accuracy

±1% for outputs 3 through 7.

±1% for output 1 at 30 V out.

±10% for output 2.

Symmetry

All waveforms, except offset sine and ramp, are symmetrical about ground within ±1% of max p-p amplitude (zero adjust rear-panel control provided for output 1).

PURITY

Sine Wave Distortion

Less than:

0.5% 0.0015 Hz to 10 kHz.

1.0% 10 kHz to 100 kHz.

2.0% 100 kHz to 600 kHz.

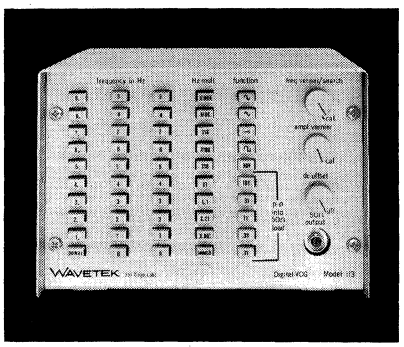
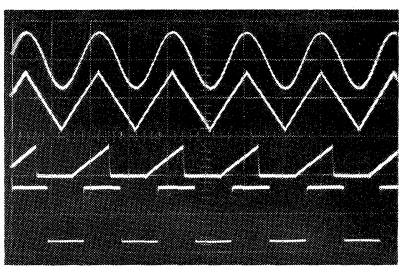
Model 113
Digital VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007





The Model 113 Digital VCG is a precision source of sine, square, triangle and ramp waveforms. It offers pushbutton control of frequency, function and amplitude, plus voltage control of frequency by external input — either dc programming or wideband ac frequency modulation.

The amplitude is controlled by a precision 50-Ω attenuator that offers 10 db steps from 0.1 volt to 10 volts peak-to-peak. Both frequency and amplitude also may be controlled by vernier controls that allow overlap between the digitally selected values. Resolutions of the frequency vernier allows 4-digit control. Frequency pushbuttons may be switched over to a 1-turn control for frequency search.

A special pushbutton position is provided to give 30 volt peak-to-peak output with a vernier control. All waveforms are available by selection on the front panel output. Fixed amplitude outputs of each waveform also are available on the rear panel.

The Model 113 Digital VCG is a portable source of stimuli for laboratory or field use allowing ease of selection, accuracy and repeatability.

VERSATILITY

Waveforms
Sine ∿ , square ⊓ , triangle ∧ , and ramp ◿ .

Dynamic Frequency
0.001 Hz to 1 MHz (15 min. to 1 μsec.)

Ranges
X.001 = 0.001 Hz to 0.01 Hz
X.01 = 0.01 Hz to 0.1 Hz
X0.1 = 0.1 Hz to 1 Hz
X1.0 = 1 Hz to 10 Hz
X10 = 10 Hz to 100 Hz
X100 = 100 Hz to 1 kHz
X1K = 1 kHz to 10 kHz
X10K = 10 kHz to 100 kHz
X100K = 100 kHz to 1 MHz

Five Simultaneous Outputs
1. ∿ , ⊓ , ∧ , or ◿ , 30 V p-p max into 600-Ω load (15 V◿). precision attenuator providing 0.1, 0.3, 1, 3 and 10 V p-p into 50-Ω load with continuous vernier. Short circuit output current ±100 mA.
2. ⊓ 5 V p-p.
3. ∿ 5 V p-p.
4. ∧ 5 V p-p.
5. ◹ 0 V to −2.5 V ramp; 50% duty cycle.

Note: Outputs 2 through 5 are 500-Ω output impedance. Output voltage stated is into open circuit.

VCG—Voltage-Controlled Generator
0.5 V input for frequency change of first significant digit (±1%). Up to 100:1 frequency ratio. Input impedance 10 kΩ.

HORIZONTAL PRECISION

Frequency Accuracy
1% of selected frequency, 0.001 Hz to 100 kHz.
2% of selected frequency, 100 kHz to 1 MHz.

Typical VCG Linearity
±0.1% frequency vs. input voltage (frequency error 0.1% of total deviation—best straight-line method) 0.001 Hz to 100 kHz generated frequency.

VCG Bandwidth
100 kHz.

Frequency Stability
Short term: Drift less than ±0.05% of setting for 10 min.
Long term: Drift less than ±0.25% of setting for 24 hrs.
No critical components requiring internal oven.

Jitter
±0.025% cycle-to-cycle stability.

VERTICAL PRECISION

Frequency Response
Amplitude change with frequency less than 0.1 db, 0.001 Hz to 100 kHz and 0.5 db, 100 kHz to 1 MHz.

Peak-to-Peak Voltage Accuracy
±1% of selected output. 0.1 V to 10 V p-p into precision 50-Ω load.
±1% for outputs 2 through 5.

Amplitude Stability
Short term: ±0.05% of max p-p values for 10 min.
Long term: ±0.25% of max p-p values for 24 hrs.

Symmetry
All waveforms, except ramp, are symmetrical about ground within ±1% of max p-p amplitude (zero adjust rear-panel control provided for output 1).

DC Offset Control
Front panel vernier may be switched in for up to ±5 V dc offset on output 1; dc offset plus ac signal limited to ±15 V peak.

DC Offset Stability
Short term: ±0.05% of max p-p amplitude for 10 min.
Long term: ±0.25% of max p-p amplitude for 24 hrs.

PURITY

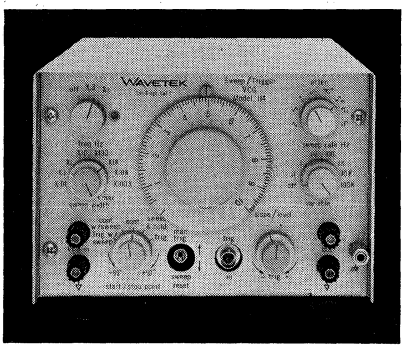
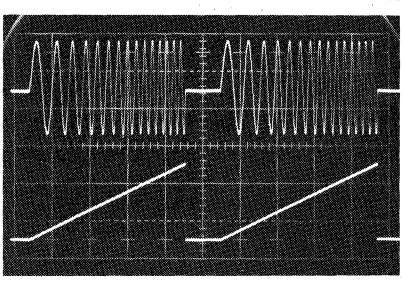
Model 114 Sweep–Trigger VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007





The Model 114 is two independent generators in a single compact unit. The first generator is a precision source of sine, square and triangle waveforms. The second is a ramp generator for sweeping the frequency of the first. Both generators may be operated continuously or triggered with independent frequency control. In the triggered mode, the start-stop point may be continuously varied through 360°. Also, sine² pulses are available from the offset sine output in the triggered mode. A unique feature of the Model 114 is the sweep-and-hold mode which allows static setting of both start and stop frequency. In addition to internal sweep control, terminals are provided for external voltage control of frequency (VCG) — either dc programming or wideband ac frequency modulation. The Model 114 Sweep-Trigger VCG is a portable oscillator, square-wave generator, FM modulator, frequency shift keyer, sweep generator and tone-burst generator. The Model 114 is a versatile, general-purpose instrument for both laboratory and field use.

VERSATILITY

Waveforms

Sine ∿ , square ⊓ , triangle △ offset sine ∿₀ , and sync pulse.

Dynamic Frequency

0.0015 Hz to 1 MHz (10 min to 1 μsec).

Nine Simultaneous Outputs

1. ∿ , ∩ , ⊓ , ⊔ , △ , ▽ , ∿₀ , or ∩° selectable with variable amplitude. Specs apply from 10% to 100% of max amplitude setting. 50-Ω output impedance.
   30 V p-p max (15 V ∿₀) into 600-Ω load. 10 V p-p max (5 V ∿₀) into 50-Ω load. Short circuit output current ±100 mA.
   Model 114B: 5 V p-p into open circuit, 600-Ω output impedance.
2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ⊓ 5 V p-p.
5. △ 5 V p-p.
6. ∩° 2.5 V p-p offset −1.25 V.
7. ∿ , ⊓ , △ , or ∿₀ selectable. 5 V p-p differential output 180° out-of-phase with outputs 2 through 6.
8. Sweep monitor (output of sweep generator), 2.5 V nominal.
9. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 thru 7 are 50-Ω output impedance. Output voltage stated is into open circuit.

OPERATIONAL MODES

Continuous Mode—Operates as a standard VCG. Frequency determined by dial/range settings parallel with VCG input.

Trigger Mode—One complete cycle is generated by activating the manual trigger or applying a pulse or gate to the trigger input.

Sweep and Hold Mode—Generator runs at the selected frequency until triggered by the manual trigger or external pulse. When thus activated, the unit sweeps to a new frequency determined by the sweep-width control and holds this frequency until manually reset.

Continuous with Sweep Mode—Main generator continuously swept from frequency selected by main dial to upper frequency selected by width control.

Trigger with Sweep Mode—No output is generated until manual trigger is activated or trigger input is applied. The unit starts at the frequency selected by the dial and range settings and sweeps to a frequency controlled by the sweep-width control. The generator stops oscillating at this point and will not restart until triggered again. Tone-burst operation may be obtained in this mode by setting the sweep-width control to zero; the number of cycles generated for each trigger applied is determined by sweep-rate controls.

Trigger Controls

Input impedance is 10 kΩ. Input voltage is ±0.5 V to ±100 V. Trigger level and slope are adjustable by front-panel controls. Start-stop point of the waveform is adjustable through 360°.

Sweep Controls

Sweep width is adjustable from 0 to 100:1.

VCG — Voltage-Controlled Generator

Over 20:1 frequency ratio (selectable in ranges of 3:1, allowing excellent range overlap). 4.75 V input for 20:1 frequency ratio (0.5 V per major dial division ±1%). Input impedance to kΩ.

STABILITY*

Short term: ±0.05% for 10 min.
Long term: ±0.25% for 24 hr.

*Percentages apply to amplitude, frequency and dc offset.

HORIZONTAL PRECISION

Dial Accuracy

±1% of full scale to 100 kHz.
±2% of full scale 100 kHz to 1 MHz.

Typical VCG Linearity

±0.1% frequency vs input voltage (frequency error 0.1% of total deviation—best straight-line method). 0.0015 Hz to 100 kHz generated frequency. From 10% to 100% of max dial frequency.

VCG Bandwidth—100 kHz.

Jitter

±0.025% cycle-to-cycle stability.

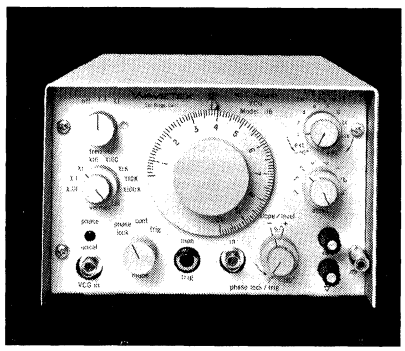
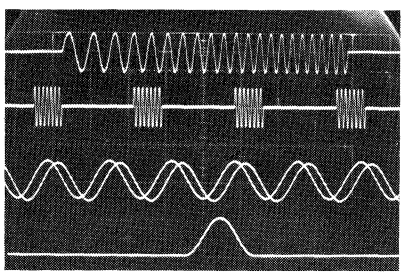
Models 115 & 116
Trigger – Phase Lock VCGs

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007





The Models 115 and 116 generators produce sine, square, triangle and ramp waveforms with trigger and phase-lock capabilities. In addition, the 116 provides tone burst operation giving discrete bursts of signal from 2 to 256 cycles in binary increments. The VCG feature offers precision control of frequency by external voltage, either dc programming or wide band ac frequency modulation. Trigger capability allows triggered or gated operation from an external pulse or gate and single cycle operation (or tone burst, Model 116) by manual push button. Phase-lock operation converts the generator to a slave unit where the frequency is locked to an external frequency input, such as a crystal or master system clock; the relative phase of the two sources is controllable over 360°. The combination of features in these compact portable instruments makes either one virtually indispensable for field or laboratory tests and design operations.

VERSATILITY

Waveforms

Sine ∿ , square ⊓ , triangle △ , ramp ◿ , and sync pulse.

Dynamic Frequency

0.0015 Hz to 1 MHz (10 min to 1 μsec).

Nine Simultaneous Outputs

1. ∿ , ◠ , ⊓ , ⊔ , △ , ◭ , ◿ or ◹ selectable with variable amplitudes. Specs apply from 10% to 100% of max amplitude setting.
   50-Ω output impedance.
   30 V p-p max (15 V◿) into 600-Ω load. 10 V p-p max (5 V◿) into 50-Ω load.

Models 115B and 116B: 5 V p-p into open circuit, 600-Ω output impedance.

2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ∿ 5 V p-p.
5. △ 5 V p-p.
6. ◹ 0 V to −2.5 V ramp; 50% duty cycle.
7. ∿ , ⊓ , △ , or ◿ selectable. 5 V p-p differential output 180° out-of-phase with outputs 2 through 6.
8. ∿$_0$ 2.5 V p-p offset +1.25 V.
9. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 thru 7 are 50-Ω output impedance. Output voltage stated is into open circuit.

VCG—Voltage-Controlled Generator

Over 20:1 frequency ratio (selectable in ranges of 3:1, allowing excellent range overlap). 4.75 V input for 20:1 frequency ratio (0.5 V per major dial division ±1%). Input impedance 10 kΩ.

Trigger

Input impedance is 10 kΩ.
Trigger mode: Manual or external voltage of ±0.5 V will generate one cycle.
Gated mode: Discrete number of cycles may be generated by application of +0.5 V gate.
Up to 100 V may be applied without damage to input circuitry.
Trigger level and slope are adjustable by front-panel controls.
The start-stop point of the generated waveform is adjustable through 360°. Haversine is available by adjusting trigger start control to the −90° position and using the offset sine-wave output 8.

Phase Lock

Frequency range is 10 Hz to 1 MHz.
Input impedance is 10 kΩ.
Input amplitude requirements are minimum 800 mV p-p to lock and 5 V p-p sine wave for specified accuracy.
An input of 100 V will not damage circuitry. Unit will frequency lock to any input within 10 to 1 of dial frequency and will be phase locked to the fundamental of the dial frequency within specified accuracy. Phase accuracy is ±10° from 10 Hz to 10 kHz.
Indicator "phase uncalibrated" light illuminates when selected phase relationship is exceeded. Unit will maintain frequency lock even when light is on.

Tone Burst (Model 116 only)

Tone burst may be generated automatically on command in the trigger mode. Selectable from a front-panel control, the unit will generate 1, 2, 4, 8, 16, 32, 64, 128 and 256 discrete cycles. The unit may be gated from an external voltage and a discrete number of cycles may be generated by selection of the proper gate length (see Trigger).

STABILITY*

Short term: ±0.05% for 10 min.
Long term: ±0.25% for 24 hr.
*Percentages apply to amplitude, frequency and dc offset.

HORIZONTAL PRECISION

Dial Accuracy

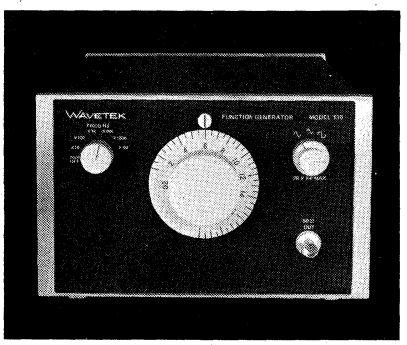
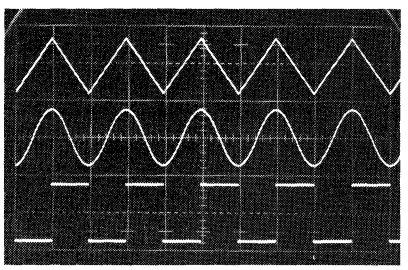
Model 130
Function Generator





The Wavetek Model 130 Function Generator is a low-cost, high-purity source of sine, square, and triangle waveforms. It provides selectable and variable outputs over a dynamic frequency range 0.2 Hz to 2 MHz. Rugged construction, compact size and precision operating characteristics make the Model 130 a portable laboratory of test signals in one economical package. It is ideal for ultrasonic audio and video applications — from trouble-shooting to exotic IC design.

VERSATILITY

Waveforms

Sine ∿ , square ⊓ , triangle △ , and sync pulse.

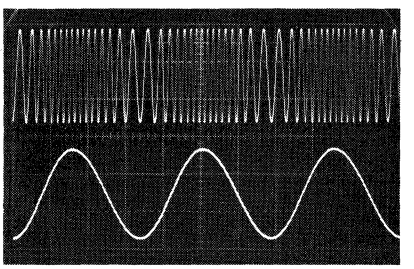
Note: Specifications apply from 0.2 to 2 on the frequency dial. Price and specifications subject to change.

Model 131 VCG



The Model 131 VCG is a precision source of sine, square and triangle waveforms. It offers control of frequency by external voltage — either dc programming or wideband ac frequency modulation. The instantaneous frequency of these waveforms is determined by the combination of the dial setting and the externally applied voltage. The VCG input is in parallel with the frequency dial. Set the dial at mid-frequency and increase the frequency with positive voltage or decrease it with negative voltage. Set the dial at the lowest point and increase frequency with positive voltage. Set the dial at the highest point and decrease frequency with negative voltage. Actually, the Model 131 VCG is a portable oscillator, square-wave generator, FM modulator, frequency shift keyer and sweep generator — all in one economical package.

Price: (F.O.B. San Diego)
Model 131, $345.

Note: Specifications apply from 0.5 to 10 on the frequency dial. Price and specifications subject to change.

The Model 134 is two independent generators in a single compact unit. The first generator is a precision source of sine, square and triangle waveforms. The second is a ramp generator for sweeping the frequency of the first. Both generators may be operated continuously or triggered with independent frequency control.

In addition to internal sweep control, terminals are provided for external voltage control of frequency (VCG) — either dc programming or wideband ac frequency modulation. The Model 134 Sweep/Trigger VCG is a portable oscillator, square wave generator, FM modulator, frequency shift keyer, sweep and tone-burst generator.

Outputs
Sine ∿, square ⊓, and triangle △, selectable and variable over 40 db with vernier control. 50-Ω output impedance (600-Ω available by removing one jumper wire). Greater than 20 V p-p into open circuit; greater than 10 V p-p into 50-Ω load; sweep output may also be selected and attenuated offering < 10 V peak sawtooth into open circuit and < 5 V peak into 50-Ω.
Sync Pulse: Approximately 10 V p-p square wave, 10 kΩ output impedance.

VERSATILITY
Waveforms
Sine ∿, square ⊓, triangle △, and sync pulse.

Dynamic Frequency
0.2 Hz to 2 MHz.

OPERATIONAL MODES
Continuous—Operates as a standard VCG. Frequency determined by dial/vernier/range settings in parallel with VCG input.
Trigger—One complete cycle is generated by applying a pulse to the trigger input.
Gated—Same as trigger except that cycles continue for the duration of input trigger.
Continuous Sweep—The main generator is frequency modulated by the sweep generator. When swept, the main generator frequency rises from the frequency set by the dial and range settings to a frequency selected by the sweep-width controls. Sweep rate is set by panel controls.
Triggered Sweep—Same as continuous sweep mode except one complete sweep cycle is generated for each input trigger pulse. Main generator continues to oscillate between sweep cycles.
Tone-Burst—Main generator is gated by the sweep output (internally connected). The tone-burst rate and length can be independently controlled.

Trigger Input
+1 V 10 kΩ input impedance.

Sweep Time
10 μsec to 100 sec.

Sweep Width
Up to 1000:1 with calibrated control.

VCG — Voltage-Controlled Generator
Approximately 5 V input for 100:1 frequency ratio.

STABILITY
Short term: ±0.05% for 10 min.
Long term: ±0.25% for 24 hr.

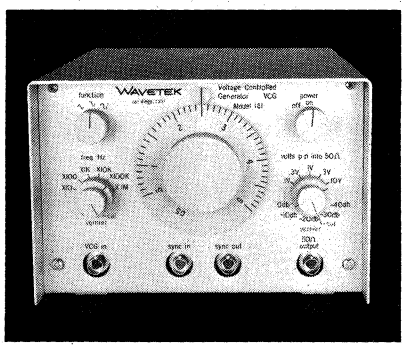
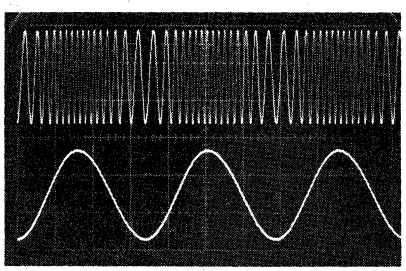
Model 141 VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007





The Model 141 Voltage Controlled Generator (VCG) is a precision source of sine, square, and triangle waveforms generated from 0.5 Hz to 5 MHz. The instrument incorporates VCG circuitry which allows external frequency control over a 1,000:1 range. External control can be either dc programming or wideband ac frequency modulation.

A precision attenuator accurately controls the waveform output level. This attenuator is calibrated in 10-db steps from 10 volts peak-to-peak. Complementing the decade attenuation control is an overlapping vernier control that permits continuous amplitude adjustment.

A synchronizing input is also provided for locking the generator to an external frequency source. When used in this mode, the generator locks to any external signal of at least 5 volts peak-to-peak amplitude that is within 1% of the generator frequency. This permits the generator to produce highly accurate square and triangle waveforms when locked to a precision sine wave source. The all-solid-state Model 141 is contained in a rugged portable package. The precision waveforms, wide frequency range, and functional versatility combine to make it ideally suited as a general-purpose signal generator, an FM modulator, or a sweep generator.

VERSATILITY

Waveforms
Sine ∿, square ⊓, triangle △, and sync output.

Dynamic Frequency
0.5 Hz to 5 MHz (2 sec. to 200 nsec.).

Ranges
X10 = 0.5 Hz to 50 Hz
X100 = 5 Hz to 500 Hz
X1K = 50 Hz to 5 kHz
X10K = 500 Hz to 50 kHz
X100K = 5 kHz to 500 kHz
X1M = 500 kHz to 5 MHz

Main Output
Sine ∿, square ⊓, triangle △, triangle selectable. Maximum amplitude approximately 20 V p-p into an open circuit with calibrated 10 V, p-p into a 50-Ω load. Precision output attenuator in 10-db steps to −40 db with a 10-db vernier giving over-all attenuator capability greater than 50 db. Output impedance is 50-Ω. Short circuit output current is ±100 mA.

Sync Output
Positive- and negative-going pulses coincident with the positive and negative transitions of the square wave.

Amplitude and DC Offset Stability
Short term (10 min): Drift less than ±0.05% of setting.
Long term (24 hr): Drift less than ±0.25% of setting.

HORIZONTAL PRECISION

Frequency Accuracy (Dial Accuracy)
±1% of full scale to 500 kHz.
±3% of full scale to 5 MHz.

Jitter
±0.025% cycle-to-cycle stability to 1 MHz.

Vernier
Electronic frequency vernier provided for precision frequency adjustment.

Sync Input
The instrument may be synchronized to an external signal of at least 5 V p-p. Model 141 frequency must be within 1% of input frequency for lock to occur. A slight change in triangle and sine amplitude occurs when locked. Induced sine distortion is less than 1%.

Time Symmetry (All Waveforms)
99.5% to 500 kHz; 99% to 5 MHz.

VOLTAGE-CONTROLLED GENERATOR

VCG Control
Up to 1,000:1 frequency change with external voltage input. Frequency is limited to maximum of selected range. Required external signal for full voltage control is 2.5 V with an input impedance of 50 Ω.

VCG Input Frequency
DC to 1 MHz. VCG response less than 3 db down at 100 kHz.

VCG Linearity
±0.1%, output frequency vs input voltage—best straight-line method, from 0.5 to 5 times frequency range setting.

VERTICAL PRECISION

Peak-to-Peak Voltage Accuracy
±1%, reference 5 kHz at 0 and −10 db settings.
±3%, reference 5 kHz at −20, −30, and −40 db settings.

Frequency Response
Sine and square output: Amplitude change with frequency less than 0.1 db to 500 kHz, and 0.5 db to 5 MHz.
Triangle Output: Amplitude change with frequency less than 0.1 db to 500 kHz and 1.0 db to 5 MHz.

Amplitude Symmetry
All waveforms are symmetrical about ground within ±1% of max p-p amplitude.

WAVEFORM PURITY

Sine Wave Distortion
Less than:
0.5% to 5 kHz.
1.0% to 50 kHz.
2.0% to 500 kHz.
500 kHz to 5 MHz, all harmonics at least 30 db down.

Triangle Linearity
Greater than 99% to 100 kHz.

Square Wave Rise and Fall Time
Less than 30 nsec.

Total Aberrations
Less than 5%.

ENVIRONMENTAL

Temperature
All specifications listed except for stability are for 25°C ±5°C. For operation from 0°C to 55°C derate all specifications by a factor of 2.

MECHANICAL

Dimensions
7¾ in. w, 5¼ in. h, 11½ in. d.

Weight
7 lb, 10 lb shipping.

Power
105 V to 125 V or 200 V to 250 V; 50 to 400 Hz. Less than 10 W.

Controls
Power on/off switch, frequency range switch, frequency dial, frequency vernier, function selector switch, amplitude selection switch, amplitude vernier. Rear panel: dc zero adjust and external dc offset input.

ORDER INFORMATION

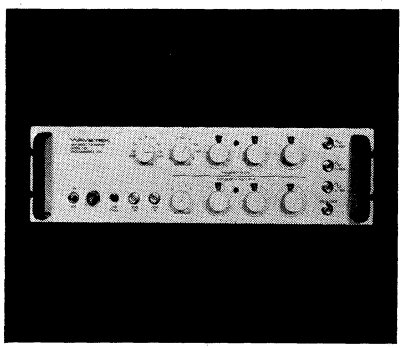
Price (F.O.B. San Diego)
Model 141, $645
Note: Specifications apply from 0.5 to 5 on the frequency dial after 30-min warmup.

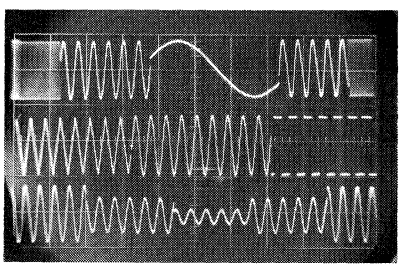
Audio Range Sweep Option
Specifications similar to the Model 141 except that the frequency dial range is from 0.2 to 2. This allows the entire audio band of 20 Hz to 20 kHz to be swept without range switching.

Price (F.O.B. San Diego)
Model 141-A, $645

Models 150 & 155 Programmable VCGs

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007





The Series 150 Programmable Voltage-Controlled Generators are precision sources of sine, square and triangle waveforms that are designed for automatic system application. The Model 155 has local and remote digital control (Model 150 remote only) of frequency, function and amplitude. Additionally, both generators may be controlled by analog voltage in the following manner: the frequency may be programmed or modulated by an ac or dc signal. Generator output may be initiated by means of a trigger which will generate one complete cycle, and/or a gate input which will provide a signal burst of an integral number of cycles for the duration of the applied gate. In the Model 155, programming is accomplished using front-panel switches. The frequency range consists of 8 decade ranges with 3 decimal digits of resolution covering the dynamic range of 0.01 Hz to 1 MHz. The signal amplitude consists of 3 decade ranges with 3 decimal digits of resolution covering the dynamic range of 0.01 volt to 10 volts peak-to-peak. Output range scaling is accomplished using an attenuator with 50-Ω output impedance on all ranges. All specifications require that the output be terminated by a 50-Ω load. The functions and modes are selected by a multiple deck switch. All these controls may be activated remotely by contact closures through a 50-pin connector on the rear panel of both models. The 3-pin digit control of frequency and amplitude is 8421 BCD coded with only 12 lines required for each. The ranges and functions are controlled by 1 line per function. Standard interface options are available so that any logic input may be converted in the instrument to provide proper information control. The Series 150 Programmable VCGs may be driven by computers, punched cards, or tape and servo switch devices. They are useful in automatic test systems, automatic control tools, production test stands, and as precision laboratory test generators.

VERSATILITY

Waveforms
Sine ∿, square ⊓, and triangle △.

Dynamic Frequency
0.01 Hz to 1 MHz in 8 ranges.

Four Simultaneous Outputs
1. ∿, ⊓, △, selectable and digitally variable from 0.01 V to 10 V p-p into a 50-Ω load in 3 ranges with 3-digit resolution.
2. ∿ 1 V p-p into 50-Ω load.
3. △ 1 V p-p into 50-Ω load.
4. ⊓ 0.5 V p-p into 50-Ω load.

Note: All outputs may be shorted without damage to instrument. This specification includes frequency stability.

VCG Analog Voltage Control
Over 20:1 frequency ratio. Analog frequency control and/or modulation. Input impedance is 10 kΩ.

Trigger
Manual or external voltage input control generator in trigger mode. A pulse will generate 1 cycle and a gate will allow a burst of cycles, the number determined by the length of the gate.
Input impedance 10 kΩ.
Input trigger voltage ±5 V to ±100 V.

HORIZONTAL PRECISION

Program Frequency Accuracy
±1% +1 digit with following exceptions: X.01 range is ±2% +1 digit; X100K range is ±5% +1 digit.

Typical VCG Linearity
±0.2% of frequency vs. input voltage, (frequency error 0.2% of total deviation best straight-line method).
0 V to 5 V gives 10:1 frequency deviation. Absolute frequency accuracy same as programmed frequency.

VCG Bandwidth
100 kHz.

VERTICAL PRECISION

Amplitude change with frequency less than 0.1 db to 100 kHz and 0.5 db to 1 MHz.

Peak-to-Peak Voltage Accuracy
Output 1 ±1% +1 digit of the programmed voltage 0.01 Hz to 100 Hz and ±5% +1 digit of the programmed voltage 100 kHz to 1 MHz when properly loaded with 50-Ω. Outputs 2 through 4 ±1% of stated output when properly loaded with 50-Ω. This specification includes amplitude stability.

Symmetry
All waveforms are symmetrical about ground within ±1% of max. p-p amplitude.

DC Offset Stability
Short term: 0.05%; long term: 0.25%.

PURITY

Sine Wave Distortion
Less than:
1% 0.01 Hz to 99.9 kHz.
3% 100 kHz to 1 MHz.

Triangle Linearity
Greater than:
99% 0.01 Hz to 99 kHz.
95% 100 kHz to 1MHz.

Square Wave Rise and Fall Time
Less than 150 nsec. output 1.
Less than 10 nsec. output 4.

PROGRAMMING

Basic units are programmable by remote contact closure. Frequency, function and amplitude may all be programmed. Frequency and amplitude have 3 digits resolution programmed by 8421 BCD code. Range and function selection direct-line contact. The Model 150 is remote programming only. The Model 155 is local and remote control. Local switches override remote programming.

INTERFACE OPTIONS

Option 1—Logic Level.
8421 code "1" = ±5 V to ±20 V dc, 15 mA/line max "0" = 0 V to ±0.5 V, $600.
Option 2—Logic Level.
8421 code "1" = 0 V to ±0.5 V.
"0" = ±5 to ±20 V dc, 15 mA/line max, $600.
Option 2S
Same as above with "0" = +3.5 V dc, 15 mA/line max.

Note: Consult factory for other options available.

ENVIRONMENTAL

Specifications apply at 25°C ±5°C. For operation 0°C to 50°C, derate by factor of 2.

MECHANICAL

Dimensions
19 in. w, 5¼ in. h, 16¼ in. d.

Weight
10 lb, 15 lb shipping.

Power
105 V to 125 V or 200 V to 250 V; 50 Hz to 400 Hz. Less than 15 W.

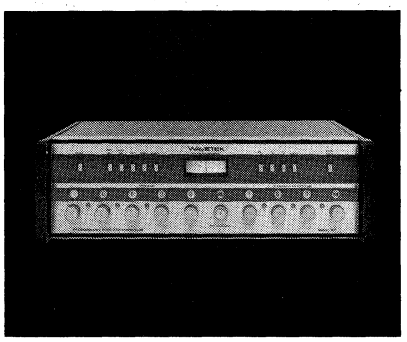
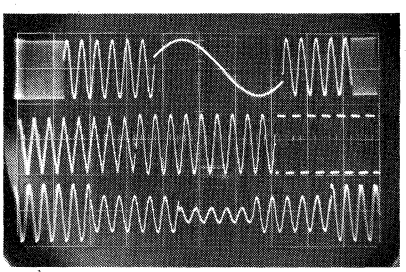
Model 157 Programmable Waveform Synthesizer

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007





The Model 157 Programmable Waveform Synthesizer is a precision source of sine, square and triangle waveforms generated over a frequency range of 100 μHz to 1 MHz. This unique multifunction generator features:

1. 0.01% frequency accuracy.
2. 100 μHz (2.77 hr/cycle) to 1 MHz (1 μsec) frequency range.
3. Sine, square, triangle waveforms.
4. 1,000:1 VCG.
5. Triggered/gated operation.
6. Selectable amplitude to 10 volts peak-to-peak.
7. All parameters programmable.

The frequency, function and amplitude of the generator can be controlled locally with front-panel switching or remotely by BCD/binary programming. Frequency accuracy is 0.01% of programmed frequency with 5-digit resolution on each of 10 ranges. The output voltage level can be programmed from 1 millivolt to 10 volts, peak-to-peak, in four ranges with 0.2% accuracy and 3-digit resolution.

The frequency of the Model 157 can be modulated about an accurately set center frequency by application of an ac voltage input. With a sawtooth input, the frequency can be swept over a 1,000:1 ratio.

A trigger capability is included to allow a single cycle of any waveform, or a burst of cycles, when gated from an external source. In addition, a frequency-search control is provided on the front panel that provides continuous sweep over the selected range with one turn of the control.

The combination of extremely broad signal range, frequency accuracy, and programmability make this instrument ideally suited for the demanding requirements of automatic system testing. It may be programmed by computers, paper tape, magnetic tape, IBM cards, servo switches, or remote-control stations. The instrument will respond to a program change in 1 milliseconds. Typical applications for the Model 157 are:

Automatically swept tone-burst signal source for programmed sonar transducer checkout.

Precise source of discrete frequency changes for audiometric research.

Muscle and tissue stimulus for biomedical research.

Low-frequency triangle waveform for metal testing to determine elongation and modulus of elasticity of samples.

Precision source for the determination of soil compressibility in geophysical studies.

Extremely low-frequency signals for earthquake-simulation studies.

The automatic-programming concept of the Model 157 propels the voltage-controlled oscillator (VCO) into the Computer Age at a time when more and more manufacturers are converting to automatic data processing (ADP) to produce, test and calibrate electronic products. In the easily foreseeable future, the demand for programmable instruments will exceed that now known for conventional manually controlled instruments.

The binary-coded-decimal (BCD) format that commands the Model 157 is used universally and is one of the simplest codes to program. Because all controllers do not use the same logic levels, Wavetek has designed the Model 157 to be optionally available in all of the following commonly-used logic configurations:

Option A: Inverse logic with positive voltage (logical one = 0 volts, logical zero = +2 volts to +10 volts).

Option B: Inverse logic with negative voltage (logical one = 0 volts, logical zero = −2 volts to −10 volts).

Option C: True logic with negative voltage (logical one = −2 volts to −10 volts, logical zero = 0 volts).

Option D: True logic with positive voltage (logical one = +2 volts to +10 volts, logical zero = 0 volts).

When no logic configuration is specified on the sales order, the Option A configuration will be shipped as the standard instrument. When Option B, C, or D is ordered, the specified logic configuration will be supplied at no additional cost.

Besides digital programming of frequency, amplitude and function, the VCO sweep and the gated tone-burst can be automatically programmed from digital or analog sources.

VERSATILITY

Waveforms

Sine ∿, square ⊓, and triangle △.

Dynamic Frequency

100 μHz to 1 MHz in 10 ranges (2.77 hrs to 1 μsec).

Outputs

∿, ⊓, △, selectable and digitally variable from 0.001 V to 10 V p-p into a 50-Ω load in 4 ranges with 3-digit resolution (0.002 to 20 V p-p open circuit).

Note: Output may be shorted without damage to instrument.

VCG—Voltage-Controlled Generator

Over 1000:1 frequency ratio with 5 V signal. Input impedance is 10 kΩ.

OPERATIONAL MODES

Trigger Mode

Generator may be triggered to produce single cycles on command or gated to produce any discrete number of cycles by applying a + gate signal to trigger input for the length of the desired burst.

Input Impedance is 10 kΩ.

Plus gate required is +5 V to +50 V.

Auto Cal Mode

Generator has an automatic control loop to maintain the output frequency for high accuracy and stability.

Manual Cal Mode

Generator is manually calibrated using the control loop but is then automatically returned to the open-loop condition so that it may be swept or triggered.

Search Mode

Generator frequency control within the selected range is transferred from the digital controls to a single turn analog control for convenient manual sweeping of the entire range.

Sync In

Within the upper 4 ranges, the instrument may be frequency synchronized to an external signal of approximately 1 V p-p that is within 1% of the free-running frequency. The induced sine distortion will be less than 1%.

Sync Out

A fixed amplitude square wave is brought out at 1 k impedance for syncing scopes or other equipment.

Model 157 Programmable Waveform Synthesizer

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

HORIZONTAL PRECISION

Auto Cal Mode

Frequency accuracy from programmed input or front-panel selector switches is ±0.01% of programmed frequency, ±1 digit.

Closed-loop stability is within ±0.005% of programmed frequency at constant temperature for a 24-hour period.

Settling time of control loop—Loop will settle to within the accuracy specification of its final value in less than 3 sec max (1 msec for small-step changes).

Manual Cal Mode

Instrument can be calibrated to within an accuracy of 0.02% of programmed frequency and triggered or frequency modulated about this accurate center frequency. Open-loop stability is within 0.05% of setting for eight-hour period at constant temperature.

VCG Bandwidth

1 MHz.

Slew rate—100% of range per μsec.

VCG Linearity

Frequency vs input voltage—best straight-line method.

±0.1% 100 MHz - 10 kHz.

±1% 10 kHz - 100 kHz.

±3% 100 kHz - 1 MHz.

VERTICAL PRECISION

Amplitude change with frequency is less than 0.1 db to 100 kHz and 0.5 db to 1 MHz.

Peak-to-Peak Voltage Accuracy % of Program

1 V to 10 V range ±(0.1% +5 mV).

0.1 V to 1 V range ±(1% +1 mV).

10 mV to 100 mV range ±(1% +0.1 mV).

1 mV to 10 mV range ±(1% ±0.1 mV).

Amplitude Symmetry

All waveforms are symmetrical about ground ±1% of full range.

Trigger start-stop point will be 0 V ±0.5% of output amplitude program.

PURITY

Sine Wave Distortion

Less than:

0.5% 100 μHz to 10 kHz.

1% 10 kHz to 100 kHz.

3% 100 kHz to 1 MHz.

Triangle Linearity

Greater than:

99% 1 Hz to 100 kHz.

95% 100 kHz to 1 MHz.

Square Wave Rise and Fall Time

Less than 100 nsec.

ISOLATION

Output signal can be raised above ground up to 250 V. Caution must be taken as all exposed BNC connectors are at raised potential.

ENVIRONMENTAL

Temperature

Specifications apply at 25°C ±5°C.

Operating temperature range 0°C to 50°C.

REMOTE CONTROL SPECIFICATIONS

Configuration A (Standard)

True or Logic **"1" = 0 V ±1 V.**

Note: 0 V sinks approximately 1.5 mA.

False or Logic **"0" = +2 V to +10 V.**

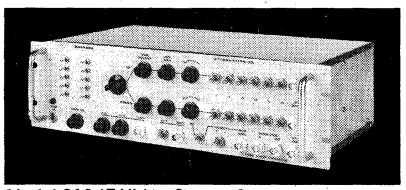
Sweep Generators for TV Industry

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007



Model 310 IF-Video Sweep Generator

860 Series Combination VHF-UHF Sweep Generators

200 Series Video Sweep Generator

These instruments provide a wideband, flat, sweep signal of from 0.1 MHz to 10 MHz. The instrument will also sweep portions as narrow as 1 MHz throughout the entire frequency range. The instrument is designed specifically for testing video stages and chroma applifiers in monochrome or color TV receivers. They also find applications in closed-circuit TV and other video transmission systems. Up to 10 crystal-controlled pulse-type markers are available at discrete customer frequencies and the markers are extremely flexible, providing plus or minus 35-volt pulses for oscilloscope Z-axis modulations. Also, they may be used to shut off the sweep oscillator allowing a useable presentation on wideband oscilloscopes. The markers may also be connected to the oscilloscope horizontal or vertical axis for pulse indications.

Frequency Range
0.1 to 10 MHz.
Sweep Width
1 MHz to 10 MHz.
Output Amplitude
1 V rms (75 Ω).
Output Amplitude Variation
±0.5 db over max sweep width.
Sweep Rate
Line frequency.
Attenuation
99 db, in 3-db steps.

300 Series IF Sweep Generator

These instruments provide fixed-frequency, fundamental outputs for alignment and evaluation of intermediate frequency amplifiers. Models are available between 20 and 80 MHz, fitting the requirements of U. S. or foreign television receivers. They are also ideal for military or industrial applications in this frequency range. Bandpass measurements or other points of interest on a demodulated IF envelope are easily identified with the accurate, sharp, crystal-controlled pulse-type markers provided. These markers, like the 200 series, may be used internally or externally. Several optional features are available with the 300 Series, providing extremely accurate, expanded views of the rejection traps for either IF, video or automatic color phase control. For further details, contact factory representative.

Frequency Range
20-80 MHz (U.S. or foreign standards).
Sweep Width
5 MHz to 15 MHz.
Output Amplitude
1 V rms (75 Ω).
Output Amplitude Variation
±0.25 db.
Sweep Rate
Line frequency.
Attenuation
99 db, in 3-db steps.

400 Series VHF Sweep Generator

This series provides any 13 television channels to either U. S. or foreign standards. All switching is from dc contacts, eliminating the maintenance problems in obsolete instruments which are switching oscillator-lumped constants. Markers are provided at the video and sound carriers of the standard selected and optional features allow the addition of extra markers, local oscillator tracking features or a total of 7 markers on an independent IF function position. Units are available for 5¼ inch x 19 inch rack mounting or in a portable 6 inch x 7 inch x 10 inch cabinet. Other optional features are available as standard items providing complete self-contained test stations for tuner manufacturers. Please contact the factory for specific details.

Frequency Range
Any 13 channels to U. S. or foreign standards.
Sweep Width
5 MHz to octave bands.
Output Amplitude
0.75 V rms (75 Ω).
Output Amplitude Variation
±0.25 db over any channel.
Attenuation
±0.5 db over max frequency range.
99 db, in 3-db steps.

500 Series UHF Sweep Generator

These instruments provide frequency coverage of from 435 to 930 MHz and are designed primarily for the evaluation and alignment of UHF TV tuners and receivers. Instruments are available with video and sound pulse-type markers on all 69 UHF channels with counterparts to European or other standards. Sweep width is continuously adjustable from 5 MHz to 60 MHz and, once preset, maintains a constant bandwidth throughout the entire tuning range.

Frequency Range
435 to 930 MHz.
Sweep Width
5 MHz to 60 MHz.
Output Amplitude
0.5 V rms (50 Ω).
Output Amplitude Variation
±0.25 db over any 50 MHz portion;
±0.5 db over max range.
Sweep Rate
Line frequency.
Attenuation
45 db, in 5-db steps.

Combination Sweep Generators

Since the 200, 300, 400 and 500 Series instruments just described are all of modular plug-in, solid-state construction, they easily lend themselves to a combination of multiple functions. Combination instruments available are described as follows:

Model 310 IF-Video Sweep Generator

This instrument provides the functions of both 200 and 300 Series, using a common 5¼ inch x 19 inch x 10 inch package. An additional savings of up to $500 under the cost of separate units, is attained by using common markers for both the video and IF functions. The Model 310 is ideal for the engineering laboratory, quality control or repair facilities in production TV receiver manufacturing facilities, or in the large-volume TV repair shops.

860 Series Combination VHF-UHF Sweep Generators

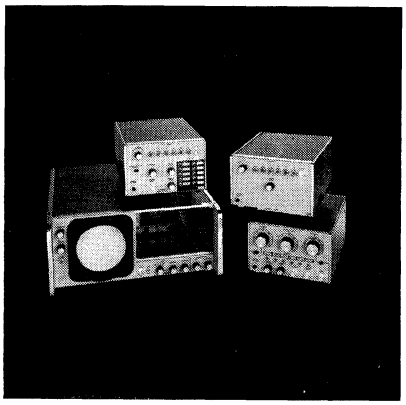
These instruments are a combination of the 400 and 500 Series VHF or UHF Sweep Generators. They provide the same frequency coverage, optional features and specifications and are designed for the engineering laboratory, quality control test station and repair facility. Due to space limitations, all optional features cannot be included and the factory or area representative should be consulted regarding the user's specific requirements.

Distribution Amplifiers

A single Series 300 Sweep Generator may be used with up to 20 Series 30 Distribution Amplifiers. Amplification, isolation, automatic leveling and adjustable amplitude of 0.1 to 1.5 V rms are provided at each test station with a flatness of ±0.25 db. More stations may be accommodated by using one amplifier to drive 20 additional stations.

Programmable Sweep Generators

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007



1000 Series Automatic Programmable Sweep Generators

A new series of sweep generators, unique in both operation and packaging, have been introduced by Wavetek-Indiana. These units provide all-modular construction, including power supply and cabinet. By removing the power supply and cabinet, the basic sweep-generator functions may be mounted in the Wavetek SA series laboratory type, 5-inch electrostatic X-Y display oscilloscope. This provides a completely integrated package with a minimum of space, interconnecting cables, etc.

All of the 1000 Series Sweep Generators utilize pin diode attenuator and leveling systems. This provides a method of leveling the sweep oscillator, or buffer amplifier, output without controlling B+; this results in little or no clipping of the RF envelope. Instead, leveling is controlled by bias on pin diode attenuator. Since the pin diode exhibits a wide attenuation range over the frequency with which they are used (and because they are in a closed-loop control system), the various 1000 Series instruments provide a continuously variable or dc programming output leveling adjustment of from 0 to 20 or 0 to 30 db.

The 1000 Series instruments also are completely voltage-tuned and voltage-swept, again allowing dc control from internal potentiometers or external analog programming. A unique feature available with the 1401, 1501, 1601 and 1001 programmer, provides automatic operation of both tuning and attenuation and, depending upon the test device and programming interface, the sweep oscillator bandwidth. This allows the instrument to be connected to the test device, adjusting itself automatically at the frequency to which the device is tuned. Attenuation is automatically programmed to maintain a constant, preset voltage from the test device and/or programming bandwidth to start or stop at the 3-db points. Analog voltages of all three parameters are readily available. These analog voltages may be compared with the desired parameters, providing error signals to automatically retune or adjust the set unit.

Many more applications and unique concepts are covered by the 1001 Series and various application notes are available from Wavetek-Indiana or the area representative. These instruments also find applications in communication checkout systems for the RF devices in telemetering, missile- or gun-control systems. The various instruments available are described in the following paragraphs.

1001 Sweep-Signal/CW Generator

This instrument provides frequency coverage of from 0.1 to 300 MHz and will sweep from 100 kHz to the entire frequency band. It includes a cw function removing the sweep and blanking for use in signal generator applications. To further enhance this use, the leveled output remains in operation (eliminating the need for calibrated output meters) and the output attenuation system is calibrated from +10 to −70 dbm. A companion programmer unit will allow complete automation or automatic operation of the variable parameters, frequency, attenuation and sweep width.

1312 Series Sweep Generator

This series provides extremely narrow or medium coverage of IF amplifiers and components in the frequency range from 5 to 250 MHz. Units are available for most specific bands of interest and the marker systems are designed for the specific band covered. The pulse-type marker output may be used to internally shut off the sweep signal or the extremely accurate ±35 V marker pulses may be added to the oscilloscope for Z-axis modulation. The marker width is always 1/100 of the display allowing easy-to-read indications on very sharp slopes. Instruments are available covering the 4 to 5, 10 to 12, 11 to 13, 20 to 22 or 70 MHz IF bands. Special instruments for other bands of interest are available with no increase in price. Please contact the factory or the area representative for specific details.

1401 VHF Sweep Generator

This instrument provides frequency coverage of from 5 to 300 MHz and is designed for use in VHF television applications where the complete automatic circuits are useful for the evaluation, alignment or repair of VHF TV tuners or receivers. Optional features are available providing an interface with detent or continuously tuned test systems, and also provide easy-to-read indications of oscillator conversion or gain. Without the automatic circuits, the 1401 is ideal for CATV or MATV applications and, again, special optional features are available.

1501 UHF Sweep Generator

This instrument is similar to the 1401, except that it covers the UHF broadcast band from 450 to 950 MHz. It may be used manually, automatically, with complete dc remote programming, or in the complete operation mode. Markers are available and frequency ranges preset for use to U. S. or all European television standards.

1601 Automatic FM Sweep Generator

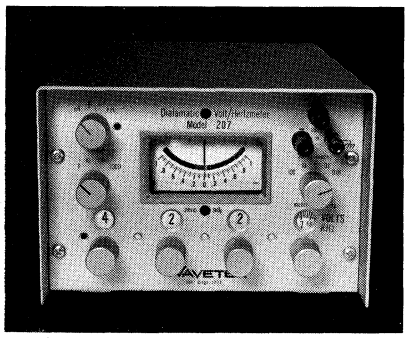
This instrument is similar to the 1401 and 1501 counterparts except that it covers the commercial FM broadcast band (88 to 108 MHz). It also provides complete manual, programming or automatic operation. Optional features are available for complete evaluation and alignment of the tuner, IF amplifier and ratio detector of a receiver, with all signals injected at the antenna terminals.

SA Series 5 Inch X-Y Display Oscilloscope

The SA basic scope frame will accept any of the 1000 Series instruments mentioned previously, providing power requirements, as well as internal connections of the three oscilloscope axes of horizontal, vertical and "Z". The instrument is all-solid-state (except CRT) and has a high-quality, electrostatic focus, 5AQP1 cathode ray tube. Vertical sensitivity is from 10 mV to 100 V/cm and is flat for frequency inputs of from dc to 500 kHz. A switch is provided on the front panel allowing the vertical amplifier to be internally connected to the built-in sweep generator or externally used for other applications.

Model 207 Dialamatic Volt/Hertzmeter

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007



The 207 Dialamatic Volt/Hertzmeter may be used to measure, monitor and tune dc voltage from 0 to 1,000 volts and frequency from 5 Hz to 100 MHz at accuracies to 0.01% of reading. This unique instrument is a differential dc voltmeter and frequency meter combined in a compact, economical package. The accuracy and resolution of the digital device are combined with the analog advantages of fast readings at low frequencies and drift or deviation measurement capability. The decade switch incorporates Wavetek's unique Transfermatic Switch, which automatically carries all transfer points, adding speed to the above advantages. The accuracy of the dc instrument is based on a matched pair of zener diodes and the frequency is based on the stability of a crystal. Frequency is converted to a voltage which is measured using ratio techniques. A novel input trigger circuit eliminates the need for slope and level adjustments and allows measurement of any waveform over a broad range of amplitude variations. The Dialamatic Volt/Hertzmeter may be used for production checkout, frequency alignment and tuning for tachometer and servo applications, and as a precision low-cost, general-purpose, broad-band measurement tool.

FREQUENCY

Frequency Ranges

Direct Input

1 kHz	5 Hz to 1 kHz
10 kHz	50 Hz to 10 kHz
100 kHz	500 Hz to 100 kHz
1,000 kHz	5 kHz to 1,000 kHz
÷ 100 Input	
100 kHz	1 MHz to 10 MHz
1,000 kHz	1 MHz to 100 MHz

Frequency Measurement Accuracy

±0.01% of reading +0.001% of range at constant temperature. Temperature coefficient ±0.0005% of range/°C (calibrated at 25°C).

Typical Response to Step Input

0.01% of range in 3 sec.
0.001% of range in 8 sec.

Deviation Response

Null meter responds to sinusoidal frequency deviations to 0.5 Hz. Meter deflection is down 3 db at 0.5 Hz.

Input Trigger Characteristics

Sensitivity—5 Hz to 1 MHz

The ac-coupled input accepts any time-symmetrical waveform and negative-going pulses from 250 mV p-p to 700 V p-p without need for manual adjustment of slope or lever. Threshold level for positive pulses increases as the duty cycle decreases.

Input Impedance—5 Hz to 1 MHz

For amplitudes less than 5 V peak-to-peak, 1 MΩ shunted by 40 pF.
For amplitudes above 5 V peak-to-peak, 100 kΩ shunted by 100 pF.

Sensitivity—1 MHz to 100 MHz

The ac-coupled input accepts voltage levels from 250 mV rms to 2.5 V rms, limited to 9 x 10^8 V/sec (about 1 V rms at 100 MHz sine wave). 5 V rms maximum input without damage to circuit.

Input Impedance—1 MHz to 100 MHz

50-Ω nominal.

Time Base

1 MHz crystal, ±0.005% accuracy.
Temperature drift ±0.005% −30°C to +90°C.
Stability 5 ppm per 30 days.
Note: Conforms to MIL-C-3098 type CR18.

Self-Check

Instrument may be calibrated in the field to the internal crystal frequency without need for additional calibration equipment.

DC VOLTAGE

Input

0 to ±1,000 V dc.

Selectable Voltage Ranges

1 V, 10 V, 100 V, and 1,000 V (decimal indicator automatically coupled to range switch).

DC Input Impedance

Infinite at null in 1 V and 10 V ranges, 10 MΩ at null in 100 V and 1,000 V ranges.

DC Accuracy

±0.01% of reading +0.001% of selected voltage range +10 μV at 25°C ±5°C.

DC Reference Stability

±0.002% after 15 min. warmup at constant temperature and line.

Common Mode Rejection

with 1 kΩ unbalance in either side of input and up to 70% humidity:

Voltage Range	dc	60 Hz	400 Hz
1 V & 10 V	130 db	100 db	90 db
100 V & 1,000 V	100 db	85 db	70 db

GENERAL

Warmup Time

Above specifications apply after 1-hour warmup. The instrument is ready for use immediately after turn-on.

Environmental

Specifications apply to 25°C ±5°C; for operation from 0°C to 50°C, derate by factor of 3.

Recorder Output

An electrical output is available for long-term drift and deviation testing with ±300 mV full-scale signal.

Controls & Readout

Power/Model SW off +, −, kHz.
Range Switch: 1-, 10-, 100-, 1,000-V/kHz.
Null Sensitivity,: ±0.01%, ±0.1%, ±1%, ±10%, ±100% of range for full-scale meter deflection.
Transfermatic Switch:* 5-digit decade switch with automatic transfer points.
Null Indicator: taut-band meter with mirror scale and knife-edge pointer.

Measurement Resolution

Transfermatic Switch Resolution: 1 part in 100,000 (0.001% of range).
Null Resolution: 0.0002% of range indicated by a change of 1 minor division at the most sensitive setting.

Direct Reading Meter

Full-scale sensitivity; dc voltage from 100 μV to 1,000 V; frequency from 100 Hz to 100 MHz.

Dimensions: 7¾ in. w, 5¼ in. h, 11 in. d.

Weight: 10 lb, 13 lb shipping.

Power Requirements

105 to 125 V or 200 to 250 V, 50 Hz to 400 Hz. Less than 20 W

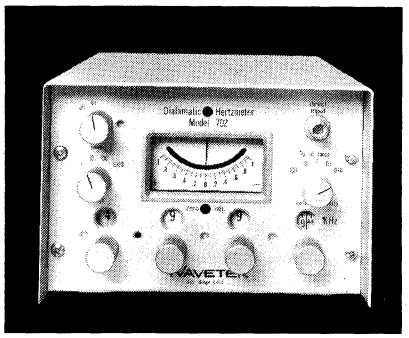
Price (F.O.B. San Diego)

Model 207, $1,095.

*Patent pending

Models 701 & 702
Dialamatic Hertzmeter

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007



The 700 Series Dialamatic Hertzmeter measures frequency from 5 Hz to 100 MHz at accuracies to 0.01% of reading. This is a unique instrument. It utilizes a series of decade switches and a null meter, providing techniques similar to those used in differential voltmeters. Thus, the accuracy and resolution of a digital device are combined with the analog advantages of fast readings at low frequencies and drift or deviation measurement capability. The decade switch incorporates Wavetek's unique Transfermatic Switch, which automatically carries all transfer points, adding speed to the above advantages. The accuracy of the instrument is based on the stability of a crystal. Frequency is converted to a voltage which is measured using ratio techniques. A novel input trigger circuit eliminates the need for slope and level adjustments and allows measurement of any waveform over a broad range of amplitude variations. The hertzmeter may be used to measure, tune and monitor frequencies with precision. It also is useful for production checkout of oscillators and filters, frequency deviation measurement such as FM telemetry checkout, frequency alignment and tuning for tachometer and servo applications, and as a low-cost general-purpose, broad-band measurement tool.

Frequency Ranges

Direct Input

1 kHz range	5 Hz to 1 kHz
10 kHz range	50 Hz to 10 kHz
100 kHz range	500 Hz to 100 kHz
1,000 kHz range	5 kHz to 1,000 kHz

÷ 100 Input, Model 702 only:

100 kHz range	1 MHz to 10 MHz
1,000 kHz range	1 MHz to 100 MHz

Frequency Measurement Accuracy

±0.01% of reading +0.001% of range at constant temperature.

Temperature coefficient ±0.0005% of reading/°C (calibrated at 25°C).

Measurement Resolution

Transfermatic Switch Resolution: 1 part in 100,000 (0.001% of range).

Null Resolution: 0.0002% of range which is indicated by a change of 1 minor division at the most sensitive setting.

Typical Response to Step Input

0.01% of range in 3 sec.

0.001% of range in 8 sec.

Deviation Response

Null meter will respond to sinusoidal frequency deviations from dc to 0.5 Hz. Meter deflection is down 3 db at 0.5 Hz.

Input Trigger Characteristics

Sensitivity—5 Hz to 1 MHz Input

The ac-coupled input accepts any time-symmetrical waveform and negative-going pulses from 250 mV peak-to-peak to 700 V peak-to-peak without need for manual adjustment of slope or level. Threshold level for positive pulses increases as the duty cycle decreases.

Input Impedance—5 Hz to 1 MHz

For amplitudes less than 5 V peak-to-peak, 1 MΩ shunted by 40 pF.

For amplitudes above 5 V peak-to-peak, 100 KΩ shunted by 100 pF.

Sensitivity—1 MHz to 100 MHz (Model 702 only)

The ac-coupled input accepts voltage levels from 250 mV rms to 2.5 V rms, limited to 9 x 10^8 V/sec (about 1 V rms at 100 MHz sine wave). 5 V rms maximum input without damage to circuit.

Input Impedance — 1 MHz to 100 MHz (Model 702 only)

50-Ω nominal.

Time Base

1 MHz crystal, ±0.005% accuracy.

Temperature drift ±0.005% −30°C to +90°C.

Stability 5 ppm per 30 days.

Note: Conforms to MIL-C-3098 type CR18.

Self-Check

Instrument may be calibrated in the field to the internal crystal frequency without need for additional calibration equipment.

Warmup Time

Above spfecifications apply after 1-hour warmup. The instrument is ready for use immediately after turn-on.

Operating Temperature Range

0°C to 50°C and less than 70% relative humidity.

Recorder Output

An electrical output is available for long-term drift and deviation testing with ±300 mV full-scale signal.

Controls & Readout

On-Off Switch, Range Switch: 1 kHz, 10 kHz, 100 kHz, 1,000 kHz.

Null Sensitivity: ±0.01%, ±0.1%, ±1%, ±10% and 100% of range for full-scale meter deflection.

Transfermatic Switch:* 5-digit decade switch with automatic transfer points.

Null Indicator: taut-band meter with mirror scale and knife-edge pointer.

Dimensions

7¾ in. w, 5¼ in. h, 11 in. d.

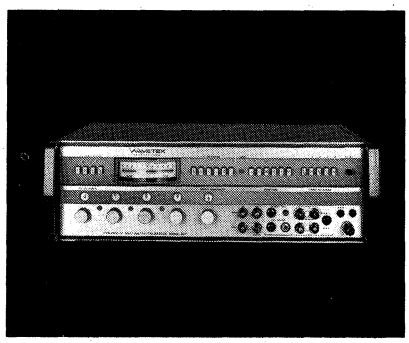
Model 220 Dialamatic Measurement System

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007



The Wavetek Model 220 presents an entirely new concept in multiple-purpose meters. The versatility that is often found in low- to medium-accuracy multimeters is combined with the accuracy that is usually only found in special-purpose calibrators. The addition of the exclusive Wavetek Transfermatic Switch mechanism and the Model 220 nonsaturating null amplifier result in an instrument that has unequalled versatility, accuracy and ease of operation.

The Model 220 has the following features:

Measures dc voltages to 1,200 V.
Measures dc ratio.
Measures ac voltages to 1,200 V.
Measures frequency to 12 MHz.
Measures ohms to 12 ohms.
Measures ohms ratio.
Supplies calibrated dc voltage to 120 V.

The basic 0.005% accuracy of this instrument is such that it can be used as a general-purpose laboratory tool in research and development, and also as an indispensable aid in the maintenance and calibration of instruments that are less accurate.

The Model 220 is a precision potentiometric/null balance measuring device. The readout is a six-digit precision Kelvin Varley bridge interconnected by Wavetek's Transfermatic Switch. Output terminals are provided for permanent recording of off-null deflections.

Digital Readout
Six-digit potentiometric control with associated dial indicators: 4 switches, and 1 potentiometer in the least-significant decade having 2-digit resolution.

Analog Readout
Edge-reading, taut-band null indicator with selectable full-scale indication from ±0.01% of range to 100% of range.

Meter Sensitivity
±0.01 0.1, 1, 10 and 100% of range. The full-scale sensitivity of the null meter depends on the meter sensitivity and the range selected for the parameter being measured. When measuring dc volts, the dc range switch determines the meter sensitivity. For all other measurements, the plug-in range switch determines the sensitivity.

Full-Scale Meter Sensitivity in Volts and kHz.

Meter Sensitivity Setting in % of Range	Range Setting, Volts—kHz/kΩ 1	10	100	1,000
100	1	10	100	1,000
10	0.1	1	10	100
1	0.01	0.1	1	10
0.1	0.001	0.01	0.1	1
0.01	0.0001	0.001	0.01	0.1

Resolution (Null Meter)
1 ppm of range (½ minor division on mirror scale).

Resolution (Transfermatic Switch)
0.5 ppm of range (½ minor division on dial).

Voltage Reference Stability
±0.0005% per hr.
±0.0025% per yr.

Recorder Output
±300 mV output corresponding to full-scale meter deflection. Output impedance—10 kΩ.

Environmental
All specifications apply for 25°C ±5°C; for operation from 0°C to 50°C, derate by factor of 3.

Dimensions
17 in. w, 5¼ in. h, 16 in. d.

Weight
Approximately 15 lb net, 20 lb shipping.

Power Requirements
105 V to 125 V or 200 V to 250 V, 50 Hz to 400 Hz. Less than 50 watts.

DC/DC RATIO SPECIFICATIONS

Input
0 to 1,200 V dc in 4 ranges: 1 V, 10 V, 100 V, and 1,000 V, each range having 20% over-range capability.

Polarity
Front-panel pushbutton selected, plus or minus.

DC Accuracy
±0.005% of reading +0.001% of range (or 15 μV); 0 to 100 V ±0.01% of reading ±0.001% of range, 100 V to 1,200 V.

DC Input Impedance
Infinite at null on 1 V, 10 V, and 100 V ranges; greater than 10 megohms on 1,000 V range.

DC RATIO LINEARITY
0.001% of full scale (+10 V nominal input into 25 kΩ).

DC CALIBRATOR SPECIFICATIONS

Accuracy
0.005% of value ±0.001% of range from 0.00000 to 119.9999 V.

Output Current
1 mA.

Overload
A current trip relay is provided to open the calibrator if the output current is exceeded.

AC SPECIFICATIONS

Frequency Range
5 Hz to 100 kHz.

Input Voltage
1 mV to 1,000 Vac rms in 4 ranges.

Input Impedance
1 MΩ and 40 pF.

AC ACCURACY
±0.1% of reading ±0.005% of range, 50 Hz to 5 kHz, 1 mV to 120 V.
±0.5%, 5 Hz to 20 kHz, 1 mV to 120 V (10 Hz to 20 kHz on 1,000 V range).

HERTZMETER SPECIFICATIONS

Frequency Range
10 Hz to 12 MHz in 5 ranges.

Accuracy
±0.001% of reading +0.001% of range.

Typical Response to Step Input
±0.01% of range in 3 sec, ±0.001% of range in 8 sec.

Input Trigger Characteristics
250 mV (rms) sensitivity, ac-coupled input into zero crossing detector; max input 250 V rms.

Input Impedance
1 MΩ and 40 pF to 5 V input, 100 kΩ and 100 pF to 250 V.

Self-Calibration Feature
Frequency calibration and linearity can be checked for all ranges by means of 1 MHz and 500 kHz test signals on front panel.

OHMS/OHMS RATIO SPECIFICATIONS

Ohms Range
0 to 12 MΩ in 5 ranges.

Accuracy
±0.005% of reading +0.001% of range, 1 kΩ to 112 kΩ.
±0.01% of reading +0.002% of range, 1 kΩ and 1 MΩ ranges.

Test Current

Range	Test Current	Max Voltage Across Range
0 to 1,200-Ω	1 mA	1.2 V
1 kΩ to 12 kΩ	1 mA	12 V
10 kΩ to 120 kΩ	100 μV	12 V
100 kΩ to 1,200 kΩ	10 μV	12 V
1 MΩ to 12 MΩ	1 μV	12 V

Ohms Ratio Accuracy
±0.02%.

ORDER INFORMATION

Price: (F.O.B. San Diego)
Model 220, $2,395.

Note: Price and specifications subject to change.

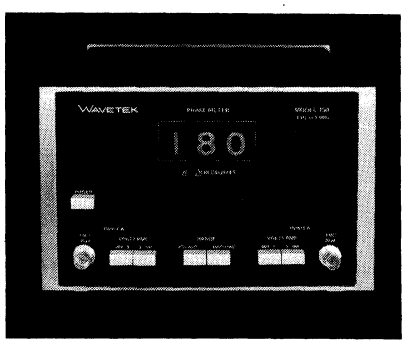
Model 740 Phase Meter

Model 750 Digital Phase Meter

WAVETEK®
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Wavetek Model 740 Phase Meter is a rugged, portable, all-solid-state instrument for measuring the phase between any two alternating signals. The phase is displayed directly on a front-panel meter. In addition, a voltage of 0 to 3.6 volts dc is available for input to a DVM, resulting in a direct reading. The Model 740 has four selectable meter ranges. If high resolution is required, a phase offset arrangement allows all readings to be made on the most sensitive scale.

ACCURACY
Absolute Accuracy
±0.1%, 10 Hz to 100 kHz; ±0.3%, 100 kHz to 1 MHz.
Resolution
0.1°.
INPUT SIGNAL
Amplitude
1 mV to 10 V rms (2.8 mV to 28 V p-p).
Frequency
10 Hz to 2 MHz.
Input Impedance
1 MΩ and 20 pF.
Maximum DC
400 V.
RECORDER OUTPUT
0 to 3.6 V dc proportional to phase (10 mV/degree); impedance 1 kΩ.
READOUT CONTROLS
Meter readout with four scales: 0 to 18°, 0 to 36°, 0 to 180°, and 0 to 360°
Phase offset control: 0 to 180° in 10° steps.
Phase offset vernier: 0 to 10°.
Phase shift selector: 6 or 180°
POWER REQUIREMENTS
100 V to 130 V or 200 V to 250 V, 50 Hz to 400 Hz.
ORDER INFORMATION
Price: (F.O.B. San Diego)
Model 740, $895.
Note: Price and specifications subject to change.



The Wavetek Model 750 Digital Phase Meter is a precision, wideband, general-purpose instrument, designed to accurately measure the phase between any two signals. A four-digit readout displays the phase reading in degrees with 0.1° resolution. This all-solid-state unit will measure signals with an amplitude ratio of up to 10,000:1 over a frequency range of 10 Hz to 2 MHz. Unique signal input circuitry allows accurate measurements of signals having high harmonic distortion. The Model 750 combines versatility, accuracy and ease of operation—features formerly available only in larger cabinet models in a rugged, portable package.

ACCURACY
Absolute Accuracy
±0.1%, 10 Hz to 100 kHz: ±0.3%, 100 kHz to 2 MHz.
Resolution
0.1°.
Stability
±0.15° for 10 hours.
INPUT SIGNAL
Amplitude Ranges
1 mV to 10 V rms (2.8 mV to 28.28 V p-p); 0.3 V to 300 V rms (0.848 V to p-p).
Frequency
10 Hz to 2 MHz.
Input Impedance
1 MΩ and 20 pF.
Maximum DC
400 V.
RECORDER OUTPUT
0 to 3.600 Vdc (10 mV/degree) proportional to phase reading; output impedance 1 kΩ.
READOUT/CONTROLS
Four-digit Nixie readout 000.0° to 360.0°, power on-off amplitude range.
POWER REQUIREMENTS
100 V to 130 V or 200 V to 250 V, 50 to 400 Hz.
ORDER INFORMATION
Price: (F.O.B. San Diego)
Model 750, $1,495.
Note: Price and specifications subject to change.

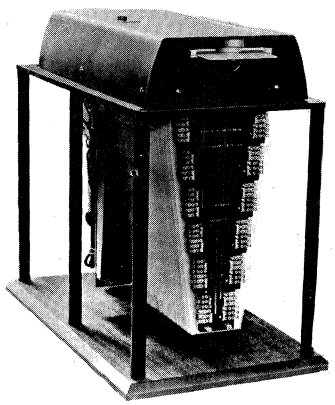
WRE CARD OPERATED *Programmers*

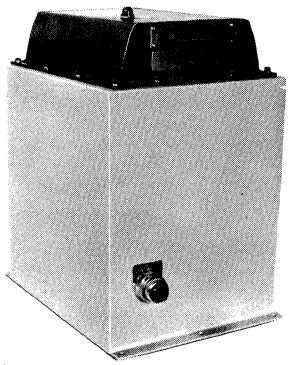


These advanced concept card actuated reader-programmers have high current carrying capabilities and provide complex switching on each data bit.

Built around a new mechanical switching arrangement that features single pole, double throw switches with silver, self-wiping contacts and excellent dry circuit characteristics.

Proper design with attention to insulation, mechanical strength and positive actuation assure long service life. Card reader instantly interprets and activates all desired contacts simultaneously.

provide complex switching on each data bit



READER/ACTIVATOR CAPACITY: Model 240P: 240 bits/240 isolated SPDT switches. Model 960P: 960 bits/960 isolated SPDT switches. Model 96: 96 bits/96 isolated SPDT switches.

DATA MEDIUM: Standard 12 x 80 EAM CARD (IBM format). Model 240: Utilizes total card data capacity by reading four, 12 x 20 bit zones (two zones each end of card). Model 950: Reads total 960 bit card simultaneously.

SWITCH CONTACT CONFIGURATION: Standard: Form A — SPST normally open. Form B — SPST normally closed. Form C — SPDT non-shorting. Form D — STDT shorting. Each of the standard configurations available on any bit within the programmer. Special switching per customer specifications.

SWITCH CONTACTS: Silver alloy, double-action, self-cleaning. Contact-to-contact resistance 0.003 to 0.015 ohms. Excellent dry circuit characteristics.

SWITCH CONTACT ELECTRICAL RATING: (Resistance load). Break 2 amperes at 28 Vdc; break 1 ampere at 110 Vac; and continuously carry 5 amperes.

PROGRAMMER ACTUATION: Model 240P and Model 960P are available motor driven only.

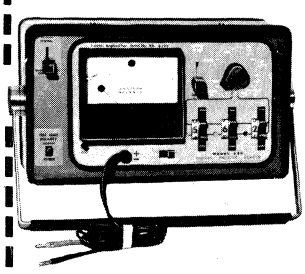
MOUNTING: Bench (horizontal) or rack (vertical) 10″ W, 15″ H, 13″ D.

NEMA ENCLOSURE: 14″ D, 7¾″ W, 13″ H.

SPECIALS: to customer specifications.

WRE DIGITAL SCALER INSTRUMENTATION

- ★ 3 significant figure in-line digital presentation
- ★ Within 1% of indicated value on all measurements
- ★ Passive solid state circuitry for long term stability
- ★ Automatic, fail-safe resettable protection system
- ★ Rugged, militarized, self-contained portables



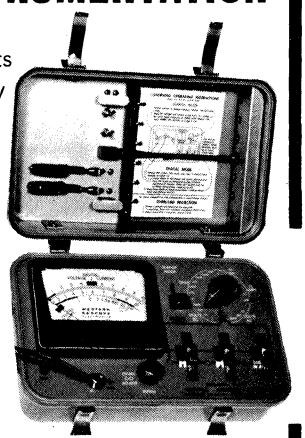
MODEL 320, IN BENCH CASE

DIGITAL TRUE RMS

Model 320 . . . Precise digital readout of the RMS value of complex waveforms containing both AC and DC components and with crest factors as great as 10 to 1. Accurate to within 1% of indicated value from 100 mv to 1000V. Freq. Resp.: 20 Hz to 100 kHz.
(Shown in bench case) Supplied in fiberglass lab case 10″ x 6½″ x 3¼″, 4½ lbs. net.

DIGITAL MULTIMETER

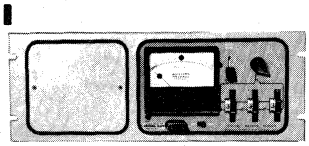
Model 300 . . . 3 figure digital. All readings within 1% of indicated. AC or DC voltage: 100 mv to 1000V; response 10 Hz to 100 kHz calibrated in RMS value of sine wave. DC current: 10 μA to 10 A. Resistance 1Ω to 1 MΩ (wheatstone bridge with direct digital readout). Resettable overload protection system. Supplied in waterproof, fiberglass case 10″ x 7¼″ x 4¾″, 6¾ lbs. net. Model 300M (Militarized) for use in extreme environments.



MODEL 300, IN FIELD CASE

DIGITAL DC VOLTMETER

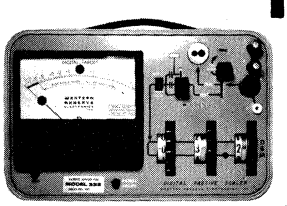
Model 310 . . . Readability, repeatability and within 1% of accuracy of actual readout — at a price of conventional analogs.
3 significant figure indication 100 mv to 1000V DC. (Shown in 19″ rack panel) supplied in fiberglass lab case, 3¾ lbs.
Model 311 available same except overload protection non-resettable.



MODEL 310, IN RACK MOUNT

TRANSMISSION LEVEL (dbm) *METER*

Model 332 . . . For measuring and setting transmission level. Direct reading in dbm for 600 and 900 ohm sources. (0 dbm = 1 milliwatt) 3 digit readout of —20.0 to +20.0 dbm, within ±0.1 db. Range to —35 dbm analog. Freq. response: 10 Hz to 100 kHz. RMS responding. Fail safe resettable overload protection. Fiberglass lab case shown, 10″ x 6½″ x 3¼″.



MODEL 332, IN LAB CASE

Adapters available for DC & AC current and transistor testing.

Nickel-Cadmium and Silver-Zinc Battery Charger/Analyzer Systems

W R E

MODEL 1575 *Nickel-Cadmium System*

This battery charger-analyzer concept is thoroughly design tested as a system to provide maximum efficiency in programmed maintenance of nickel-cadmium batteries.

Required sequence of events is unitized in a functional package to increase work flow efficiency with minimum equipment. Since all units can function simultaneously, single system has capacity for 3 batteries at a time; i.e., one discharging, one charging, and one under evaluation.

Exhaustive tests have proven this system to assure a full charge — safely! . . . and provide cell restandardization in the process.

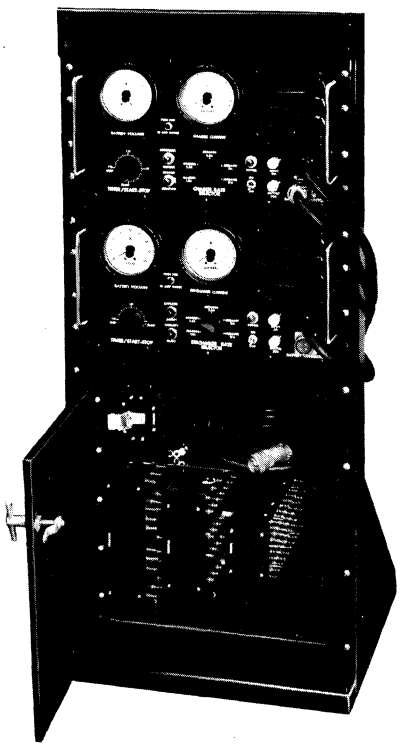
1) Deep discharge of each cell assures total emptying of battery safely — with all cells to "zero". This standardizing effect assures a zero-base for each cell.
2) 150% ampere-hour charge at precise prescribed rate assures "total-fill" of the battery.
3) Evaluation cycle "pulls" 100% of battery rated capacity in 2 hours. Analyzer automatically cuts off at either of 2 points . . . at preset voltage point, or at 2 hours . . . and "holds" the result.

ANALYZER, MODEL 1000 — Discharge Rate: 5 preselectable discharge current ranges: 1.8, 2.5, 5.5, 11, 17 amperes. Discharge Time: 0-2 hours, ±5%. Cut-off Voltage: Internally adjustable, 17-20 volts. Indicators: "Capacity Accept", "Capacity Reject", "Power On". Meters: 250°, 4½", ruggedized. Voltmeter: 0-40 volts. Ammeter: 2-range; 0-10, 0-20 amperes. Circuit: Solid state power switching. Physical: 19" W., 10½" H., 11" D., 33 lbs. Rugged, portable, rack mountable, drip-proof construction. Cooling is forced air.

CHARGER, MODEL 1500 — Charge Current: 5 preselectable ranges: 1.8, 2.5, 5.5, 11, 17 amperes, ±3%. Charge Time: 0-3 hours ±5%. Meters: 250°, 4½", ruggedized. Voltmeter: 0-40 volts. Ammeter: 2-range; 0-10, 0-20 amperes, Overload Protection: Charge terminates if output voltage rises above 33V on all ranges (except 2.5A range — 34.5V). Indicators: "Power On", "Charge Complete", "Abnormal Charge". Circuit: Solid state. Physical: 19" W., 10½" H., 11" D., 72 lbs. Rugged, portable, rack mountable, drip-proof. Cooling is forced air.

5 popular discharge fixtures for fixed resistive load to each cell at the C/2 rate, and MA and MS type battery cables are available from stock. Other fixtures are available on special order.

Specifications subject to change without notice.



Overall system, rack and cabinet, is approximately 22" W., 4' H., 12" D., 192 lbs. and is of strong steel construction with drip-proof finish. Discharge fixtures and cables fit neatly into the compartmentized storage cabinet.

MODEL 1525 *Silver-Zinc Battery Charger*

Also charges Nickel-Cadmium, Silver-Cadmium, and Lead-Acid Types

The Model 1525 is a portable, 3-channel battery charger that meets the most stringent requirements for charging Silver-Zinc batteries (such as BB-451/U types).

The unit is designed with modular plug-in circuits and features a precision, solid state electronic control that permits front-panel programming of cut-off voltages in one-tenth volt steps, from 0.0 to 36.0 volts. This programming extends the capabilities so that the equipment may be used for charging Silver-Cadmium, Nickel-Cadmium or Lead-Acid battery types.

Each of the 3 channels may be used independently at currents of 1.0 or 2.25 amperes, or connected in parallel to provide up to nine different currents (up to 6.75 amperes).

Fail-safe charging indication is provided via internal sensing circuitry which assures that the programmed charging current is flowing when the charging lamp is lighted. The system automatically prevents damage to batteries or charger due to operator error.

Single cell charge capability permits charge equalizing of a battery. The 1525 is thoroughly militarized . . . including R.F.I. suppression.

Accessories furnished include 3 special charging handles for BB-451/U Silver-Zincs, and universal charging cables for other batteries. Cables, line cord and instruction manual are neatly stored in the case lid. Self-contained, water tight portable case; 13⅜" W., 11" H., 11½" D., 38 pounds net.

Specifications subject to change without notice.

MARK 200—MODULAR SERVO PENMOTOR RECORDERS

The Brush Mark 200 Recorder System Series 1707 combines the advantages of all solid state electronics with modular construction and a flexibility in application never before achieved. The result is a totally new concept in instrument design which allows any system to be tailored to specific requirements by selection from a broad range of "building block" subsystems.

6 STEPS TO CREATE YOUR OWN MODULAR SERVO PENMOTOR RECORDER

- CHOOSE YOUR OSCILLOGRAPH
- SELECT A SUITABLE PENMOTOR
- IDENTIFY APPROPRIATE CHANNEL-WIDTH COMBINATION
- SELECT SIGNAL CONDITIONER
- CHOOSE YOUR CABINET
- CREATE YOUR MODEL NUMBER

GENERAL SPECIFICATIONS

No. analog channels .....4/80 mm, 8/40 mm, or 4/8-channel "Multimarkers," or any in combination
No. event channels .....2 standard (others mounted interchannel at option)
Non-linearity .....±0.5% full scale
Chart speeds .....0.05, 0.1, 0.2 (or 0.25*), 0.5, 1, 2, 5, 10, 20 (or 25*), 50, 100, 200 mm/sec. Other chart speeds on special order.
*Specify whether 20 or 25
Chart-speed inaccuracy .....±0.25% @ nominal line frequency
Chart capacity .....high contrast: 500′; reproducible: 850′
Writing method .....pressurized ink
Trace width .....0.01″ nominal
Presentation .....true rectilinear
Timer .....standard timing pulses of 1 plus 10, 20, 30, or 60 seconds

CHOICE OF OSCILLOGRAPHS

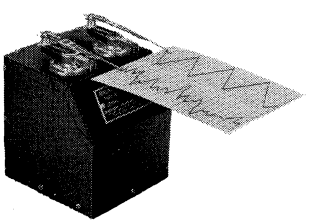
A flush mounted vertical oscillograph... a pull-out horizontal oscillograph...

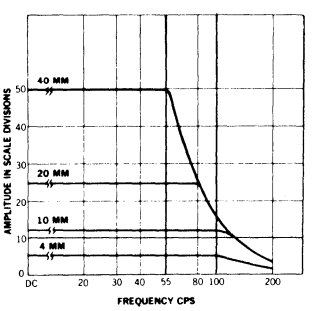
- identical performance characteristics
- push-button control of 12 chart speeds
- provision for quick chart paper loading
- easy accessibility to all internal parts

CHOICE OF PENMOTOR

DUAL 40MM PENMOTORS

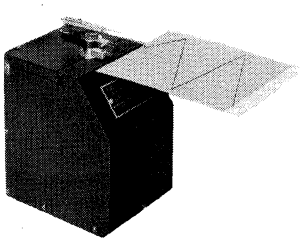
Containing two analog penmotors in a single magnet block, this compact unit gives you two 40mm analog channels powered by an associated dual-channel drive amplifier. Frequency response of this system is 55 Hz full scale, extending to 200 Hz at reduced amplitudes.





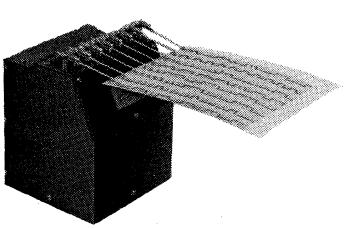
SINGLE 80MM PENMOTOR

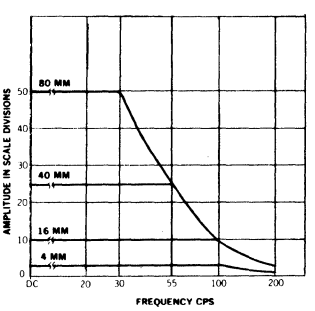
This 80mm deflection penmotor permits analysis of recorded data with accuracy and resolving power never before possible. Flat frequency response is better than 30 Hz full scale, to 55 Hz at 40mm p-p amplitude and extends to 200 Hz at reduced amplitudes.



8-CHANNEL EVENT "MULTIMARKER"

Eight event markers sharing a common magnet block, driven by a 5-volt-sensitivity high-impedance amplifier, provide for closely-spaced recording of multiple events in sequence—side-by-side with analog data if desired. Driven by one 8-channel event-marker amplifier.



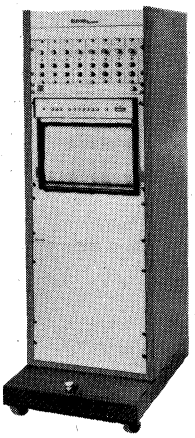


BRUSH

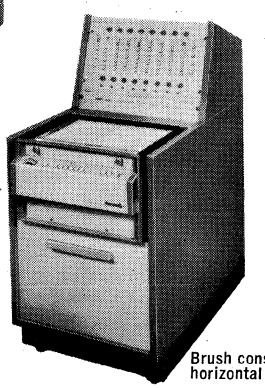
CLEVITE CORPORATION / BRUSH INSTRUMENTS DIVISION / 37TH AND PERKINS / CLEVELAND, OHIO 44114

MARK 200—MODULAR SERVO PENMOTOR RECORDERS

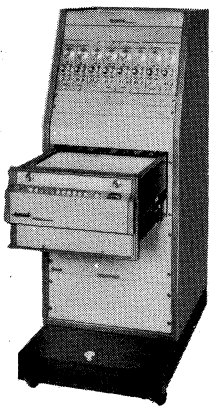
CHOICE OF CABINETS



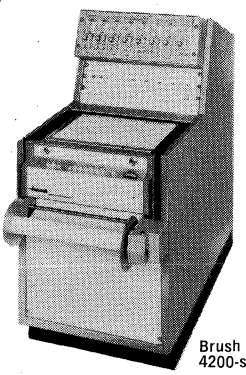
Brush cabinet with vertical oscillograph



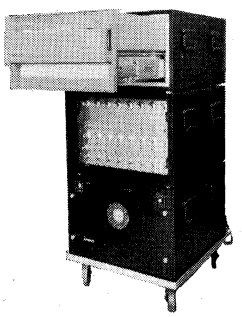
Brush console cabinet, horizontal oscillograph



Brush cabinet with horizontal oscillograph

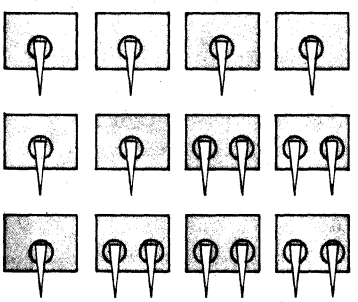


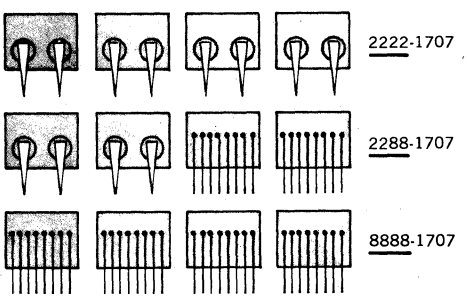
Brush console cabinet for 4200-series plug-in amplifiers



Brush portable model, disassembles into 3 sections

CHOICE OF CHANNEL-WIDTH COMBINATIONS





Standard Brush chart paper is available only for these six standard combinations. In the lefthand group of digits, "1" stands for an 80-mm penmotor; the digit "2" stands for a dual 40-mm penmotor; and the digit "8" stands for one 8-channel Multimarker module. Each pen in the 8-channel unit is an event marker capable of being deflected one direction only. The position of the digit in its numerical group corresponds to the penmotor's position in the oscillograph. Note that width of the channels must be in descending order starting from left of the oscillograph, and numerals are in ascending order.

CHART PAPER

1. Standard chart paper is available for the following penmotor combinations:

1111-1707	2222-1707	8888-1707
1122-1707	2288-1707	1222-1707

Penmotor combinations other than the above will require special chart paper at a one-time set-up charge plus cost of paper itself.

CREATE YOUR MODEL NUMBER

Each digit in the prefix stands for one of the four penmotor locations—from left to right facing the oscillograph.

1=a one-pen 80mm unit
2=a dual-pen 40mm unit
8=an 8-pen event "Multimarker" 8888
0=no penmotor used

8888 – 1707 – 200

BASIC SERIES NUMBER 1707

First digit:
1=vertical system
2=horizontal system
3=extended writing table

Second digit:
0=no front ends
1=4185 series preamps
2=4200 series preamps
4=4485 series preamps

Third digit:
0=with Brush cabinet
1=with shipping frame
2=Console cabinet
3=Emcor cabinet

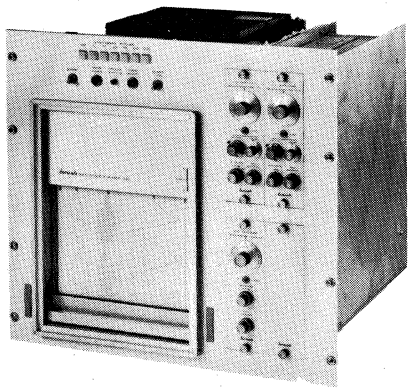
BRUSH

CLEVITE CORPORATION / BRUSH INSTRUMENTS DIVISION / 37TH AND PERKINS / CLEVELAND, OHIO 44114

MARK 240—SERVO PENMOTOR RECORDER



This versatile, high-accuracy direct writing recorder is a complete, self-contained system designed for a very wide range of applications where resolution and precision in measurement are required. It may be mounted in standard 19″ racks to RETMA specifications, or in Brush racks, or bench-top cabinets.

Modular design permits selection of interchangeable plug-in pre-amplifiers of the solid state Brush 4200 Series, affording choice of high gain d-c units (with or without calibrated zero suppression) straight-through couplers, strain-gage, log-linear and phase-sensitive demodulator types; also with biomedical preamplifiers of the Brush 4300 Series.

The Mark 240 may be fitted with two each of either dual-channel 40mm or single-channel 80mm analog penmotors, or with 8-channel event "Multimarker" modules—either alike or in combinations. Analog modules include drive amplifiers mounted internally, providing requisite sensitivity for preamplifier inputs, position-feedback circuitry, signal-limited circuitry, and controls for damping and span adjust. "Multimarker" event amplifiers, also internally mounted, provide 5V ON, 0 to 4V OFF triggering and 100k impedance for "Multimarkers" when these are specified.

STANDARD SYSTEMS (Rack Mounting)	
Basic Recorder, 4 40mm channels. Includes right and left hand event markers.	2200-6607-10
Basic Recorder, 2 80mm channels. Includes right and left hand event markers.	1100-6607-10
Basic Recorder, 1 80mm channel and 2 40mm channels. Includes right and left hand event markers.	1200-6607-10
Basic Recorder, 2 8-channel multimarker penmotors (16 channel). Marginal event markers are not included.	8800-6607-10
Mark 240 recording system in accordance with BUWEPS Drawing No. 1222474. Testing for compliance with paragraph III C5 has not been performed by Brush Instruments.	2200-6607-10815

POWER OPTIONS

1. For 115 V, 400 Hz operation change model number suffix to -14.
2. For pulse chart drive change model number suffix to -30. Signal conditioning (pulse-drive amplifier) may be required at extra cost.

NOTES

Base prices include basic recorder, penmotors, drive amplifiers and event markers. (Except 8800-6607-10 model which has no event markers.)

Preamplifiers (where required) are **not** included in unit price.

Accessories, other than event markers, are **not** included in unit price and must be priced separately.

AVAILABLE IN

- 2 80-mm analog channels
- 16 event channels
- 4 40-mm analog channels

or a combination

SPECIFICATIONS

No. analog channels .....2 8mm, 4 40mm, or 2 8-channel "Multimarkers" or any combination
No. event channels .....2 standard (others mounted interchannel at option)
Non linearity .....±0.5% a-c or d-c
Chart speeds .....0.05, 0.1, 0.2 (0.25*), 0.5, 1, 2, 5, 10, 20 (or 25*), 50, 100, 200 mm/sec. Other chart speeds on special order.
*Specify whether 20 or 25
Chart speed inaccuracy .....±0.25% @ nominal line frequency

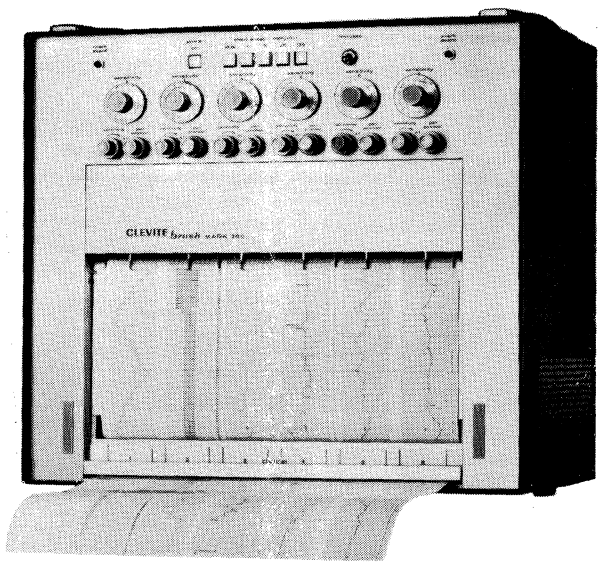
MARK 260—SERVO PENMOTOR RECORDER

A complete, self-contained portable recorder capable of handling the great majority of recording tasks with precision and utmost operator convenience. Simple and rugged in design, the Mark 260 offers features previously available only in more expensive recorders.

The recorder's patented pressurized inking system produces charts of unparalleled clarity. The system includes two disposable ink cartridges—sufficient for a year's normal recording—which can be replaced in minutes. Traces are immediately smudge-proof, uniform in width at any pen velocity. Presentation is rectilinear, to facilitate wave-form interpretation. Four event markers, two on margins and two interchannel, are standard.



SPECIFICATIONS

Number of channels .....6 analog, 4 event (2 on margins, 2 interchannel)
Channel span .....40mm (50 divisions)
Frequency response .....at 50-div.: Flat within ±2% of full scale from d-c to 40Hz
at 10-div.: Flat within ±2% of full scale d-c to 100 Hz; 3dB down @ 125Hz
Non-linearity .....±0.5% full scale a-c or d-c
Trace presentation .....rectilinear
Writing method .....pressurized ink
Chart description .....six 40mm grids graduated in 50 divisions each. 5mm increments on time axis. Event marker channels on both chart margins and interchannel 2-3 and 4-5.
Chart capacity .....high-contrast: 225 ft.
Chart speeds .....eight: 1, 5, 25 and 125mm/sec. plus same speeds in mm/min.
Timer .....internal timer produces 1-sec, pulses on left interchannel event marker. Rear-panel switch allows choice of timer or external input.
Input circuit .....differential, balanced-to-ground
Input impedance .....10 megohms balanced, 5 megohms each terminal to ground
Common-mode rejection ....60dB @ 60Hz, 1mV range with 1k ohms unbalance
Measurement range .....1mV/ chart division to 500V d-c full scale (50 chart divisions)
Maximum allowable input voltage to avoid damage .....500V d-c or p-p a-c either terminal (No. 1 or No. 2) to ground or between terminal 1 and 2 (354V rms sine-wave)
Signal limiters .....built-in, adjustable, prevent pen-damage from off-scale overloads
Power input .....115V a-c ±10%, 60Hz
Power consumption .....200 watts, 275VA @ 60Hz, 115V a-c
Dimensions .....17.5″ wide x 16.25″ high x 10.25″ deep
Weight .....65 lbs., less chart paper

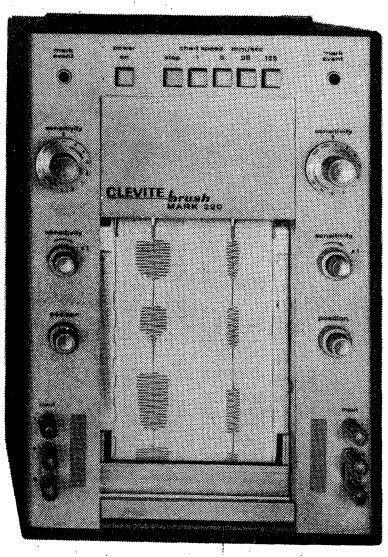
BRUSH

CLEVITE CORPORATION / BRUSH INSTRUMENTS DIVISION / 37TH AND PERKINS / CLEVELAND, OHIO 44114

MARK 220—PORTABLE SERVO PENMOTOR RECORDER



Dual Channel Portable Preamplifier Carrying Case 11-4123-10

The Brush Recorder Mark 220 is a completely self-contained portable recorder which weighs just 25 pounds, measures 9 x 14 x 8 inches. It has two 40mm channels and four pushbutton chart speeds. Maximum sensitivity is 1 millivolt per chart division.

Voltages up to 500 volts d-c or peak a-c can be applied to its input terminals without damage to any component—no matter what the attenuator setting. Protection of pens against overload is afforded by electrical limiters on both channels.

A pen-position servo system, based on a frictionless transducer, assures extreme accuracy. Penmotor and transducer are fully enclosed and are immune to wear, time and dirt.

The pressurized ink system enables pen to write dry, smudge-free traces. Disposable, plastic ink cartridge can be replaced in minutes. If power is lost or chart paper runs out, the writing system stops immediately and ink is sucked from the pen tip back into the system. "Puddling" cannot occur.

Left-and right-margin event markers (standard) can be manually activated by buttons on the control panel or by external switch closure through convenient jacks on the rear panel.

Pen motion is rectilinear to facilitate interpretation of waveforms.

- **Priced for universal application**
- **Rectilinear marking for easy interpretation**
- **Lightweight, extremely portable**
- **Dual-channel convenience**
- **Unmatched trace clarity**
- **High-resolution, smudge-free ink recording**
- **Uses low-cost Accuchart® paper**
- **Contactless, position feed-back pendrive system ignores dirt wear**
- **Reliable, all solid-state electronics**
- **New, disposable, pressurized ink cartridge for greater convenience**

SPECIFICATIONS

Number of channels .....2 analog, 2 event
Analog-channel span .....40mm (50 divisions)
Frequency response .....at 50-div: flat within ±2% of full scale from d-c to 40Hz
at 10-div: flat within ±2% of full scale from d-c to 100Hz, 3dB down @ 125Hz
Trace presentation .....rectilinear
Trace width .....0.01″ nominal
Writing method .....pressurized ink
Writing fluid .....1 oz. (sufficient for one year of normal recording); replaceable throw-away cartridge
Chart description .....two 40mm grids graduated in 50 divisions across span. Graduated increments on time axis. Right, center and left event marker channels.
Chart capacity .....high-contrast: 275′; Reproducible: 400′
Chart speeds .....1, 5, 25 and 125mm/sec. pushbutton (electrically) selected
Chart-speed inaccuracy .....±0.25% @ nominal line frequency
Chart take-up .....optional at extra cost
Non-linearity .....±0.5% full scale a-c or d-c
Input circuit .....differential, balanced-to-ground
Input impedance .....10 megohms balanced, 5 megohms each terminal to ground
Common-mode rejection .....60dB @ 60Hz, 1mV range with 1k ohms unbalance
Measurement range .....1 millivolt per chart division to 500V d-c full scale (50 chart division)
Maximum input voltage .....500V d-c or peak a-c either input terminal (No. 1 or No. 2) to ground (354 volts rms sinewave)
Attenuator steps .....1, 2, 5, 10, 20, 50, 100 and 200mV/div: "off"
Power input .....115 volts a-c ±10%, 60Hz
Power consumption .....only 120 watts, 175VA @ 115 volts
Dimensions .....9⅛″ wide x 13 11/16″ high x 8⅛″ deep
Weight .....25 lbs.

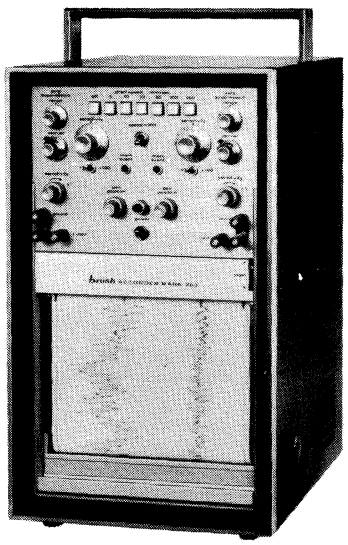
BASIC UNIT—MARK 220	
Mark 220 portable dual-channel system	15-6327-50
Telecommunications Mark 220. Same as 15-6327-50, but includes 1/10th-second timer, provisions for remote chart drive, a-c to d-c converter, protective cover with storage facility.	15-6327-51
ACCESSORIES	
Starter kit, including 12 rolls chart paper, gram gage, 2 pen-adjust wrenches, dust cover.	11-6250-00
Replacement kit, includes 12 rolls chart paper, 2 analog pens, 2 event pens, 1 ounce ink cartridge.	11-6251-00
1-second timer	11-6101-21
Chart takeup	11-6402-03
Rack-mounting kit	11-1202-08
Mid-channel event marker	11-6221-00
Dust cover	465971
Connecting cable for preamplifier, 1 channel	11-4310-02
Dual channel portable preamplifier carrying case	11-4123-10

MARK 280—WIDE CHART PORTABLE SERVO PENMOTOR RECORDER



The Recorder Mark 280 is a high-performance two-channel recording system which permits analysis of recorded data with accuracy and resolving power never before possible in a medium-frequency recorder. It combines a basic system accuracy of ½% (static and dynamic) with double-width 80 millimeter channels capable of displaying this accuracy usefully to the unaided eye.

Frequency response is not sacrificed. Peak-to-peak response at 80 millimeter amplitude is beyond 35 Hz, and is flat at usable amplitude to 200 Hz.

SPECIFICATIONS

No. analog channels .....2; 80mm wide (50 divisions)
No. event channels .....2; 3rd interchannel event marker is optional @ extra cost
Chart speeds .....0.05, 0.1, 0.2, 0.5, 1, 2, 5, 10, 20, 50, 100, and 200mm/sec.
Trace width .....0.01″ nominal
Presentation .....true rectilinear
Writing method .....pressurized ink
Chart capacity .....high contrast paper: 275′ reproducible paper: 400′
Sensitivity .....0.5 millivolts per chart div.
Attenuator steps .....0.5, 1, 2, 5, 10, 20, 50 and 100mV/div; plus x100 multiples of above steps; "off"
Measurement range .....500V full scale
Frequency response (flat within 0.4 div.) .....to 35Hz (80mm p-p) to 60Hz (40mm p-p) to 100Hz (15mm p-p) to 140Hz (4mm p-p)
Signal input .....1 megohm impedance, constant; floating, shielded
Common mode rejection .....d-c —120dB; maximum voltage off ground, ±500V
Noise .....0.2 division peak-to-peak with 100k ohm source impedance. Any attenuator position
Non-linearity .....±0.25% full scale, a-c or d-c
Stability .....0.2 div./8 hrs.
Zero suppression (model 15-6327-10 only) .....8 ranges plus "off" and a vernier dial to read 3 significant figures of d-c suppression voltage from +500V d-c to —500V d-c

MARK 250—HIGH FREQUENCY STRIP CHART RECORDER

This versatile strip chart recorder combines the accuracy and resolution of the wide-chart servo recorder with the fast response and flexibility of the direct writing recorder.

The recorder is designed for use with any Brush interchangeable preamplifier, affording exceptional flexibility.

The chart magazine is detachable, can be removed to user's desk for review. Chart can be manually transported backward or forward. Twelve chart speeds, pushbutton actuated. Sprocketed chart drive is synchronous with line power.

Left-hand event marker	11-6220-00
Removable chart magazine	11-6104-00
Dust cover for portable model	464809
Handle kit for portable Mark 250 recorder	11-6230-00

SPECIFICATIONS

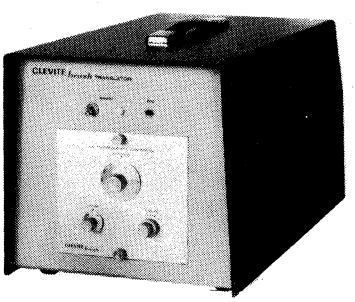
Span .....4½″ calibrated chart
Response .....40 milliseconds full scale
Non-linearity .....±0.5% of full scale, a-c or d-c
Presentation .....rectilinear
Writing method .....pressurized ink
Chart description .....4½″ grid, 50 divisions, 100′ (high contrast), 150′ (reproducible)
Chart speeds .....two ranges: 0.02, 0.05, 0.1, 0.2, 0.5, 1 sec/div. or min./div.
Basic sensitivity .....100mV/div., ±2.5V full scale; 50k ohms input impedance (supplemented by preamplifier)
Dimensions .....11 3/16″ high x 14″ wide x 18 3/16″ deep
Weight .....65 lbs.
Power requirements .....115V, 60Hz, 130 watts max.

INCREMENTAL CHART DRIVE (OPTIONAL)

Brush Recorders (Mark 200, 240 and 280) can be factory-equipped with a precision pulse-actuated stepping motor in place of the synchronous chart-drive motor. This option permits slaving chart speed to a variable other than time, and finds use in connection with digital systems or where chart speed can be a function of an independent variable.

In operation, the chart advances a precise and repeatable distance for each input pulse or switch interrupt, affording very exact chart positioning. Length of chart advance can be varied by pushbutton selection of chart speed control.

The option includes a rack-mounted pulse-amplifier (model 17-7680-00) and a plug-in frequency coupler (model 11-7280-00) which provides input pulse control. To order, add "900" following system model no. suffix, and call out Pulse Amplifier and Frequency Coupler by above model numbers.

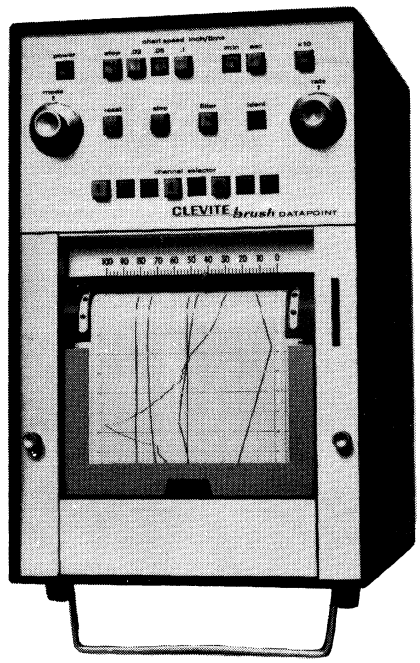


Portable pulse amplifier Model 13-7380-00 shown with input signal conditioner module Model 11-7280-00. Applicable in Mark 200, 240 and 280 Brush Recorders.

PULSE DRIVE COMPONENTS

description	model number
Portable pulse amplifier	13-7380-00
Input signal conditioner module (plugs into pulse amplifier)	11-7280-00
Rack mounting pulse amplifier	13-7680-00

DATAPOINT—A NEW CONCEPT IN RECORDING



Brush Datapoint, a high speed 8-channel multipoint recorder, operates in three modes: multipoint sampling, intensified sampling on one or two channels with less frequent sampling on the others, and continuous recording. And fast: continuously adjustable sampling from 20 points/second to 2 seconds/point. Twelve paper speeds.

FEATURES

Accepts and records mixed inputs on same chart. Multiplexes at low levels; needs only one amplifier. 99.5% accuracy with non-contact position feedback system. Push-button selection of any or all 8 inputs.

BASIC UNITS

Datapoint 8-channel multipoint recorder, portable	15-6317-40
Datapoint 8-channel multipoint recorder, horizontal, rack-mounting	15-6617-40

ACCESSORIES

description	model number
8-channel multiplex thermocouple conditioner	13-4582-00

SPECIFICATIONS:

Presentation ..... Rectilinear

Paper ..... Z-fold pack with internal collection drawer. 75 foot length, 6 inches wide. Channel grid 4½ inches wide, 50 divisions, every 5th accentuated. In time axis, graduated 10 divisions per inch, every 5th accentuated.

Paper Speeds ..... 0.02, 0.05, 0.1 inches/minute and sec., plus "x10" multiplier

Paper Drive ..... Sprocketed drive, 12 speed transmission. Automatic shut-off when out of paper.

Non-Linearity ..... ±0.5% full scale, enforced by non-contact position feedback system.

Inputs ..... ±2.5 volts into 50,000 ohms impedance, compatible with Brush external preamplifiers.

Optional Inputs ..... Accessory amplifier with automatic thermocouple cold junction compensation, gain adjust and zero suppression. Has 8 additional input connections, to allow mixing external signal conditioner channels with thermocouple inputs. **Sensitivity:** 5 millivolts full scale into 1000 ohms impedance.

Power Requirements ..... 115V, ±10%, 60Hz, 100 watts, or 230V, ±10%, 50Hz, 100 watts,
or 115V square wave, 60Hz

Dimensions ..... 9″ wide x 14¼″ high x 12″ deep

Weight ..... 35 lbs.

SIGNAL CONDITIONERS FOR BRUSH DIRECT WRITING SYSTEMS

SIGNAL CONDITIONERS... FOR FULL-RANGE VERSATILITY IN DIRECT WRITING

Signal conditioners described in this catalog are designed to provide amplification, control and signal-conditioning functions for Brush direct writing recording systems. They extend the application range of these systems to the full capability of the direct writing medium.

Choice from models shown includes low, medium and high gain d-c preamplifiers in both single-channel plug-in and rack-mounting multi-channel models; also special-purpose units for carrier-transducer, demodulator, high off-ground voltage and logarithmic applications. A series of signal-converters for graphic readout of frequency deviations, watts, amperes and a-c rms levels also is available.

For applications in clinical medicine or biomedical research, Brush offers special medically-oriented couplers for ECG, EEG, cardio-tachometer and physiological pressure measurements. Couplers of this series combine with fixed-gain preamplifier submodules, for added gain and signal-conditioning, and can be interchanged easily and quickly.

All Brush signal-conditioners have factory-fixed calibration and require no re-calibration when changed from one mode of recording to another.

SIGNAL CONDITIONERS, 4200 SERIES—DC

Self-powered Interchangeable Preamplifier Modules Interchangeable single-channel preamplifier modules of the 4200 series provide utmost system flexibility, convenient signal control over wide input ranges, and highest performance standards. All are fully-enclosed solid-state units of rugged construction, incorporating aerospace-quality components and assembly practices.

Each unit contains its own regulated power supply, which governs its specific operating frequency—thus operate completely independently. Calibration is factory-fixed.

For recording d-c inputs in the range from 0 to 500 volts, the series includes medium, high and very high gain types, with calibrated zero suppression features optional.

4200 SERIES—DC SPECIAL PURPOSE INTERCHANGEABLE PREAMPLIFIERS

For recording of inputs requiring special input circuitry, as from very high off-ground d-c voltages, from transducers requiring excitation, from carrier-operated electrical mechanisms or from sources having wide dynamic ranges—these single-channel preamplifier modules extend the capability of Brush direct writing systems into applications not otherwise easily adapted to recording.

Like other models of Brush single-channel modules, all units have self-contained power supplies—thus can operate independently in the same enclosure with units having different operating frequencies.

Description	Model No.	Measurement Range	Attenuator Steps
 **Medium Gain DC Preamplifier**	13-4211-20	50mV/div. to 250V Full Scale	0.05, 0.1, 0.2, 0.5, 1, 2, 5V/div. OFF (±0.5%)

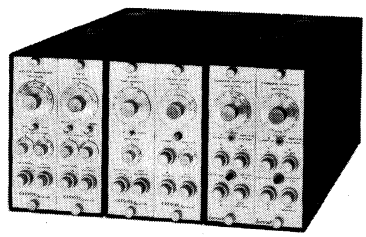
MOUNTING PROVISIONS

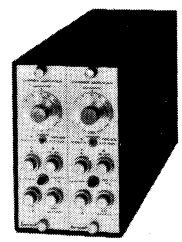
Single-channel signal conditioners are designed for use with all Brush direct-writing systems. They can function as primary signal conditioners in modular systems such as the Brush Mark 200 and Mark 240; or as supplementary signal conditioners to augment use of recorders with built-in preamplifiers, such as Brush portable recorders Mark 220, Mark 260 and Mark 280.

Mounting provisions are identical for all plug-in signal conditioner models. Plug-in connectors are compatible with the various signal conditioner receptacles available for Brush recording systems. Each module is fully-enclosed in heavy-gage steel to protect interior components. Thumb-screws used for mounting also afford safe hand-holds for insertion or withdrawal.

CARRYING CASES



Model 11-4163-10 (6-channel)

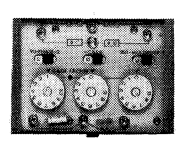


Model 11-4123-10 (2-channel)

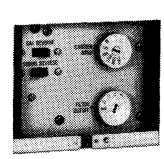
These rugged heavy-gage carrying cases, available in 2-channel or 6-channel models, provide convenient means for transport and use of Brush plug-in signal conditioners when used in conjuction with Brush portable recording systems.

Each dual-channel module (the 6-channel model comprises three modules bolted together) includes receptacles for each pre-amplifier, two sets of four output binding posts, an a-c power cord receptacle and a convenience outlet. Power for the 6-channel unit is distributed by patch-cords, supplied. Convenience outlets supply a-c power for recorder or associated instrumentation. Six-foot signal cords with appropriate connectors are available as accessory for connection of each channel with Brush portable recorders Mark 220, Mark 260, or Mark 280, and should be specified on order.

Note 1: Carrier Preamplifier Model 13-412-02
QUICK-ENTRY INTERNAL PANEL CONTAINS OTHER CONTROLS
Accessible with preamplifier partially withdrawn, this side panel has provision for setting transducer gage factors, phase adjustment, cal signal polarity and attenuator multiplier. Includes terminals for counting bridge-completion resistors; also for altering resistive and capacitive balance range.



Note 2: Demodulator Preamplifier Model 13-4216-02
QUICK-ENTRY INTERNAL PANEL CONTAINS OTHER CONTROLS
Accessible with preamplifier partially withdrawn, this side panel has provision for setting signal reverse, cal signal reverse, carrier band select and filter cut-offs.



Note 3: Log-Linear Preamplifier Model 13-4214-00
SELECTIVE FILTERING
In a-c Log and a-c Linear modes, low frequency cutoffs are selectable at —3dB down points of 7, 20, 100 and 500Hz. Filter roll-off is 12dB per octave.

In addition to high-pass filtering, each cutoff point switches in proper filter elements to eliminate a-c ripple in output. At nominal frequencies, ripple will not exceed 1dB. Step response of the preamplifier is affected as follows:

Cut-Off	Rise Time (10%-90%)
7Hz	0.4s
20Hz	0.1s
100Hz	0.02s
500Hz	0.004s
d-c	2ms

Note 4: High Voltage Preamplifier Model 13-4215-82
FILTERING CAUSES NO LOSS CALIBRATION
Selective filtering of extraneous electrical noise is accomplished without loss of calibration accuracy and with constant input impedance. Dial settings indicates 3dB down points of filter network.

BRUSH

CLEVITE CORPORATION / BRUSH INSTRUMENTS DIVISION / 37TH AND PERKINS / CLEVELAND, OHIO 44114

SIGNAL CONDITIONERS

4100 and 4400 SERIES
MULTI-CHANNEL D-C PREAMPLIFIERS

For use with Brush Mark 200 multi-channel recording systems in medium- or high-gain applications, these rack-mounting 8-channel preamplifier units offer signal conditioning, control and amplification—also exceptional convenience and highest fidelity.

Series 4100 medium gain models are available in choice of pushbutton or rotary attenuator configurations, with maximum sensitivity of 50 mV/div. and 50,000 ohms input impedance. The pushbutton model is ideal for analog computer use and features external-switch pushbuttons which allow control of the computer from the recorder station. Rotary-attenuator model occupies less space, has identical specifications, but does not include external switching feature.

Series 4400 preamplifiers extend recording capability of the Mark 200 system to 1 mV/div. sensitivity, with floating inputs and 1 megohm input impedance. Models are available with or without calibrated zero suppression.

Units have built-in power supplies, hence can operate independently at 50 to 400 Hz a-c power, 115 or 230 volts. Mounting provisions are compatible with standard 19-inch racks to RETMA specifications.

Description	Model No.	Measurement Range	Attenuator Steps
 Medium Gain Multichannel d-c Preamplifiers	13-4185-05 (Push-button) 13-4185-25 (Rotary)	50mV/div. to 250V F.S.	0.05, 0.1, 0.2, 0.5 1, 2, 5V/div., OFF (±1%)
 High Gain Multichannel d-c Preamplifiers	12-4485-00 13-4485-10 with calibrated zero suppression	1mV/div. to 250V F.S.	1, 2, 5, 10, 20 50mV/div., OFF plus x multiplier (±1%)

4300 SERIES
BIOMEDICAL COUPLER-PREAMPLIFIERS

Brush biomedical coupler-preamplifiers (4300 Series) are specifically applicable for recording of biophysical data for use in medical and life-science research, or in clinical and diagnostic applications. The series includes ECG, EEG, biotachometer and universal-purpose a-c/d-c couplers, plus an integrator coupler for blood pressure measurements and others where transducer excitation is required. All are fully-enclosed solid state units, designed to combine utmost accuracy, stability, common-mode rejection and reliability with greatest convenience in use. All are factory-calibrated and have independent power supplies.

Biomedical couplers are designed to plug into a Universal preamplifier sub-module (model 13-4218-00), one per channel, which supplies final amplifier stages plus necessary signal isolation. Such combinations have response in the frequency range from d-c to 10 kHz and have ample output to drive tape recorders, computers, oscilloscopes or other devices in combination with the oscillograph.

Description	Model No.	Measurement Range	Sensitivity Steps
ECG Biomedical Coupler	11-4307-01	20V/div. to 25mV F.S.	20, 50, 100, 200, 500V/div. (±1%)
 **EEG and High Gain a-c Biomedical Coupler**	11-4307-02	1V/div. to 50mV F.S.	1, 2, 5, 10, 20, 50, 100, 200, 500, 1000V/div., OFF, (±2%)
 **Bio-Tach Computer Coupler**	11-4307-03	1bpm/div. to 500bpm F.S. **Hi level:** 13V/div. to 25mV F.S. **Low level:** 2mV/div. to 5V F.S.	1, 2, 5, 10bpm (±2%) CAL, OFF, ECG
Universal a-c/d-c Biomedical Coupler	11-4307-00	**a-c:** 20V/div. to 25mV F.S. **d-c:** 1mV/div. to 25V F.S.	**a-c:** 20, 50, 100, 200, 500V/div. (±1%), OFF **d-c:** 1, 2, 5, 10, 20, 50, 100, 200, 500mV/div. (±1%)
Integrator Coupler	11-4307-04	1mV to 10V	1, 2, 5, 10, 20, 50 and 100mV/sec/div.

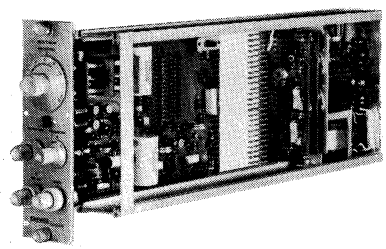
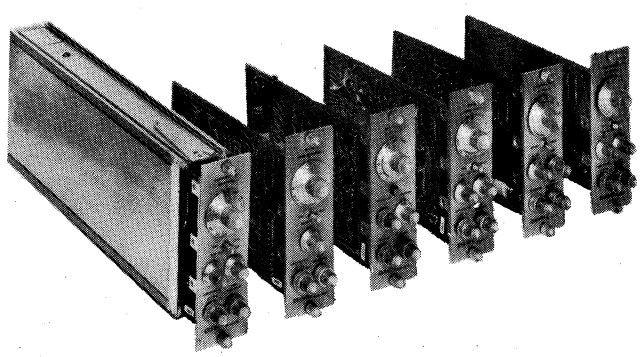
Universal Preamplifier 13-4218-00



Each of the various Brush biomedical signal conditioners consists of two separate sub-modules; a coupler and a medical amplifier. The coupler contains the control panel and circuitry peculiar to its nameplate function. The medical amplifier, or "back end" of each plug-in module, is a universal a-c/d-c high-gain amplifier and other circuitry which is exactly the same for each channel, regardless of function. It is ordered by a separate model number, 13-4218-00, one per channel. For one channel of ECG, for example, you must specify two model numbers: 11-4307-01 for the ECG Coupler and 13-4218-00 for its mating universal preamplifier. (Specifications refer to the combination.) The economic advantages of this arrangement are well established: when all of the couplers in your collection are not likely to be used simultaneously, your investment in idle circuitry can be sharply reduced.



SIGNAL CONDITIONERS

5201 SERIES
INPUT CONVERTERS

This series of interchangeable plug-in input converter modules provides for conversion of rms volts, rms current, watts and/or frequency deviations into corresponding d-c levels for direct recording on Brush oscillographs. They are widely used for performance evaluation of a-c operated motors, controls, voltage regulators, circuit breakers and other apparatus where a-c operating levels must be measured.

THE SERIES INCLUDES A TOTAL OF SEVEN MODELS:

Frequency Deviation
Three models, for measurement in 45-55, 55-65, and 375-425 Hz ranges.

A-C Watts
One model, 0-250/500W @ 115V; 0-500/1000W @ 230V. Two frequency ranges: 55-65 Hz and 350-450 Hz.

A-C Volts
Two models, one with 0-300V range, the other with 90-140V and 180-280V ranges. Each has two frequency ranges: 55-65 Hz and 350-450 Hz.

A-C Amps
One model, with selected 0-1 amp, 0-2 amp or 0-5 amp measurement ranges.

All models are designed to be compatible with established electrical industry standards. All have floating inputs. Units simply plug into standard preamplifier receptacles and are self-powered.

BRUSH

CLEVITE CORPORATION / BRUSH INSTRUMENTS DIVISION / 37TH AND PERKINS / CLEVELAND, OHIO 44114

MARK 2300 LIGHTBEAM OSCILLOGRAPH

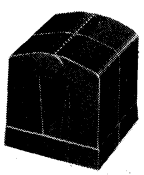
The Brush Series 2300 eight or sixteen channel oscillograph produces direct recordings of unmatched readability by an incandescent optical system possessing unique advantages in simplicity, safety, and economy. Dual-filament lamp insures fail-safe data acquisition.

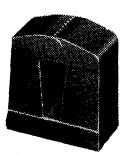
Writing speed is greater than 20,000 inches/second. Records are visible directly on exposure to ambient room light. They appear in fine traces at all writing speeds, uncluttered by UV jitter. Sixteen record speeds are controlled by pushbuttons, may be changed during operation with no loss of data.

Galvanometers are simple plug-in units with no setscrews, requiring no adjustment other than spot-zeroing. Matched solid-state galvo amplifiers, optional, further augment application range.

Brush's system of galvo drive amplifier design enables the user to avoid burdensome juggling of signal-source impedance, damping resistance, natural frequency, and sensitivity parameters for each test set-up.

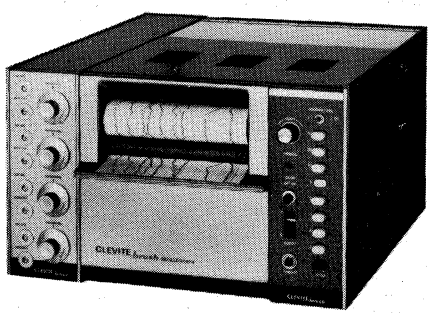
By routine use of one or both Brush drive amplifiers (-00 or -10), the investigator can proceed with the simplicity of preamplifier-and-pen oscillography.





Either 1 or 2 of 11-2130-00 magnet block must be ordered separately

description	model number
BASIC UNITS less galvanometers and accessories.	
Standard lightbeam oscillograph, (less magnet block)	16-2300-00
8-channel magnet block (order 2 for 16-channel/operation)	11-2130-00
GALVANOMETERS AND RELATED APPARATUS	
Galvanometer, flat frequency response 0-22Hz, sensitivity 6 microamps/inch	11-2111-30
Galvanometer, flat frequency response 0-45Hz, sensitivity 25 microamps/inch	11-2111-28
Galvanometer, flat frequency response 0-100Hz, sensitivity 55 microamps/inch	11-2111-20
Galvanometer, flat frequency response 0-170Hz, sensitivity 2.5mA/inch	11-2111-13
Galvanometer, flat frequency response 0-1000Hz, sensitivity 28mA/inch	11-2111-10
Galvanometer, flat frequency response 0-5000Hz, sensitivity 45mA/0.1 inch	11-2111-05
Fuse for -30, -28, -20, -13 galvos	233947-3
Fuse for -10 and -05 galvos	233947-8
Magnet block heater—8 channel	11-2107-00
Magnet block heater—16 channel	11-2107-01
SIGNAL CONDITIONERS (amplifiers, networks, etc.)	
Signal limiter, for use with 11-2111-10 galvanometer only	11-2113-30
Galvo damping network, adjustable	11-2113-10
Galvo damping network, fixed	11-2113-20
Matching network for use with 4200 series preamplifiers and 11-2111-20 galvo	11-2113-40



SPECIFICATIONS

Recording speeds .....Model 16-2300-00: 0.2, 0.4, 1, 2, 5, 10, 25 and 50 ips (±5%) plus 100.

Recording paper .....6″ wide direct writing photo recording paper. Accepts 125′ roll of standard of 225′ roll of thin-base paper. Also accommodates standard photographic papers.

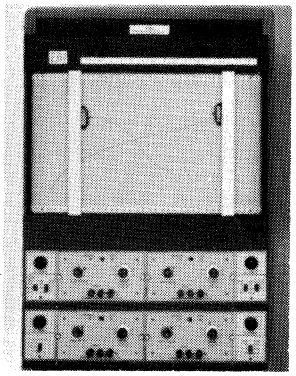
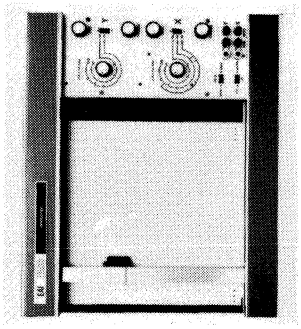
EAI®

X-Y RECORDERS, DIGITAL RECORDERS

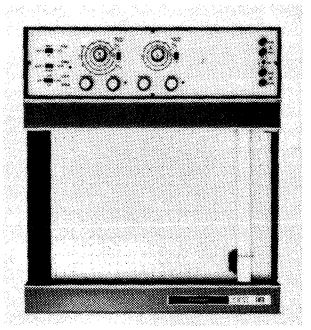


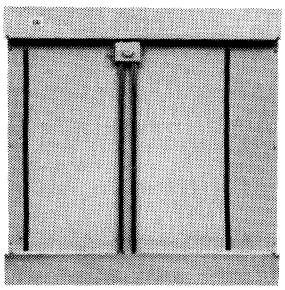
Series 1110 solid state VARIPLOTTER®
for systems or general laboratory applications.
The EAI VARIPLOTTER, Series 1110 combines proven superior accuracy, with solid-state circuitry, transformer-coupled servos, dual mode hydraulic damping, modular design and complete flexibility. The Series 1110 Variplotter is the most advanced 11" x 17" x-y plotter available today.
Superior accuracy and performance.
• 0.075% static accuracy • 0.05% repeatability • 100 microvolt/inch sensitivity • dual mode hydraulic damping • controlled flow ink cartridge.
Rugged and reliable.
• all-solid-state • blower type vacuum system • stainless steel arm rails • high strength arm beam • transformer coupled servos.
Maximum flexibility.
• modular plug in design • full line of accessories and input modules • $X_1Y_1X_2Y_2$ plotting capability • $X\text{-}Y_1Y_2$ plotting capability • rack or table mounting.



all solid-state VARIPLOTTER®, series 1125
...11" x 11½" recorder offering precision x-y plotting of any data available in D.C. voltage form. Designed for table-top or rack mounting, the new Series 1125 combines the accuracy, flexibility, speed and quality, that for more than 15 years has made EAI a leader in x-y recording equipment.

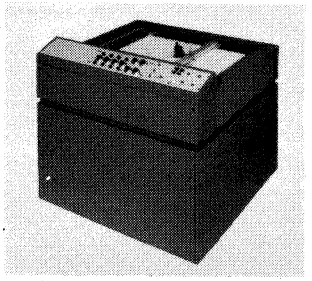
Series 1130-1133
11" x 17" recorders in four versatile formats, including X-Y, X-Y-Y_1 recording modes. This series incorporates a wide range of options for precision laboratory and systems applications. High quality components, simple construction and typical EAI reliability.

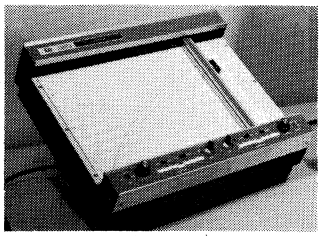




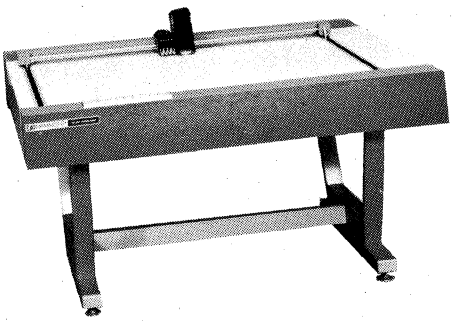
OEM series 17 X-Y recorder
The OEM-17 X-Y Recorder is a new concept in plotter design for the original equipment system manufacturer. The plotter employs a highly reliable low cost design employing a DC servo system. It offers flexibility in size and interface to accommodate your particular system requirements.

ALL-Solid-State VARIPLOTTER®
Series 205 30" x 30" X-Y plotting system. The Series 205 Transistorized VARIPLOTTER X-Y Plotting System by EAI provides fast, accurate and convenient plotting of any data that is available in d-c voltage form. A special model, capable of accepting 400 cps a-c voltage signals directly, is also available.





VARIPLOTTER® series 1140
The new Series 1140 VARIPLOTTER® combines long term repeatability with outstanding dynamic and static accuracies to assure an unusually reliable high-speed 11" x 17" X-Y Analog Plotter. Designed for recording of computer solutions, its high velocity is augmented by greater acceleration to provide ideal performance under a wide range of applications.



SERIES 430 DATAPLOTTERS®
The Series 430 Dataplotters® are an entirely new concept in the reduction of digital data to useful graphic format. Employing a servo drive system and a unique "look-ahead" acceleration control, the 430 Dataplotter is able to provide inked drawings from a digital input at plotting speeds of up to 20 IPS, for greatly enhanced tape and computer-time efficiency.

The 430 Dataplotters operate with resolution to 0.001", and employ position feedback to automatically and positively correct accidental displacement of pen or arm.

In addition to line plots, the 430 Dataplotters can also annotate alpha-numerics of typewriter quality.

Six-mode software is available.

Plotting surfaces up to 54" x 76" available.

MODULAR DIGITAL MEASURING SYSTEMS

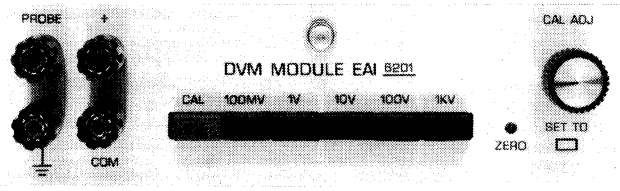
EAI®

The EAI Series 6200 instruments introduce a major new concept in electronic measurement equipment, combining the precision and reliability expected from a laboratory instrument with the "plug-in" versatility necessary for a variety of routine measurements.

With EAI's "plug-in" concept, it's simpler and far less costly to keep pace with changing instrumentation needs. The user may start with the basic measuring system, then by selecting the desired "plug-in" input module you can tailor-make an instrument to meet your present needs. As requirements change, you can buy the needed plug-ins for the functions you want—at a fraction of the cost of a new instrument.

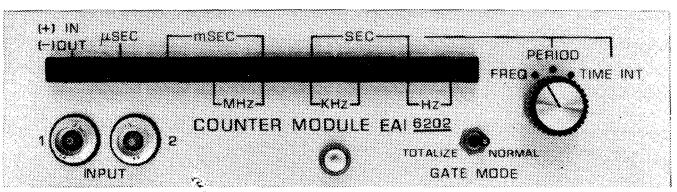
Digital Measuring System

The Series 6200 Digital Measuring System consists of the basic chassis containing the power supply, 4-digit NIXIE® Readout and silicon solid-state circuitry, plus provisions for up to two plug-in modules. For measurement of DC and AC voltages, frequency, period, time interval and other electrical parameters—the Series 6200 provides the display—the plug-in module determines the application. This plug-in approach permits buying only those measuring capabilities currently required, and provides unparalleled versatility in the low cost digital measuring field. EAI Instrument Division engineering will introduce additional input modules to keep the Series 6200 Instruments at "state of the art" level for years to come.



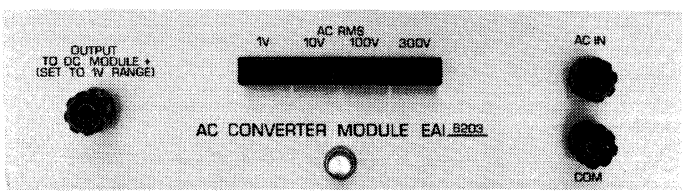
DC INTEGRATING DIGITAL VOLTMETER MODULE
Series 6201

The EAI Series 6201 Plug-In Module provides DC voltage measurement capability in five ranges, from 100.0 mv to 1000 volts, with an accuracy of ±0.1 percent ±1 digit. Automatic polarity selection and push-button ranging afford fast, easy operation, while the integrating function provides accurate voltage measurements even in the presence of high levels of superimposed hum and noise.



DIGITAL COUNTER MODULE
Series 6202

The EAI Series 6202 Plug-In Module provides multi-function measurement capability for the Series 6200 Digital Measuring System. When used with the 6200 Display Unit, the 6202 measures frequencies to 10MHz with ±.005% ±1 count accuracy and period or time intervals from 1 usec to 1000 seconds with 1 usec ±1 count resolution. Input sensitivity is 100 millivolts.



AC CONVERTER MODULE
Series 6203

The EAI Series 6203 Plug-In Module provides multi-function measurement capability for the Series 6200 Digital Measuring System. When used with the Series 6200 Digital Display Unit and the Series 6201 DC Integrating Digital Voltmeter Module, the 6203 provides AC voltage measurement capability in four ranges from 0 to 300 volts (rms) over a frequency range from 20 Hz to 100 KHz.

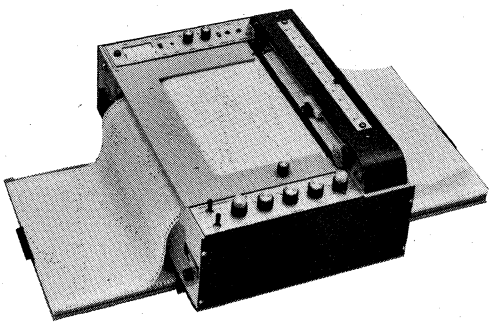
Omnigraphic™ Plotters Continue to Offer More Features, Less Cost



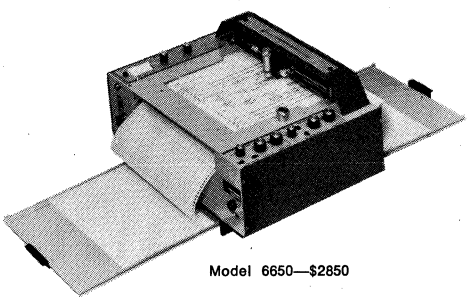
Model 6550—$2850

High speed point plotting for the Nuclear Lab:

Here is the popular OMNIGRAPHIC™ point plotter designed for use with pulse height analyzers, digital oscilloscopes, DVM's, counters or scanners. Simply plug in the 6550 and you get:

- ☐ A plotting speed of 1200 points/minute
- ☐ Four Step resolution from 0.025″ to 0.10″
- ☐ High accuracy of ± 0.2% with ± 0.1% repeatability
- ☐ Manually selectable 6 character printer head
- ☐ Z-fold chart paper tears to file size
- ☐ Bi-directional paper movement
- ☐ Plugs into the following Pulse Height Analyzers with only a cable change:

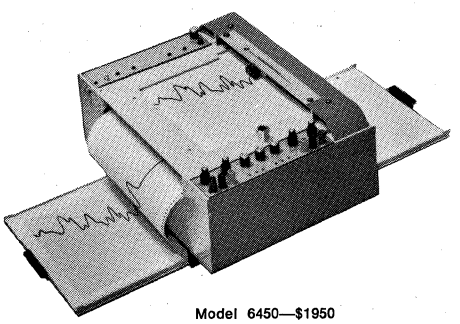
Fabri-Tec Intertechnique Laben Northern Scientific Nuclear Data Packard RCL-RIDL TMC Victoreen



Model 6650—$2850

The 6650 digital plotter records data from computers, encoders or other incremental signals:

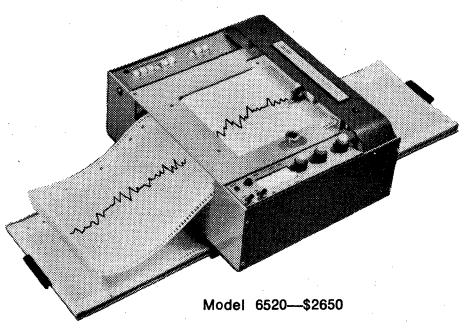
- ☐ Bi-directional stepping motor on each axis steps up to 18,000 increments/min.
- ☐ .01″ or .005″ step sizes
- ☐ Programmable pen control
- ☐ Accepts AC or DC input signals
- ☐ Z-fold chart paper
- ☐ Infinite Scale Expansion available
- ☐ Send for complete information on this and other computer plotters.



Model 6450—$1950

X-Y Plotting is now more convenient with the Omnigraphic™ 6450 because it has all the advantages of conventional X-Y's, yet offers:

- ☐ Z-fold paper eliminates hand loading of individual charts
- ☐ Automatic index or reversal of chart on command—local or remote.
- ☐ Slewing speed 20 in/sec. on Y (pen) axis and 15 in/sec. on X (paper) axis.
- ☐ 18 calibrated DC voltage ranges (continuously variable between ranges).
- ☐ Input impedence 1 megohm, all ranges fixed and variable
- ☐ Accuracy ± 0.2% of full scale, repeatability ± 0.1%
- ☐ 11″ x 17″ recording surface
- ☐ Pen control local or remote
- ☐ Front panel switch for automatic English/Metric scaling
- ☐ Ask about 2 pen model 6452



Model 6520—$2650

Here's an X-Y, Sequential Chart, External Chart Control, X-Y Programmed Voltage, Strip Chart and X-Y Programmed Movement: All in one recorder!

The 6520 does the job of six . . . without additions or modifications. Features include:

- ☐ Continuous or automatic paper feed.
- ☐ 18 speed selections from 2″/sec. to .05 in/hr. (144,000:1) range.
- ☐ Sensitivity 1mv full scale
- ☐ Pen speed 20 in/sec.
- ☐ Accuracy 0.2% full scale, repeatability .1%
- ☐ 20 voltage ranges.

Various optional features are available for special applications. Write today.

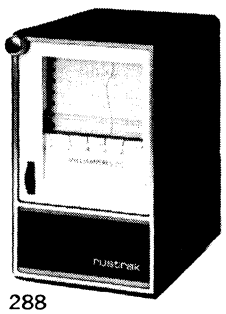
rustrak miniature chart recorders

Dependable miniature instruments for permanently recording power, temperature, pressure, strain, events or virtually any parameter that can be converted into an electrical signal. • Inkless, dry writing, rectilinear recording with wide range of sensitivities, writing and chart speeds. • Operate as chart tearoff or reroll. Quick, easy chart review and rewind. Sliding access window. • Most units about 5⅝"H, 3⅝"W, 4⅛"D. Weight about 3½ lbs. • Rugged die-cast aluminum case in epoxy suede-like charcoal gray finish. • Accuracy ±2% of full scale. Response time 0.8 sec. to 1.0 sec. Usable chart widths: single channel — 2-5/16", dual channel — 1" each.

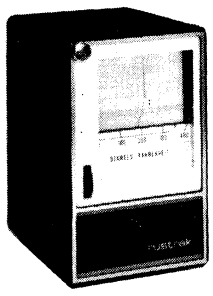


288

Single Channel DC Recorder.

Basic recorder in the Rustrak line. Ranges from 0-10 microamperes to 0-5 amperes DC; 0-10 millivolts to 0-500VDC. Multipliers and shunts available. Chart speeds 1/32" to 480" per hour. Many available options, features and accessories. AC models also available.

from **$99.50**

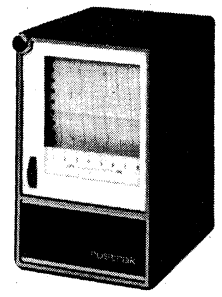


2122

Temperature Recorders.

Wide variety of temperature recorders using thermocouples, thermistors or nickel wire sensors. Ranges from −100°F. to +2400°F. and custom spans as narrow as 25°F. Also available in °C. and in single or dual channels.

from **$148.00**

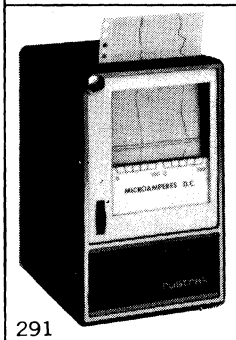


292-4

Event Recorders, Models 292-4 & 292-8.

Four or eight channels. Records worktime, productivity of machines and personnel; provides data for time study, cost analysis, security control. Chart speeds to 50 inches per minute with definition of up to 16 events per second.

from **$103.00**



291

Dual Channel DC Recorder.

Same as basic Model 288 except dual channel with two galvanometers. Available in combinations of current and voltage or different ranges each channel. Useable chart width, 1" per channel. AC models also available.

from **$143.50**

Let Rustrak engineering "knowhow" develop an instrument for your particular application.

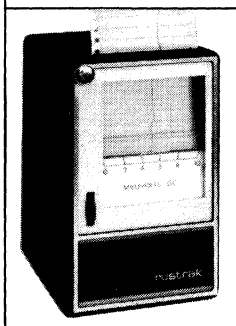
2133/F204AB

Recording-Controller Feature.

ON-OFF solid state controller feature available as option on most Rustrak recorders. Controls up to 5 amps resistive load at 30 VDC or 115 VAC. Set points continuously adjustable over entire chart range. Option price added to cost of companion recorder. Not available separately.

from **$95.00**

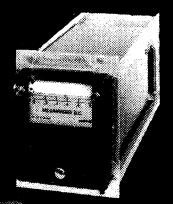


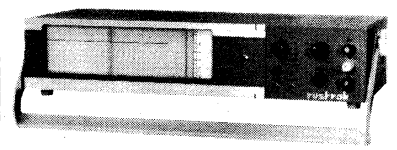
2194

One Microampere DC Recorder.

Solid state with full-scale sensitivity of 1 microampere, range of 0 to 10 millivolts DC and input impedance of 10,000 ohms. For use as temperature bridge and strain gauge readout or as a recorder accessory for laboratory and process instruments.

$180.00



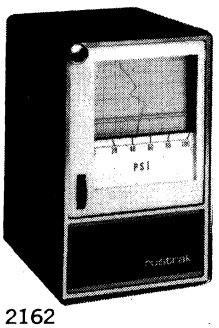


191

Multipurpose Recorder.

Two recording channels, one analog, one event. Twenty-one ranges up to 1000 millivolts, microamperes or milliamperes on analog channel. Displays 7½ inches of chart. On-off event marker has 10 millisecond response time. Carrying handle doubles as tilting support.

$425.00

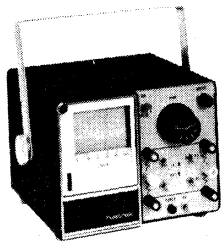


2162

Pressure Recorder.

Single channel pressure recording of most liquids and gases using a C-type Bourdon tube. Standard ranges 0-15, 0-30, 0-50, 0-100, 0-200, 0-300 and 0-500 psi. Many special offset ranges available.

from **$110.00**

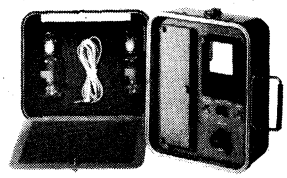


2195

Strain Gage Recorder.

Records resistance change of gages used for measuring strain, stress, displacement, load, torque, or any transducer using strain gauge sensing elements for static display. Maximum sensitivity: 500 micro-inches/inch. Self-contained instrument with regulated supply.

from **$385.00**



192

Dissolved Oxygen/Temperature Recorder.

Simultaneously records dissolved oxygen and temperature. Temp. range, 0 to 40°C. Operates unattended for about four weeks from two inexpensive batteries. Chart speed regulation, ±0.5%. For surveys in water pollution control programs.

$585.00

Many other types of recorders available. Send for catalog.

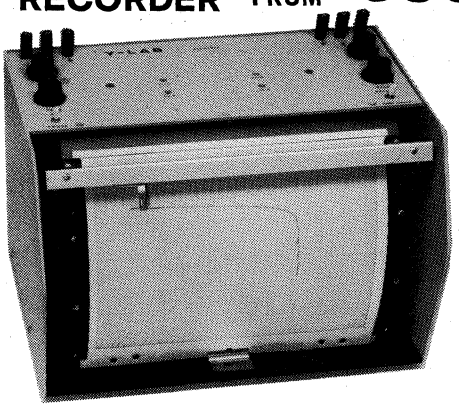
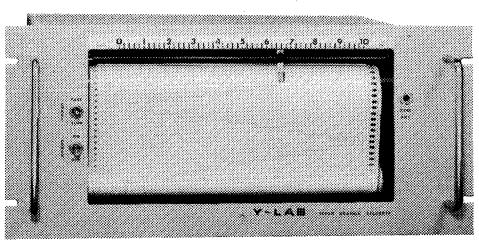
THE Y-LAB MODEL 30 X-Y RECORDER FROM $380.00



SPECIFICATIONS	MODEL 30A	MODEL 30B
CIRCUIT	Direct coupled servo amplifiers.	Chopper stabilized servo amplifiers.
SENSITIVITY (max)	100 millivolts/inch.	1 millivolt/inch
ACCURACY	½% full scale.	½% full scale.
INPUT RESISTANCE	Potentiometric (infinite) on max sensitivity. 50K on attenuated range.	Potentiometric on high sensitivity. 10K/volt on attenuated ranges.
ATTENUATOR	Continuously variable 100 mv/in to 1 v/in.	1-5-10-50-100-500 mv/in plus continuously variable.
SPEED	10 inches/second.	10 inches/second.
PRICE	$380.00.	$485.00.
GRAPH SIZE	8½" x 11" paper. Pen travel 7" x 10".	
DIMENSIONS	14" Wide x 9" High x 10½" deep.	
WEIGHT	15 pounds.	
POWER	115 volts; 50-60 cycles per second; 30 watts.	

THE Y-LAB MODEL 28 SERVO GRAPHIC RECORDER FROM $325.00



SPECIFICATIONS	
FULL SCALE SPAN	10 Millivolts.
INPUT RESISTANCE	Infinite at balance. Signal Source resistance greater than 50K will degrade accuracy.
INPUT ISOLATION	100 volts DC maximum relative to chassis.
LIMIT OF ERROR	½% of full scale.
LINEARITY REPEATABILITY STABILITY	Better than ¼% over a 30° F temperature and 105-125 line voltage.
PEN SPEED	One second full scale.
DAMPING	No overshoot.
CONTROLS	**Front Access:** Zero Set — pen may be zeroed anywhere on chart. Power Switch. Chart Speed Switch. Pen Lift. **Rear Access:** Full Scale Span. Servo Amp Gain. Input Terminals.

INKING SYSTEM

Capillary reservoir.

CHART SPEEDS

1 inch per minute and 1 inch per hour standard. Other speeds available on order.

CHART

12 inches x 100 feet; graduated 10 inches.

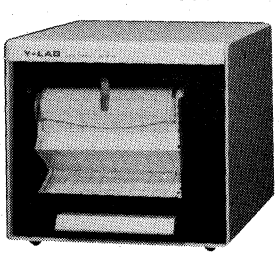
POWER

115 volts; 60 cps; 15 watts.

DIMENSIONS

19" wide x 8¾" high x 8" deep. Weight 15 lbs. Mounts in standard rack or cabinet.

THE Y-LAB MODEL 26 SERVO GRAPHIC RECORDER FROM $195.00



6" H x 7" W x 6½" D BENCH OR PANEL MOUNT

FEATURES

- 1% ACCURACY
  All the precision that is meaningful on a 4" chart.
- ½-SECOND PEN SPEED
  1 CPS response. No overshoot.
- FLOATING INPUT
  Immune to stray pickup.
- POTENTIOMETRIC
  Null balance circuit.
- FLIP FOLD CHART and TILT OUT DRIVE

POWER	115V 60 CPS 15 watts
CHART	5" x 25' calibrated 4"
CHART SPEED	1 in/min or 4 in/hr

It is now economically practical to record all data from research, analytical and process instruments.

The MODEL 26 can be bench or panel mounted, and is designed to be compatible with all equipment having recorder output.

MODEL 26A — 1 volt full scale.....**$195.00**
MODEL 26B — 10 millivolt full scale.....**$235.00**

- **Circuitry on all models is silicon solid state with Zener reference.**
- **Simple straightforward design and elimination of frills make possible these remarkably low prices.**

ADVANTAGES OF ALSIMAG® TECHNICAL CERAMICS

MORE MATERIALS

For many decades American Lava has worked with leading firms to develop special ceramics for their advanced designs. The result is the greatest number of special ceramic compositions available from any source. This wealth of ceramic materials can help in two ways. First, it may give you the exact performance you require. Second, it enables you to select the most economical material that meets your design requirements.

MORE PROCESSES

American Lava offers the broadest processing capabilities in the industry. These include forming ceramics by all modern methods including pressing, extrusion, injection molding, isostatic pressing, plus metallization, plating, chemical milling, machining, grinding, lapping, and hermetic bonding.

Many of these processes were pioneered by American Lava. Examples are (1) the ability to produce certain as-fired ceramics to precision tolerances and (2) the proprietary AlSiBase process for producing thin flat ceramics.

MORE SPECIALIZED ENGINEERING TALENT

American Lava, built on engineering ability, has demonstrated that it is the best source for any problem involving technical ceramics.

GREATER PRECISION

Technical ceramics play an increasingly important part in American industry because they can meet especially demanding requirements. American Lava has the experience, know-how and facilities to produce ceramics to the closest tolerances, and to measure and inspect them by agreed means.

MORE MODERN DESIGNS

Technical leadership at American Lava Corporation is based on working with its customers to give them what they want. This currently involves work on composite substrates, composite packages, buried metal patterns, super-smooth and flat substrates, special temperature compensating dielectrics, ceramic capacitors and new ceramic coatings for metal and low expansion glass.

VOLUME PRODUCTION

American Lava has the resources, know-how and the desire to make commitments required to meet volume requirements of its customers. A long parade of firsts in new manufacturing capabilities have allowed American Lava to keep pace with the ever changing need for technical ceramics in volume.

EXPEDITED PROTOTYPES

Special procedures speed the production of prototypes for your evaluation. A chart giving the characteristics of our most frequently used AlSiMag ceramic compositions will be sent on request. Suggestions are available from our specialized engineering staff.

Hypalox®

Ceramic Electronic Components

HYPALOX CERAMIC

is made of sintered aluminum oxide (Al_2O_3) in its highest chemical purity; a material that holds a special position amongst metallic oxides. Owing to its special atomic structure, its mechanical, chemical and electrical properties are extremely high. Its outstanding feature, however, is the insignificant decrease of these properties when used at high temperatures.

Advantages include

Absolute vacuum tightness at 2192°F (minimum wall thickness 0.004") • unchanged accuracy of size • compressive strength 85.34 tons/sq. in. • volume resistivity 3.94^5 ohm/in.

This material therefore meets all requirements necessary for heavy duty insulating parts in the electrical and electronic industries.

E2 is our standard quality which will be sufficient in the majority of cases.

We can supply molded parts of complex shapes as well as mass-produced parts for the following applications — **Transmitter tubes:** Envelopes, windows, cathode supports. **Vacuum engineering:** Rings and tubes (on request with molybdenum-manganese metallization). **Electronics:** Substrates for micro-modules with defined surface roughness — natural finish up to 0.5 microns — ground up to 0.2 microns — polished up to 0.02 microns. **Electrical engineering:** Insulators for coils and resistance.

HYPALOX CERAMIC-METAL

The metallization is carried out according to the molybdenum-manganese process. This metallization is constant and suitable for brazing up to 2012°F under protective gas and vacuum. The most suitable solder is silver-copper eutectic.

The outstanding features of

HYPALOX CERAMIC-METAL COMPONENTS

are . . . high vacuum tightness (leakage smaller than 10^{-10} Torr.1/sec) • great stability • resistance to thermal shocks • reproduceable dimensional accuracy • working temperatures up to 1292°F.

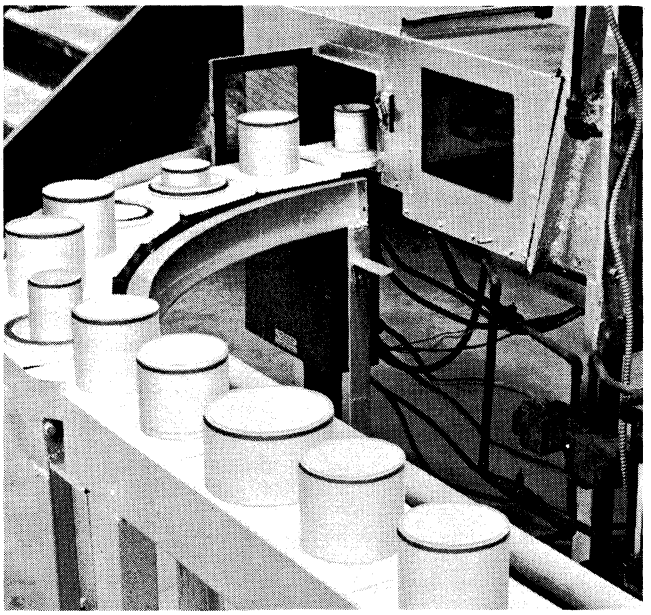
HYPALOX CERAMIC-METAL COMPONENTS

are used as — **Envelopes** for transmitter tubes, clystrons, magnetrons, travelling ware tubes. **Housings** for mercury vapour and silicone rectifiers, thyristors. **Terminals** for high vacuum installations and measuring instruments, pressure vessels.

AMERICAN FELDMUEHLE CORP.
P.O. Box 2160, Glenbrook, Conn., 06906 • Tel. (203) 325-1511

BASIC CERAMICS INCORPORATED

Complete Technical Ceramic Services... Design and Development Assistance, Fast Response Prototype, High Volume Production.



Metalizing

What We Do:

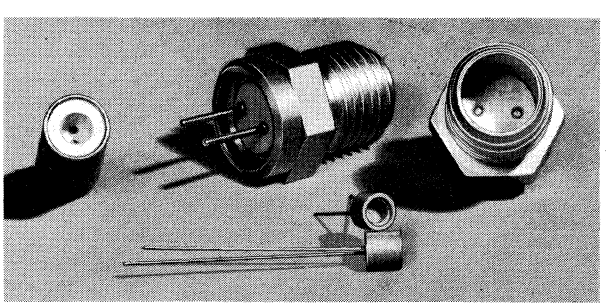
- Mix, and fire our own ceramics.
- Machine ceramic parts in the hard state to tolerances as precise as ± .00005
- Provide complete ceramic/metal services including metalized sub-assemblies
- Hermetically seal parts

Methods of Manufacture:

- Extrusion • Isostatic Pressing
- Dry Pressing • Casting
- Injection Molding
- (Green machining, hard machining with diamond grinders, lapping, polishing, drilling, honing, high and low temperature metalizing, plating, assembly brazing)

Ceramic Bodies Offered:

- Alumina (white) • Alumina (opaque)
- Forsterite • Beryllia • Steatite
- Zirconia • Titanium
- Castables (non-shrink)
- High-Temperature Ceramic Cements



Products Offered:

The following electronic products are now being manufactured:

★

Electron Tube Envelopes:
Full range including spark gap, traveling wave, magnetron and microwave.

★

Rods and Tubes:
Conventional, or extremely close tolerances.

★

Semiconductor Packages:
Including ceramic/metal sub-assemblies.

★

Insulators:
Tube, antenna, cyclotron, heater

★

Printed circuits on ceramic bases.

★

Feed-Throughs • Igniters

★

Microwave Windows • Internal Spacers

★

Heater Supports

★

Radar Flat Spiral Antenna

★

Coil Forms • Magnetron Wells

★

Radomes

Offering a complete ceramic service from prototype through production.

CARBORUNDUM® TECHNICAL CERAMICS

COMBAT™ BORON NITRIDES
Standard & High Purity Grades of solids, powders, coatings that conquer where lesser materials fail

APPLICATIONS

Use COMBAT as fixture or jig materials for sealing or brazing operations in induction, vacuum, or atmosphere furnaces, for molten-metal crucibles, for heat-sinks and special insulators, for increasing thermal conductivity in silicone oils, resins and potting compounds, or for the jobs where lesser materials fail.

STRUCTURE

COMBAT boron nitrides have a hexagonal, platy crystalline structure similar to graphite. Like graphite, it orients during the hot-pressing operation, making many of the physical properties of the solid grades anisotropic.

FORMS

COMBAT boron nitrides are available as a solid hot-pressed product, a powder, and a coating, in three grades of each form.

DIELECTRIC PROPERTIES

COMBAT boron nitrides have dielectric strengths of nearly 1000 volts per mil; four times that of alumina. With this high strength, plus their low dissipation factor and dielectric constant, they are outstanding low-loss materials over a wide range of frequencies and temperatures.

THERMAL RESISTANCE

COMBAT boron nitrides are used at temperatures to 2800°C. in inert or reducing atmospheres—to nearly 3000°C in a dry hydrogen atmosphere—and between 985°C. and 1400°C. in oxidizing atmospheres, depending upon the grade.

The thermal expansion of COMBAT boron nitrides are lower than those of most refractory materials.

COMBAT's high thermal conductivity decreases slowly with increasing temperature. It exceeds that of beryllium oxide above 500°C.

COMBAT has exceptional resistance to thermal shock, standing water quench at 1200°C.

CORROSION RESISTANCE

Inorganic COMBAT boron nitrides are inert to most organic solvents and many corrosive agents such as molten iron, silicon, aluminum, cryolite, copper, and zinc. They are not wet by most molten metals and slags.

MACHINABILITY

COMBAT solids can be easily machined to close tolerances, with conventional tools. No further firing or heat treating is required. Machine, then use They can be threaded or otherwise physically joined to form strong assemblies.

PROPERTIES

Density, gms/cc	1.90 to 2.12, depending on grade
Working temperature: Inert or reducing atmosphere, solid	up to 2775°C, depending on grade
Oxidizing atmosphere solid	up to 1400°C, depending on grade
Dielectric constant	3.7 to 4.11, depending on grade
Dielectric strength	to 986 volts/mil
Electrical resistivity	$< 2 \times 10^{14}$ ohm-cm
Coefficient of friction	low
Thermal shock resistance	excellent
Permeability	negligible
Hardness	up to 89.5 (15T) depending on grade

STRENGTH

Depending upon grade, COMBAT boron nitrides have moduli of rupture of 6,000 to 15,000 psi.

LITERATURE

For detailed borchure or specific application assistance, contact The Carborundum Company, Technical Ceramics Plant, Latrobe, Pa. 15650. Phone: 412 - KE 7-3331.

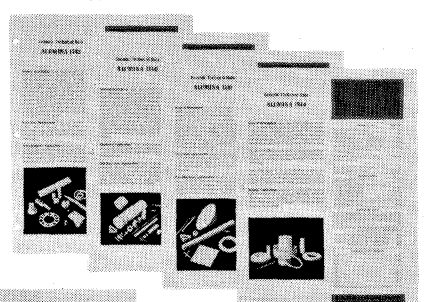
ALUMINA CERAMICS

94%, 96%, 98%, 100%

Specify Carborundum #1544, a 94% alumina composition, for metallizing applications. For a porous 100% alumina body, specify Carborundum #1510. Specify Carborundum #1542 or #1540 for 96% or 98% alumina coil forms, substrates, tuning shafts, etc.

Surfaces may be ground to very close tolerances, or furnished as fired. Two standard glazes are available.

Ask for our new package of data and application sheets.



SWAGEABLE MAGNESIA TUBING

Magnesia preforms are certified to be at least 99.4% pure. This composition is easily and completely reduced to a dense, homogeneous powder.

Ask for Data Sheet A-1852.

Dilectrix FLUOROFILM® TFE and TFE/FEP TEFLON TAPES AND FILMS

Fluorofilm is a void-free multilaminar cast film. It is fabricated by the unique Dilectrix continuous casting process, wherein each micro-thin lamina is independently sintered and cured. Each successive lamina is fused to the preceding one until the predetermined thickness is achieved. This process yields two important features: freedom from voids or pinholes and greater tensile strength.

Dilectrix Fluorofilm cast Teflon films and tape conform to Military Specification MIL-P-22241A. The basic film is cast in thicknesses from ⅛ mil to 5 mils, widths from ¼" to 12", and splice-free continuous lengths of 500 ft.

TYPE	THICKNESS RANGE (MILS)	DESCRIPTION	TYPICAL APPLICATIONS
C	⅛ to ¾	Cast TFE† film.	Delay lines, insulation and capacitor dielectric — General purpose insulation.
CD	¼ to ¾	Cast TFE film, Duplex wound. 2 rolls, of same film thickness, wound on one core.	In capacitors to eliminate dust between layers, loading of only 2 rolls on winders, stands higher tension when winding on mandrels.
CM	¼ to ¾	Cast TFE film. One side metallized. Pure aluminum vacuum applied, controlled thickness produces resistance of approx. 1 ohm/sq. in.	Conductor and dielectric in single unit for capacitor manufacture. Available with insulated margins. Reduces unit size and reject loss.
DF-100**	1, 2, 3, 4 & 5	Multilaminar TFE film. Processed for void-free and pinhole-free qualities.	Wire and cable wrapping, coil interlayer, slot and phase insulation. Anti-friction surfaces.
DF-1700**	1, 2, 3, 4 and 5	Multilaminar TFE. One side FEP coated and heat bondable.	Folded and weld-seamed, an excellent chemical tubing resistive to corrosive fumes, gases, liquids.
DF-1700-DB**	2, 3, 4 & 5	Multilaminar TFE film. Both sides FEP coated and heat bondable.	Insulation over wire shielding because it takes lower temperature to weld it together than is required for an extruded, unsintered TFE tape.
DF-1100**	2, 3 and 4	Multilaminar TFE film. One Side Receptive to Adhesives by a Proprietary Surface Treatment.	Same as DF-500 but for more exacting applications.
DF-1200**	2, 3 and 4	Multilaminar TFE film with Pressure Sensitive Backing.	Most versatile. Adheres to most any surface: Metal, wood, ceramics, plastics, etc. Used as harness bundling, spot insulation, slot linings, core wrapping. For non-slip surfaces, gasket facings, etc.
DF-1300	2½ only	Multilaminar TFE film. Black. Both Sides Coated for Epoxy Adhesion.	Coil wrappings where epoxy potting resins are used.
DF-1400	2½ only	Multilaminar TFE film. Black. Treated to make both sides conductive.	Ideal for low noise cable wrapping.

PHYSICAL AND MECHANICAL PROPERTIES

DOW CORNING

DOW CORNING® SILICONE MATERIALS

SILICONE ENCAPSULATING MATERIALS

Two-part SYLGARD® Resins

Sylgard resins are solventless, pourable, deep section curing silicone materials that provide tough, firm, yet resilient packages for electronic components and circuits. They provide excellent protection against high humidity, heat, cold, thermal shock, moisture and radiation; they are self-extinguishing and completely reversion-resistant.

Circuits embedded in Sylgard resin are easily repaired—the resin is cut away, the repair made, and fresh resin is poured in place. There is no loss in dielectric integrity.

As supplied, these resins flow readily around complex circuitry. If required, they may be thinned to very low viscosity with Sylgard® 1330 thinner.

Sylgard resins cure with the addition of a catalyst, without releasing volatile by-products. There is virtually no shrinkage, even when these materials are cured in deep sections. Curing rate can be heat-accelerated without causing bubbling. No moisture is required for curing, and no post-cure is necessary to prevent depolymerization.

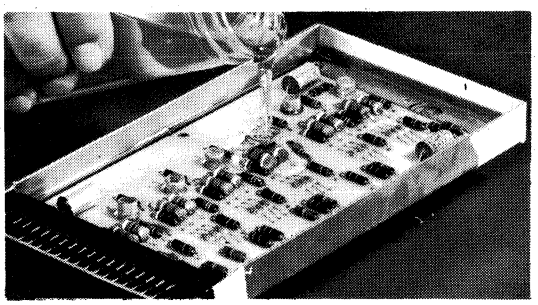
Both clear and opaque types are supplied. For maximum adhesion, a Sylgard® primer is recommended.

Sylgard® 182 and 183 resins are heat curing, offer a selection of pot life and cure times. Typical curing rate is 4 hours at 65 C. Serviceable temperature range is from −65 to 200 C for the clear resin (182); −65 to 250 C for the black (183).

Sylgard® 184 and 185 resins are similar to the above, but cure at room temperature. Typical cure time is 24 hours.

Sylgard® 186 and 187 resins, although similar to the rest of the family, offer extra physical strength and toughness. Their tear strength—100 ppi—is many times greater than the other Sylgard resins, and they provide more than three times the elongation. They are used where durability and maximum protection against mechanical damage are required.

Sylgard® 188 and 189 resins are specifically designed for use where shock absorption is vital.



One-part SYLGARD Resin

Sylgard® 3150 resin is a one-part, premixed, white, solventless resin that cures at moderate temperature to form a resilient, easily repairable encapsulant for electronic components. It cures without exotherm, even in confined spaces, and retains its physical and electrical stability over a wide frequency range and 100% RH. Its low viscosity (100 poises at 25 C) aids in potting and filling deep, intricately shaped components and assemblies.

Stress-free potting gel

Sylgard® 51 dielectric gel is supplied as a water-white, medium-viscosity liquid that readily surrounds components. With the addition of a catalyst and the application of heat, it cures to form a clear, resilient, jelly-like material that combines outstanding dielectric properties with thermal stability and moisture resistance. Typical electric strength is 800 volts/mil; dissipation factor at 100 Hertz is 0.0005.

No damaging stresses are exerted on delicate parts by this material during cure—after cure it develops virtually no stresses throughout its wide operating temperature span of −65 to 200 C.

Since this material is transparent, potted circuits can be traced visually. Test probes can be inserted through the gel for instrument checking of circuits and components—the gel "heals" itself immediately when the test probes are removed.

DOW CORNING CORPORATION, MIDLAND, MICHIGAN 48640 TELEPHONE 517-636-8940

DOW CORNING

DOW CORNING® SILICONE MATERIALS

SILICONE ENCAPSULATING MATERIALS

DOW CORNING RTV ENCAPSULANTS

Dow Corning's family of two-part room-temperature-curing silicone rubber encapsulants offers optimum processing flexibility plus outstanding environmental and electrical protection for many types of equipment. These materials stay rubbery and flexible from −65 to 250 C, and have good dielectric properties over this range. Their excellent resilience helps absorb mechanical shock and vibration, and they protect components against temperature extremes, moisture, dirt, weathering and corrosive atmospheres. Encapsulated circuits are easily repaired by cutting away old material and repouring fresh encapsulant. Package integrity is fully restored.

Production flexibility

Four of the RTV encapsulant bases are designed to be used with any one of three catalysts, in varying proportions, to give working times from less than a minute to more than an hour. Thus a minimum inventory of material is required to meet a variety of applications. When used in 10:1 base-to-catalyst ratio, these materials are well suited to automatic dispensing and mixing equipment. They can be cured at room temperature or under heat, depending on the catalyst used; the room-temperature-vulcanizing types cure in deep sections without exotherm.

Dow Corning® 3110 RTV encapsulant is a white, low-viscosity silicone rubber base.

Dow Corning® 3112 RTV encapsulant is a white, medium-viscosity silicone rubber base that cures to a high durometer, high-strength rubber.

Dow Corning® 3116 RTV encapsulant is a white, medium-viscosity silicone rubber base with a low specific gravity.

These three bases can be pigmented for color coding.

Dow Corning® 3120 RTV encapsulant is a red, medium-viscosity silicone rubber base that cures to a high durometer, high-strength rubber.

The catalysts used with these four bases are all paste-consistency materials containing active organo-metallic compounds. They are designed for easy measuring and for mixing by either automatic or mechanized methods.

Dow Corning® RTV standard (S) catalyst is the most widely used of the three. It permits at least 30 minutes working time, cures well in deep sections.

Dow Corning® RTV fast (F) catalyst is used for high-speed production. It is ideally suited for use with automated mixing and dispensing equipment where mixing is done just prior to dispensing. Working time with 10% of this catalyst is about 2 minutes. Rubbers using this catalyst cure well in deep sections.

Dow Corning® heat-accelerated (H) catalyst is used where long working time is desired but where fast curing is necessary. With this catalyst, thin sections (⅛ inch) of RTV encapsulants can be cured in as little as 5 minutes at 150 C.

Dow Corning® 1201 primer is recommended for maximum adhesion. *Dow Corning® 1200 primer* is an acceptable alternate, and should always be used when products catalyzed with Dow Corning RTV catalyst H are to be cured *without* heat.

Reversion Resistant

Dow Corning® 3118 RTV encapsulant is a buff-colored, medium-viscosity, reversion-resistant encapsulant specially designed to cure in deep sections. It is supplied with its own curing agent, a master-batched co-reactant polymer. The required curing agent concentration is 4% by weight of the RTV encapsulant base.

Pot life and cure time vary with temperature. At 25 C, pot life is 1½ hours, and curing time is 24 hours.

PROTECTIVE COATINGS AND VARNISHES

Dow Corning offers a variety of protective coatings, including resilient conformal coatings, varnishes and wax-like films, which give physical and electrical protection to electric motors, transformers, circuit boards, memory planes, and other equipment. These coatings are highly resistant to humidity, and retain their properties even after thermal cycling.

Dow Corning® 3140 RTV noncorrosive coating is a tough, transparent, rubbery conformal coating that cures without emitting corrosive by-products. Coating clarity allows easy visual inspection of components, simplifies component repair or replacement.

DOW CORNING

DOW CORNING® SILICONE MATERIALS

PROTECTIVE COATINGS AND VARNISHES (continued)

Silastic® S-2288 dispersion cures to a tough rubbery coating that withstands repeated flashover without tracking, reduces current leakage. It is used as an over-coating for porcelain and epoxy insulators, bushings and stand-offs, or any piece of electrical equipment subjected to severe arcing or tracking.

Dow Corning® 630 protective coating is transparent, dries to a flexible, non-melting, wax-like, water-repellent coating. It is easily removed for component repair by soaking in solvent and brushing, or by an ultrasonic solvent bath.

Dow Corning® GP-77 varnish is a tough, multipurpose impregnant for Class A, B, F and H systems. Applied by dipping, flooding or impregnating, this varnish is used on equipment designed for operation at temperatures to 200 C, including random- and form-wound stators, dry-type transformers, and high-speed armatures.

Dow Corning® 997 varnish is designed for continuous service at temperatures to 250 C, gives superior protection against overload, severe duty cycling, high-temperature ambients, many chemicals, corrosive atmospheres and other environmental hazards. It has many times the thermal life of organic Class B varnishes.

Dow Corning® 1890 protective sealer is an easy-to-apply silicone rubber dispersion used to form a tough, rubbery protective coating on motor stator windings, bus-bars, transformers, splices and connections and many types of electrical hardware. It protects against moisture, abrasive dust, chemicals and weathering, can be applied by spraying or brushing.

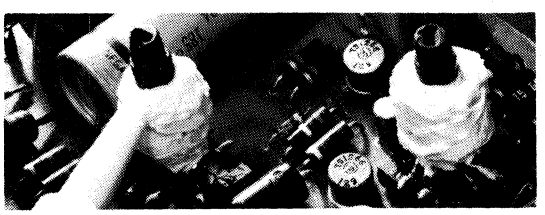
The Sylgard® resins and Dow Corning® RTV rubbers may also be used as protective coatings. For this application, they are usually used in their low-viscosity forms, and the RTV's are blended with the heat-accelerated catalyst to allow time for dipping, draining and other process operations. These materials are widely used as cushion coatings to protect circuits that are subsequently potted in organic materials.

ONE-PART RTV ADHESIVE/SEALANTS

One-part, ready-to-use Dow Corning® and Silastic® brand adhesive/sealants are general-purpose, room-temperature-curing materials suitable for a wide range of applications. When fully cured, they have all the physical and electrical properties typical of silicone rubber, including excellent heat stability, resistance to weathering, moisture and ozone, and excellent insulating properties.

They are supplied in collapsible tubes or dispensing cartridges, and are easily extruded onto the surface where the bond or seal is desired. They are easily worked with a spatula . . . do not sag or slump of their own weight, even on vertical or overhead surfaces. For maximum adhesion on surfaces other than silicone rubber, Dow Corning® 1203 primer is recommended.

Silastic® 732 adhesive/sealant is used to bond metals, glass, plastic, silicone rubber, asbestos and ceramics. Typical uses include insulating and sealing wire and cable splices and connections; holding conduit terminal boxes in place; and bonding components to printed circuits. It retains its flexibility from −60 to 260 C, provides excellent electrical insulating properties, and resists weathering, moisture, ozone and other harsh environmental conditions.



Dow Corning® 731 RTV adhesive/sealant is a special-purpose material manufactured under rigorously controlled conditions. The cured material is approved by the Food and Drug Administration for use in contact with foods. Typical applications include sealing steam kettles, sealing windows in oven doors, and sealing around chutes or tubing used for transporting hot foods. It withstands contact with hot cooking oils, free steam, water, prolonged hot and humid conditions, and cycles of freezing and thawing.

Dow Corning® 3145 RTV noncorrosive adhesive/sealant cures without releasing corrosive by-products. It is ideal for use in contact with copper, particularly printed circuit boards, small-diameter wire, and other corrosion-sensitive electronic components. It is a gray, toothpaste-consistency material that cures tack-free in 24 hours. It offers unusually high strength, and retains its resilience from −75 to 250 C.

DOW CORNING

DOW CORNING® SILICONE MATERIALS

DIELECTRIC COMPOUNDS

Dow Corning supplies a variety of non-hardening, water repellent, grease-like silicone compounds for use as water-repellent seals and insulators for switches, cable connectors, battery terminals and many other applications. These materials withstand harsh environments, are noncorrosive to metals, inert to most plastics, and practically nonvolatile.

Dow Corning® 103 compound is used to reduce corrosion on switch contacts and battery terminals; to lubricate rubber and plastic O-rings and seals; to insulate and waterproof ignition systems, control switches and circuit breakers; to prevent sticking of switches exposed to icing conditions, and many other uses. It is serviceable from −40 to 200 C, withstands a wide range of harsh environmental conditions.

Dow Corning® 107 compound is a light gray, translucent material that can be applied as supplied, or dispersed in a solvent and applied by brushing or spraying. It serves as an excellent mold release agent.

Dow Corning® 4 compound, similar to the 103 compound, features constant consistency from −100 to 200 C. It is designed to meet the requirements of MIL-I-8660B. Applications include use on battery terminals, switch contacts, relays, high tension ignition harness and as a lubricant for O-rings and seals made from rubber and plastics.

HEAT SINK COMPOUND

Non-hardening, non-melting heat sink compound provides the fast heat removal that keeps diodes, transistors, rectifiers and other electrical and electronic devices operating longer and more efficiently.

Dow Corning® 340 silicone heat sink compound is a grease-like silicone material heavily filled with heat-conductive metal oxides. Thermal conductivity (k factor) is in the range of 0.0015 cal/cm²-sec-(°C/cm).

Product Type	Product Designation	Packages
Potting and Encapsulating Resins	Sylgard® 51 dielectric gel	1, 8, 40, 400 lb. cans
	Sylgard® 182 resin, clear, heat cure	1, 11, 55, 5, 50 lb. kits
	Sylgard® 183 resin, black, heat cure	
	Sylgard® 184 resin, clear, RT cure	
	Sylgard® 185 resin, black, RT cure	
	Sylgard® 186 resin, translucent, RT cure (high strength)	
	Sylgard® 187 resin, black, RT cure (high strength)	
	Sylgard® 3150 resin, white, heat cure (one part)	1, 10, 50, 500 lb. cans
	Sylgard® primer	pint and gallon cans
RTV Rubber Encapsulants	Dow Corning® 3110 RTV encapsulant	1 lb., 10 lb. pail, 50 lb. pail
	Dow Corning® 3112 RTV encapsulant	
	Dow Corning® 3116 RTV encapsulant	
	Dow Corning® 3120 RTV encapsulant	
	Dow Corning® RTV catalyst F, S, H, 1 and 4	tubes, 1 lb., 5 lb. and 10 lb. cans
	Dow Corning® 3118 RTV encapsulant (4% catalyst)	1 lb., 10 lb. pail, 50 lb. pail
Varnishes and Protective Coatings	Dow Corning® GP-77 varnish	1 and 5 gallon cans, 55 gallon drums
	Dow Corning® 991 varnish	1 and 5 gallon cans, 55 gallon drums
	Dow Corning® 996 varnish	1 and 5 gallon cans, 55 gallon drums
	Dow Corning® 997 varnish	pint, gallon, 5 gallon, 55 gallon drums
	Dow Corning® 1890 protective sealer	2 lb. jar, 8 lb. and 38 lb. pails
	Dow Corning® 630 protective coating	pint, gallon, 5 gallon
	Dow Corning® 3140 RTV noncorrosive coating	2 oz. tubes; 1 lb. cans
Adhesive/Sealants	Silastic® 732 RTV adhesive/sealant	2 and 5 oz. tubes; 6 and 12 oz. cartridges
	Dow Corning® 899 RTV adhesive/sealant	12 cartridges/carton (cartridge 1/12 gal.)
	Silastic® 140 RTV adhesive/sealant	2 and 5 oz. tubes; 6 oz. cartridges
	Dow Corning® 3145 RTV adhesive/sealant	2 oz. tubes; 12 oz. cartridges
Compounds (Dielectric)	Dow Corning® 103 compound	2 and 8 oz. tubes; 10 and 50 lb. cans
	Dow Corning® 107 compound	2 and 8 oz. tubes; 10 and 50 lb. cans
	Dow Corning® 4 compound	2 and 8 oz. tubes; 10 and 50 lb. cans
	Dow Corning® 19 compound	8 oz. tubes; 10 lb. cans
Compounds (Heat Sink)	Dow Corning® 340 heat sink compound	5 oz. tubes; 14 oz. cartridges; 20 lb. and 100 lb. pails

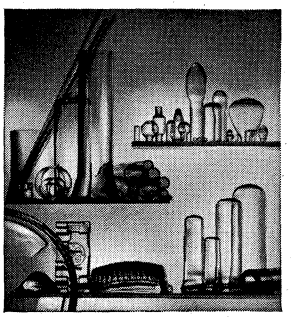
Worldwide Service and Prompt Delivery for Quartz, Lucalox® and Electronic Glass Products

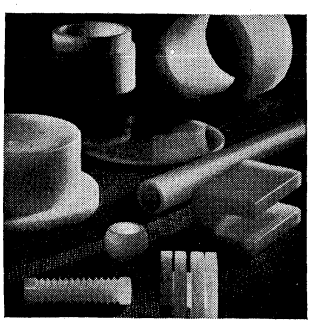
G
GLASS

Machine-pressed shapes, formed to specification without additional grinding and polishing, can be furnished in a wide variety of glass compositions. At far right, is an example of an as pressed lens system for an audio visual entertainment unit for children. A highly experienced staff is available for customized orders in glass tubing, special glass formulations (beads) and other glass components.



L
LUCALOX®

Lucalox®, a polycrystalline alumina, is available in standard tubing, rod, plates, discs and custom parts. This versatile ceramic is ideal for such critical applications as electrical insulators in corrosive environments, where wear surfaces require dimensional stability and for windows when low loss factor is important. Lucalox can transmit up to 90% of total light in the visible spectrum. Outstanding characteristics include: chemically inert to cesium, fluorine, sodium, potassium; transmits radiation in both visible and infrared wave lengths; surface may be polished to less than one micro-inch; high dielectric strength. Lucalox can be fabricated to complex specifications. Standard shapes in stock.



Q
QUARTZ

General Electric high purity fused quartz is available in clear and translucent tubing and rod, solid shapes, standard fabrication, and to custom specifications. In addition, fused quartz fiber products including yarn, matt, roving, overlay, and wool are manufactured. Fused Type 151 schlieren grade is available for critical optical and ultraviolet applications, schlieren windows, schlieren photography, laser optics, spectophotometer optical elements and other high ultraviolet transmission applications. New Type 125 fused quartz, a high-quality, economical material which features the absence of large bubbles, is suitable for commercial grade optical and mirror applications. It has low stress birefringence and high transmission in both UV and IR wavelengths.

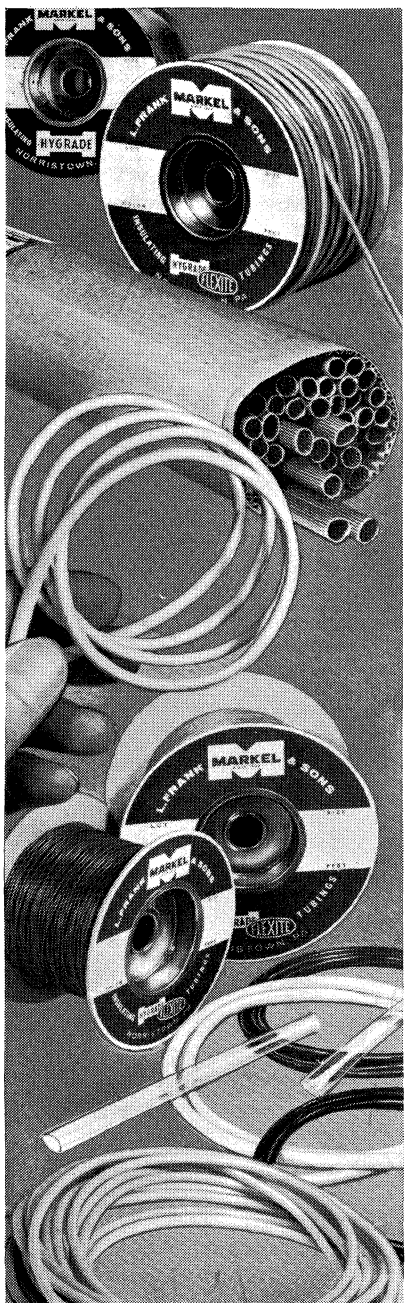
Insulating Tubings and Sleevings- High Temperature Wire and Cable



HYGRADE®

HYGRADE Fabric-Base Insulating Sleevings, the oldest and best known in the industry, are constructed of carefully braided fiberglass yarn, impregnated and coated with varnishes, vinyls, resins, or silicone rubber compounds.

HYGRADE SR-398 Silicone Rubber Coated Fiberglass Sleeving is a Class H material of closely woven glass braid coated with highly abrasion-resistant silicone rubber.

HYGRADE SV-862 Silicone Varnish Impregnated Fiberglass Sleeving is a flexible Class H insulation with unusual resistance to temperature extremes and weathering.

HYGRADE VF Flexible Fiberglass Sleeving is a tough, Class B insulation of plastic-covered fiberglass combining excellent electricals, flexibility, heat stability.

HYGRADE Polytube 463 Class F Flexible Fiberglass Sleeving is an acrylic-coated material compatible with the wire enamels used in motors and transformers.

HYGRADE Polytube 962 Class F Flexible Fiberglass Sleeving is a polyurethane-coated insulation compatible with the wire enamels in motors and transformers.

HYGRADE Thermoflex 1200 Class C Flexible Fiberglass Sleeving is made of 100% tightly braided fiberglass. For use at continuous temperatures as high as 1200°C.

HYGRADE Thermoflex 500 Class C Flexible Fiberglass Sleeving is made of tightly braided and pigmented fiberglass. For continuous operating temperatures to 500°C.

Ask for data sheets on these HYGRADE and FLEXITE products

FLEXITE®

Included in the FLEXITE line are extruded plastic tubings of Teflon, Silicone Rubber, Vinyls, Polyethylene, Nylon, and other plastics; Shrinkdown Heat Shrinkable extruded Tubings; and TGL Triangular Guide Line Wrapping Tape.

FLEXITE TFE Extruded Tubing of DuPont Teflon is a flexible material for continuous use at 250°C, with outstanding electricals, heat stability, chemical resistance.

FLEXITE AR-400 Modified Teflon Tubing is a flexible material with exceptional abrasion and cut-through resistance at temperatures from −70°C to 250°C.

FLEXITE SR-200 Silicone Rubber Extruded Tubing is made of an extremely elastic compound, and is excellent for high voltage applications at Class H temperatures.

FLEXITE Teflon FEP Extruded Tubing is a fluorocarbon tubing suitable for continuous use at 200°C. It possesses outstanding electricals and chemical resistance.

FLEXITE HT-105C Extruded Vinyl Tubing is U/L recognized for continuous use at 105°C. It is a strong, very flexible tubing suited for many general applications.

FLEXITE E Extruded Vinyl Tubing is an extremely flexible tubing designed primarily for low temperature applications (to −68°C), as in aeronautical instrumentation.

FLEXITE Polyethylene is a flexible Class A tubing offering excellent electricals, compatibility and abrasion resistance over a wide (−70°C to 80°C) temperature range.

FLEXITE Shrinkdown HT-105 Heat Shrinkable Tubing is a flexible material supplied in expanded sizes to cover shapes; it shrinks 50% on application of heat (190°F).

FLEXITE Shrinkdown PO-135 is a Class B flexible tubing which shrinks at 235°F. It is widely used to jacket cables, insulate terminals, and as a printed marker.

FLEXITE Shrinkdown TE-250 is a Heat Shrinkable Teflon Tubing for use at Class H temperatures. It shrinks at 621°F to make a form-fitting Teflon cover over shapes.

NATVAR – one source for all types of flexible electrical insulation

NATVAR COATED FIBERGLASS SLEEVINGS

Natvar coated fiberglass sleevings combine the strength and heat-resistance of a braided glass fiber sleeve with selected coatings to achieve strong, reliable insulations for all temperatures up to Class 180. The various coatings have been selected for the optimum combination of properties required for their respective temperature ranges. All Natvar coated sleevings are inspected and tested in accordance with ASTM Specification D-350. They conform to ASTM D-372 and applicable NEMA and military specifications.

NATVAR HEAT-GRIP® Irradiated Polyolefin Tubing

Here's the fast sure way to protect or insulate. Heat-Grip heat shrinkable tubing shrinks down to form a strong, flexible shield when moderate heat is applied. Won't melt or flow upon heating. Has longer heat life and greater resistance to solvents. Conforms to Spec. MIL-I-23053/5, Classes I and II. Heat-Grip is available in sizes 3/64" to 1" I.D. in five colors and clear.

Excellent for mechanical protection, color identification, product encapsulation, insulation.

NATVAR VINYL TUBINGS

Natvar vinyl tubings are available with a wide range of properties. Each class of tubing is produced from a vinyl compound especially formulated to yield the most favorable properties for the intended use. Natvar tubings are offered to conform to the following specifications: MIL-I-631D, Type F, Form U: Grade A, Class I, Category I; Grade A, Class II, Category I; Grade B, Class I and II, Category I; Grade C, Class I and II, Category I. MIL-I-7444B. MIL-I-22076A.

NATVAR COATED MATERIALS

Natvar manufactures a complete range of coated materials for a wide variety of Class 105, Class 130, Class 155 and Class 180 applications. Coated materials include cambric, polyester, paper, fiberglass and Nomex®. They are inspected and tested in accordance with appropriate ASTM and NEMA standards, and conform to Military Specifications where applicable.

COATED FABRICS AND PAPERS

CLASS 180°C
- Silicone Rubber Coated Fiberglass
- Silicone Varnished Fiberglass
- Coated Fiberglass and Quinorgo Combination
- Dura™ Resin B-Stage Products

CLASS 155°C
- Isoglas®
- Isoteraglas®
- Epoxy Coated Fiberglass
- Polyester Coated Fiberglass
- Polyteraglas®
- Isoplex®
- Coated Fiberglass and Quinorgo Combination
- F-LAR™ Coated Film
- "B" Stage Coated Products

CLASS 130°C
- Teraglas®
- Varnished Fiberglass
- Varnished A-B Fiberglass
- Varnished Polyester Film
- Coated Fiberglass and Quinorgo Combination
- Aboglas
- Acryliglas®

CLASS 105°C
- Varnished Cambric
- Oil Packed Varnished Cambric
- Varnished Papers
- Varnished Cambric and 100% Rag Paper Combination

FLEXIBLE SLEEVING

CLASS 180°C
- Silicone Rubber Coated Fiberglass Sleeving

CLASS 155°C
- Isolastane® Fiberglass Sleeving

CLASS 130°C
- Vinyl Coated Fiberglass Sleeving

EXTRUDED PLASTIC TUBING AND TAPE

CLASS 130°C
- Heat-Grip® Heat Shrinkable Polyolefin Tubing

CLASS 105°C
- High Temperature Vinyl Tubing
- Vinyl Transformer Tubing
- High Temperature Vinyl Tape

OTHER EXTRUDED PRODUCTS
- General Purpose Vinyl Tubing
- Low Temperature Vinyl Tubing
- Styroflex® Capacitor Film

We have the capabilities for solving your insulation problems and invite your inquiries.

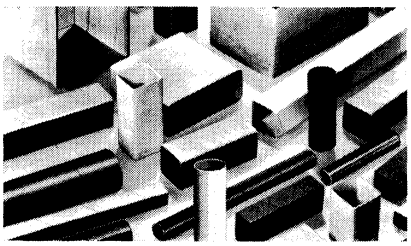
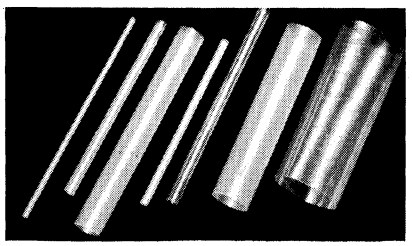
Choose the best Insulating Materials and Parts for your project!

HEAT-SHRINK MYLAR* TUBING
Having an extremely high dielectric strength, HS "Mylar" may be specified in very thin wall thicknesses to reduce space requirements. It is shrinkable as much as 50% to provide an immovable, tight fit. *TM-DuPont Co.

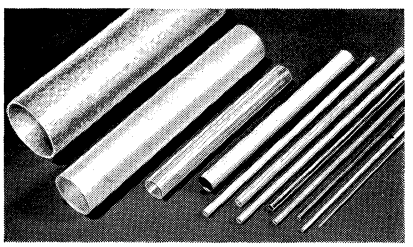
Specializing in the fabrication of insulating materials for the electrical/electronic industry since 1935, Precision Paper Tube Company can produce practically any insulating part required. Precision's manufacturing facilities, located in major market areas, can wind, slit, punch, impregnate, form and mold an endless variety of insulating materials and parts. Some are shown below. If you have an insulating problem, ask Precision to help.



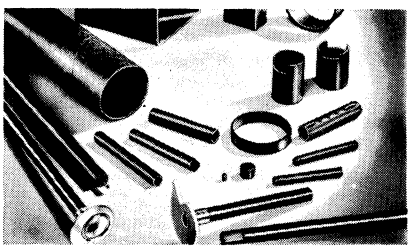
DIELECTRIC KRAFT TUBING
Meets general dielectric requirements for a variety of applications including; coil and transformer forms, capacitor covers, light shields, spacers, etc. Can be produced in almost any wall thickness and tubing dimension.



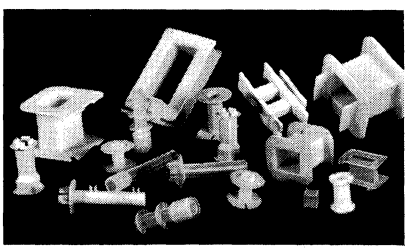
PLASTIC TUBINGS
Many types of plastic materials can be wound, extruded and formed by Precision to your requirements. Acetate, Mylar*, Teflon*, Kapton*, Butyrate, Propionate, Polyethylene and PVC are some of the materials available. *TM-DuPont Co.



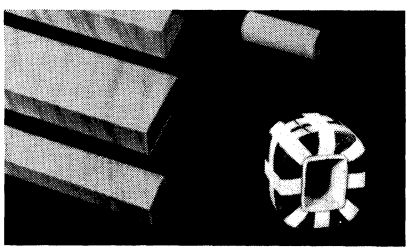
COMBINATION AND FOIL TUBING
To meet exacting conditions of tolerance, temperature stability, dielectric strength and/or mechanical strength, tubings can be produced in a wide combination of materials. Metal foils are also wound with other materials for shieldings, delay lines or voice coils.



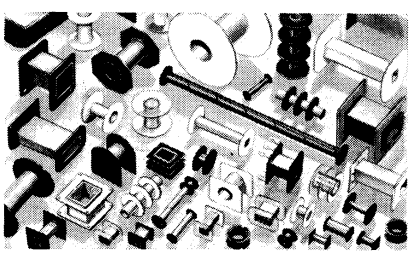
RESINITE PHENOLIC TUBING
This phenolic impregnated kraft tubing is mechanically stable, non-corrosive and reasonably priced. Resinite tubing may be punched, slit, cut and have lugs applied for a large number of applications such as coil forms, spacers and shafts.



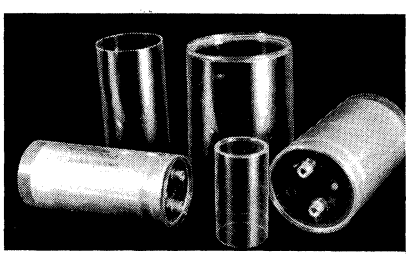
MOLDED PARTS
Molded bobbins, coil forms and insulating parts are available through Precision's extensive molding facilities. Services include engineering assistance in design and complete, modern tooling facilities on the premises.



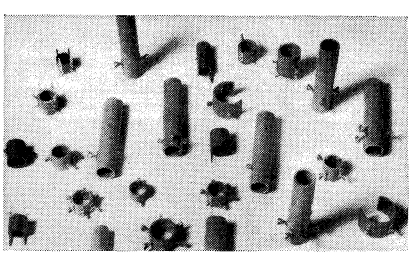
HIGH TEMPERATURE TUBING
Made to withstand temperatures up to 300°C., Precision's "Thermoform" tubings are produced from a variety of materials such as: mica, Quinterra*, asbestos, or Nomex* papers. Ideal where superior heat resistance is required. *TM-Johns Manville, *DuPont Co.



FABRICATED BOBBINS
A wide range of materials and the largest inventory of tooling in the industry allows you to have your choice of high quality bobbins at reasonable prices. Precision's patented "Plastilokt"® process assures positive affixing of flanges.



CAPACITOR COVERS
Either acetate or "Pol-Lar"® provide capacitor covers that can be heat-formed in a wide variety of shapes. May be supplied with sealed ends with or without lead holes. Available in a complete range of sizes.



COIL FORMS AND COLLARS
Precision can produce high quality coil forms and collars in a wide variety of sizes. Terminals are automatically applied to specification for printed circuit or tie-off applications. Forms are impregnated with an electrical grade phenolic resin.

FREE! Dielectric tubing material-selection chart.

Shows at a glance which material is best for a particular type of application. Gives temperature and breakdown voltage ranges.

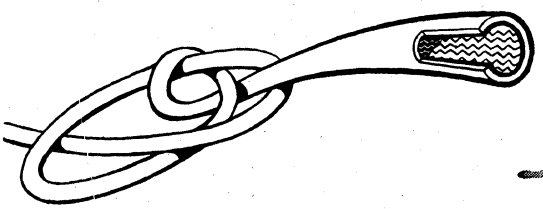
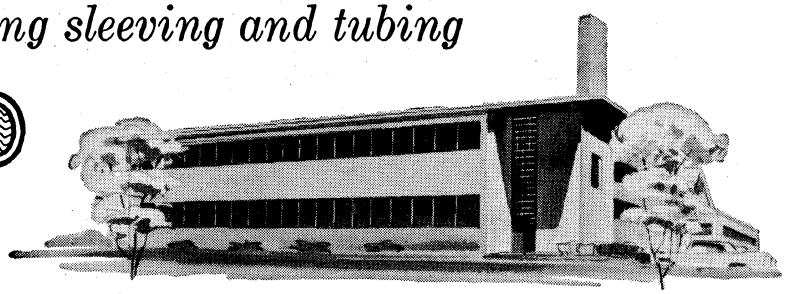
RELIABLE PRODUCTS DELIVERED ON TIME

VARFLEX *the complete line*

of electrical insulating sleeving and tubing





Whatever your problem, heat, cold, flexibility miniaturization, high insulating or dielectric strength—Varflex can supply the required reliability and delivery. Our rapidly expanding plant is fully equipped to supply sleeving for any combination of characteristics you may need. In addition to maintaining large stock for off-the-shelf delivery, Varflex has the productive capacity to provide prompt delivery (often 48 hours) on special orders. As insulation specialists, we are ready to work with you on unusual specifications or applications.

Check your needs against this complete line:

VARGLAS SILICONE RUBBER. Tubing: The ultimate in flexibility, yet dielectric protection to 8000 volts. Class H-A-1 certified to meet Government Specification MIL-I-18057 (SHIPS). Class H-B-1 (4000 volts) available, also. Continuous exposure from minus 70° to 400°F. does not affect coating or Fiberglas braid. Sleeving: Made in Class H-C-1 (2500 volts), Class H-C-2 (1500 volts) and Class H-C-3.

VARGLAS SILICONE RESIN. Tubing: Class H-A-1 is recommended for applications requiring extremes of heat endurance and high dielectric strength (7000 volts). Class H-B-1 is identical except for dielectric guarantee (4000 volts). Good abrasion resistance. Both grades conform to MIL-I-3190A. Sleeving: Made in Classes H-C-1 (2500 volts), H-C-2 (1500 volts) and H-C-3.

SILFLEX SLEEVING. A light coating of Silicone resin on Fiberglas braid. Extremely flexible within a temperature range from minus 85°F. to 500°F.

VARGLAS SILICONE LEAD WIRE. Made from solid or stranded wire covered with one or more walls of Fiberglas braid and impregnated with Silicone. Built to your specifications.

VARGLAS SILICONE TYING CORDS. Continuous filament Fiberglass cords impregnated with Silicone resin, 1/64" to 1/8" diameter. Specify Type 46 for dry cure, Type 48 for tacky cure.

VARGLAS CLASS F TUBING. Made with synthetic resins such as epoxy, polyester or urethane on glass braid and offering better than Class B heat resistance (up to 155°C for continuous operation) while maintaining good electrical properties.

VARFIL TUBING AND SLEEVING. Fiberglas braids impregnated with polyester resin. Four grades available in coils as well as 36" lengths in most sizes. In a class by itself because of its toughness, flexibility, high temperature resistance and ability to withstand bending and twisting without dielectric loss. Compatible with varnish. Over 1000 hours at 125°C., with intermittent operation at 150°C.

VARFLO TUBING AND SLEEVING. Class B insulation. For those who need flexibility, solvent, oil and moisture resistance. Has good shelf life and will not lose dielectric strength when subjected to severe twisting. Three grades . . . Classes B-A-1, B-B-1 and B-C-1. Flame and fungus resistant if specified. B-A-1 approved under MIL-1-21557. Passes proposed Navy 90° bend test after 2,000 hours at 300°F with 3500 volt end point.

VARGLAS VARNISHED TUBING. Flexible continuous coatings of flame resistant varnish built up over Fiberglas braid in eight or more carefully controlled operations. Varnished tubings have thinner walls and good heat resistance.

VARGLAS VARNISHED SLEEVING. NEMA Classes B-C-1, B-C-2 and B-C-3 are similar except for dielectric strength. The impregnant is oleoresinous varnish.

VARGLAS ACRYLIC CLASS F (155°C). Highly resistant to acids, organic solvents, oils and water and exhibits fair resistance to alkalies. It is compatible with polyester, acrylic, epoxy, phenolic and formvar wire enamels. Designed to perform for long periods in the 150°C-175°C range without loss of any electric or physical properties. All standard grades.

VARGLAS LECTON ACRYLIC. Specifically designed for hermetic motors. Non-contamination of Freon and other refrigerants in Class B motors. B-A-1, B-B-1, and B-C-1 grades.

VARGLAS NON-FRAY SLEEVINGS: Type H: The normalizing treatment given the Fiberglas braid removes the organic impurities and tends to hold the individual filaments together. The lack of any bonding agent means it may be subjected to temperatures as high as 1600°F. Recommended for applications where dielectric requirements are not of prime importance. Resists fungus and is noncorrosive. Type HP: Similar to Type H, but dyed various colors for coding purposes. Ideal as secondary insulation where primary covering might disintegrate due to high temperature or continual flexing. Colors may fade at 300°F. Type HO: A very light treatment of resin added after the braid has been normalized—just enough to hold the sleeving round for accurate cutting. Will distend to cover soldered joints or terminals. Available in eight colors. Colors fade at 300°F., but sleeving unaffected up to 1600°F. Better by 400° than formerly available.

VARGLAS LITEWALL SLEEVING. Wall thickness of Type A is .008" and of Type B, .006". Both types available untreated or treated. If treated, may be supplied in colors. Standard I.D. sizes 1/16" to 1/2" inclusive. Larger sizes on request.

SYNTHOLVAR EXTRUDED TUBING. Made from vinyl polymers. High dielectric and tensile strength. Will not support combustion nor absorb moisture. Smooth surface, thin wall and flexibility all make for ease in assembling operations. Super HH for installations where temperatures of 105°C. must be withstood. Type XLT will function at temperatures down to —65°C. Specify fungus resistant tubing where needed. Conforms to applicable MIL specifications.

COTTON OR RAYON TUBING. These tubings are furnished with varnish as the impregnant. They are braided from long staple yarns. Standard NEMA grades. They are Classes A-A-1 and A-B-1. Also, sleeving is available in three NEMA grades. Classes A-C-1, A-C-2 and A-C-3.

TEFLON* TUBING

INSTANT DELIVERY

SPECIALIZING IN CLOSE TOLERANCES
PRODUCING ALL OUR PRODUCTS IN OUR OWN PLANT

SPECIAL CAPABILITIES

Extremely close tolerances on I.D., O.D., wall thickness and concentricity

Finer sizes than covered by published specifications

Straight lengths

Long lengths of expanded tubing in all sizes

SPECIFICATIONS

Zeus will manufacture and certify tubing to all of the published specifications or to a customer's engineered specifications

Common specifications for TFE Tubing

MIL-I-22129-C — Standard Wall	**AMS 3653C** — Standard Wall
MIL-I-23053A — Class 6 - Heat Shrink	**AMS 3655** — Thin Wall
CS 252-63 — Standard Wall	**AMS 3654A** — Lightweight Wall

Teflon extrusions have many uses:

Electrical insulation • Handling of hot or cold and corrosive liquids and gases • Mechanical applications to take advantage of the low coefficient of friction (Anti-stick properties) • Medical applications.

Many great properties of TFE

Tolerance to temperatures from +500°F to −100°F • Excellent electrical insulation properties (Dielectric breakdown voltages as high as 1000 volts per mil of thickness) • Corrosion resistance to all known alkalies, acids and solvents • Water absorption practically nil • Extremely low coefficient of friction.

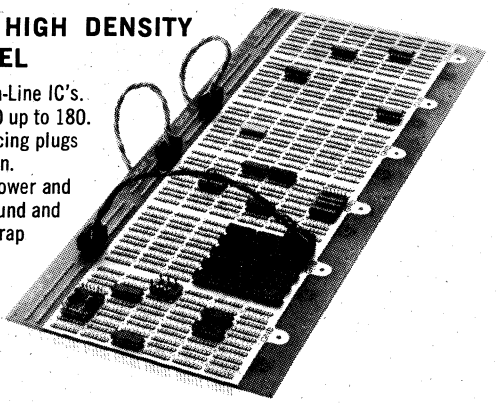
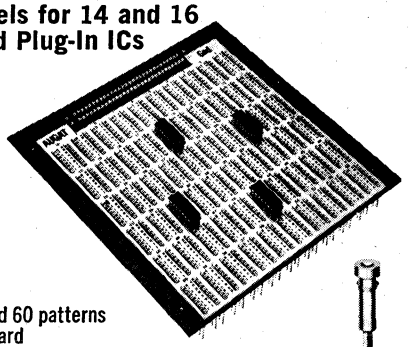
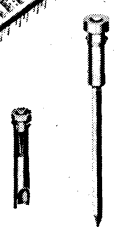
MODULAR TYPE HIGH DENSITY PACKAGING PANEL

for 14 and 16 Lead Dual-in-Line IC's. Patterns in multiples of 30 up to 180. Pattern accepts 3 inter-facing plugs for input-output connection. Double sided board with power and ground planes. Accepts round and flat lead packages. Wire-Wrap termination sufficient for 3 levels of 30 gauge wire.



HIGH DENSITY PACKAGING PANEL
Panels for 14 and 16 Lead Plug-In ICs

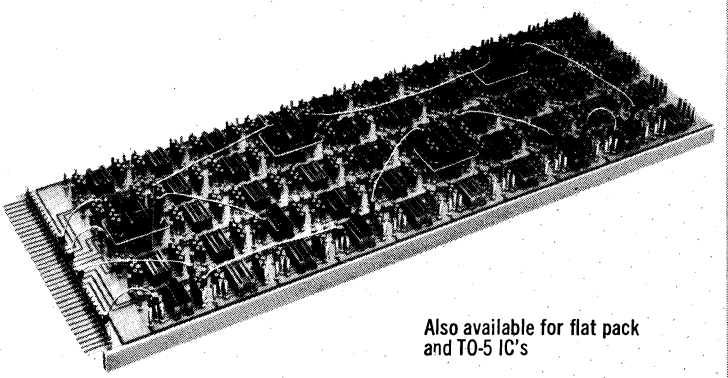




30 and 60 patterns standard
Double-sided board with power and ground planes at each pattern
Wiping action contacts assure high reliability
Wire-Wrap® or solder pot terminations

BREADBOARD AND TEST PANELS

10, 25 and 50 patterns standard. Eliminates soldering or welding IC leads. Also solderless jumper interconnections.

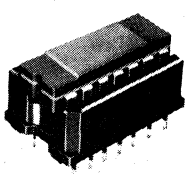


Also available for flat pack and TO-5 IC's

LOW PROFILE SOCKETS

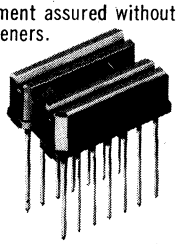
Available for 14 & 16 lead packages, accepts all packages with round or flat leads. Inner rail design. In diallyl phthalate or black phenolic with gold or tin plated contacts.

PC Style. Directly interchangeable! Exclusive socket configuration identical to IC package. Saves time, simplifies mounting on PC board.



Has wiping type beryllium copper contacts

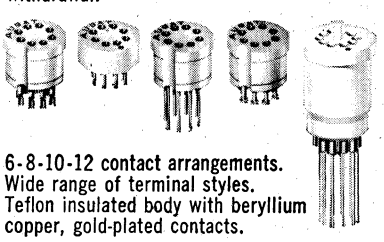
Wire-Wrap Style permits fast, easy mounting on boards. For .036 diameter holes. Retention and alignment assured without cement or special fasteners.



Contacts individually replaceable without removal of entire socket. Wire-wrap terminals — .025" square tails. Sufficient length for 3 levels of 30 gauge wire.

TO-5 CASE SIZE TEST AND PACKAGING SOCKETS

Positive retention — high contact reliability. Test sockets permit easy, fast insertion and withdrawal.



6-8-10-12 contact arrangements.
Wide range of terminal styles.
Teflon insulated body with beryllium copper, gold-plated contacts.

Large selection of Module and Transistor Sockets also available.

®Trademark Gardner-Denver Co.

Our flexible designs permit fast, easy modifications to suit particular requirements without premium charges or extended deliveries.

For fast, economical service on your I C Handling Problems, request Catalog 364.

AUGAT INC. 36 PERRY AVE., ATTLEBORO, MASS. 02703

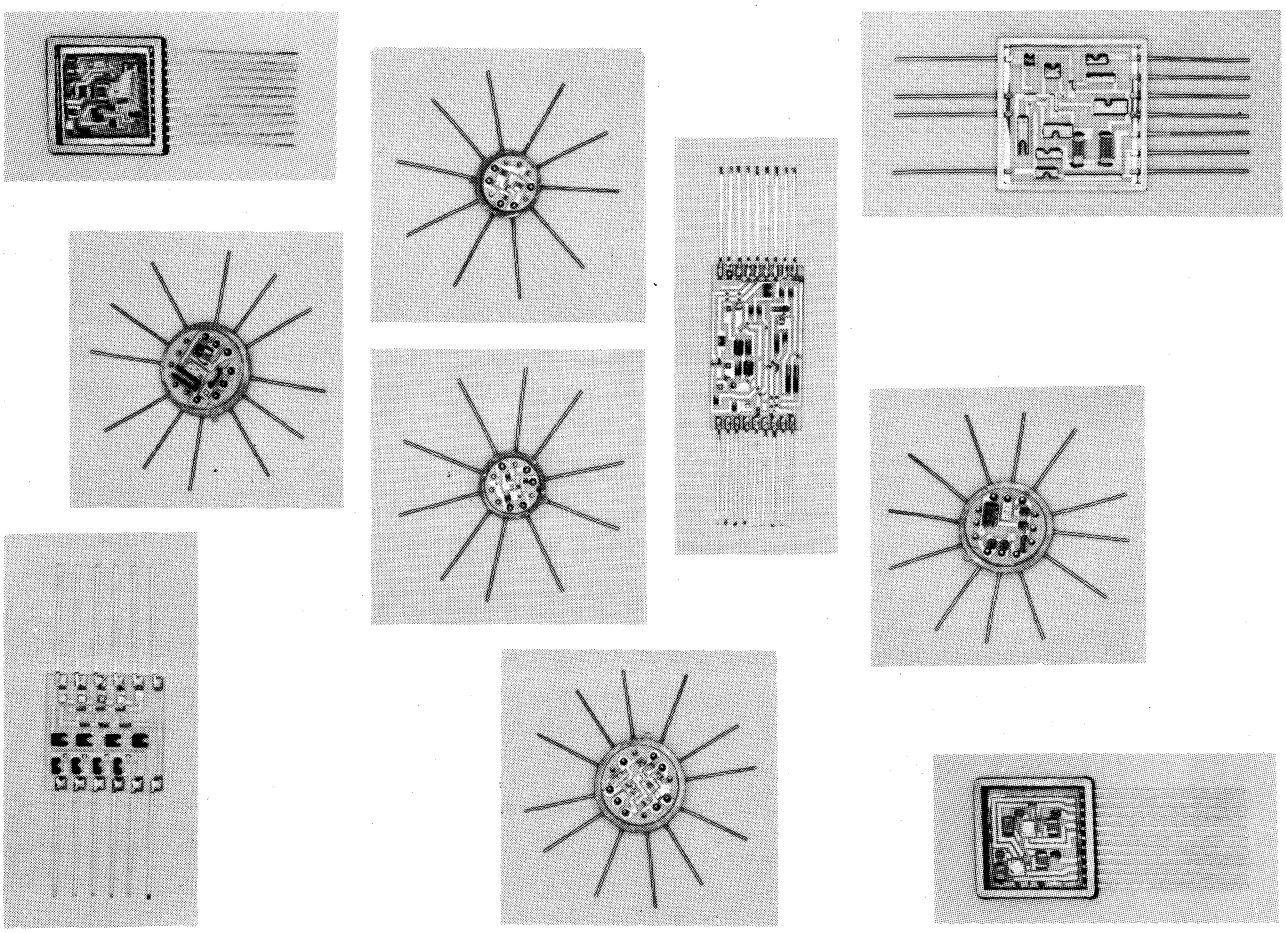
CTS CORPORATION ELKHART, INDIANA HYBRID CIRCUITS

CIRCUITRY TO SPECIFICATION

Over ten years of CTS cermet circuitry experience are concentrated in a 65,000 square foot facility in West Lafayette, Indiana, devoted to the manufacture of cermet passive and active circuits.

Cermet microelectronics offers many design possibilities to the forward-thinking engineer. Words such as high power, extremely low power, high frequency, precision, miniature size, low noise, and high reliability are all used to describe this concept. Another word "flexibility" should also be included. This is the key to the success of the CTS cermet microelectronics system. In order to provide the customer with an approach most consistent with his application, CTS offers both prototype and production facilities, several construction techniques, numerous packaging methods, three levels of quality control, and reliability data to demonstrate product performance under the environmental conditions you specify.

In order to achieve the best product for the lowest cost, CTS offers the flexibility required to optimize each application. Careful analysis of each requirement by our design engineering, production, and quality control personnel enables us to recommend the best product design consistent with your requirements.

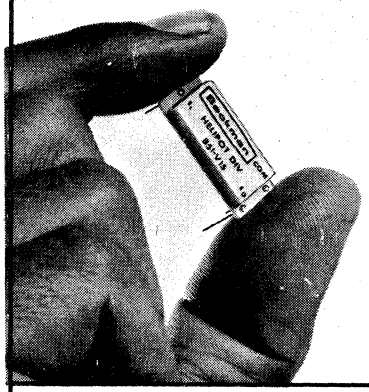


ORDERING INFORMATION: Place hybrid circuit orders at the following address:

CTS Microelectronics, Inc., P.O. Box 1278, Lafayette, Indiana 47902 • Telephone 317-463-2565 • TWX 810-342-1882

Helipot HYBRID MICROCIRCUITS

DC VOLTAGE REGULATORS



Helipot's hybrid cermet d-c voltage regulators are available from local stock throughout the country. They feature:

- ±0.05% regulation
- 500mA load capability
- 60 dB ripple rejection
- −55° to +125°C operation
- Short circuit proof models
- 0.5 sq. in. x 0.17 in. high
- Fully sealed and mil spec tested
- 24-hour burn-in

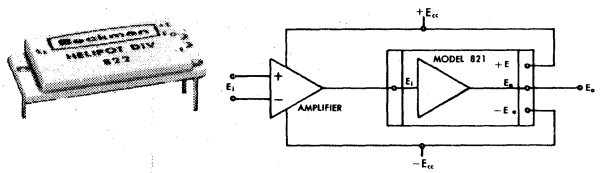
Voltage Range	POSITIVE		NEGATIVE	
	Fixed Output	Adjustable Output	Fixed Output	Adjustable Output
3 to 9 volts	Series 805	Model 806	Series 855	Model 856
9 to 21 volts	Series 801	Model 802	Series 851	Model 852
21 to 32 volts	Series 803	Model 804	Series 853	Model 854

LOW COST UNITS AVAILABLE TOO!

- Fixed outputs that can be externally adjusted
- ±0.003%/mA regulation
- 750 mA load capability
- 2 volt minimum input-output differential
- −55° to +125°C operation
- $10.80 each in 100-199 quantities

Series 809	Series 859
+5 to +28 Volts	−5 to −28 Volts

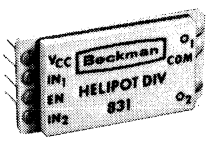
POWER AMPLIFIERS



Helipot Power Amplifiers, Models 821 and 822, are miniature, unity voltage gain power boosters designed to supplement the performance of available IC amplifiers (also most miniature hybrid or discrete packaged amplifiers). They feature:

- Fold-back current limiting.
- Peak output power to 5 watts.
- High voltage swing (±16 V).
- Wide total gain bandwidth.
- −55°C to +125°C operation.

LAMP & RELAY DRIVER



Model 831 Lamp and Relay Driver is a hybrid cermet unit that provides a convenient pre-engineered interface between digital IC levels (typical to computer logic) and output indication or control devices which demand considerably larger power levels. It is designed to provide the complete step up in power level required without the need for external pass transistors and features:

- 0 to +60 volts operating range
- 0 to 1 amp current capability (1.8 amps in parallel)
- Two circuits per package
- Standard DTL input levels
- −55° to +125°C operating temperature range.

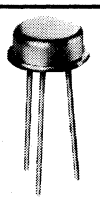
OVERVOLTAGE CROWBARS

Voltage Range	5-10 V	10-40 V
Series	827	826

Series 826 and 827 Crowbars are designed for either direct shunt protection of the power line, or indirect control where SCR conduction triggers alarm or disable circuitry. Standard threshold points of 5, 6, 7, 8, 14, 18, 30 or 40 volts are trimable.
They feature:

- Low standby current.
- 500 ns maximum response time (return to safe voltage level).
- 5 μs maximum to reach SCR saturation.
- 10 amp peak surge capability.
- 4 amp continuous current capability ($T_C = 25°C$).
- −55° to +125°C operation.

HIGH SPEED FUSES



Model	817-0.5A	817-0.75A	817-1.5A
Current Rating (Notes 1 & 2)	0.5 amps	0.75 amp	1.5 amps

Note 1: Fuse life—1,000 hrs. minimum at rated current.

Note 2: Current rating tolerance of ±20% applies to ratings shown above and in the Figure. This tolerance also includes ambient temperature effects over −55° to +125°C.

The Series 817 High Speed Fuse is designed specifically to protect power transistors from short circuit destruction.

In addition to extremely fast response time (see Figure 1), the fuse features:

- 40 volt at 50 amp circuit interruption.
- −55° to +125°C operating temperature range.
- TO-46 all-metal hermetic packaging.
- Insulation resistance of 10^8 ohms at 150 volts.

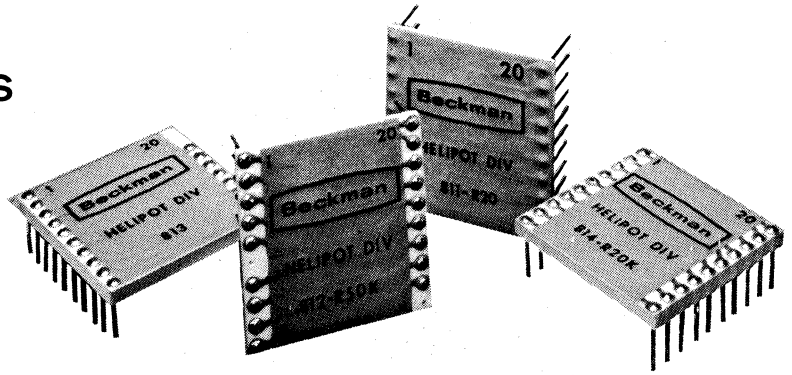
Helipot DAC/ADC COMPONENTS

LADDER NETWORKS



Helipot has a wide selection of Ladder / Resistor Networks to choose from, and most units are available from stock at economy prices.

They are constructed of Helipot's rugged cermet thick film passive elements and fused to alumina substrates at extremely high temperatures. By screen printing all resistors simultaneously, close temperature coefficient matching is achieved for all units and excellent temperature stability over the entire operating temperature range is assured.

Here are some outstanding features of Helipot's Ladder Networks:

- 60 ppm initial worst case accuracy at 25°C
- 0.6 ppm/°C tempco
- 20 ppm per year stability
- 50 ns settling
- Small size (1" x 1")
- Low profile (0.1" or 0.14")
- 100% testing at 5 temperature points
- Serialized accuracy data available on all networks

STANDARD STOCK MODELS

Model 811: A 12-bit Binary Ladder Network for use in DAC/ADC applications requiring fast switching and high accuracy over a wide temperature range.

Model 812: A 12-bit R-2R Binary Ladder Network designed specifically for MOSFET switching applications.

Model 813: A Binary Resistor Network designed for use with Fairchild's μA722 10-bit current source.

Model 814: An ultraprecision 14-bit R-2R Binary Ladder Network with accuracies to ±30 ppm from —20° to +80°C.

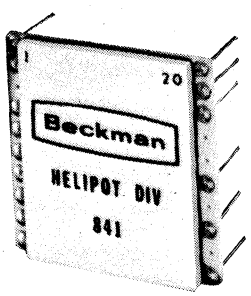
BCD Ladder Networks are also available in many standard configurations.

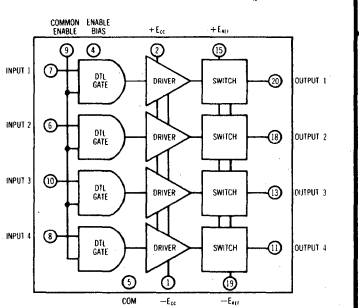
LADDER SWITCHES

The Model 841, 4-bit ladder switch is a miniature, hybrid, cermet thick film device for use in digital-to-analog conversion systems. It is designed primarily for use with Helipot's Series 811 high speed ladder networks, but can be used in other D to A systems (with either BCD or binary ladder networks) where precision, stability and small size are required. It features 4 switching sections with:

- 0 to 2 mV switch offset
- 5 (±3) ohms "on" resistance
- 200 ns rise and fall time
- 0 to 5 mA load range
- RTL, DTL or TTL input drive compatibility
- —55°C to +125°C operation.

An unusual feature of the 841 is its independence of reference voltage used. Plus and zero, zero and minus or plus and minus arrangements may be used without degradation of specifications.





Model 841 Block Diagram

LOW COST A to D CONVERTER

Model 835 is a 12-bit hybrid ADC building block. Its internal circuitry includes a twelve bit R-2R binary ladder network, a high speed precision comparator, analog switching and the digital registers and gating required for successive approximation conversion. The unit is capable of conversion at 250 kHz clock rates and provides serial output data.

LOW COST D to A CONVERTER

Model 845 is a self-contained hybrid 8-bit DAC which includes switches, an eight bit ladder, the reference supply and an output buffer amplifier. The unit is stocked in preset unipolar and bipolar output configurations.

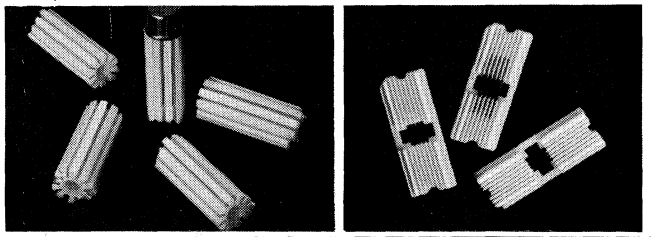
METAL-TO-CERAMIC COMPONENTS AND ASSEMBLIES

A wide variety of standard and custom components and assemblies utilizing high alumina and beryllia ceramics are available. Among them are: rectifier housings with a standard hermeticity of 1×10^{-9}; high temperature components and connectors for fuel cells and thermionic and thermo-electric generators; miniature housings for varactors and other diodes; transistor packages; DO-4 and DO-5 rectifier housings; and feed-thru assemblies for systems in the 10^{-10} Torr range that resist temperatures up to 800°C.



CARRIERS FOR INTEGRATED CIRCUITS

GTI's Clover Division supplies carriers for "Flat Pack" and TO-5 packaged circuits. Molded of DuPont Delrin® these carriers can be used for environmental testing as well as shipment of finished packages.

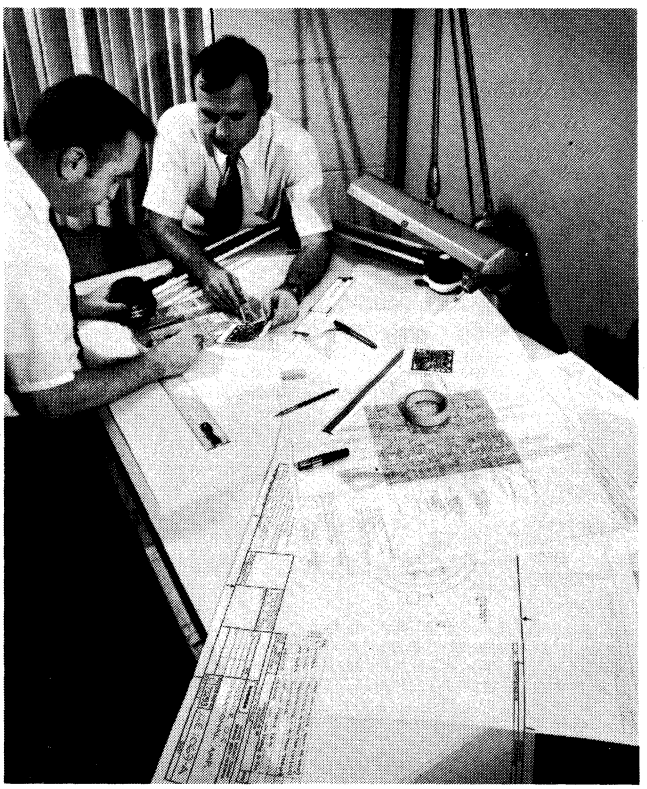
HYBRID CIRCUIT MANUFACTURE

Customer Specification Study

Electrical and mechanical design requirements which were analyzed during quotation preparations are again carefully reviewed. Responsible groups study electrical loading, power dissipation, materials compatibility, component selection, and package performance that must be achieved for the product to meet quality and reliability standards when operating under the customer's operational and environmental specifications.

Preliminary Manufacturing Studies and Design Review

Some phases of a hybrid circuit manufacturing process must be started in a preliminary effort to provide data for a Design Review Board. Drawings of schematics, substrate layouts, and package outlines are prepared. More important, hardware is roughly assembled or "breadboarded" so that testing procedures and test equipment may be planned. As designs are evaluated, manufacturing drawings are released by the review group followed with approved process specifications. The Design Review is conducted at periodic intervals to provide control and coordination during the manufacturing cycle. Actual manufacturing is preceded by the release of procurement drawings for the purchase of components. Much procedural planning is accomplished pending the receipt of hardware. The main goal of the Design Review Board is to resolve the following considerations:



CONSIDERATIONS OF A HYBRID DESIGN REVIEW BOARD:

1. **MECHANICAL DESIGN**

Substrates

Size of material — available area.

Type of material — alumina, silica, glass.

Method of attachment to package — weldment, adhesive, etc.

Method of manufacture — thick film, thin film.

Conductors

Sizes and lengths of conductors, sizes of pads and terminations.

Types of material—gold, palladium-gold, silver, nichrome, etc.

Method of manufacture—screening, evaporation.

Components and Package

Sizes consistent with package and substrate materials.

Types of components — beam leads, flip chips, lids, face up chips.

Method of Assembly

Wire bonding — thermal compression, ball bonding, ultrasonic bonding.

Weldments and adhesive pastes.

Soldering and reflow methods.

Flip chip construction.

Beam lead construction.

Conventional chip construction.

Package assembly.

2. ELECTRICAL DESIGN

Power Dissipation

Current loading.

Voltage drops — conductor lengths.

Termination pads.

Resistor and component values and tolerances.

Circuit Performance

Speed of response.

Stability.

Component selection.

Voltage offsets.

Conductor crossovers.

Electrical Tests and Equipment

Component tests.

Manufacturing tests.

Quality control and qualification tests.

Environmental behavior.

Final acceptance tests.

3. THERMAL DESIGN

Power Dissipation and Dispersal

Tracking effects.

Hot spots.

Component thermal properties.

Temperature coefficients of materials.

Environmental Conditions

Heat exchange to package.

Long term stability.

hughes hot line

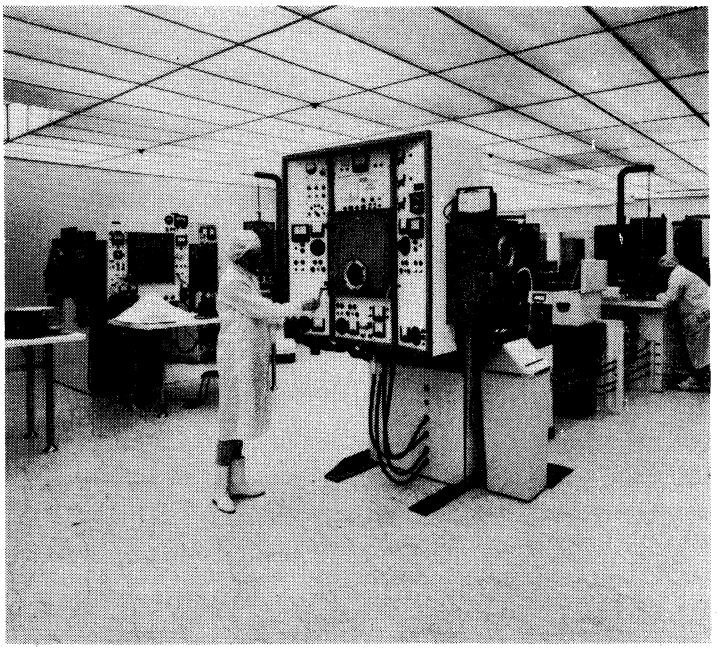
SUBSTRATE LAYOUT

A layout is drawn 20:1 times actual size in order to produce a highly accurate copy through the use of Rubylith "cut and strip" artwork. The layout drawing is reproduced on a coordinatograph machine with an accuracy of plus or minus .001". This master artwork is then photographically reduced to the final size and later used to form the masks for resistors and conductors if thin film is chosen; or the screens for resistors, conductors and glaze if thick film is chosen. The master artwork may be reduced, and by means of a step and repeat process, result in a single film negative with multiple patterns, each a faithful reproduction of the original artwork.

THIN FILM SUBSTRATES

The Thin Film Area comprises one of the largest collections of deposition equipment in the world.

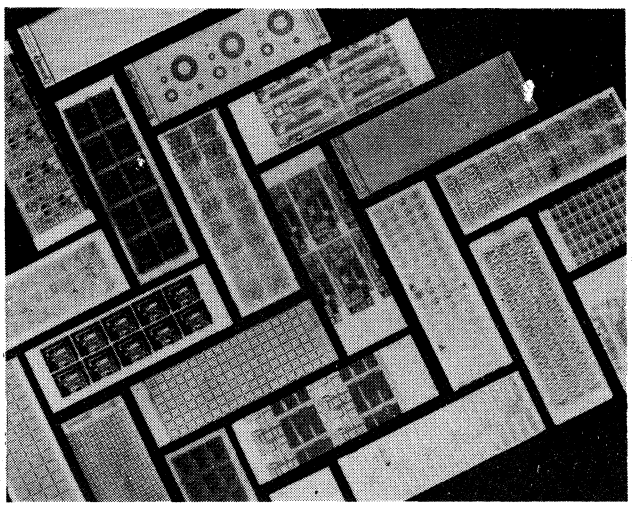


Hughes can deposit over 5000 square inches of Nichrome-gold per day with six systems in operation. Other systems are used for Aluminum and glass deposition. The Thin Film area can provide up to 5 microns of gold in order to obtain less than .01 ohms per square resistivities in the conductors of a substrate. Substrates can be produced from artwork within two days, but multilayered substrates require more preparation and time.

We prefer providing unglazed alumina substrates with resistors and conductor patterns, but we can supply other materials such as resistor chips with resistances as high as 1 megohm on a .065"x .065"x.006" silicon die. Thin film capacitors have been developed at HAC as integral parts of circuits or as chips.

Substrates are made using photoresist and etching techniques to obtain high resolution circuit patterns. After resistors are formed, they are stabilized at high temperature in air.

THIN FILM CHARACTERISTICS:



....Resolution of .0005 in. is obtainable on silicon.

....Resolution of .002 in. is obtainable on unglazed alumina.

....Resistor tolerances of 1% are attained.

....Temperature coefficient of resistance (TCR) can be better than 60 ppm/°C.

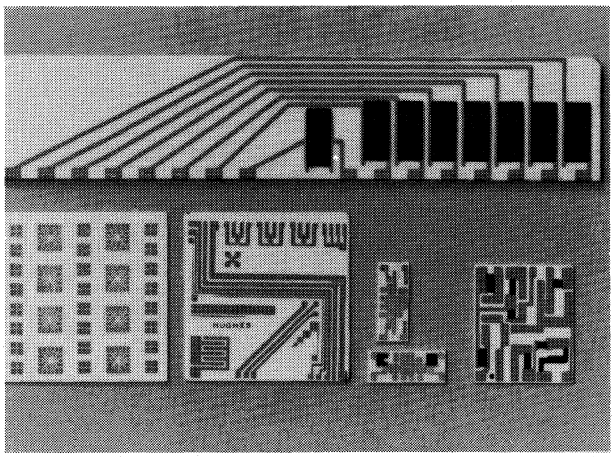
....Temperature coefficient of resistance tracking (TTCR) can be better than 10 ppm/°C.

....Stability is better than .3% per 1000 hours at 125°C.

....Material 2x3 in. is commonly used.

....Substrates may be supplied with materials deposited to customer requirements.

THICK FILM SUBSTRATES



Hughes prepared substrates are processed by screening processes to form the desired pattern of resistor and conductor paths to which the active devices can then be attached. Because thick film is composed of baked or "fired-on" metallic inks, various metallic combinations may be used to optimize the circuit function. At Hughes, thick film substrates are usually coated with "fired-on" glazing materials in order to provide additional long term stability.

By using screens prepared from reduced artwork of the customer's substrate requirements, conductor and glazing patterns are formed. Depending upon the pattern complexity, 165 mesh to 325 mesh stainless steel screens may be used. For extremely complex patterns, etched metal masks are employed.

The conductor screen is then properly aligned in a printer and the conductor ink is printed on the unglazed alumina substrate. Curing and firing take place in a 5-zone belt furnace. Resistor screens are then aligned and printed. Since the inks are limited to a number of controlled resistivity levels, several ink selections may be required to achieve the range of resistor values employed in a specific circuit. After all resistor inkings have been printed and cured, the substrate is refired, glazed, and again fired in a third furnace.

The trimming operation is performed on a Hughes semiautomatic pneumatic "sand blast" thick film resistor trimmer. Trim resolution is finer than 0.1%.

THICK FILM CIRCUIT LAYOUT SUBSTRATE CHARACTERISTICS

Resolution : 5 mil lines and spacing.
Resistor Tolerance : ± .25% at 25°C.
Temperature Coefficients :

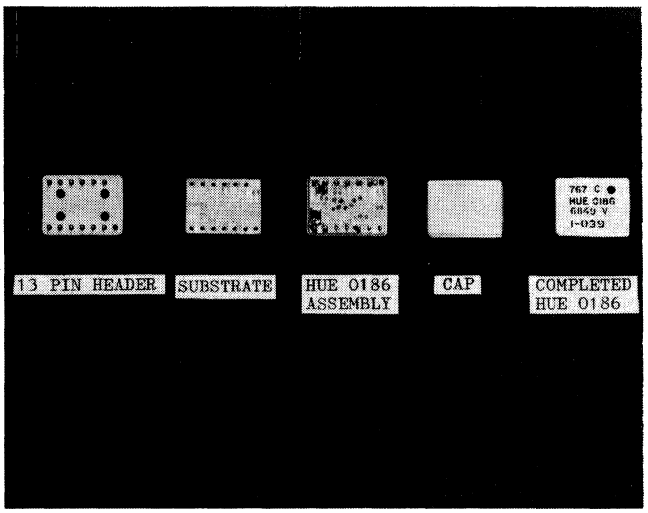
Ohms/Square	Temperature Coefficient Range (−55°C/+125°C)
5 ohms	+ 300 PPM/°C
10 ohms	+ 130 PPM/°C
50-100K ohms	± 150 PPM/°C
100K-200K ohms	− 200 to −400 PPM/°C

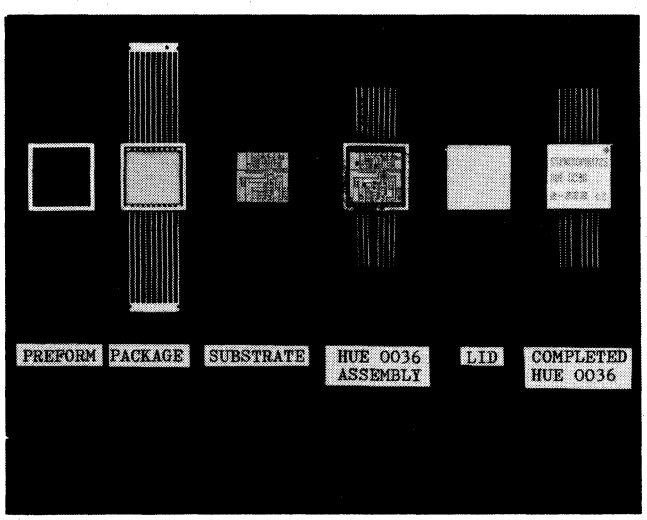
Temperature Tracking Coefficient : 50 PPM/°C maximum for most inks.

hughes hot line
(800)854-3280 / in California (714)548-0671

ASSEMBLY OF HYBRID CIRCUITS

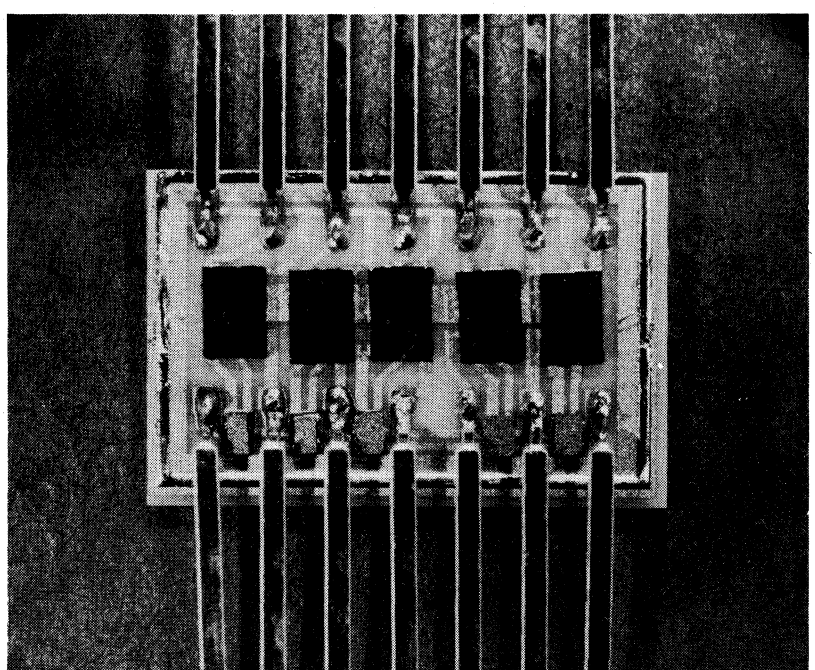
Normal practice is to place the substrate on the case or carrier; attaching the substrate to the carrier with the aid of a thermally conductive paste. If flip chips are being used, it is more practical to bond all the chips to the substrate before making the substrate adhere to the carrier. Two types of thermally conductive pastes are used at Hughes, one called "Scotch Cast" which is an insulator and is preferred for temperatures ranging from 125°C to 165°C, and the other a true epoxide called "Ohmex" which is electrically conductive and is used for projects with higher temperature requirements. The substrate and carrier are baked between +125°C and +150°C for two to three hours to cure the pastes. Typical eutectic chip attachment is also used when the design review indicates the desirability of such a die attach.





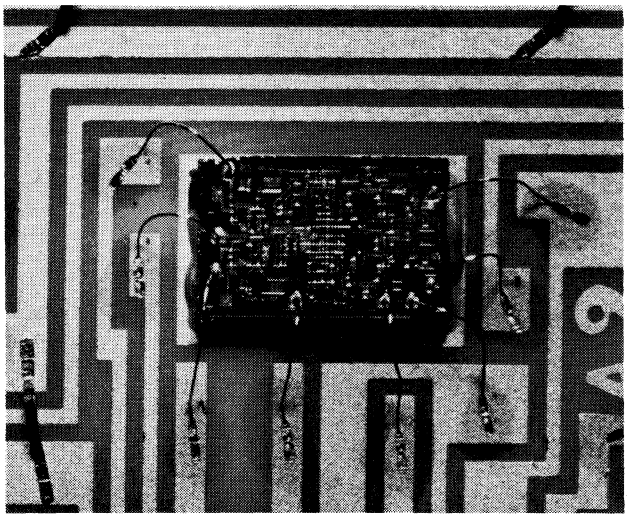
Many devices can be purchased, tested, and premounted on moly tabs from the manufacturers. Integrated circuits have a much higher basic price and usually require more complex testing. For these reasons, IC's are often purchased as chips, mounted on headers for testing, and then demounted for later assembly of the substrates. The overriding consideration being the need for thoroughly tested devices.

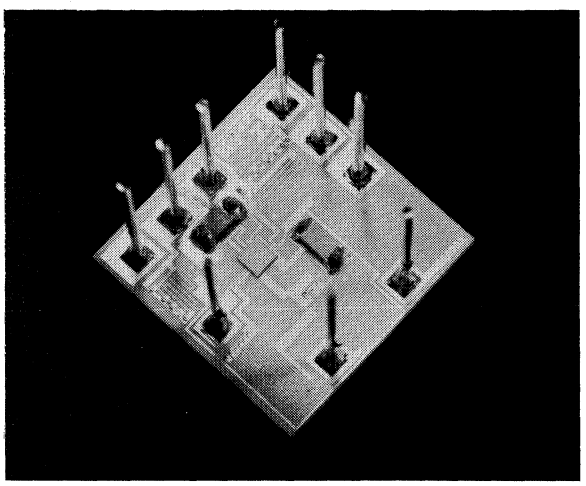
A DTL circuit is usually covered with a protective coating and mounted on a header for testing. Two machines are kept in readiness; one at 380°C for mounting and one at 400°C for demounting. Both operations take a few seconds. The other major components such as large capacitors or coils, that are not manufactured on the substrates are generally soldered into position after carefully tinning and forming the leads.

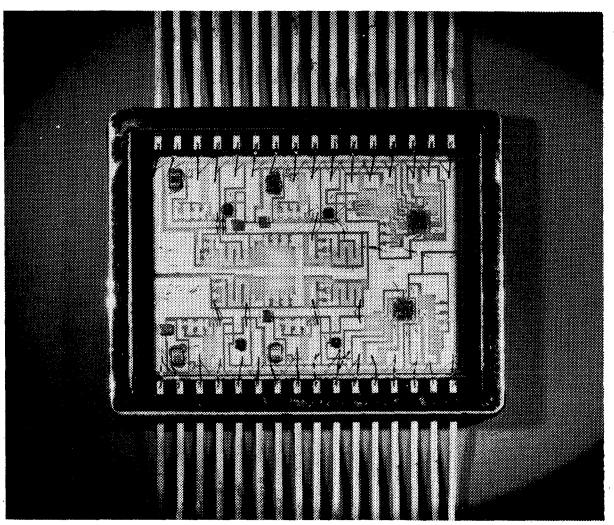


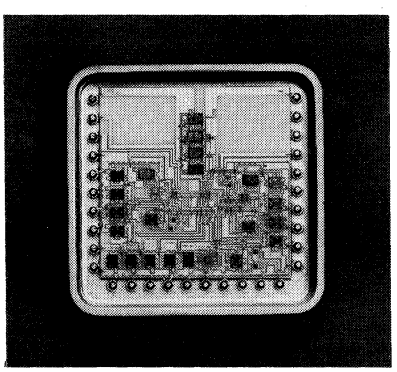
Flip chip devices require slightly different assembly techniques. Flip chips are mounted face down directly to the conductive patterns on the substrate. All connections to the circuit are made simultaneously through the use of a Hughes Ultrasonic Flip Chip Bonder. Flip chips are usually mounted early in the assembly of the substrate, thus avoiding the encumbrance of the package during the bonding process.

Conventional dice are mounted face up and the previously attached leads are interconnected with a dual tip bonder. Many devices such as IC's are left with redundant leads coming from the chip. These are deliberately left without connecting them to the substrate terminations until all testing is completed. Before final sealing and prior to visual inspection, the redundant leads are clipped and removed.









Final sealing may be done either by soldering the lid to the package, or by a weldment process to provide a hermetic seal. Both helium (fine leak) and oil bubble (gross leak) tests are normally used to check the hermeticity of the seals.

During the production assembly, many aids are made available to the production assemblers. Large scale layouts show component orientation and location. These visual aids are supplemented with Quality Control criteria and examples. A series of test stations and quality inspections maintain Process Control and provide data for the Product Review Board's evaluation.

hughes hot line
(800)854-3280 / in California (714)548-0671

Package Testing

A great proportion of the manufacture of Hughes Hybrid Integrated Circuits is devoted to testing and, naturally, a great amount of this effort is reflected in the amount of test equipment available. Equipment is constantly being used during the manufacturing cycle for incoming receiving inspections of components, sub-assembly tests, first electrical tests, final pre-seal tests, pre-screening of material for environmental tests, high-temperature operational burn-in, life tests, and final inspection tests. Facilities are available for contractual use upon request.

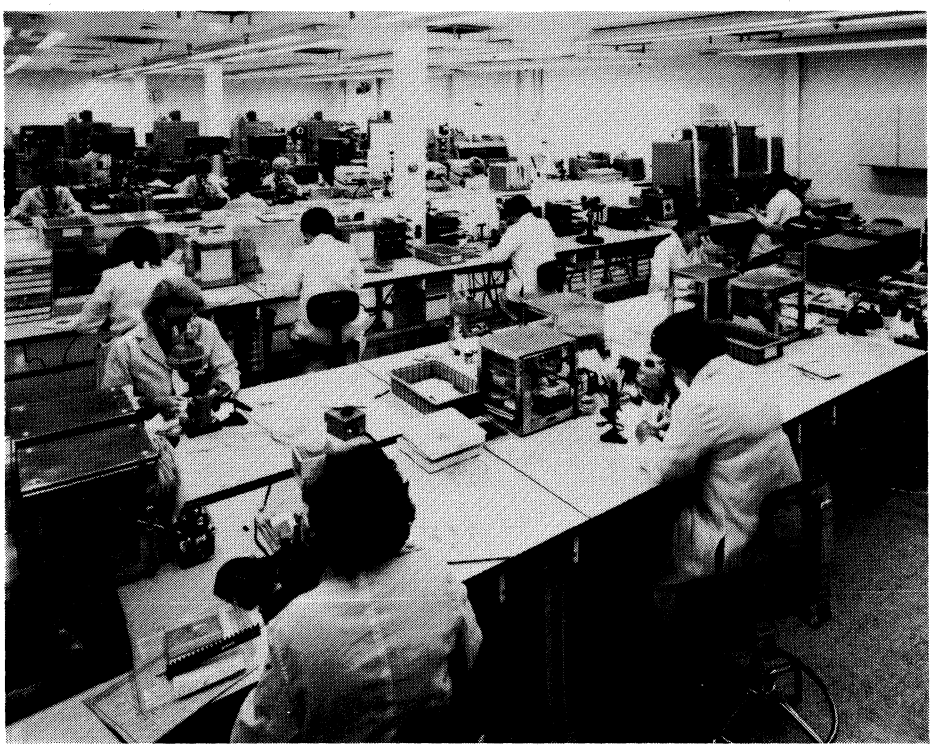
Hughes has served a great many High Reliability programs in the semiconductor industry and the experience has proved invaluable in the manufacture of hybrid circuits. Results of such programs as Surveyor, Apollo, Minuteman, Poseidon, and numerous other qualifactions have lead to such practices as screening all circuits to these environmental conditions:

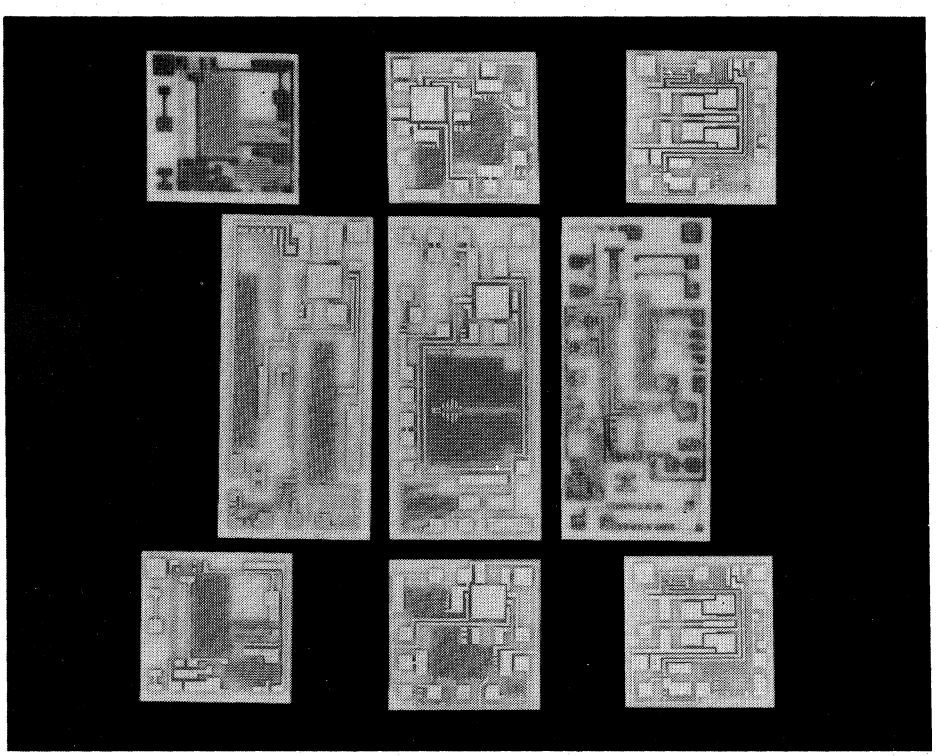
1. High Temperature Bake at 150°C for 24 hours.
2. Centrifuge Tests at up to 20000 g.
3. Temperature Cycling from −55°C to +150°C over 10 cycles.
4. Fine Leak Test less than 5×10^{-7} cc/sec.
5. Gross Leak Test or Bubble Test using Fluorochem at 125°C for one minute.

In addition, Hughes maintains a large number of "Burn-in" stations whereby not only Operating Life Tests may be performed, but also many devices may be burned-in or "aged" for 168 hours under loaded circuit conditions.

Hughes Hybrid Product Capability

Quotation requests are solicited on any or all phases of thick film or thin film manufacturing. Hughes has facilities for layout and masking, evaporation and etching, partial or total assembly, and complete Quality Control and Inspection facilities. The Hughes Newport Beach facility is qualified for any degree of high reliability testing program and offers those services. By using the selected and versatile facilities available at Hughes, any firm with some in-house capability can quickly become a supplier of their own sophisticated custom hybrid circuits.





Hughes Technological Support

As indicated previously, Hughes Newport Beach houses many varied product lines and engineering groups. The Hybrid Integrated Circuits area has direct access to the following product line groups within the same building:

- Hughes MOS Integrated Circuits.
- Hughes Flip Chip and Equipment capability, which provide PNP and NPN transistors, diodes, and other elements in Flip Chip form in addition to supplying the dice handling equipment for testing. The same group also manufactures the ultrasonic bonding equipment for production assembly of hybrid circuits.
- Hughes Frequency Control Device Product Line which offers a variety of precision crystals and crystal filters.
- Hughes Microelectronics Laboratory provides technological support for thick and thin film products, monolithic products and many research phases in semiconductor manufacture.
- The Hughes Hybrid Integrated Circuits area has liaison with Hughes Aerospace Group (Culver City), the Applied Research Laboratories (Santa Barbara), Vacuum Tube Products Division (Oceanside), Ground Systems and Communications Group (Fullerton), Hughes Research Laboratories (Malibu), and Hughes Aircraft Company (El Segundo and Tucson, Arizona).

The Hughes Hybrid Integrated Circuit Product Line is a versatile and capable organization offering complete in-depth scientific engineering and complete modern manufacturing facilities for the production of hybrid circuits.

MOS devices index

The products listed in this brochure define the MOS capability of Hughes. All products listed are available as off-the-shelf, either through direct OEM or Distributor inventory.

A great amount of effort has been directed towards the following goals for 1969 and 1970; further expansion of our already large emphasis on Custom Devices, and towards additions to more sophisticated LSI devices.

If the device you desire is not listed within this brochure, contact our Sales Department either through our Field Offices or through the Hughes-Hot Line/Toll Free (800) 854-3280.

MOSFET SWITCH HDIG 1030 (HRN 1030)

The Hughes HDIG1030 is a P-Channel enhancement-mode, insulated gate Field Effect Transistor. This device is designed primarily for efficient digital logic switching applications and chopper applications featuring zero offset, high input impedance and low "on" resistance. Typical input resistance of greater than 10^{15} ohms permits the HDIG1030. to be used in many electrometer applications.

HANDLING PRECAUTIONS: Owing to its very high input resistance, every precaution should be taken during the circuit wiring and testing of this device in order to prevent gate break-down. Shorting the gate lead to any of the other leads while handling and wiring is sufficient gate protection.

TRIPLE 3 PLUS DUAL 2 INPUT MOS NOR GATES

HLOG 2304 (HRM 2304)

The HLOG 2304 is a Monolithic, Triple 3 plus Dual 2 input NOR gates. Gate inputs may be externally interconnected to produce a large variety of circuit combinations, and is used as a basic building block in the design of large systems. Each input gate is diode protected and shunted to the substrate with a high value resistance for gate pulldown, thus making possible systems design trade-offs between the electrical characteristics of power dissipation, switching speed, and output voltage.

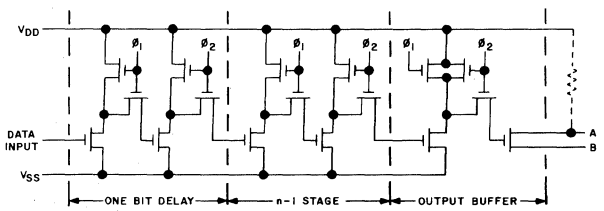
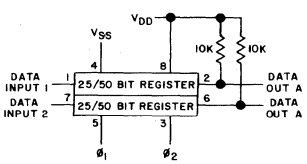
2ϕ DYNAMIC SHIFT REGISTERS
HDSR 2025 Dual 25 Bit
HDSR 2050 Dual 50 Bit

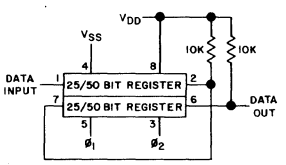
The Hughes P-Channel monolithic MOS 2ϕ dynamic shift registers will operate with clock repetition rates from 1000 Hz to 1MHz. V_{DD} and clock voltages may be varied over a wide range with power consumption of less than 100μ watt per bit. Low impedance outputs allow the outputs to be "OR'd". These are truly versatile 20 dynamic shift registers.



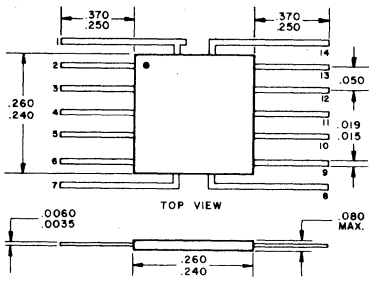
Dual 25/50 Bit Delay Element



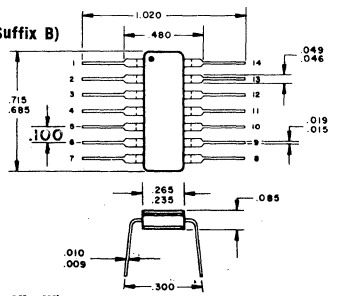
50/100 Bit Register



CASE: TO-86 (Suffix K)



TO-116 (Suffix B)



TO-99 (Suffix W)

ABSOLUTE MAXIMUM RATINGS

IN, ϕ1 ϕ2	+0.3 volts to −25 volts
V_{DD}	−20 volts
V Output	−20 volts
I Output	−5mA
Ton	500ns*
Toff	500ns*

*(Dependent on load)

POWER DISSIPATION

Ambient	200mW
Case	500mW
Operating Temp.	(−55 to +125)°C
Storage Temp.	(−65 to +200)°C

The Hughes low voltage P-Channel monolithic MOS dynamic Shift Registers will operate with clock repetition rates of 1000 Hz to 1 MHz. The low voltage process allow power consumption of less than 60 μw per bit. Low impedance outputs allows the outputs to be "OR'd". This shift register is very unique for low power, low voltage applications.

2ϕ DYNAMIC SHIFT REGISTERS

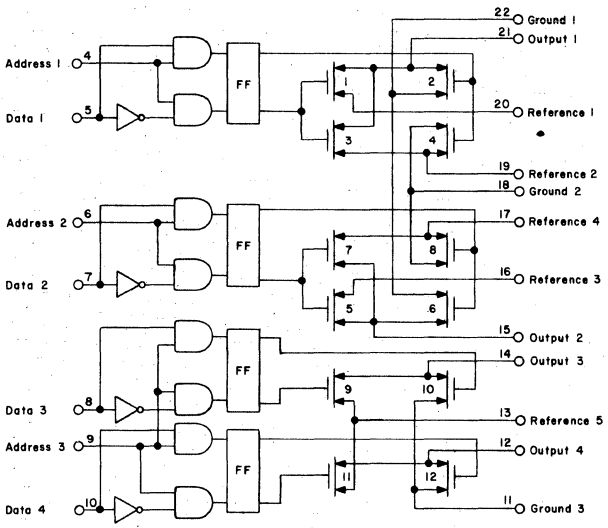
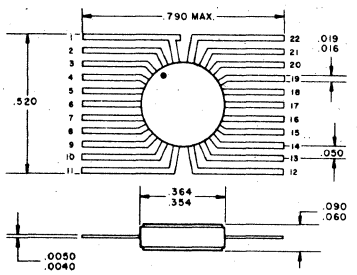
MOS 4 BIT CONVERTER
HMUX 1756 (HRM 2302)

The HMUX 1756 is a complex monolithic MOSFET array having digital-to-analog and analog-to-digital applications. Four type D flip-flops allow DTL voltage levels to selectively set MOSFET switches in their ON or OFF condition, providing 4-bits of the active portion of a multi-bit ladder when used with external resistive dividers. All gate inputs are diode-protected against excessive electrical transients.



CASE: "A" Pack



ABSOLUTE MAXIMUM RATINGS

(V_{DD}) Drain Supply Voltage	−25V
(V_{GG}) Gate Supply Voltage	−25V
Power Dissipation	200mW
Derating Factor	2.0mW/°C
Operating Temp.	−55°C to +125°C

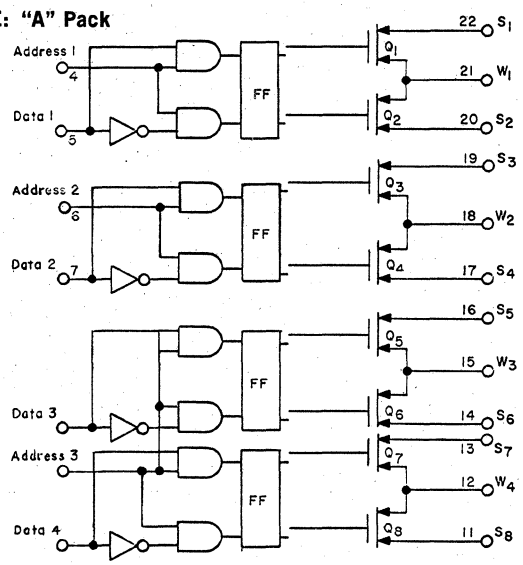
4 BIT MOS MULTIPLEXER
HMUX 1784 (HRM 2352)

The HMUX 1784 is a complex monolithic MOSFET array having digital switching applications. Four type D flip-flops allow DTL voltage levels to selectively set MOSFET switches in their ON and OFF condition, thus connecting or shunting other independent circuit elements. All gate inputs are diode-protected against excessive electrical transients.

CASE: "A" Pack



ABSOLUTE MAXIMUM RATINGS

(V_{DD}) Drain Supply Voltage	−25V
(V_{GG}) Gate Supply Voltage	−25V
Power Dissipation	200mW
Derating Factor	2.0mW/°C
Operating Temp.	−55°C to +125°C
Storage Temp.	−65°C to +200°C

NOMINAL OPERATING VOLTAGES

V_{DD}	−15
V_{GG}	−26
V_{SS}	+5
Address	−15
Data	0 to +5
Outputs	0 to −10

OPERATION

With the Address inputs tied to V_{DD}, a Data input of +5 volts turns on the even numbered switches, and a Data input of 0 volts turns on the odd numbered Switches.

MOS DUAL 2 CHANNEL COMMUTATOR
HMUX 2542 (HRM 8068)

CASE: TO-86

The Hughes HMUX 2542 is a dual two-channel MOSFET commutator. The circuit has applications as a multiplexer, a chopper, a digital to analog converter, or a summing network. By properly biasing the inputs, this commutator may be used to gate 10 volt peak-to-peak signals with a 4 volt level change at the input.

Power Dissipation	300mW
Operating Temp.	(−55 to +85)°C
Storage Temp.	(−65 to +200)°C
Propagation Time	800nsec

*To be measured with $-30V < V_{DD} < -10V$

4-BIT MOS MULTIPLEXER
HMUX 2641 (HRM 8013)

CASE: TO-86

The Hughes HMUX 2641 is a four switch MOSFET high level commutator. The circuit has applications as a multiplexer, a chopper, a digital-to-analog converter, or a demodulator. By properly biasing the inputs, the commutator may be used to gate 10 volt peak-to-peak signals with a 4 volt level change at the input.

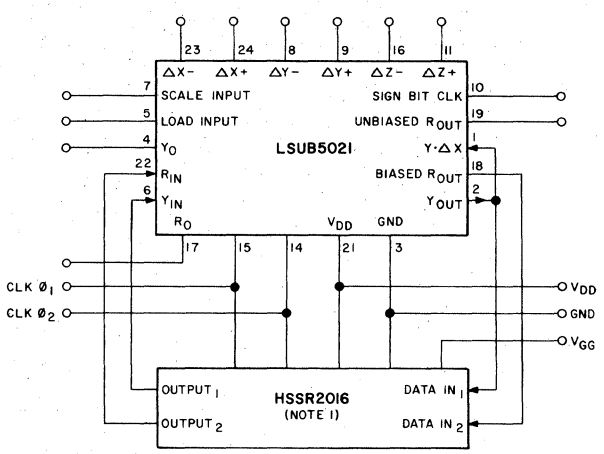
9 | sub-systems

The Hughes **LSUB 5021** Digital Differential Analyzer Adder Element is a monolithic MOS P-Channel large scale integrated circuit. This element used in conjunction with two shift registers forms a Digital Differential Analyzer of the ternary type. The DDA is designed for serial operation and can be used to implement the algorithms for rectangular and trapezoidal integration as well as multiplication and division. The DDA has many control system applications and can be used to solve differential equations thus making it useful for function generation.

The function diagram shows the adder element connected to two shift registers to form an integrator. The numbers in the shift registers are serial, least significant bit (LSB) first, sign bit last; negative numbers are in 2's complement form. Scaling is accomplished for each integrator by inserting a single "one" into the scale input at the appropriate bit time. The timing diagram shows the relative timing of the 2-phase clocks. For detailed information concerning the use of the DDA, consult the Hughes MOS Applications Staff.

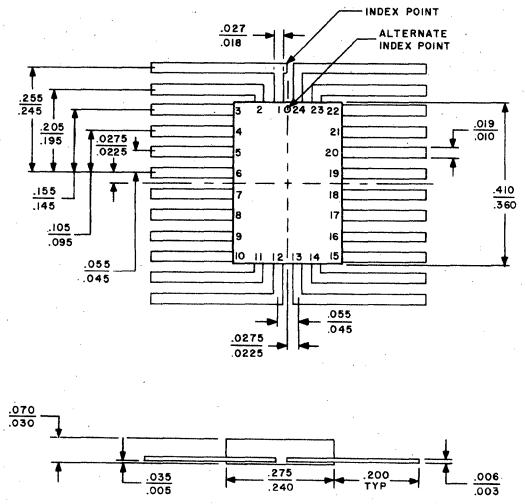
FUCTION DIAGRAM



NOTE 1: The HSSR2016 is a dual 16 bit, d.c. to 1 Mc, shift register.

MOS: DIGITAL DIFFERENTIAL ADDER (preliminary)
LSUB 5021

CASE: "F" Pack



FEATURES

- Serial, ternary integrator usable with any length shift register
- Arbitrary Scaling
- Two separate initial conditions load inputs for each adder
- Biased or unbiased R remainder
- Adders are separate and can be used independently
- $\Sigma \triangle Y$ is possible using additional elements
- Inputs protected against static damage

ABSOLUTE MAXIMUM RATINGS

Clock Voltages ($\phi 1$ and $\phi 2$)	−30V to +0.3V
Input Voltages	−30V to +0.3V
Drain Voltage	−25V to +0.3V
Storage Temp.	−65°C to +200°C
Operating Temp.	−55°C to +85°C

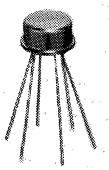
(15) Transient <100ms and <1% Duty Cycle.
(16) Transient <1sec and <10% Duty Cycle.

MALLORY INTEGRATED CIRCUITS



For complete catalog, request Bulletin #9-1C.

Mallory offers designers of commercial and industrial electronic equipment low cost integrated circuits. In most cases, the Mallory IC is less expensive than discrete component equivalents.

This page describes Mallory integrated circuits currently in production. Changes are swift, and we ask that you contact us if the circuit you require is not included here. We have the capability to supply both standard and custom circuits in production volume.

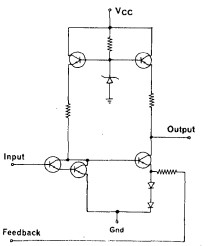
PREAMPLIFIER AND DUAL PREAMPLIFIER — MIC 0101 (Single Channel) MIC 0103 (Dual Channel)

The Malloy MIC 0101 is a silicon monolithic integrated circuit audio preamplifier designed to accept input signals in the 50 to 500 microvolt range. Open loop voltage gain is 60 db with a 20K ohm minimum input impedance. The circuit is self biasing and has an internal zener diode for power supply filtering.

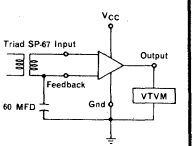
Mallory MIC 0103 is a dual preamplifier containing two identical circuit chips. The separation between channels is 50 db minimum. All other specifications are identical to the MIC 0101.

GENERAL SPECIFICATIONS	Maximum	Minimum
Supply voltage V_{CC}	24V	9V
Supply current at 12V (per channel)	8 ma	4 ma
Operating temperature	85°C	−40°C
Voltage gain	66 db	57 db
Power supply ripple amplification	0 db	—
Harmonic distortion at .2V output	1%	—
Input impedance	—	20K ohm
Output impedance	3500 ohm	2500 ohm
Audio noise at output, RMS unfiltered	10 mv	—
Channel separation (MIC 0103 only)	—	50 db

EQUIVALENT CIRCUIT



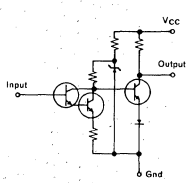
TEST CIRCUIT



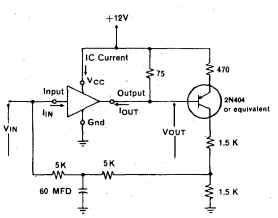
DRIVER AMPLIFIER — MIC 0201D - MIC 0201M

The Mallory MIC 0201 silicon monolithic integrated circuit is designed to drive a PNP germanium output transistor in Class A operation. It features DC drive capability to 40 ma, internal zener diode filtering and feedback biasing. A unique feature of the MIC 0201 is its ability to accommodate output transistors with wide ranges of current gain.

EQUIVALENT CIRCUIT



TEST CIRCUIT

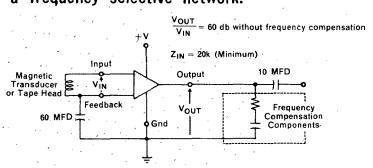


GENERAL SPECIFICATIONS	Maximum	Minimum
Supply Voltage	16V	10V
IC Current at 12V	12 ma	7 ma
Input Imp. $\frac{\Delta V_{IN}}{\Delta I_{IN}}$	—	50K ohms
Output Imp. $\frac{\Delta V_{OUT}}{\Delta I_{OUT}}$	150 ohms	—
Voltage Gain (0201 Test Circuit) $\frac{V_{OUT}}{V_{IN}}$	43 db	23db
Power Dissipation	600mw (TO-5 Case) 450mw (Molded Case)	— —
Operating Temp. Range	+170°C (TO-5 Case) +125°C (Molded Case)	−30°C −30°C
Power Derating Factor (Derate above 25°C)	4.1mw/°C (TO-5 Case) 4.5mw/°C (Molded Case)	— —

All ratings at 25°C unless otherwise noted.

APPLICATIONS — PREAMPLIFIER AND DUAL PREAMPLIFIER

This application is intended for use with a magnetic transducer such as a magnetic tape playback head. The circuit offers high voltage gain and high input impedance. Typical voltage gain is 60 db and input impedance is greater than 20 K ohms. Frequency compensation may be achieved by loading the output of the IC with a frequency selective network.



The preamplifier may be driven from a transformer input with not other external components. Voltage gain is 60 db typical and the input impedance presented to the transformer is 220 ohms.

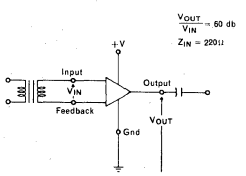


Figure 2

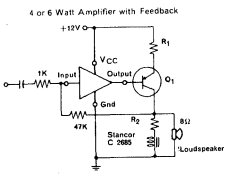
6 WATT AMPLIFIER

The driver amplifier integrated circuit MIC 0201 can be used in conjunction with a PNP germanium output device to provide a low cost, high quality 6 watt audio amplifier. Both circuits illustrated can provide up to 6 watts of audio power at less than 10% distortion.

4 or 6 Watt Amplifier with Feedback

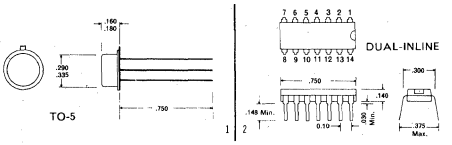


Distortion at 5 Watts	Frequency Response	Sensitivity Volts in for 2 Watt Output	External Components	Input Impedance
4.20%	25 Hz - 15 KHz	100 mv	2 res	1.1 K

PACKAGE STYLES

Mallory integrated circuits are packaged in two popular styles.

1. The TO-5 metal container offers true hermetic sealing and long flexible leads for easy insertion into prototype circuits.
2. The dual in-line molded plastic package is more economical and has leads which are ridged. This construction is ideal for using with automated insertion equipment in volume production.



ORDERING INFORMATION

Part Number	Case Style	Part Number	Case Style
MIC 0101D	TO5 CAN	MIC 0201M	INLINE MOLDED
MIC 0201D	TO5 CAN	MIC 0103H	TO5 CAN
MIC-0101M	INLINE MOLDED	MIC 0103M	INLINE MOLDED

Standard Mallory components are available from authorized Mallory distributors throughout the United States.

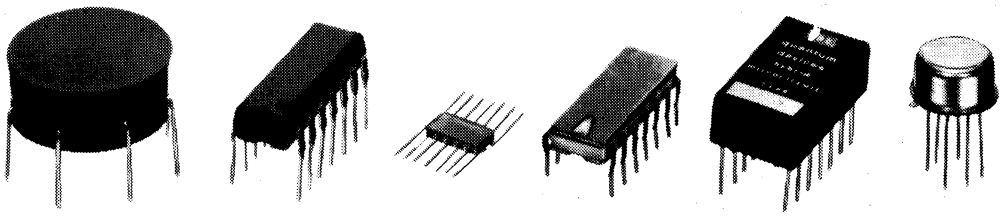
MALLORY

Custom Hybrid Microcircuits



QUANTUM DEVICES CORP. can transform your existing circuitry system to a hybrid microcircuit. By using automated techniques, hybrid microcircuits can be produced with low production costs and high volume capability. Increased reliability and drastic reduction in size are some of the benefits of hybrid microcircuits.

Discrete devices such as transistors diodes, capacitors and integrated circuits can be carefully tested and selected before being bonded to a ceramic substrate containing the thin film resistor network. This type of control guarantees the performance of the complete circuit.

Thin film resistor networks are used for low noise characteristics and excellent temperature coefficients. By drastically reducing handling and heating operations the reliability of the module is increased with the advantage of faster assembly and lower costs.

Many package configurations and sizes are available.

Steps To Obtain a Custom Hybrid Microcircuit

A. Customer breadboards circuit and tests feasibility.

B. Customer supplies schematic and parts list to Q.D.C.

C. Q.D.C. engineering reviews circuit and discusses any predictable forseen problems with customer.

D. Circuit is manufactured into a hybrid microcircuit.

E. Circuit is final tested and delivered to customer.

- LOW TOOLING COSTS
- EXTREME REDUCTION IN CIRCUIT SIZE
- FAST DELIVERY OF PROTOTYPES
- RESISTORS TO
  0.1 ± TOLERANCE
  25 ± PPM TCR
  5 ± PPM TRACKING
- DISCRETE CHIPS BONDED TO CIRCUIT

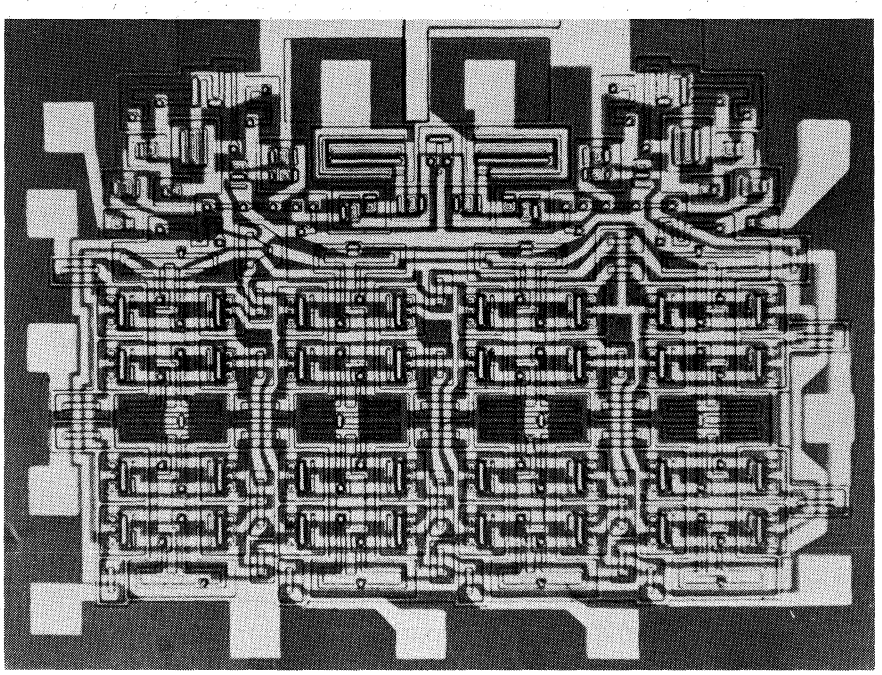
TRANSITRON ELECTRONIC CORPORATION

DIGITAL INTEGRATED CIRCUITS



16-BIT MEMORY CELL

THE INDUSTRY'S MOST COMPLETE LINE OF TTL INTEGRATED CIRCUITS

SERIES I

Electrically identical and pin-for-pin equivalents for all SUHL I® circuits.

Available in hermetic DIP* and flat pack.

SERIES II

Electrically identical and pin-for-pin equivalents for all SUHL II® circuits.

Available in hermetic DIP* and flat packs.

SERIES III

Shift registers, ripple counters, memories and other LSI devices in addition to those in Series I, II, and IV circuits.

Available in hermetic DIP,* plastic DIP, and flat pack.

SERIES IV

Electrically identical and pin-for-pin equivalents for all Series 5400/7400 circuits.

Available in hermetic DIP,* plastic DIP, and flat pack.

* Dual-in-Line package

ALL TYPES IN STOCK FOR IMMEDIATE DELIVERY. CALL YOUR NEAREST TRANSITRON SALES OFFICE OR DISTRIBUTOR.

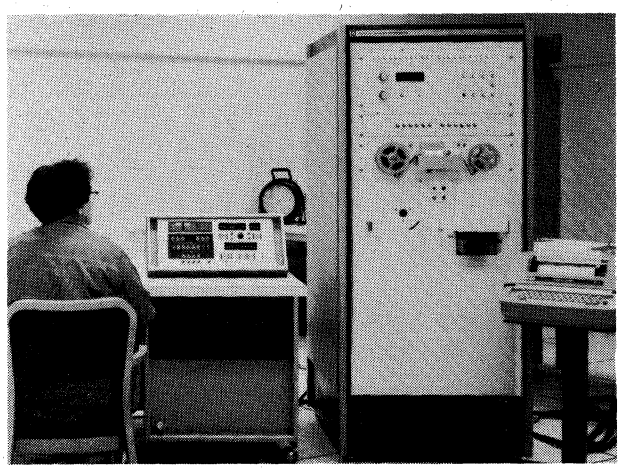
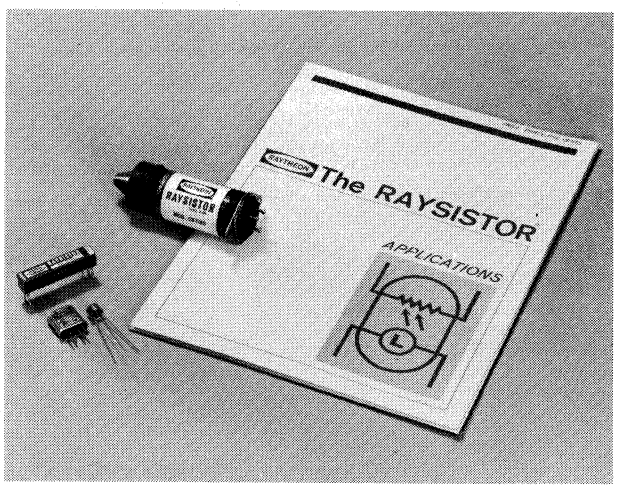
RAYTHEON CAPABILITIES IN MICROELECTRONICS



Typical facilities for production burn-in of completed module at elevated temperature and dissipation conditions.

COMPLEX COMPONENT CIRCUIT MODULES

Proved in Polaris, ALQ-59, GRC-50, Chaparral, Nite Vision and Hawk programs, Raytheon welded circuit modules feature high density, subminiaturization, and exceptional reliability. They incorporate advanced techniques in stacking, welding, soldering, encapsulation and in testing and quality control. Raytheon is equipped to render design service from "black box" specifications, or to duplicate or innovate existing designs. *Write for Raytheon capability brochure SP-1112 and for specification forms.*



RAYSISTOR™ PHOTOCELL—LAMP ASSEMBLIES

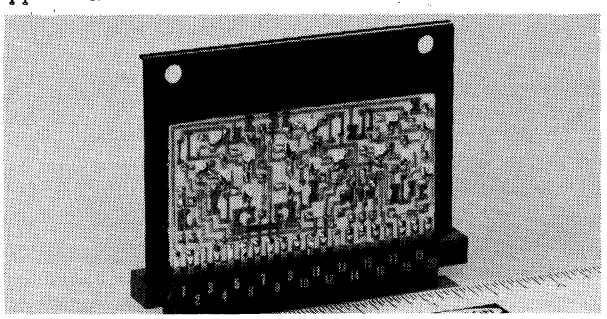
These opto-electronic devices are capable of performing a variety of control functions with no electrical or mechanical connection between signal and control circuits. There are no moving parts; this eliminates transients and contact chatter and provides noise-free control of AC or DC signals over a wide dynamic range. Raytheon produces 47 types of small-size, dependable Raysistors, as well as CdS and CdSE photocells — all available from your Raytheon distributor. *Write for data and circuit applications brochure SP-1149 and SP-1150.*

The Industrial Components Operation of Raytheon Company is engaged in a wide range of activities in microelectronics. Capabilities range from initial design to large-scale production of high-reliability, high-performance modules. These capabilities have been demonstrated in numerous programs such as F111, Sparrow, C5A, ANEW, and EIAD.

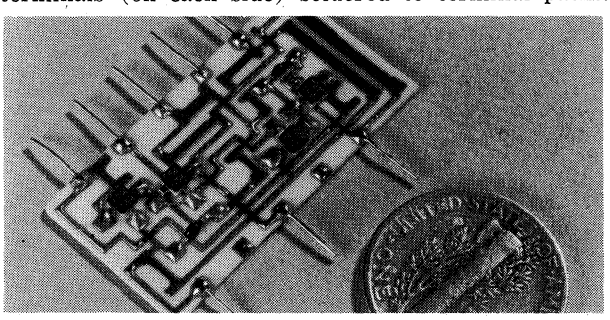
For capability brochure SP-1179, write or call: *Raytheon Company, Industrial Components Operation, 465 Centre Street, Quincy, Mass. 02169. Tel: 617-479-5300.*

RAYTHEON

Hermetically-sealed hybrid module with bonded chip construction utilizes RAY-PAK™ standardization approach.



NAFI-type module has two 1" x 2" thick film circuits epoxy-sealed to aluminum heat exchanger, and to terminals (on each side) soldered to terminal paths.

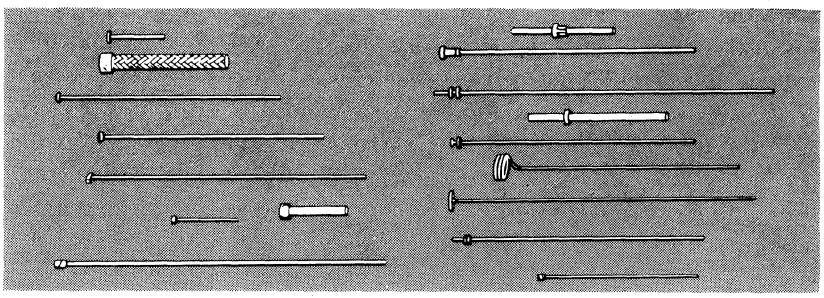


Typical thick film circuit module used in high-reliability programs. Devices are also available in modified TO-5 packages.

Get more precise wire forms and small metal stampings... more economically.

ART WIRE KNOWS HOW!

Art Wire's automatic equipment is geared for high-speed production, precision and economy . . . three big reasons why we can produce wire forms and small metal stampings at big savings to you.

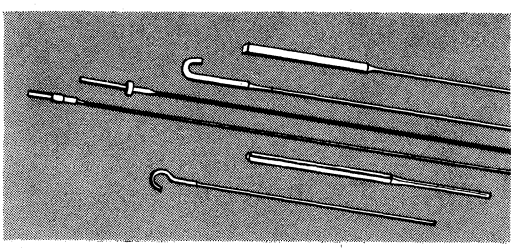


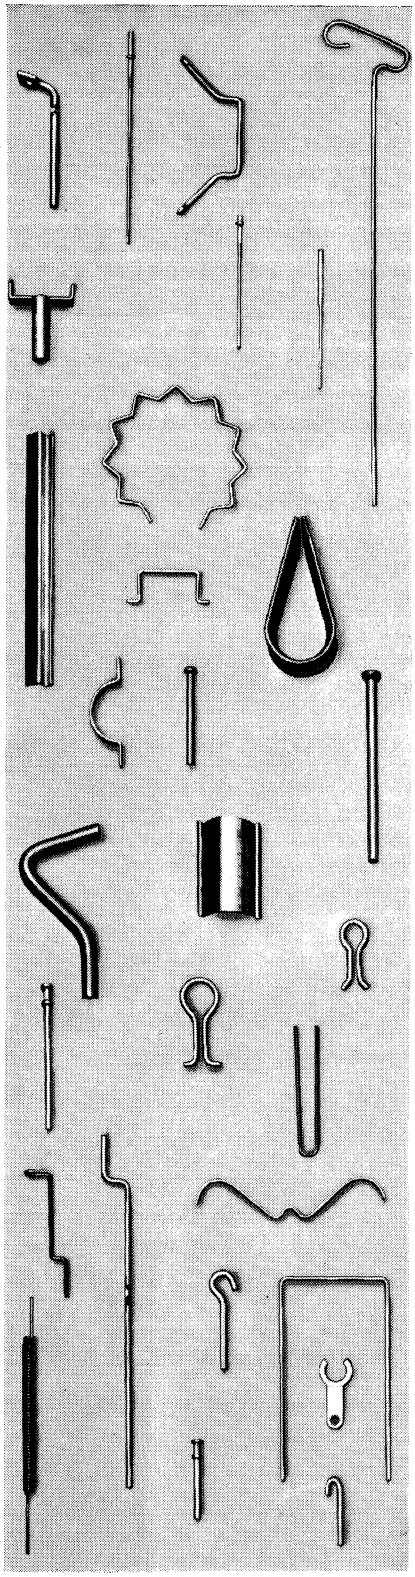
TERMINAL LEADS

For use in resistors, transistors, relays, etc. Wire diameters from .008 to .125. Perfectly concentric heads in diameters up to 4 times the wire diameter.

SWAGED LEADS

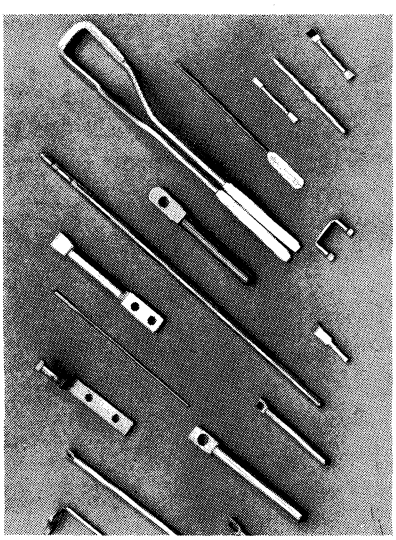
One-piece construction eliminates welded joint failures and resistance, increases rating output. In diameters from .015 to .080, necked down to as much as 50% original diameter.





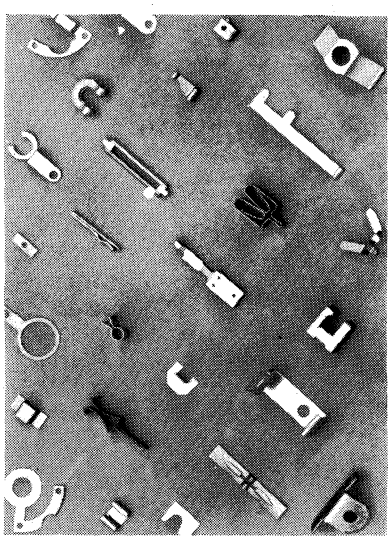
WIRE FORMS

Shape and design limited only by the imagination. Available in round wire from .005 to .125 diameter, flat stock and ribbon.



FLATTENED, NOTCHED AND PIERCED PINS

In great variety to meet all needs for improved sealing, connections, etc., in wire as fine as .015 to .125. Rounded or square cut ends. Shaped to your specifications.



SMALL METAL STAMPINGS

Produced to specifications from all the basic metals and precious metals. Processes include stamping, blanking, forming and piercing.

Send blueprints or sample for estimate or write for catalog.

THAT TOUGH GLASS SEAL PROBLEM... FUSITE SOLVED IT FOR YOU YESTERDAY

We've been specializing in difficult sealing applications for over 25 years, so probably the solution to your particular problem is already in our files.

Reliability? Fusite is the *only* sealer that formulates, smelts, and preforms technical glasses. This means a greater in-depth capability to solve your problem, design the part, build the dies, smelt the glass, make and assemble it to your specs. At less cost than you could do it yourself. Want proof? Send us your latest design for hermetic terminals, glass preforms, or glass-ceramic substrates or lids. Challenge our experience with low temperature solder glasses as coatings and preforms. We'll send you a similar part for inspection. Plus a cost estimate for prototype quantities—or production in millions.

For solutions to all your sealing glass problems, call Fusite in Cincinnati. Or, if your interests are overseas, call one of these plants: Fusite N.V., Konigweg 16, Almelo, Holland; Fusite-Japan, Gotemba, Japan; Terminal Products, Hormigueros, Puerto Rico; or, Fusite GmbH, Dieselstrasse 5, Karlsruhe, West Germany. Fusite Corporation, 6000 Fernview Ave., Cincinnati, Ohio 45212 . . . phone (513) 731-2020.

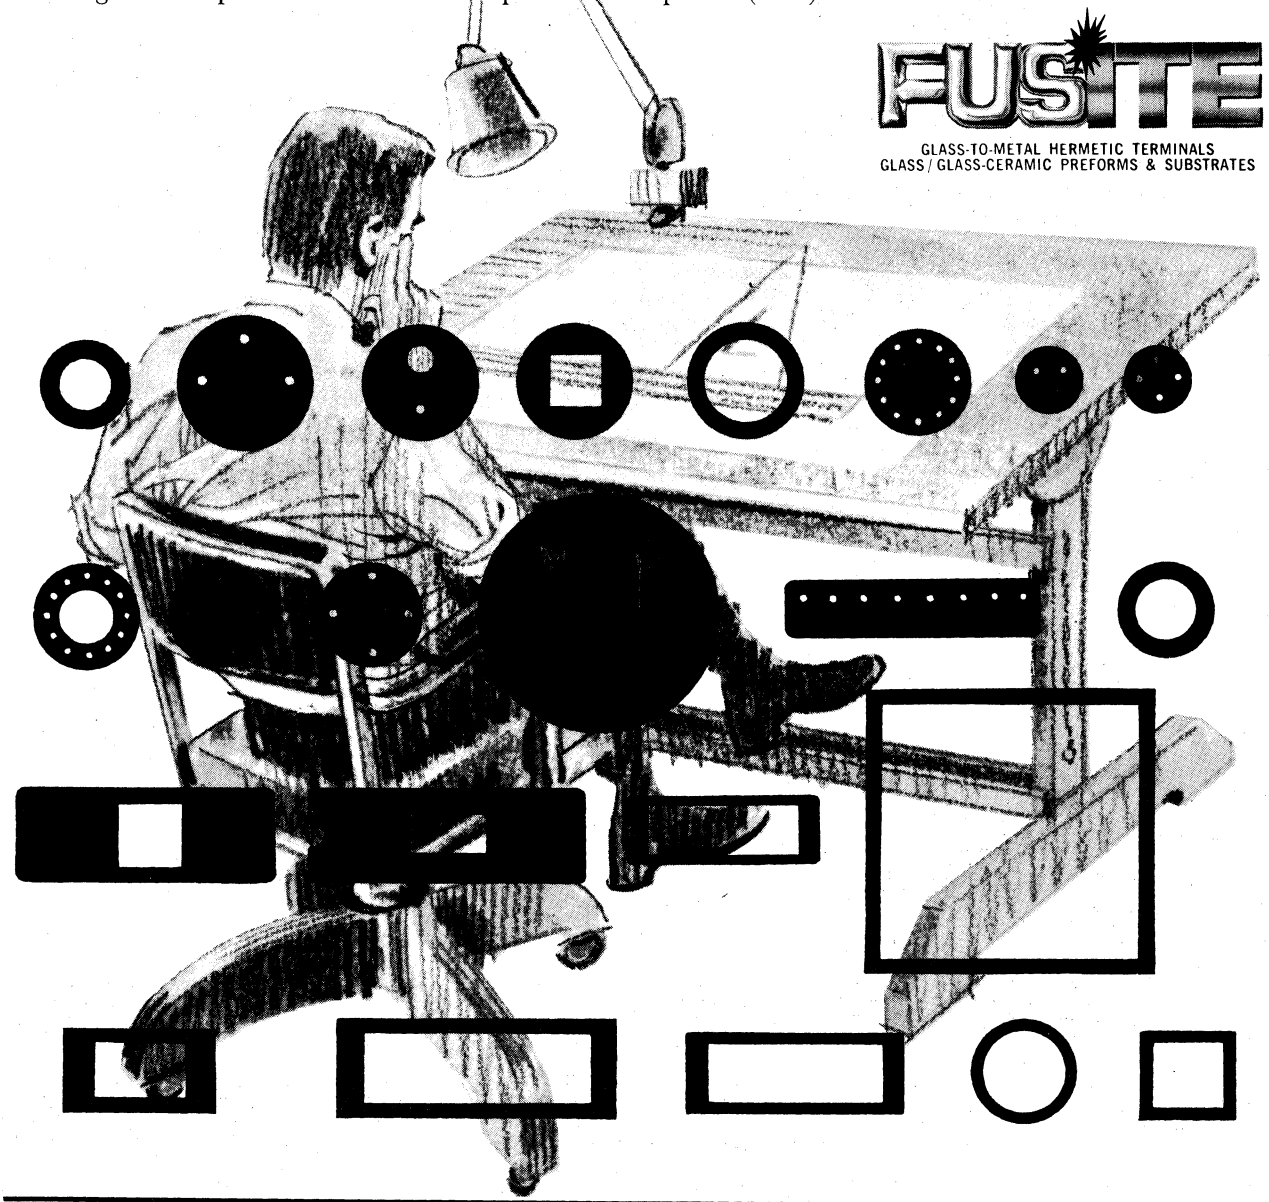
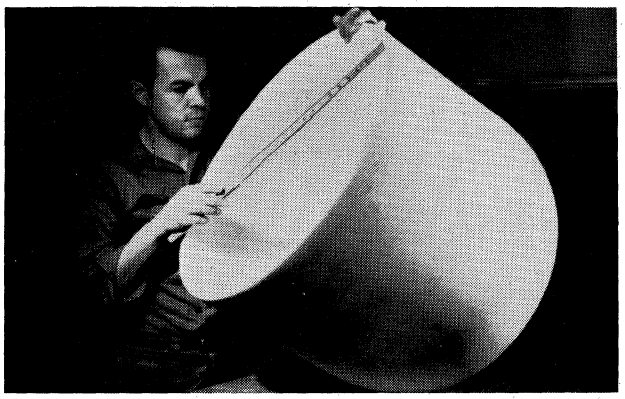
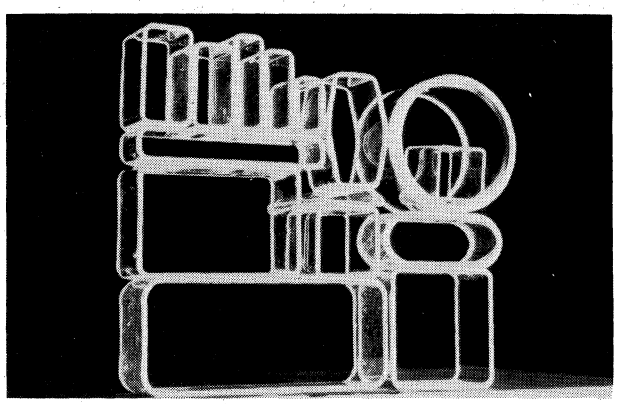
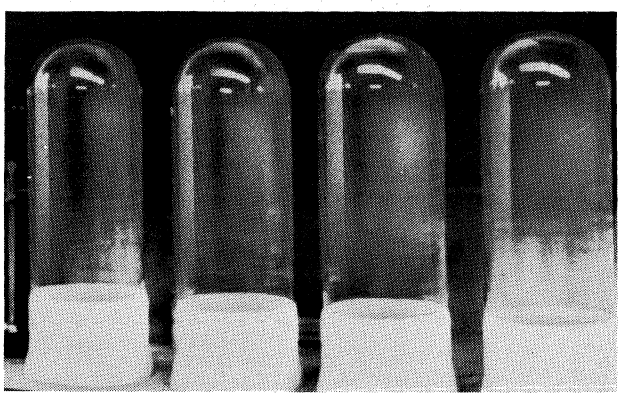
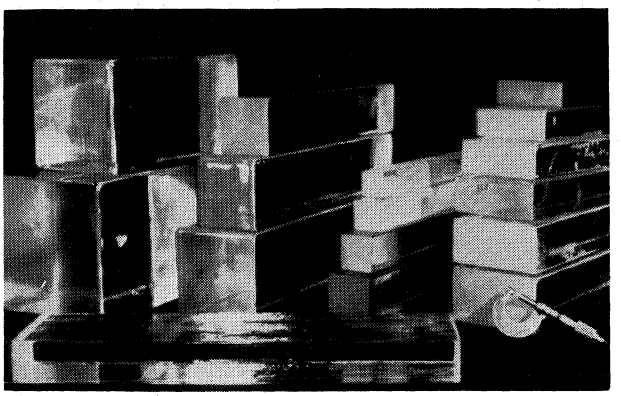
GLASS / GLASS-CERAMIC PREFORMS & SUBSTRATES











Fused quartz or fused silica. Call on Amersil.

When your plans call for fused quartz or fused silica, call us. Amersil produces both in forms that are highly pure, non-contaminating, resistant to acid and thermal shock, and exhibit high dielectric strength. Our materials can be ordered in a variety of forms and sizes that are either transparent, opaque, or combinations of each. Both types are available as furnace tubes, epitaxial reactors, bell jars, insulators, slice boats, diffusers, distillation apparatus, beakers, flasks, joints . . . and tubing, rod, plates and discs. Amersil is also sales agent for Worden Quartz microbalances and springs.

CHOMERICS, INC. CONDUCTIVE COMPOSITE MATERIALS FOR INDUSTRY

Chomerics, Inc. is engaged in the proprietary development and manufacture of electrically conductive composite materials for shielding sealing, grounding, bonding, contacting and terminating. These materials are based on patented techniques* which transform plastics and elastomers into highly conductive materials, without significantly degrading their original properties. Chomerics' products include conductive elastomers, molded RFI gaskets, waveguide gaskets, conductive adhesives, conductive caulking, potting and coating compounds, and conductive heat-shrinkable tubing.

* U.S. Patents 3,140,342; 3,194,860; 3,202,488; and other patents pending.

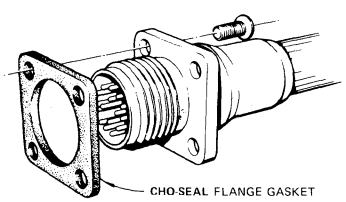
Chomerics offers four grades of highly electrically conductive elastomeric sheets. These materials consist of silver-plated copper particles dispersed in a binder of silicone rubber. Aerospace grades available in standard thicknesses of .020, .032, .062, .093 and .125 inch, and in sizes of 10 x 10, 10 x 15, 20 x 15 and 30 x 20 inches. Commercial and GSE grades are available 12" wide x 36" long in thicknesses of .020, .032 and .062 inch.

RFI CONNECTOR FLANGE GASKETS

Chomerics Cho-Seal combination RF/Pressure Gaskets are electrically and thermally conductive elastomers of dimensionally stable characteristics. Cho-Seal gaskets are designed to provide an RF shield as well as a pressure seal between the connector flange and mounting panel.

Cho-Seal gasket characteristics include high-power RF capabilities, low flange leakage, compliance with MIL specifications for systems use, maximum heat transfer, and minimal outgassing (silicone). Total attenuations are in the 85–115+ db range between 14 kHz and 15 GHz – depending on the magnitude and uniformity of closure force.



DETERMINING PART NUMBER

The dash number identifies the material (see Table 2).

The Chomerics base number identifies the dimensional characteristics of the gasket (see Table 1).

1961 - 1215

* Where a choice of cure cycles is available, values are separated by a slash. Values on each side of slash in "Cure Temp." column correspond to those in "Cure Time" column.

** Requires 1-hour air drying at room temperature, followed by elevated cure.

This wide selection of conductive compounds provides the most economical solution to shielding, bonding, grounding, and static-discharging problems. Where very thin applications are required, a silver-filled resin should be selected. If slightly thicker compounds will work, Chomerics' patented silver-plated copper filler provides lower cost materials with the same excellent conductivity. Where only moderate conductivity is required, a carbon-filled resin should be selected.

CONDUCTIVE STRAIN RELIEF BUSHINGS

These AN 3420 bushings, in conjunction with standard MS 3057A cable clamps, provide a reliable method of terminating shielded cables. Molded from CHO-SEAL 1215 conductive silicone rubber, they are completely interchangeable with standard non-conductive AN 3420 bushings.

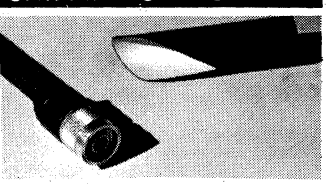
CONDUCTIVE HEAT SHRINK TUBING

New!



Chomerics' new CHO-SHRINK* conductive heat-shrinkable tubing provides a totally new approach to shielding cables, components, or connectors. A thin, uniform metal coating on the inside surface of standard TFE, polyolefin or PVC shrink tubing enables the simultaneous achievement of RF shielding, insulating and corrosion protection.

Chomerics can apply a conductive coating to the inside surface of any heat-shrinkable plastic tubing. Since the coating does not affect the physical, electrical, or chemical properties of the basic tubing, material selection should be based on the properties of the tubing. The following table can be used as a guide.

PROPERTY	MATERIAL PVC	POLYOLEFIN	TFE
Operating Temp. (°F)	14 to 221	-66 to 275	-88 to 432
Shrink Temp. (°F)	250	275	625
Tensile Strength (psi)	2,000-4,000	2,000-3,000	5,000
Dielectric Strength (v/m)	750	800-1,000	1,000
Shrink Ratio	1.3:1 to 2:1	2:1 to 3:1	1.3:1 to 4:1

RFI/EMI GASKETS

These highly reliable gaskets use no wire mesh or oriented wires to achieve electrical continuity. Instead, they combine the excellent conductivity of silver with the resiliency and memory of silicone rubber to provide the highest shielding effectiveness of any RFI gasket material. In addition to the standard configurations listed here, custom gaskets can be molded or die cut to meet your requirements.

CHO-WELT STRIP GASKETS

These highly compressible gaskets provide RFI shielding around doors, access panels or enclosures with very low closure forces. They consist of a soft neoprene sponge core, surrounded by a .020" layer of conductive silicone rubber.

New!

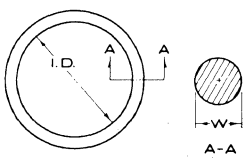
CONDUCTIVE O-RINGS



Note: Chomerics also carries a standard line of conductive d-rings. Contact the factory or your nearest Chomerics sales representative for sizes and part numbers.

RFI STRIP GASKETS

Standard RFI strip gaskets include both O and D cross sections. Part numbers below include material designations. Choose CHO-SEAL 1212 for high durometer gaskets, CHO-SEAL 1214 for medium durometer, and CHO-SEAL 1215 for low durometer. CHO-SIL 1401 is softer than any of the above CHO-SEAL materials.

WAVEGUIDE GASKETS

Chomerics' standard line of waveguide gaskets includes flat and molded configurations to fit most JAN, CPR, and CMR flanges. No knurled surfaces to mar machined flanges – just highly conductive silicone rubber which conforms perfectly to flange irregularities. These gaskets assure RF integrity, pressure retention, and low insertion losses. Chomerics, Inc. offers gaskets with raised lips around the guide opening for highly pressurized systems.

CUSTOM RFI/EMI GASKETS

Chomerics RFI/EMI gaskets combine the conductivity normally associated with metals and the sealing qualities of rubber. They provide RF supression and pressure retention without marring metal surfaces, and are reliable, lightweight, and reuseable.

These patented materials consist of Chomerics' "essential silver" powder dispersed in binders of silicone or fluorosilicone. Variations in compounding result in materials with a wide range of physical and chemical properties, all exhibiting low dc volume resistivity (between 10^{-2} and 10^{-3} ohm-cm), excellent shielding effectiveness (up to 125 db at 100 psi flange force in plane wave fields), and good heat stability (from -55°C to 200°C in some cases).

Custom shapes or sizes are easily die cut or molded. Compatibility with specific environmental conditions can be designed into the gasket material.

How do you want your Boron?

NORMAL OR ENRICHED IN BORON-10. We're at your service when it comes to supplying Boron in almost any form. So, simply tell us how you want your Boron—Natural Boron as well as Boron enriched in B-10 from 50 to 92% in the following forms; BBr_3, B_2O_3, H_3BO_3, B_4C, Czochralski, float-zoned rods and crystalline powder crushed to size or spherodized. And in addition to Boron we'll be happy to serve you with any of the other compounds and metals listed below. Just phone (918) 542-8480 collect, and speak to Joseph E. Powderly, Senior Scientist in charge of Boron Sales.

Cadmium: Ultra High Purity Cadmium Metal, Sulfide, powder, crystal chips, melt and vapor phase crystals; Cadmium Selenide and Cadmium Telluride powder.

Gallium: Metal, Sesquioxide, Trichloride, Phosphide.

Germanium: First Reduction Metal, Intrinsic Metal, Single Crystals; Dioxide, Tetrachloride, Tetrabromide, Tetraiodide, Monoxide, Diiodide, Sodium Metagermanate, Sodium Heptagermanate.

Zinc: Metal, Sulfide, powder, crystal chips, melt and vapor phase crystals; Zinc Selenide and Zinc Telluride powders.

Sodium Nitrite: Crystals.

Triple header

Thermometals® for thermostatic functions

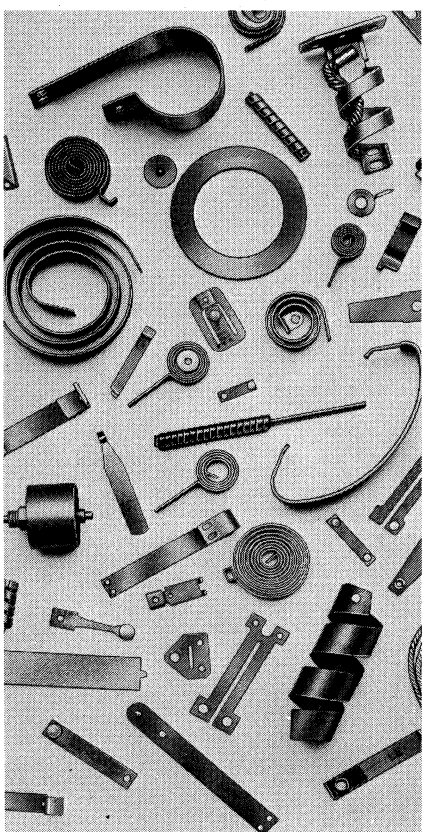
Thermometals are thermostatic bimetals that change shape with temperature and build up force with change of temperature when constrained. They can be used for Temperature Indication, Control and Compensation or Sequence Control. Thermometals can be rolled to any thickness, formed into almost any shape . . . plated, brazed or welded.

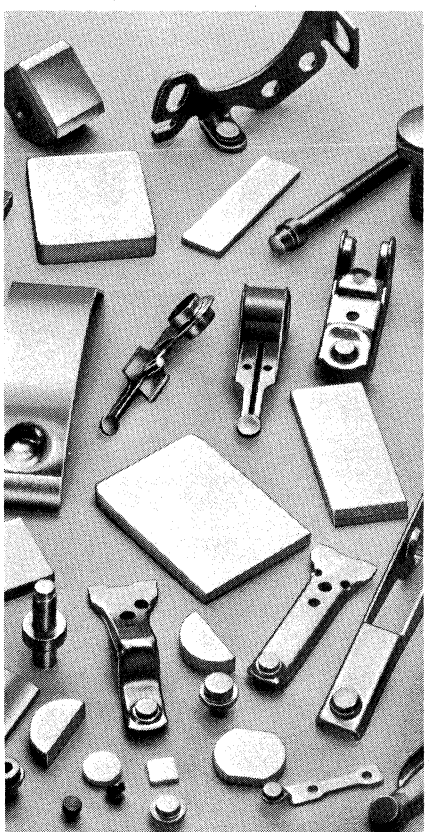
Tungsten and sintered metals for contacts

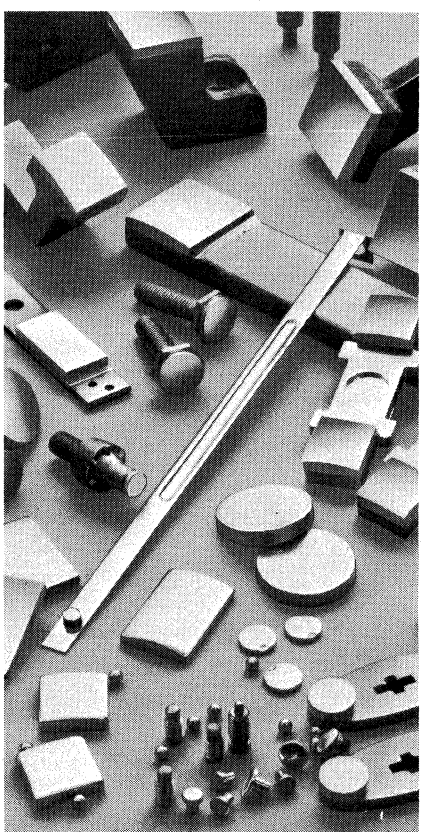
Ideal materials for contacts for heavy duty applications. Our special powder metallurgy processes make possible contacts of sintered materials that can't be alloyed. Available in rivet form, steelbacks, faced screws, discs, washers and special shapes. Assemblies available riveted, hot upset, welded or brazed.

Precious metals and alloys for contacts

Over 1750 precious and sintered metals for electrical contacts. With this variety we can produce every conceivable form of contact in sizes ranging from microminiature to 1¼ in. square (NEMA #6 & #7) motor starters. Whether it's for make and break or for rotating systems we can design and produce the contacts you need.







We have the experience, the engineering and production capabilities to solve any of your contact or thermostatic metal problems. For information and/or engineering assistance write the H. A. Wilson Technical Service Department.

If you have the application- we have the iron oxide

(or, we'll develop it for you...!)

HIGH PURITY IRON OXIDES

High purity iron oxides especially suited for use in both hard and soft ferrites and garnets. Available in both spheroidal and acicular shapes with average particle diameters from 0.2 to 0.8 microns. Impurities are at a minimum; Fe_2O_3 assay is 99.5% for the spheroidal type.

MAGNETIC IRON OXIDES

Magnetic iron oxides—both black octahedron ferrosoferric and brown acicular gamma ferric—for audio, video, computer, and instrumentation tapes; memory drums; cinema film stripping; magnetic inks; transfer ribbons; etc.

Whatever *your* application for these important oxides, there's probably a Williams® high purity iron oxide or IRN® magnetic iron oxide available with the exact chemical and physical characteristics you need. If we don't have it on hand, our laboratories are equipped to work with you to develop it.

For tech reports, or for specific answers to your specific problems, please write.

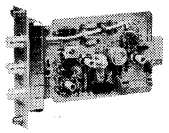
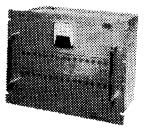
AEROSPACE RESEARCH INC.

RADIO DEVICES, RF RANDOM NOISE GENERATORS, PRECISION FREQUENCY AND TIMING INSTRUMENTATION for laboratory, production line and field operations.

PHASE AND AMPLITUDE STABLE AMPLIFIERS





ARI specializes in amplifier systems for use with high insertion loss elements, such as delay lines. Driver amplifier shown, Type A, provides 34 db gain at 60 Mc/s. BW is 30 Mc/s, output 1 watt phase stability within 2°, amplitude within 0.25 db. Post amplifier, Type B, provides 54 db gain with 250 MW output to follow lossy element.

These amplifiers can be packaged in standard multiple chassis as shown above. Unit holds 30 ARI modules, plus power supply and fans, where required. Other rack-units hold 2, 4, or 15 units.

SOLID-STATE ANTENNA MULTICOUPLERS

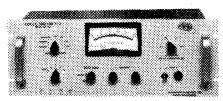
RECEIVERS — ULF-UHF

ARI designs and manufactures receivers for standard and special purposes. Included are our VLF rocket and satellite units, LF beacon, HF radar, VHF radar, UHF balloon, Dopplometers, and many others. Write for free receiver catalog . . . or send us your specifications.

VLF-UHF combining optimum noise figure, dynamic range, intermodulation distortion and VSWR. Units shown are AMC-110 (3-300 Kc/s) and AMC-136 (130-140 Mc/s). Other units at HF and UHF. Prices start at $310.

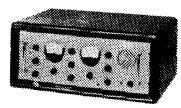
RADIO ASTRONOMY

ARI is eminent in the field of radio astronomy equipment at metric and longer wavelengths. Our radiometers are in constant use in almost every part of the world. In addition to the items shown, we manufacture a Polarimeter of the Cohen configuration in the HF-VHF range, various receivers for measuring cosmic noise intensities on the ground and in space, and special antenna systems. ARI Random Noise Generators are standard equipment at many observatories for radiometer system calibration. Send for free Radio Astronomy brochure.



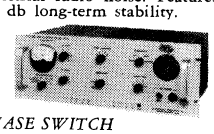
EDSON RADIOMETER

The ER-110 can be used ith any HF-VHF receiver to form a precision 0.1 db long-term stability radiometric instrument. It makes use of a closed-loop Ryle-Vonberg configuration to continuously calibrate to a thermionic servo diode.



ARI-100C RIOMETER MARK II

A highly sensitive, ultra-stable instrument for measuring intensities of electro-magnetic fields. The RIOMETER is used principally for recording changes in ionospheric absorption of extra-terrestrial radio noise. Features 0.1 db long-term stability.



PHASE SWITCH

The ARI-140 Phase Switching Receiver is a complete phase sensitive interferometer (less antennas) in a single package. Based on the Ryle configuration, the unit enables precise measurement of the interferometer pattern. The ARI-140 is equipped with plug-in r.f. heads to cover a range from 3-250 Mc/s.

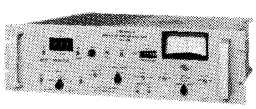
RF RANDOM NOISE GENERATORS

STABILITY, ZERO- WARM-UP TIME, FREQUENCY COVERAGE 100 c/c TO 2000 mc/s. ARI Random Noise Generators provide the unique feature of servo-control of the output level to insure stability with variations in line voltage and ambient temperature. The units are specifically suitable for continuous production-line testing and for calibration of sensitive receivers and radiometers. Other advantages gained from the servo-control system are excellent long-term stabilities (0.05 db), and millisecond warm-up. A remote programming capability is standard equipment providing the ultimate in resettability. Another unique feature of ARI noise sources is meter calibration in both db noise figure and degrees Kelvin.

The Model NS-L is the only commercially available device that provides RF random noise at laboratory accuracies in the VLF ranges. It uses lightweight rechargeable batteries to completely rid the output signal of power-line contamination.

Model	Frequency	
NS-L	100c/s-500 Mc/s	$845.
NS-B	1-500 Mc/s	450.
NS-H	1-2000 Mc/s	825.

PRECISION FREQUENCY AND TIMING

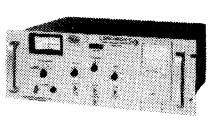


LORCHRON*

Loran-C Timing Receiver. Latest techniques, incorporating integrated-circuit micrologic. All-electronic servo system, lightweight and portable. TIMING SYNCHRONIZATION TO ONE MICROSECOND within Loran-C area.

DIGICHRON*

Numerical readout of hours, minutes and seconds. Thumb-wheel digital switch to set output pulse delay from 0 to 999,999 microseconds. Useful with any clock standard for display, and removal of propagation delay.



LORCHRON-C

For frequency comparison and synchronization. NO DIURNAL SHIFT, as experienced at VLF, within Loran-C area. Measurement can be made to 1 x 10^{-9} in two minutes, and 1 x 10^{-12} in a day.

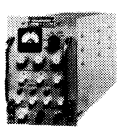
* TM

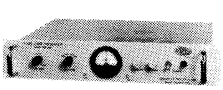
LORAN-C

Thirty Loran-C stations are currently in operation with locations in Europe, Africa, the North Atlantic, Continental U.S., Alaska, Hawaii, and in the vicinity of Japan. Operation is on an assigned frequency of 100 Kc/s is controlled to atomic standards. Times of transmission of some of the chains are being steered by the Naval Observatory to provide synchronization to the Observatory Master Clock.

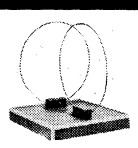
The instruments shown can be used to derive time reference and frequency synchronization for Loran-C signals. In addition, ARI manufactures Loran-C r.f. amplifier units, repetition rate generators, simulators, and antenna systems. Send for our free brochures on Loran-C Timing and Instrumentation.

RF TIME DISTRIBUTION





Range timing by transmission of RF signals modulated by standard IRIG codes is a simple technique for covering a large area at minimum cost. ARI manufactures complete systems to suit any requirement, and can provide field services for installation, operation, and maintenance. Transmitters are available for AM and FM service using either single, or multiplexed time codes. Receivers such as the airborne TCR-136 or the ground based TCR-141 as shown are available in both AM and FM configurations to suit your particular timing needs. Send for free brochure.



LOOP ANTENNAS

Crossed-loop (shown), single loops and loop-whip cardiod arrays, ULF-HF. General purpose L1-L single loop available from stock is balanced, electrostatically shielded and has an effective height of 1 cm at 20 Kc/s. $140.

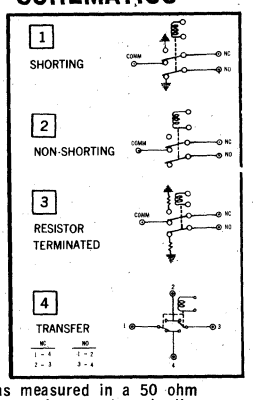
SCHEMATICS



NOTE: High frequency electrical characteristics are typical values (not maximum) as measured in a 50 ohm circuit and may be used for most design analyses. For more exacting applications, maximum values in the frequency range may be obtained upon request. SWR measured to common with a matched 50 ohm termination. **For additional specifications request Amphenol RF Switches Catalog SS-1.**

HIGH ISOLATION MICROWAVE SWITCHES

DESCRIPTION

These compact coaxial switches, with superior isolation characteristics over its entire zero to 12.4 GHz operating range, are particularly suitable in applications where crosstalk interference must be kept to an absolute minimum.

Amphenol's Series 303 units described here represent a few of the variations available. Other connector types, auxiliary contacts, and hermetically sealed units as well as transfer types in both the miniature and standard sizes are also available. Please contact us for additional information and specifications.

CHARACTERISTICS

ELECTRICAL

Frequency range	0-12.4 GHz
Characteristic impedance	50 ohms
Crosstalk (isolation)	60 db min. @ 12.4 GHz
SWR	1.5:1 max. @ 12.4 GHz
Insertion loss	0.5 db maximum
Contact resistance	60.0 milliohms
RF power rating (power off during switching)	100 watts @ 1 GHz
High RF voltage rating	1000 volts peak @ 60 Hz
Switching time	operate: 15 ms max. release: 10 ms max.

MECHANICAL

Mechanical life	1,000,000 cycles min.

ENVIRONMENTAL

Characteristics are in accordance with applicable portions of MIL-S-3928B.

NOTE —
Other voltages and connectors are available as well as indicator light circuit.

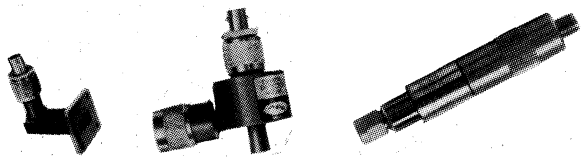
AEL

CRYSTAL VIDEO DETECTORS DIODES/MOUNTS

☐ **STANDARD DETECTORS**



Each of these detectors is designed to work with a specific AEL silicon point-contact diode. Careful mount design achieves an overall detection sensitivity closely approaching the theoretical diode sensitivity (while preserving uniform response over the specified bandwidth.)

Diodes are normally not supplied with these particular detector mounts. The standard AEL diodes recommended can be ordered by number, stocked, and used interchangeably without the need for special selection.

COAXIAL INPUT — 0.05 to 11 GHz

BROADBAND
Typical Tangential Sensitivity @ 2 MHz Bandwidth (—dbm): 50

OCTAVE BAND
Typical Tangential Sensitivity @ 2 MHz Bandwidth (—dbm): 52 to 56

NARROW BAND
Typical Tangential Sensitivity @ 2 MHz Bandwidth (—dbm): 54 min. (@ 4 MHz bandwidth with 4 K video load)

WAVEGUIDE INPUT — 8.2 to 40.0 GHz

Typical Tangential Sensitivity @ 2 MHz Bandwidth: 48 to 52

☐ **SPECIAL-PURPOSE DETECTORS**

Diodes are included with all of these special-purpose detectors. Diodes and mounts are carefully matched to give optimum performance in specific applications.

Most models can be custom engineered for frequency ranges other than those listed, and can be qualified to common MIL Specs.

MATCHED PAIRS FOR TRACKING — 2.60 to 5.15 GHz
Min. Tangential Sensitivity @ 2 MHz Bandwidth (—dbm): 51-52

MINIATURE NARROW-BAND DETECTORS — 0.10 to 4.40 GHz
Min. Tangential Sensitivity @ 1 MHz Bandwidth (—dbm): 55 to 58

MINIATURE DETECTORS — 1.0 to 18.0 GHz
Typical Tangential Sensitivity @ 2 MHz Bandwidth (—dbm): 46 to 53

DIODES for Standard Detectors
Test Frequency GHz: 5 to 33. Tangential Sensitivity* (—dbm): 50 to 56

*Maximum theoretical sensitivity in a perfectly matched lossless system with 2 MHz video bandwidth.

Send us your requirements

HYBRID & MICROWAVE INTEGRATED CIRCUITS

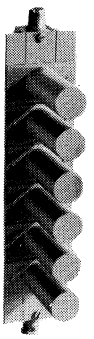
Thin/Thick Film Hybrid Circuits DC — 500 MHz

Standard & Custom from design through production. Standard circuits include video preamps, IF & RF Amps, VHF/UHF Receivers, Ring Counters, etc.

Microwave IC's

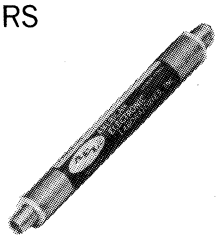
Mixers, Oscillators, Detectors, Switches, Limiters, Filters, etc. including sub-assemblies such as front ends and paramps.

FILTERS



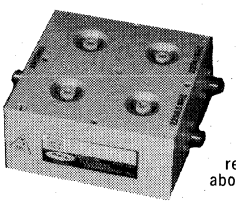
BAND REJECT FILTER 40 MHz TO 4 GHz SERIES FRL AND FRN

Series FRL and FRN are band reject filters using sectional construction techniques. Standard filters utilize 4 sections with minimum rejection levels of 60 db and passband bandwidths of 2%. Additional sections provide rejection levels of up to 100 db. Narrow band units (as narrow as 0.5%) and tunable versions are also offered. Tuning ranges of up to 40% between 40 MHz and 500 MHz and up to an octave above 500 MHz are obtainable.



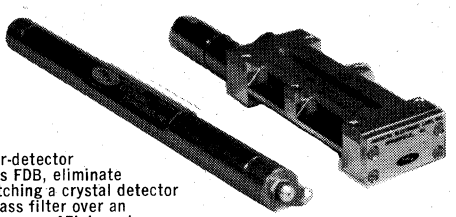
SERIES FBF 3000 TUBULAR BAND PASS FILTERS

The Series FBF 3000 Tubular Band Pass Filters operate over the frequency range from 100 MHz to 1000 MHz. These ⅜″ diameter filters feature performance essentially equivalent to presently available ½″ diameter designs. Standard designs are available with 3 db bandwidths from 2 to 25%.



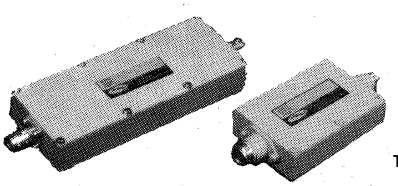
DIPLEXER SERIES FMN-250

The Series FMN-250 Diplexers are intended for missile applications, operating in the 2200 to 2300 MHZ telemetry band. The units are ruggedly constructed to meet severe environmental requirements and are sealed so that operation above 150,000 feet is possible.



INTEGRATED FILTER-DETECTORS SERIES FDB
Folded Coaxial
Straight Coaxial

AEL integrated filter-detector combinations, Series FDB, eliminate the problems of matching a crystal detector to a separate bandpass filter over an extended frequency range. AEL impedance matching techniques ensure maximum tangential sensitivity over the entire frequency band.



LUMPED CONSTANT HIGH PASS, LOW PASS AND BANDPASS FILTERS

The series FBA Bandpass Filters cover the frequency range from 2 MHz to 1000 MHz. The AEL FBA 1000 series filters are narrow band filters available with bandwidths ranging from 2 per cent to 20 per cent while AEL FBA 4000 series bandpass filters feature wider bandwidths from 20 per cent to two octaves.

The AEL FLA 1000 series and FLA 3000 series low pass filters are standard units operating from 2 to 1000 MHz. The FLA 1000 filters are eleven element units having Tchebycheff response, while the FLA 3000 filters are nine branch elliptical type units offering greater selectivity.

The AEL FHA 1000 series and FHA 3000 series high pass filters are available from 2 MHz to 750 MHz. The FHA 1000 series are eleven element Tchebycheff filters while the FHA 3000 series, offering greater selectivity, are nine branch elliptical filters.

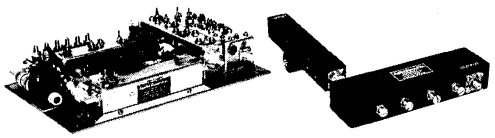
advances in RF techniques

In recent years, Applied Research Inc. has contributed notably to the state of the art with unique originations in RF components and equipments. Much must remain undiscussed; the production items below are representative.

BROADBAND FREQUENCY MULTIPLIERS



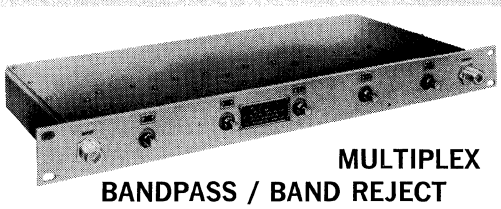
SIGNAL SOURCES / SYNTHESIZERS
VACUUM TUBES / SOLID STATE
VARACTOR / SNAP-ACTION DIODES / TRANSISTOR

5-15,000 MHz

A complete line of frequency multipliers operating up to 15,000 MHz has been developed and is presented by APPLIED RESEARCH. These units utilize solid state devices, vacuum tube devices or combinations of both.
Using the frequency multiplier as the basic tool, lines of Signal Sources, Frequency Synthesizers and Multiplier Chains are now available.

Some general characteristics are:

Frequency Range:	5 - 15000 MHz
Bandwidths:	up to 27%
Power Output:	up to 5 watts
Efficiency:	as high as 50%



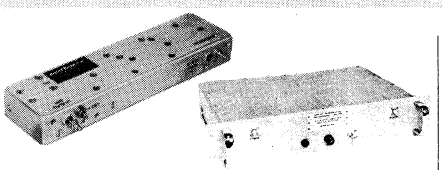
MULTIPLEX
BANDPASS / BAND REJECT
LOW POWER / HIGH POWER

FILTERS (5-12,000 MHz)

By applying advanced network design techniques, Filters have been developed operating in the frequency range up to 12,000 MHz with electrical performance approximating theoretical expectations. In addition to Bandpass, Band Reject and Multiplex Filters, advanced network designs are available for antenna couplers, Diplexers, Interdigital Filters and many other types.

Some general characteristics are:

Frequency Range:	5 - 12,000 MHz
Bandwidths:	up to several octaves
Insertion Loss:	as low as 0.25 dB
Power:	up to 3.5 kW(cw)
Band Reject Notches:	as narrow as ¼ % fo
Band Reject Attenuation:	as great as 75 dB



AMPLIFIERS

SOLID STATE VACUUM TUBE

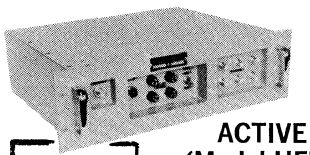
APPLIED RESEARCH presents an integrated line of RF amplifiers in both solid state and vacuum tubes for operation in the frequency spectrum up to 3000 MHz. Their truly exceptional performance features many advanced characteristics. Units are also available in weatherproof cases for antenna mounting or other outdoor applications.

Included within this line are:
Phase-matched amplifiers / Low noise amplifiers / Broadband amplifiers / Power amplifiers / Linear and high dynamic range amplifiers /

Some general characteristics are:

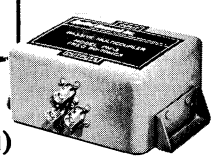
Frequency Range:	**up to 3000 MHz**
Bandwidths:	**up to multiple octaves**
Gains:	**up to 120 dB**
Phase Matching:	**to within 1° over an octave**
Noise Figures:	**as low as 1.5 dB**
Power Output:	**up to 20 watts**

MULTICOUPLERS



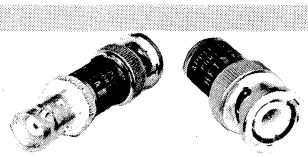
ACTIVE (Model HFM)

3-4000 MHz



HYBRID (Model PM)

Model HFM and PM Multicouplers provide the ultimate in performance and sensitivity in signal distribution.
Model HFM Active Multicouplers, by combining filter networks and active elements, feature multiple outputs, broad bandwidths (if desired), low noise and high dynamic range.
Model PM Hybrid Multicouplers offer compact size, minimal insertion loss, broad bandwidths (if desired) and low cost.



FIXED PAD ATTENUATORS & TERMINATONS

DC—3GHz

FOR TYPES BNC, TNC
C, N & OSM CONNECTORS

APPLIED RESEARCH presents an integrated line of fixed pad attenuators, terminations and impedance-matching transformers. These products provide means for rapid and accurate division of voltages over the frequency range of DC to 3GHz, and for the matching of different impedances with minimum loss over a broad frequency band. The unit cost is within the practical price range of the large and small equipment user, as well as the research and experimental user.

Some general characteristics are:

Frequency Range:	DC—3GHz
VSWR:	1.25:1
Attenuation Accuracy:	±0.5 dB
Impedances (nominal):	50, 75, 90 ohms
Attenuation values:	1, 2, 3, 4, 6, 10, 12, 15 20 dB (standard)

ANAREN MICROWAVE, INC. PRODUCT DIRECTORY

PRODUCT	DESCRIPTION	TYPICAL OCTAVE L-BAND SPECIFICATIONS
	**3 db 90° COUPLERS (COAX HYBRIDS)**	
	• 60 MHz – 18 GHz • octave, multi-octave bandwidths • rugged, reliable stripline circuit • withstands severest environments	• VSWR: 1.1 • isolation: 32 db • insertion loss: 0.15 db • coupling: 3 db ±0.4 db • power rating: 200W avg., 5 KW peak
	**10 db, 20 db DIRECTIONAL COUPLERS**	
	• 60 MHz – 12.4 GHz • octave, multi-octave bandwidths • other coupling values available • dual directional designs available	• directivity: 25 db • coupling variation: ±1 db • VSWR: 1.1 • insertion loss: 0.15 db • power rating: 200W avg., 5 KW peak
	**ULTRA-MINIATURE 3 db 90° COUPLERS**	
	• stripline, solder-tab design • 20 MHz – 12.4 GHz • standard octaves, plus specials • operates over −60°C to +185°C	• VSWR: 1.1 • isolation: 32 db • insertion loss: 0.15 db • power rating: 200W avg., 5 KW peak • 3/100 cu. in.; 1/30 ounce
	**HIGH ISOLATION POWER AMPLIFIER DIVIDERS AND COMBINERS**	
	• 4, 8, 16-way octave designs • 0.125-8 GHz – also specials • ultra-miniature 225-400 MHz designs • low input and output VSWR – independent of amplifier match	8:1 Power Combiner: • insertion loss: 0.4 db • input VSWR: 1.1 (independent of amplifier impedance) • isolation: 28 db • power rating: 200W avg., 5 KW peak • size: 4″ x 1.50″ x 0.07″
	**CORRELATORS**	
	• RF/RF 60 MHz – 18 GHz in octaves • RF/Video 60 MHz – 12.4 GHz • RF/RF miniature, stripline, solder-tab 60 MHz – 8 GHz • versatile application in phase measurement and adaptive circuits	• VSWR: 1.3 • isolation: 18 db • insertion loss: 1.0 db • ampl. balance: ±1.0 db • phase linearity: ±6°
	**INSTANTANEOUS FREQUENCY DISCRIMINATORS**	
	• wideband electronic warfare applications • FM communication applications • lab frequency monitoring • exceptional linearity • RF or video outputs	• VSWR: 1.4 • linearity: ±7° • insertion loss: 1.0 db • size: 8″ x 8″ x 1/2″
	**MIXERS**	
	• single-ended, balanced • octave bandwidths 0.25-12.4 GHz • IF output DC – 400 MHz • excellent VSWR, isolation • stripline solder-tab options • integrated or replaceable diodes	Balanced mixer configuration: • VSWR: 1.2 • RF/LO isolation: 30 db • conversion loss: 6 db • noise figure: 7.0 db • L.O. power: 8 MW

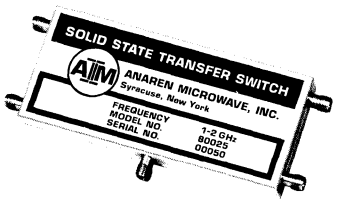
EXCELLENCE IN MICROWAVE SIGNAL SENSING / PROCESSING

DESCRIPTION	TYPICAL OCTAVE L-BAND SPECIFICATIONS	PRODUCT

SOLID STATE SWITCHES

- transfer, SPDT, SPNT, DPNT types
- octave bandwidths 0.125-12.4 GHz
- drivers available
- low VSWR under all switching conditions
- stripline solder-tab option

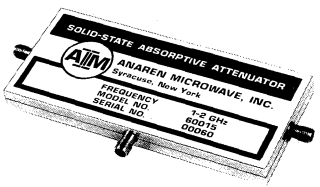
- isolation: 30 db
- insertion loss: 0.9 db
- switching speed: 50 nsec.
- power rating 5 watts CW
- input VSWR: 1.25



SOLID STATE VARIABLE ATTENUATORS/MODULATORS

- octave bandwidths 60 MHz-12.4 GHz
- multi-octave bandwidths available
- excellent match
- small size, light weight
- stripline solder-tab option

- VSWR: 1.2
- max. atten. per section: 30 db
- residual attenuation: 0.9 db
- switching speed: 50 nsec.
- power rating: 1/2 watt CW



DETECTORS

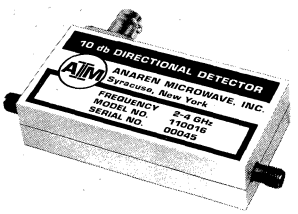
- octave bandwidths 0.125-12.4 GHz
- combined high sensitivity with excellent match
- matched pairs available

- VSWR: 1.5
- tangential sensitivity: −50 dbm
- frequency response: ±0.5 db
- sensitivity: 500 MV per MW

10 db, 20 db DIRECTIONAL DETECTORS

- 60 MHz – 12.4 GHz
- octave, multi-octave
- other coupling values available
- dual directional designs available

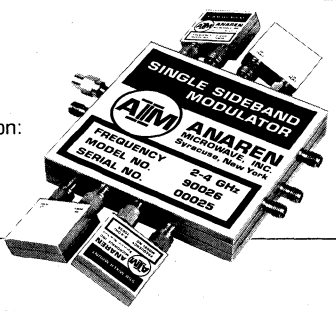
- directivity: 20 db
- VSWR: 1.2
- frequency response: ±0.3 db
- insertion loss: 0.25



SINGLE SIDEBAND MODULATORS

- octave bandwidth RF 0.225-12.4 GHz
- octave bandwidth IF 30 MHz-1 GHz

- carrier suppression: 15 db
- unwanted sideband suppression: 20 db
- conversion loss: 10 db



• Unique wideband sensors/processors • Custom subsystems for EW, radar, navigation, communications • New stripline solder-tab designs • Ultra-miniature size, lightweight • Computer controlled/ optimized designs • Exceptional wideband electrical performance • Laminated stripline construction • Precision, controlled manufacture • Outstanding ruggedness, reliability • New approaches to cost-effectiveness • Stock delivery/quick reaction capability based on—NEW CONCEPTS!

Order through our nearby representative or direct. Send for detailed specifications and applications information.

Let Babcock SOLVE YOUR RADIO CONTROL SYSTEM PROBLEMS

whatever the mission

Babcock Electronic Systems Division is a pioneer in the remote control and guidance field. We currently specialize in the design and manufacture of quality electronic equipment and systems for remote radio control, range safety, electronic scoring (miss-distance indicators), telemetry, electronic warfare, and related instrumentation and accessories. Our products are used in industry as well as all branches of the Armed Forces. Babcock radio control equipment is in use directing unmanned vehicles ranging from space probes to patrol boats . . . Command-destruct systems, supplied by Babcock, safeguarding life and property during critical missile launch operations . . . . and the Atomic Energy Commission uses locomotives controlled through Babcock equipment during nuclear experiments. Wherever the need arises for specialized techniques and applications, Babcock is ready to accept the challenge. Application assistance to interested contractors is available through our world-wide service organization. Babcock assistance is as near as your telephone.

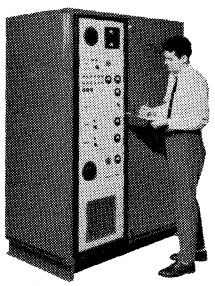
Bendix Electronics

HIGH POWER

Pulse Modulators
Pulse Generators
D.C. Supplies
Transmitters

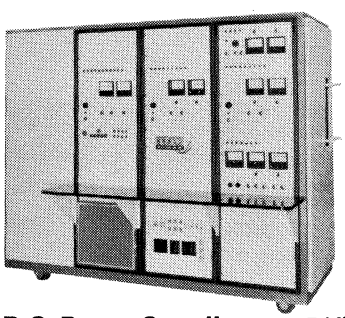


Model 698-L2 Power Amplifier used in FM tropospheric systems provides 1 KW in the 610-985 MHz band.

Cober Electronics, Inc., manufactures a very broad line of High-Power Products. These are assembled to customers' specifications from packaged modules and standard Cober designs, making it as easy and as economical to buy custom equipment as it is to buy standard units. The categories below illustrate the range within which these products fall.

Transmitters and Power Amplifiers
Troposcatter & Satellite Communications & Test

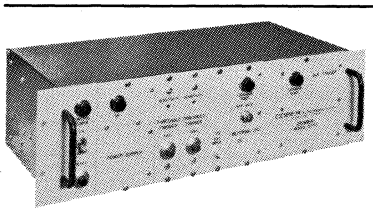
Cober transmitters are supplied at powers from several hundred watts up to megawatts in the UHF and Microwave frequency areas. They form the heart of troposcatter and earth-satellite transmitting systems or are designed as test sets for antenna-pattern studies, R.F.I. susceptibility measurements, and microwave component testing.



Model 1421 Power Supply drives exotic Crossed Field Amplifier microwave tubes. It contains five supplies in floating arrangement, is highly regulated, and has two modulators for pulsed modes.

D.C. Power Supplies 5 KV to over a Million Volts

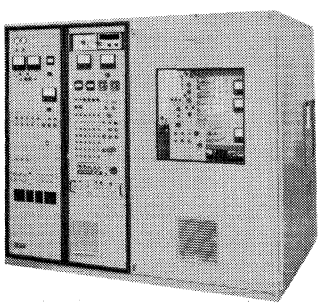
Industrial and Mil-spec DC supplies offer high regulation up to .001%. Multiple output units, with various supplies floating at high voltage are a specialty. Unregulated brute force units that furnish large amounts of power at minimum cost are also available.



Model ST-77 Electronic Crowbar acts within 5 microseconds of an arc or fault to protect valuable microwave tubes and loads.

High Power Components

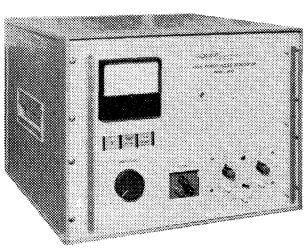
Specialized high power components and modules are available for customers building or modifying their own systems. These include:
• Electronic Crowbars • Electronic Regulators (up to .001% regulation) • Pulse Current Viewing Transformers • High Voltage Discharge Solenoids.



Model 1445 85 KV Grid Modulator powers T.W.T.'s. Pulse width is variable from 1 to 10 microseconds and rep rate adjustable to over 20KC.

Pulse Modulators 5 KW to 100 Megawatts

Cober's high-power modulators drive a wide range of microwave and power tubes, as well as such devices as laser and plasma tubes. Units are available from a few kilowatts to over 100 megawatts with pulse widths as narrow as 25 nanoseconds to long pulses of thousands of microseconds. State-of-the-art rise times and high rep rates are our specialty. Full mil-spec, solid-state modulators are supplied for systems use, and soft-tube and hard-tube units are supplied for laboratory and industrial applications.



Model 605P 24 KW Pulse Generator, available from stock $3,990.

Pulse Generators 24 KW

Cober's line of pulse generators is characterized by their pulse fidelity and flexibility. The Model 605P shown is a 24 Kw Pulse Generator with a rise time of 20 nanoseconds and pulse widths variable from 50 nanoseconds to more than a millisecond at repetition rates from a single shot to 1 MHz. It is used for driving LSA devices, Gunn diodes, microwave tubes, Pockel cells, and general laboratory applications. Other pulse generators in Cober's line provide pulse widths to D.C. or offer unique characteristics, such as built-in bias supplies to allow convenient use as a grid pulser.

Send us your high power problems; our applications engineering department will give you a speedy and effective response.

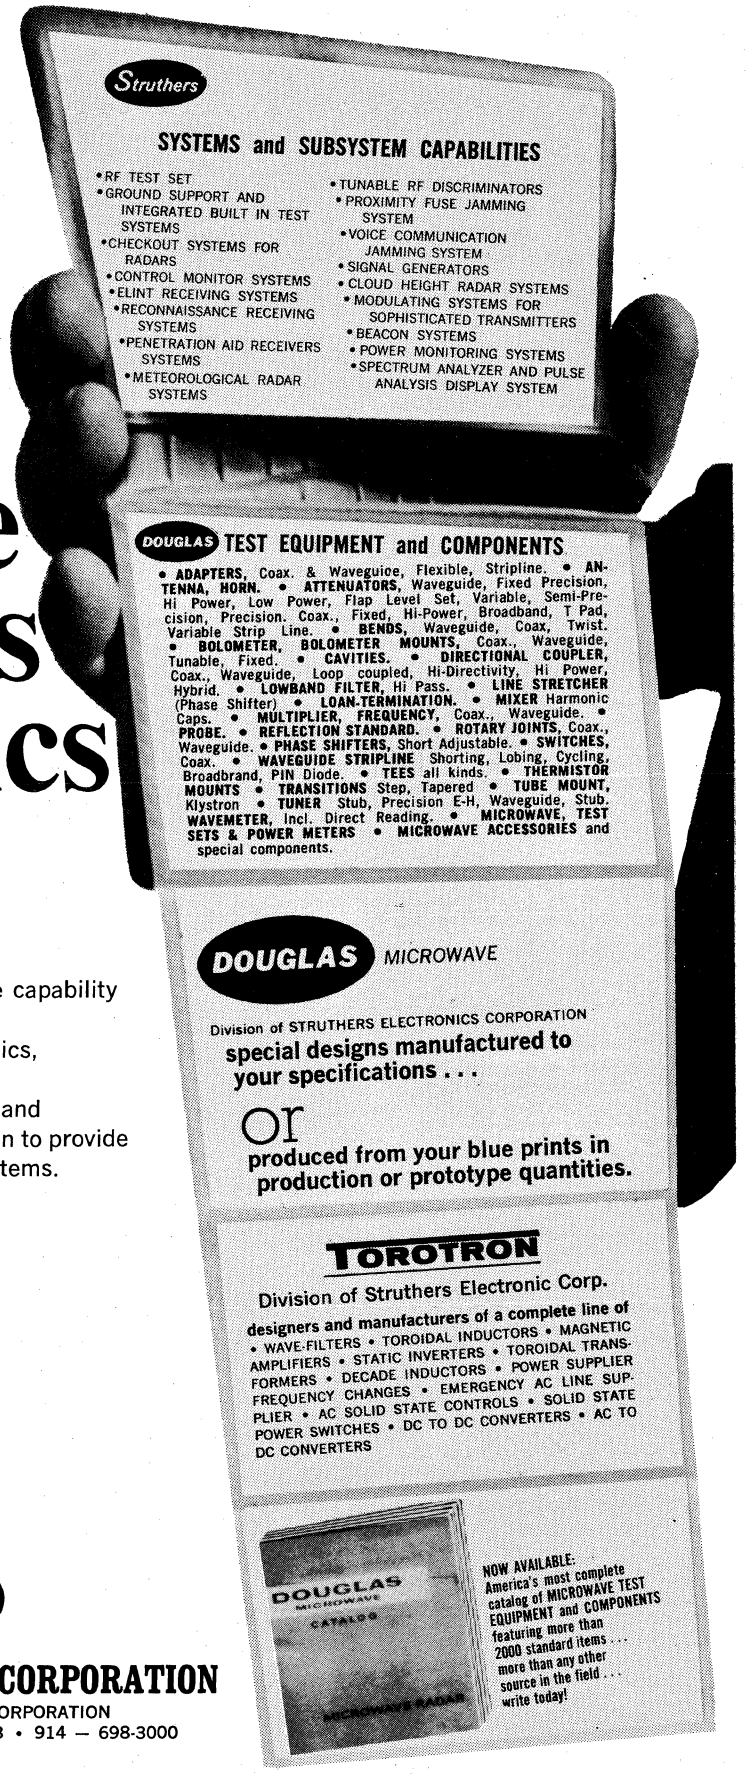
The High-Power People

COBER ELECTRONICS, INC.

7 Gleason Avenue, Stamford, Connecticut 06902, Tel: (203) 327-0003

Meet the Struthers electronics family.

Struthers Electronics Corporation has the capability to answer the latest demands.
The Douglas division of Struthers Electronics, using microwave module concepts, has developed integrated microwave systems and subsystems. Now, we have the organization to provide you with both microwave modules and systems. Please send us your requirements.



ELECTRONICS Struthers CORP.

RAILROAD PLACE, MAMARONECK, N. Y. 10543 • 914 — 698-3000

NOW AVAILABLE

THIN FILM PRECISION RESISTORS for MICROWAVE APPLICATIONS

A newly developed Ionized Plasma coating technique enables Struthers to offer Thin Film Coating to custom requirements. **METALLIC** and **NONMETALLIC** materials can be deposited **ON ANY SUBSTRATE,** to tolerances and uniformity not heretofore obtainable.

WRITE FOR FREE STRUTHERS THIN FILM PRECISION RESISTORS CATALOG.

AREAS OF APPLICATIONS:

MICROWAVES • Film resistors and capacitors.

CIRCUITRY • Deposition of complete circuits in high frequency applications. Hi-Density memory core matrixes.

SEMI-CONDUCTOR • Complex integrated circuits of multilayer construction.

LASERS • Hi-reflective coatings and other laser applications.

OPTICS • Protective coating, reflective coating and filters.

ETCHING • Any material etched to preset parameters.

MATERIAL RESEARCH • Coating of high purity multi materials predetermined environment.

Complete machine shop and grinding facilities are available for special applications or production requirements.

(A) TWO WAY POWER DIVIDER — QUADRATURE 90° HYBRIDS — 180° MAGIC "T"

Description
Dynographics quality miniature and subminiature wide band reactive power dividers are designed for high isolation with excellent amplitude and phase characteristics.
Application:
Signal division or summation matching and isolation circuitry for balanced and unbalanced mixers.
A wide range of connectors can be provided with BNC and Selectro type connectors normally in stock.
Please specify style or type of connectors when ordering.

Specifications

Frequency MHz	2-100	20-200
Model	**100**	**200**
Isolation db	30	30
Phase Balance	1°	1°
Amp. Balance db	0.2	0.2
Loss db	0.3	0.3
Power Watts	1.0	1.0
VSWR	1.3	1.3

Size ..... Length 1", Width 1", Ht. 3/4"
Weight ..... BNC or TNC, 1.4 oz., Selectro 0.6 oz.

(B) FOUR WAY POWER DIVIDER

Description
Dynographics quality miniature and subminiature wide band reactive power dividers are designed for high isolation with excellent amplitude and phase characteristics.
Application:
Signal division or summation matching and isolation circuitry for balanced and unbalanced mixers.
A wide range of connectors can be provided with BNC and Selectro type connectors normally in stock.
Please specify style or type of connectors when ordering.

Specifications

Model	**4-32**	**4-100**	**4-200**
Frequency MHz	2-32	10-100	20-200
Isolation db	30	30	30
Phase Balance	1°	1°	1°
Amp. Balance db	0.2	0.2	0.2
Loss db	0.5	0.5	0.5
Power Watts	1.0	1.0	1.0
VSWR	1.3	1.3	1.3

Sizes ..... Length 1 39/64", Width 1", Ht. 3/4"
Weight ..... BNC or TNC, 2.1 oz., Selectro 1.6 oz.

(C) DIRECTIONAL COUPLER

Description
Dynographic Electronics quality wide band, low loss Directional coupler with high directivity is now available with a 20db coupling factor. Model D20 couplers can be obtained with a wide ranbe of con-measuring both **incident and reflected power.** These coupler can be obtained with a wide range of connectors. The BNC, TNC and Type N are normally in stock.

Please specify styler or type of connectors when ordering.

Specifications

Frequency Range	2-50 MHz
Directivity	35db
Insertion Loss	0.3db Maximum
VSWR	1.09:1 Maximum
Input Power	1 watt
Coupling	20db
Coupling Flatness	±0.15db Maximum

Sizes incl. connector	**Length**	**Width**	**Height**
BNC or TNC	2 15/16"	1 31/32"	1 3/16"
Type N	4"	2"	1 7/16"

Weight
BNC or TNC ..... 5.0 oz.
Type N ..... 6.8 oz.

(D) L-C ELECTRIC WAVE FILTERS

Precise filters in the range of frequencies from Hz. to 300 MHz. may be designed and produced with accuracy. Modern network synthesis permits optimum network design with the minimum number of components. Dynographic can produce filter networks with the following characteristics: Elliptic Function, Butterworth, Chebyshev, Inverse Chebyshev, Butterworth Thompson and minimum phase shift filters.

(E) MINIATURE COAXIAL FILTERS:

Band pass low pass and high pass filters, designed to operate from 200 MHz to 10 GHz. These units are designed for sharp skirt, low insertion loss and low VSWR in the pass band.

(F) FIXED COAXIAL ATTENUATORS

Model FT50 achieves its broad frequency range using new high reliability components. These reliable inline attenuators are available at standard, or non standard values of attenuation. Each pad is calibrated at two frequencies; 10 MHz and 1000 MHz with measured values recorded on the body of the attenuator. All combinations of BNC, TNC, and N type attenuators are stock items although a wide range of additional connectors can be provided upon request.

★ 50 to 90 ohm minimum loss attenuators.

Please specify style or type of connectors when ordering.

Specifications

Attenuation Values	1 , 2, 3, 6, 10, 20db Standard
Average Power	1 watt
Impedance	50 Ohms
Nominal Loadlife	25% per year max.
Temp. Coeff	±100 PPM from —55°C to +125°C
Frequency Range	**DC to 2000 MHz**
VSWR	Less than 1.2:1 at 1000 MHz Less than 1.5:1 at 2000 MHz
Attenuation Accuracy	DC to 500 MHz ±0.25db DC to 1000 MHz ±0.5db DC to 2000 MHz ±1.0db
Calibration Accuracy	±0.1db

Connectors	**BNC-BNC**	**BNC-N**	**N-N**
Length	1 15/16"	2 7/32"	2 9/16"
Weight	.9 oz.	1.6 oz.	2.1 oz.

(G) FIXED TERMINATIONS

Description
Dynographic Electronics Model T-50 type termination designed to give low cost, reliable broad band operation. Usable from DC to 2000 MHz. These units are available from stock. Each termination is quality controlled and tested. A wide range of connector types can be provided with BNC, TNC and type N normally in stock.

Please specify style or type of connectors when ordering.

Specifications	**Gold Label**	**Silver Label**
Frequency	DC to 1000 MHz	DC to 1000 MHz
Max. VSWR	1.05	1.10
Power Watts	.5	.5
Temp. Coeff.	100 PPM from —55°C to +125°C	100 PPM from —55°C to +125°C
Nominal Load Life	25% per year max.	25% per year max.

Connector	**BNC**	**TNC**	**Type N**
Weight	.75 oz.	.75 oz.	1.5 oz.
Size	1 3/16"	1 3/16"	1 1/2"

(H) FREQUENCY GENERATION:

Divide, mix, multiply, amplify with low spurious and harmonic content.

(I) WIDE BAND TRANSFORMERS

2:1 and 4:1 Transformers can be used for Impedance Matching, Balanced Mixers, Phase Detectors, Antennas and interstage coupling. Frequency Range .1 MHz to 500 MHz.

(J) HI Q COIL MEET MIL-C15305

Variable miniature coils are available in standard values from .1μh to 100,000μh with Q values up to 150.

(K) DC BLOCKS AND INLINE CRYSTAL DETECTORS GOOD TO 4GMz

DYNOGRAPHIC Electronic Corporation
57 BLOOMINGDALE RD., HICKSVILLE, N. Y. 11801
516 Wells 5-8080

We would appreciate an opportunity to submit a quotation on any current or future requirements you may have.

YIG TUNED Panoramic Receiver Plug-In

Four models cover the entire frequency spectrum from 100 Mc to 25 Gc with greater than decade band tuning ranges. With these units, an ordinary oscilloscope is converted into a preselected wide band, microwave receiver which gives a panoramic display of signals on the scope face. The entire frequency spectrum or any segment of it, may be displayed in a single sweep.

SPECIFICATIONS

For these Tektronix oscilloscopes: 531A, 532, 533A, 536, 541A, 543A, 543B, 544, 545A, 545B, 546, 547, 549, 551, 555, 556, 581A, 585A

TUNNEL DIODE DETECTORS

SPECIFICATIONS

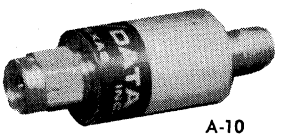
Type N Input	Freq. Gc	TSS (—dbm)	Price
D10	1-12.4	50	$75.00
D11	1-2	54	60.00
D12	2-4	54	60.00
D13	4-8	52	60.00
D14	8-12.4	50	60.00

When ordering with integral D.C. return, add "R" to Model number and $20 to price. Models with miniature input connectors also available.

Ask for Series D Bulletin

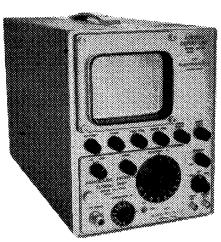
- Highest sensitivity
- Broadband, flat response
- Field replaceable diodes
- Low price includes diodes with mount

Broad Band Miniature Amplifier



A-10

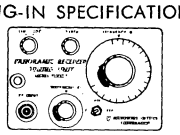
- Broad band 20 to 1000 Mc
- High gain 18 db
- Low noise, 4 db typical
- Solid state, miniature size
- Price $300.00
- Bulletin: A-10



SPECTRUM DISPLAY UNIT DU-501

This portable, battery operated display unit provides panoramic viewing from 100 Mc to 25 Gc when used with the three plug-ins listed below. Price $2675.

PLUG-IN SPECIFICATIONS



TU-VL501A .10-1.0 Gc
Resolution . . . . . 5 Mc Typ.
Dispersion . . 100 to 1000 Mc.
Price $3,000.00

TU-LX501 1-12.4 Gc
Resolution . . . . . 15 Mc Typ.
Dispersion . . 100 to 11,000 Mc.
Price $2,000.00

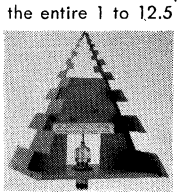
TU-LK501 1.8-25 Gc
Resolution . . . . . 5 Mc
Dispersion . . . . . 1 to 23 Gc
Price $2,600.00

Bulletin: DU-501

LOG PERIODIC ANTENNAS

Broad Band Coverage 1-12.5 Gc. Compact, Rugged, Lightweight Portable.

Measured antenna patterns show only a single main lobe with a 15 db front to back ratio over the entire 1 to 12.5 Gc band.

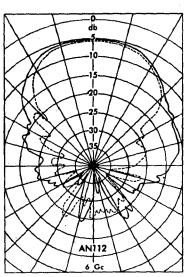


AN112 6¼" x 6½" x 8"

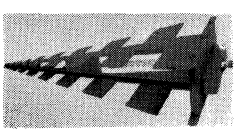
SPECIFICATIONS

- Broad bandwidth — 1 to 12.5 Gc
- High Gain — 11 db (50° beamwidth)
- Linear Polarization 20 db

- High front to back ratio in both horizontal and vertical planes — 15 db.
- Low VSWR — 2: 1 nominal with 50 ohm input.
- Connectors: Type "N" or miniature
- Price, $175 each Bulletin: AN112



Measured typical radiation pattern
Solid, vertical
Dashed, horizontal

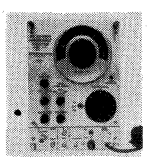


AN112F 1¾" x 6½" x 8"

SPECIFICATIONS

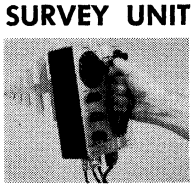
- Broad bandwidth — 1 to 12.5 Gc
- High Gain — 8 db (90° bandwidth)
- Linear polarization 15 db
- Price, $175 each
- Bulletin: AN112F

PANORAMIC RECEIVER R-10



Self contained YIG tuned receiver accurately tunes any selected decade band from 100 Mc to 25 Gc. Price: $3,750. Bulletin: R-10

HAND HELD SURVEY UNIT



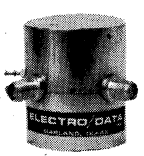
This compact receiver utilizes a YIG tuned RF preselector and sensitive crystal video circuit to cover 1-12.4 Gc. Price $2,900. Bulletin: RLX-100

Crystal Marker Generator

MK-1

Covers 1-12.5 Gc. 100/500 Mc spacing. Self contained power supply. Price: $995. Bulletin: MK-1

YIG FILTERS



4 models cover from 100 Mc to 25 Gc with greater than decade electronic tuning ranges. Solid state, rugged compact construction. Bulletin: YIG Filters.

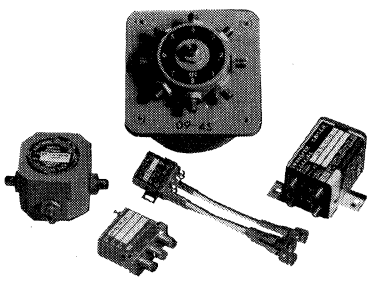
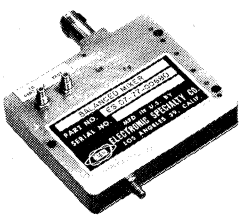
ELECTRO/DATA INC.

Electronic Resources Inc. designs & produces an expanding line of components and subsystems in a 190,000 sq. ft. computer equipped plant.

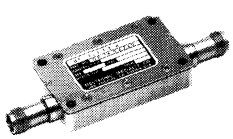
MICROWAVE DEVICES:



COAXIAL SWITCHES
DC to 18 GHz



BALANCED MIXERS
frequencies: S-X Band



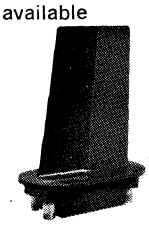
COMBLINE FILTERS
Computer designed, frequencies S-KU Band, also inter-digital, bandpass filters, diplexers & multiplexers

OTHER MICROWAVE DEVICES INCLUDE: Couplers, Power Dividers, Multipliers, Amplifiers

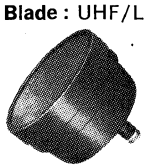
AIRBORNE ANTENNAS:

Typical of ERI's antenna capability for standard or custom specifications (and many are available off-the-shelf).

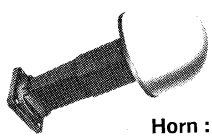
Stub: 2-10 GHz



Blade: UHF/L Band



Spiral: 2-12 GHz

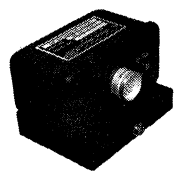


Horn: 7-10.75 GHz

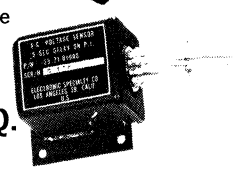
Poly-Environ Mineral Insulated COAXIAL CABLE ASSEMBLIES:

The answer for 1700°F, environments. ERI coax cable is vibration, crush, and abrasion resistant, suitable for radiation environments, hermetically sealed and designed for RF power handling applications. Coax assemblies are available as small as .090" dia. with ERM (mates with OSM) and other connectors.

Custom ELECTRONIC CONTROLS:



ANTENNA SELECTORS
UHF, Solid State

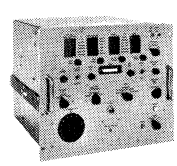


VOLT./FREQ. SENSORS
AC or DC, Solid State

OTHER CONTROLS INCLUDE: Static Inverters, AC to DC and DC to DC Power Control Systems, A to D and D to A Digital Systems

ELECTRONIC SUBSYSTEMS:

DIGITAL CONTROLS



SIGNAL GENERATORS

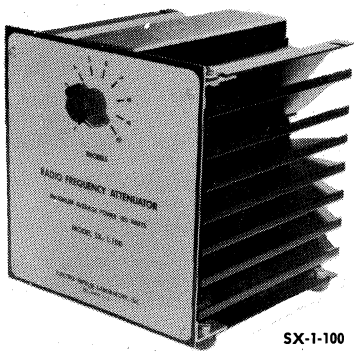
HIGH POWER RF ATTENUATOR

- Power Capacities to 5000 watts
- Variable in 1 db steps
- VSWR less than 1.25
- Input and output impedance: 50 ohms (DC to 100 MHz)

These attenuators are arranged in a T-pad configuration, switched in one db steps. Use either connector as input, with no loss of accuracy.

Usable to 500 MHz with slightly different characteristics.



SX-1-100

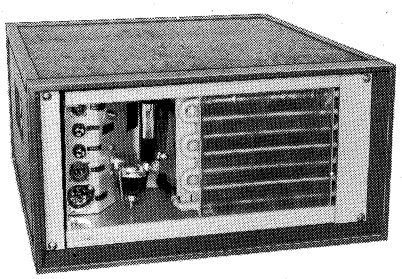
AUTOMATIC DIRECT READING CALORIMETERS

1% ACCURACY

TRACEABLE TO NATIONAL BUREAU OF STANDARDS!

One percent accuracy is independent of frequency and waveshape, but does not include load error. A VSWR vs. frequency chart can be furnished with your choice of any standard waveguide or coaxial load. (No extra cost on 1% models).

ADR-100



ADR-100, REAR VIEW

AUTOMATED PRECISION

Instead of time consuming manipulation of Controls, Flow Adjustments, Reading of Thermometers, Flow Meters, Graphs and other error producing devices.

Model	Max. Power	Load*
ADR-1	1 watt	
ADR-10	10 watts	CHOOSE ANY
ADR-100	100 watts	STANDARD
ADR-1000	1000 watts	LOAD
ADR-5000	5000 watts	DC-40GHz
ADR-10000	10000 watts	

*Price includes choice of Standard Load and Connector.

MODELS TO 40 GHz

WIDE VARIETY OF CONNECTORS

- Calibration resistor precisely located in coolant flow path permits calibration of Load using only a source of DC or 60 Hz power
- Quick-connect couplings on coolant connections guarantee safe, sure and convenient operation
- Specify frequency range desired when ordering
- Compact, portable
- Use with our Calorimeter Bridges or Calorimetric Power Meters
- Extremely low RF radiation
- Low VSWR guarantees most accurate termination and power transfer

Model	Frequency Range GHz	VSWR Max.	Power Rating Watts	Weight	Connector

WL-42	18.00 - 26.5	1.2		2	
WL-28	26.6 - 40.0	1.2		2	

- Optional equipment includes Closely Coupled Thermopiles, Output Meters reading directly in watts and Flow Meters
- Loads can be furnished with power ratings up to maximum feasible waveguide applications

BALUNS

- High efficiency Baluns permit use of 600 ohm twin line between Transmitter and Antenna
- Insertion VSWR 1.2
- Impedances are 50, 75, 200 and 600 ohms
- Insertion loss less than 0.15 db
- Maximum load (antenna) VSWR 3:1
- Ambient temperature range (typical) −40°C to +50°C
- Frequencies to 34 MHz

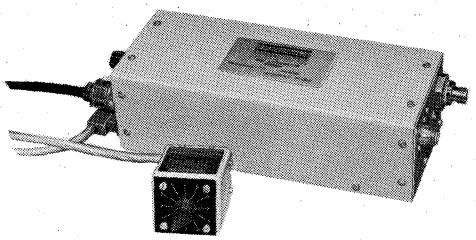
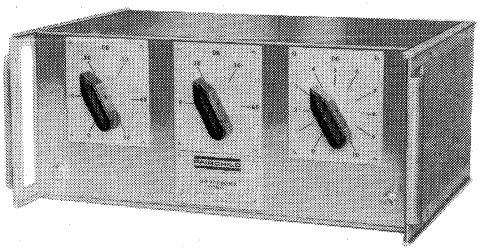
SINGLE-MOTOR-DRIVEN COAXIAL STEP ATTENUATORS

MA-600 and MA-1200 Series, 1, 2 or 4 watts, DC to 4 GHz
MA-610 and MA-1210 Series, 1 and 2 watts, DC to 10 GHz
All Attenuation Steps to 60 DB.



These motorized 6-position and 12-position units permit remote control of precise attenuation steps over the frequency range of DC to 4 GHz or DC to 10 GHz.
Because of the "Turn-Only" features, only a single motor is needed to position properly the selected attenuator pad. System complexity is reduced and operating reliability enhanced, while maintaining the low VSWR, high accuracy characteristics of the basic attenuator pads.
Control is achieved through a multi-conductor cable attached either to a Control Box or another remote switch of user's choosing.
Normal power requirement is either 115V AC or 28 V DC.

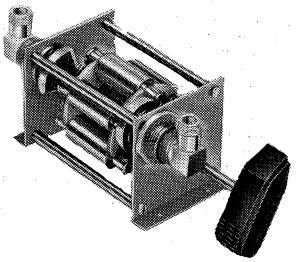
MULTI-TURRET STEP ATTENUATOR SYSTEMS

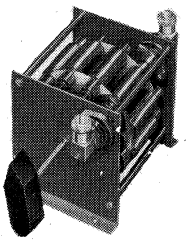


These Coaxial Attenuator Systems consist of two or more "Turn-Only" manual or motor-driven step attenuators mounted together on a chassis and tested as a system. Standard systems consist of two or more 6- or 12-position turrets, as described, installed on an enclosed, rigid chassis behind a 7" high panel, 19" wide, for standard rack mounting. For manually operated step attenuators, control knobs are also located on the front panel, while leads for power and control of motor-driven step attenuator systems are usually located at the rear of the chassis.
As all units are engineered to customers' needs, an almost unlimited variety of combinations of special step attenuators can be provided as systems. For motor-driven, remotely controlled systems, programming and other unique switching arrangements can be furnished.

"TURN-ONLY" COAXIAL STEP ATTENUATORS

SA-600 and SA-1200 Series, 1, 2 or 4 watts, DC — 4 GHz
SA-610 and SA-1210 Series, 1 or 2 watts, DC — 10 GHz



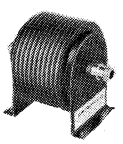


These low-VSWR, high accuracy, six-position and 12-position step attenuators can be switched to any position by merely rotating the easy-turn control knob. The unique mechanical arrangement is such that as soon as turn motion is initiated to change the setting, the end connectors are disengaged, allowing the attenuator pads to turn to the selected position.
Switching can be either clockwise or counterclockwise, permitting the user to select the desired position with a minimum of rotary motion. A positive detent action gives the user assurance that his step attenuator is properly positioned.
External cables may be permanently mounted directly, eliminating connectors entirely at the step attenuator outputs.
Turrets operating up to 12 GHz are available on special request. 15-step units also available.

HIGH-POWER FIXED PADS

5-Watt Dissipation—Model FA-505

Low VSWR and highly uniform attenuation versus frequency is exhibited by these carefully-designed units. Full 5-watt dissipation can be handled in either direction by units of up to 20 DB attenuation ratio and unilaterally up to 60 DB. Conservative rating allows for reasonable overloads.

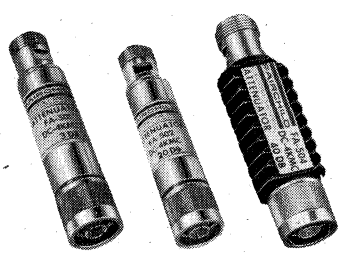


10-Watt Dissipation—Model FA-5010

Electro-Metrics' 10-watt microwave coaxial attenuators provide highly accurate attenuation throughout the frequency range of DC to 1.5 GHz. When used with a suitable termination, such as Fairchild EMC Model FT-502, this attenuator will serve as an excellent dummy load.

50-Watt Dissipation—Model FA-815

This Fairchild coaxial microwave power attenuator provides high accuracy throughout the frequency range of DC to 1 GHz while dissipating a full 50 watts. It may be used as a dummy load for transmitters, or to reduce transmitter outputs, as well as for isolating bolometers and couplers from high powered sources.



BROADBAND FIXED PADS

FA-511, 1 watt, DC to 10 GHz
FA-512, 2 watt, DC to 10 GHz
FA-501, 1 watt, DC to 4 GHz
FA-502, 2 watt, DC to 4 GHz
FA-504, 4-watt, DC to 4 GHz

Fairchild coaxial attenuator pads exhibit low VSWR and a high uniformity of attenuation over their specified frequency ranges.
New manufacturing techniques insure permanence of all characteristics despite rough handling and temporary overloads. Standard units are available for any attenuation level up to 60 DB. All production data fully traceable to National Bureau of Standards. Normal finish is nickel over brass.

performance guaranteed

precision microwave resistors

Every Filmohm component is pre-tested and performance-guaranteed to assure reliable system response. Precision test equipment, advanced production methods and strict quality controls combine to produce stability and uniformity in every Filmohm product.

WAVEGUIDE

FILMCARD®
For attenuators and terminations . . . low cost. Std thickness .004 to .062". Resistance from 25 to 750 ohms/square. Protective plastic overcoat available. **Bulletins P-2 & UFC-1.**

METALLIZED GLASS & FOTOCERAM® ATTENUATOR ELEMENTS
Attenuations to 70 db for frequencies from L- thru K-Band. In all shapes and values for low VSWR, high precision attenuators. **Bulletins A-1 & FCA-1.**

METALLIZED MICA ELEMENTS
Ideal for high microwave frequencies and stripline terminations . . . and as rotary vane and guillotine attenuator elements. 25 to 400 ohms/square; .001" to .005" thick. **Bulletin C-1.**

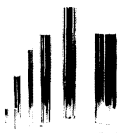
METAL FILM MYLAR®
Ultra-thin, flexible, easily cut. High stability resistive or conductive film in large sheets or custom shapes. **Bulletin CRM-1.**

COAXIAL

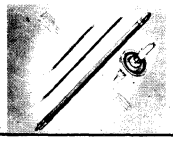
COAXIAL DISC & ROD RESISTORS
For coaxial terminations, loads, tee or pi pads. Low T.C., highly stable metal resistance film fused to Pyrex, Alumina, Plastic or High Temperature BeO substrate . . . sealed with microthin quartz coating. **Bulletins M-1-1, CD-2, & DR-1.**

COAXIAL TERMINATION RESISTORS
Metallized film alumina or high temperature BeO base resistors for miniature, 3/8 and 7/8 lines. Usable to 12.4 Gc. **Bulletins CTR-1 & CT-1.**

HI-POWER COAXIAL LOAD RESISTORS
Non-inductive, for dummy loads and terminations. Metal film tubular glass, almuina or hi temp BeO resistors in sizes to 2" OD x 18" long. **Bulletin HP-1**



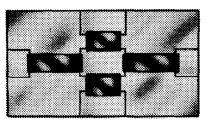
COAXIAL ATTENUATOR ELEMENTS, TEE PADS
For all military and standard commercial pads in 3/8 and 7/8 line sizes. Distributed-film type. Frequency: 1 to 12.4 Gc. **Bulletins CA-2 & CTP-1.**



STRIPLINE

STRIPLINE RESISTORS & PELLET RESISTORS
Film-deposited metallic resistive materials on thin mica, BeO and alumina substrates. Ideal for short terminations in stripline designs. **Bulletins SL-2 & SPR-1.**

STRIPLINE TEE PADS
Two dimensional stripline tee pads, install in series with the center conductor of stripline. Attenuations from .1 to 25 db. Usable to 4 Gc. **Technical Note TN-1 & Bulletin SL-2.**



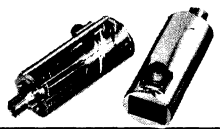
STRIPLINE TERMINATIONS
Easy-to-install, small and inexpensive. Standard 50 ohm matching impedance. Broadband, dc to 10.5 GHz, with VSWR less than 1.1 to 1.2 at high end. Dissipate as much as 1.5 watts. **Bulletin ST-1**

BOLOMETERS

Disc, Coaxial, Fuse, Waveguide Crystal Cartridge BOLOMETERS & THERMISTORS . . . 39 types in all . . . in stock! Interchangeable with all widely used types . . . chart available.

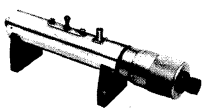
INSTRUMENTS

COAXIAL THERMAL VOLTMETERS
Wide-range AC-DC Transfer Devices for precise voltage measurements up to 50 Kc. In 6 ratings from ¼ volt to 100 volts. **Bulletin TDO-1.**



MICROPOTENTIOMETERS
Based on designs by NBS, these units are voltage standards for DC to 1000 Mc in nominal ranges of 1 microvolt to .33 volts. **Bulletin MP-1.**

A-T VOLTMETER
Micrometer adjustment provides readout of standard attenuations calibrated in voltage for high-accuracy measurement from 10 Mc to 1000 Mc. Calibration charts from NBS. **Bulletin ATV-1.**

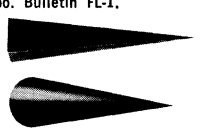


STEP ATTENUATOR

Series TA-700 Turret Attenuators provide 60 db attenuation in 10db steps, accurate to 1.0 db (including frequency sensitivity) from dc to 12.4 GHz. Bulletin TA-700

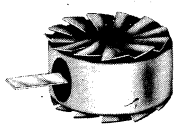
FILMLOAD

A lossy material supplied in various standard shapes, sizes and in a castable liquid form too. Bulletin FL-1.



NOW IN RESILIENT pill-form...

■ CRUSH-TO-FIT ATTENUATORS ■ CRUSH-TO-FIT TERMINATIONS
■ CRUSH-TO-FIT RF (CAPACITOR) BYPASSES ■ CRUSH-TO-FIT SHORTS



The easy installation of pill-form now offered in a host of standard ⅛" and ¼" strip transmission line components with low VSWR, excellent match. Write for complete details on "Pill-form Components".

Frequency Sources Inc.

KENNEDY DRIVE P.O. BOX 159
NORTH CHELMSFORD, MASS. 01863
TEL (617) 251-4921 • TWX 710-343-6506

We manufacture the most adaptable line of microwave frequency sources available anywhere. Our standard models are manufactured to meet your individual requirements. How is this possible? Because of their unusually flexible circuit designs and modularized mechanical construction, our production models are designed to be customized. This results in virtually "off-the-shelf" availability of "specials" with reduced delivery time and lower costs to you.

If you don't see exactly what you want listed on these pages, select the model having the nearest frequency range, power output, method of tuning or degree of frequency stability to meet your requirement. Then contact our Application Engineering Department. Chances are, one of our standard models can be scheduled through production to meet your exact requirements in a matter of days.

VOLTAGE TUNED — High Power

- Bandwidths up to 15%
- Extremely fast tuning rates
- Voltage/frequency curve approximately linear
- Power output to 2.0 watts
- Spurious outputs —40 dB on most models

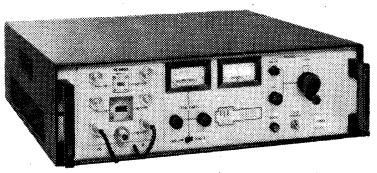
130A series SYNCHRONIZERS



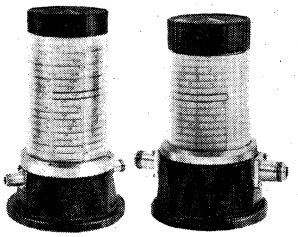
FEL 1-40GHz CONTINUOUSLY TUNABLE SYNCHRONIZER

to phase-lock klystrons, backward-wave oscillators, solid state and triode oscillators to a crystal reference

- ultra frequency stability . . . 1 part in 10^8/second, or 1 part in 10^7/day
- continuously tunable from 1GHz to 40GHz . . . also available in shorter ranges with add-on range capabilities
- single control operation
- solid-state and completely self-contained; cabinet or rack mount
- low power consumption
- deliverable from current production

For use with an oscillator source in the research lab, on the production line, or rack mounted for tactical environments . . . to provide an extremely stable signal for microwave frequency standards, doppler systems, MTI techniques, radio astronomy receivers and parametric amplifier pumps.

WDA series DIRECT-READING WAVEMETERS

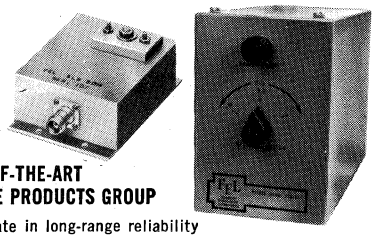


FEL WDA 940, WDA 3712 DIRECT-READING PRECISION FREQUENCY METERS

just 2 absorption type meters—instead of the usual 4 to 5—cover the full frequency range from 960MHz to 12400MHz

- WDA 940, 960-4200MHz
- WDA 3712, 3700-12400MHz
- direct readout in MHz
- special alloys and precision-ground invar threads assure smooth operation, minimum wear
- reduced cost
- superior temperature stability

For measuring cw, am, fm or pm microwave signals. Ideal for frequency measurement of microwave transmitters, microwave receivers, local oscillators and signal generators.



FEL STATE-OF-THE-ART SOLID-STATE PRODUCTS GROUP

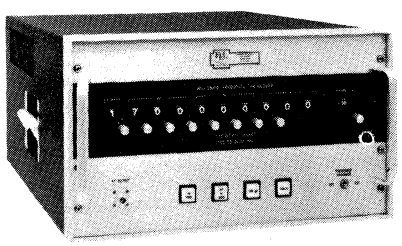
for the ultimate in long-range reliability

- Sources, 500MHz to 16MHz . . . high output power, wide running range, high spectral purity, superior MTBF
- Up/Down Converters, 1-9GHz . . . high power output, conversion efficiency, spectral purity, integrated source or LO
- Amplifiers, 100MHz to 2GHz . . . low noise, high gain, high output
- Multipliers, 100MHz to 10GHz . . . high efficiency, wide range

The FEL state-of-the-art solid-state products listed above are available from current production. We invite your inquiries for solid-state oscillators, VCOs, broadband frequency multipliers, IMPATT oscillators, amplifiers, up and down converters, and related products custom-engineered to meet your requirements for airborne, missile-borne, ground-based, or laboratory applications.

FREQUENCY ENGINEERING LABORATORIES

PRECISION MICROWAVE INSTRUMENTS AND COMPONENTS



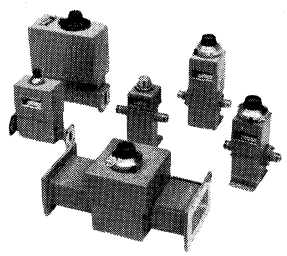
FEL 700A 1.2-2.4GHz COHERENT MICROWAVE SYNTHESIZER

generates ultra-stable, spectrally-pure RF energy

- ultra frequency stability . . . 2 parts in 10^9/day
- simplified tuning
- frequency selection in increments of 1Hz with digitally calibrated front dials or electronic programming
- solid-state, self-contained, compact
- rear-panel jacks supply reference outputs at 100kHz, 1, 5 and 100MHz
- optional remote programming with 10 line bcd code
- 10mw output across entire range

Applications include laboratory use as a microwave frequency standard, telemetry, local oscillators for coherent radar and MTI systems, automatic and manual testing of frequency sensitive devices.

CUSTOM ENGINEERED PRODUCTS



Extensive engineering and manufacturing capabilities make Frequency Engineering Laboratories an ideal supplier of custom engineered microwave components, instruments, sub-systems or complete fixed station or tactical systems. Your inquiries are invited, for:

- airborne interdigital filters
- tunable bandpass and band reject filters
- special wavemeters with direct, micrometer or tape readout
- diplexers and multiplexers
- reference cavities, pre-selector mixers, discriminators, converters
- frequency sources, frequency monitors and custom microwave instrumentation

Specification sheets for these and all other FEL products are available by writing or calling:

FREQUENCY ENGINEERING LABORATORIES

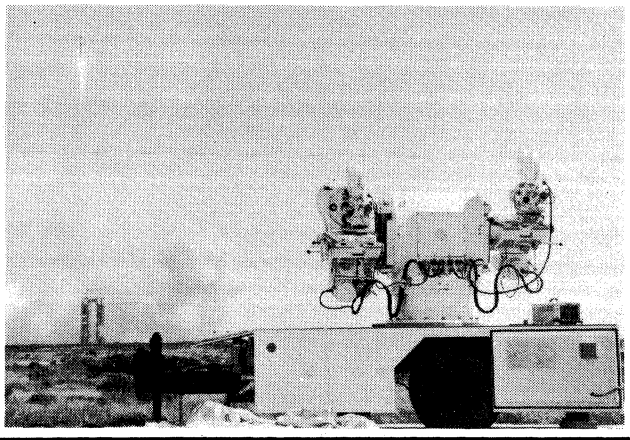
GEO SPACE SYSTEMS, INC.

RANGE INSTRUMENTATION EQUIPMENT — PRECISION PEDESTALS

COMPLETE TRACKING SYSTEMS



MOBILE OPTICAL TRACKING SYSTEM

The Mobile Optical Tracking System is a precision, high load capacity, servo controlled position pedestal, mobilized for usage in rugged terrain. It can be controlled locally from the pedestal, or from its mobile control van—or a permanent site—located up to 12 miles from the pedestal.

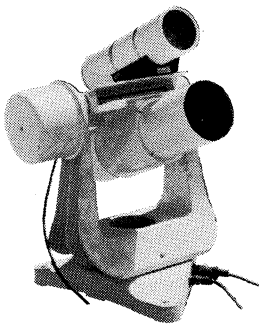
The pedestal is controlled by infrared or TV edge track auto-track systems, or by manual joystick control. The control system features auto-override to allow momentary selection of manual mode, and a coast function allowing the pedestal to continue at the established rate for a minimum of 10 seconds should the target be lost.

Versatility is the key to the control system design. Operational switches allow the operator to select a variety of tracking modes, change system bandwidth, or introduce special functions for ease of tracking and improved accuracy.

The system requires only two hours site installation and collimation time. Two men are necessary for calibration and set-up, but normal system operation is a one-man job. Position accuracy is 2 arc seconds (static) and 0.003 mr/mr/sec (dynamic). Its angular displacement is 345° azimuth, −10° to 90° elevation. Stable tracking rates in the speed range of 5 arc sec/sec to 70 deg/sec may be obtained. Camera platforms are capable of accepting cameras weighing 500 pounds with a maximum load capacity of 1480 pounds symmetrical and balanced. Balancing of the load requires no counterweights, utilizing crank controlled weight displacement for balancing.

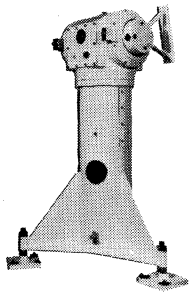
The flexible capabilities of MOTS allows many system variations, making it easily adaptable to the user's specific requirements.

PEDESTALS AND TRACKING EQUIPMENT



SERVO CONTROLLED INSTRUMENT POSITIONER

This positioner is a rugged, lightweight unit capable of remote control, auto-track, and pre-programming. Handling a symmetrical load of up to 75 lbs., it utilizes dc servo control in a closed loop system.

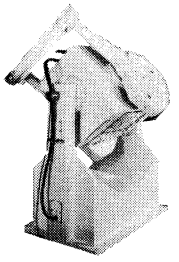


PRECISION SERVO CONTROLLED PEDESTAL

This instrument positioning system features continuous azimuth travel with ±100° elevation, is capable of mounting symmetrical loads up to 200 pounds, and has a positioning accuracy (static) of ±.1°. Along with the solid state servo controller, the complete system can be pre-programmed, operated in a pre-position select or auto-track mode.

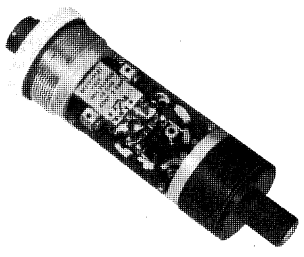
AZIMUTH/ELEVATION POSITIONER

The GSS Model 8175 Azimuth/Elevation Positioner is a lightweight, precision positioning unit capable of remote, manual or autotrack control. The versatile mounting arrangement permits balanced loads of up to 75 pounds with a rated velocity of 30 degrees/second and an acceleration of 30 degress/second and an acceleration of 30°/sec². Elevation travel is −10 degrees to 190 degrees. Azimuth travel is limited by cable wrap up, or approximately ±180 degrees. Drive power is supplied by a dual-channel, complimentary transistor servo-amplifier.



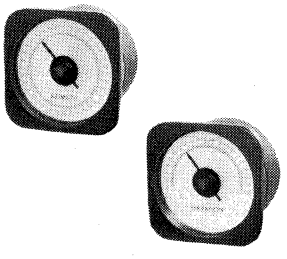
XY PEDESTAL POSITIONER

The XY Pedestal positioning system is a high rigidity antenna positioner capable of maximum sky coverage including target fly-over. A unique X-shaft cam reduces "key hole" around support pillows to a minimum. Instrument loads of up to 1200 pounds can be positioned to .1° static accuracy. The tracking unit rate is 10° per second with a dynamic error of .3° maximum. The maximum acceleration is 35° per sec².



SUN SENSOR AND CONTROL

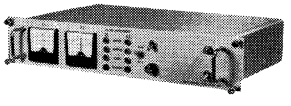
The SS-101 furnishes switch contact closures when an intense light source passes through the field of view. The unit is fully compatible with any electrically driven sun shutter equipment and its light sensitivity threshold is adjustable.



SERVO/SYNCHRO DRIVEN REMOTE AZIMUTH AND ELEVATION INDICATORS

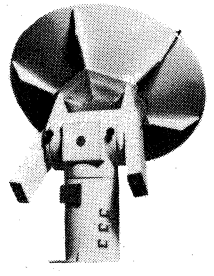
These indicators display remote angular or linear position, or any other calibrated quantity that can be represented by shaft rotation or linear displacement.

A wide variety of dial calibrations, colors, mounting arrangements and synchro ratios can be provided.



AUTO-TRACK INTEGRATION EQUIPMENTS

These solid state units will couple an angle-error sensing device to an elevation-over-azimuth positioning pedestal to achieve a completely automatic tracking system. They also allow addition of a remote manual control (joystick) to the system, provide a provision for automatic switchover to null detector tracking, and allow retention of existing means of pedestal control.



AUTOMATIC TELEMETRY TRACKING SYSTEMS

These systems have been designed using the GSS precision servo controlled pedestal. A variety of antennae from conical scanning telemetry types to helix and cross dipole arrays can be mounted on and positioned by the servo driven pedestal. Antenna polarization can be selectable from remote control. Automatic tracking rates to 30 deg/sec are obtainable.

Design excellence and trouble-free performance are recognized attributes of the Geo Space Systems' servo positioned pedestal equipment that has been developed and manufactured for a number of critical national test range applications.

A staff of professional design engineers and consultants and an experienced field engineering team are maintained to offer a full range of expert services to prospective users.

HADRON

THE NEW CONCEPT IN LASERS AND LASER COMPONENTS

Hadron has the capability to determine whether a laser can provide a better and more economical solution to your problem — be it in the area of manufacturing processes or laboratory applications. The laser having the right characteristics can then be supplied. This avoids the pitfalls that frequently confront the laser purchaser — that is, obtaining an expensive instrument whose capabilities far exceed those required for his particular needs or obtaining a laser whose capabilities are not sufficient to solve his particular problems.

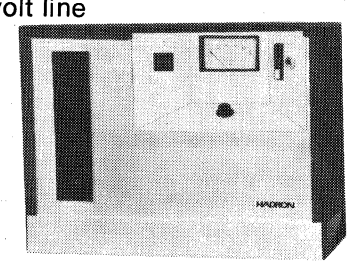
LPM LASER POWER SUPPLY

Maybe you have several pulsed lasers and find that each requires a different power supply. Or maybe you are aware of the special problems that face the designer of laser power supplies and, therefore, prefer to buy your energy source.

Hadron can furnish you with a versatile supply that provides the energy for solid-state lasers of all types. Take the features of our LPM Laser Power Supply.

- Laser head or flashlamp components can be mounted inside power-supply cabinet
- Provides an ouput of several hundred joules at repetition rates of 30 PPM
- Incorporates modular design as well as compact and rugged construction
- Provides a wide range of stable outputs
- Can be customized to operate with various laser systems
- Combines simplicity of design with ease of operation and maintenance
- Provides long trouble-free operating life
- Operates from 120-volt line

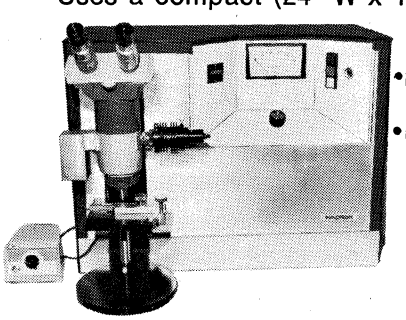
In addition, Hadron can supply power sources for pulsed laser systems requiring an input power in the order of 100 kilowatts at repetition rates of several Hertz.



LPM SOLID-STATE LASER SYSTEM

Maybe you require a laser system that is easily applicable to your needs in microwelding, trimming, drilling, or general laboratory applications. Or maybe you need a laser system that is reliable, economical, simple to operate, small in size, and adaptable to a wide range of uses. Hadron can provide you with a laser to satisfy all these requirements. Take the features of our LPM Ruby Laser System.

- Provides an output energy of up to 5 joules, a pulse width of 800 microseconds, and a repetition rate of up to 1 pulse per second
- Incorporates modular design and rugged construction
- Adapts to a wide range of tooling requirements and production rate processes
- Available with standard fixtures for different applications
- Uses a compact (24″ W x 18″ H x 12″ D) and lightweight (125 pounds) design
- Necessitates little maintenance
- Requires a power of 120 volts/20 amperes, single phase



HADRON is the exclusive distributor for the Compagnie Générale D'Électricité laser product line in the United States. We thus have available such advanced equipments as: • High-peak-power high-brightness systems • Laser ranging systems — ground, airborne, and satellite • Laser gyroscopes • Medical laser systems • Alignment systems • Laser materials • For complete specifications, price and delivery information, call or write: HADRON • 300 Shames Drive/Westbury, N. Y. 11590 • 516-334-4402

HADRON

LAD Electro-Systems, Inc.

HIGH ENERGY PULSE SOURCES

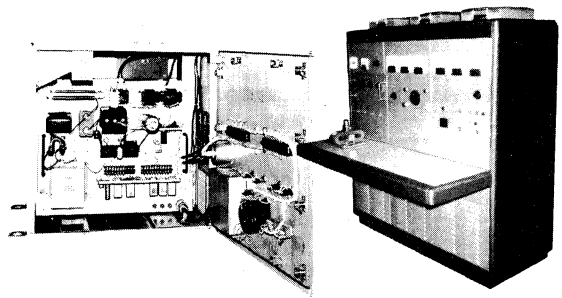
- Complex loads
- Variable repetition rates
- Variable pulse shapes and widths

APPLICATIONS:

- Aerospace
- Military
- Commercial
- Industrial

CUSTOM DESIGNED PULSE SYSTEMS

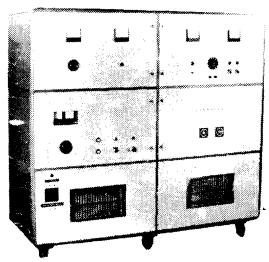
for RADAR, LASER, ARC DISCHARGE DEVICES, LABORATORY and PRODUCTION TESTING

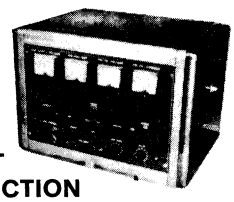


RADAR/LASER/MASER MODULATORS

The ability to shape a pulse to specific requirements provides invaluable information on the performance of a device and the obvious advantage of optimizing an energy-time relationship. The ability to vary the output impedance over a wide range makes the modulator suitable whether pumped optically, electrically or by microwave.

Energy, from millijoules up to many joules, can be delivered to your load under controlled conditions, or dumped as in simple capacitor discharge into loads from one ohm to many kilohms.





- SHAPED PULSE
- HIGH POWER
- COMPACT CONSTRUCTION
- BUILT-IN SAFETY FEATURES
- SOURCE IMPEDANCE MATCHES LOAD

TYPICAL LAD MODULATORS

Model No.	Joules per Pulse	Peak Voltage	Peak Current	Pulse Width	Pulse Rep. Rate	Duty Max.

PULSE FORMING NETWORKS

LAD Pulse Forming Networks and Pulse Capacitors meet exacting requirements for both systems and laboratory applications. Designed and built to applicable MIL specifications, they are available in a wide range of ratings and performance characteristics.

Networks can be supplied individually or as part of pulse packages, with single or multiple pulse widths.

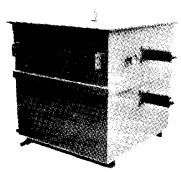
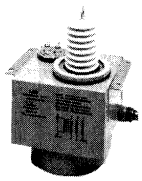
High Voltage — High Power

PULSE TRANSFORMERS





LAD produces a broad line of pulse transformers for use in high power ground, aerospace and shipboard radar systems. These LAD high voltage devices deliver high levels of peak pulse power over a wide range of pulse width and repetition rates.

FEATURES

- Optimum Pulse Fidelity
- High Quality
- Custom Packaging
- Meet Applicable Mil Specs

LAD Electro-Systems, Inc.

LAD PRODUCES A COMPLETE LINE OF

- Pulse Components
- Keep-Alives
- Pulsed Keep-Alives
- Current Viewing Transformers
- Energy Storage Capacitors

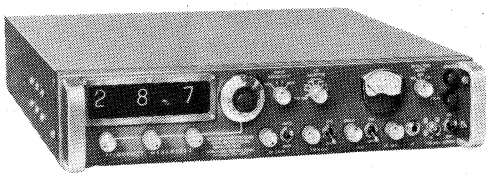
LORCH COMMUNICATION EQUIPMENT AND ACCESSORIES • RF COMPONENTS

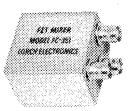
WIDE DYNAMIC RANGE RECEIVER
Model HR-240 - 2 to 32 MHz



A sensitive, wide dynamic range receiver with locally or remotely controlled all-electronic tuning. All front panel knobs and switches, including frequency tuning may be controlled locally or by remote program.

Frequency Range	2 to 32 MHz
Tuning Time	5.0 milliseconds
Dynamic Range	over 100 db
Spurious Response Rejection (including Image and IF)	over 100 db
Sensitivity (3 KHz Bandwidth)	−133 dbm
Gain Variation vs. Frequency (2 to 32 MHz)	±1 db
Reception Modes	AM, USB, LSB, and CW
Size	17″ W x 21″ D x 5¼″ H

DOUBLE BALANCED FET MIXER
Model FC-351



A double balanced FET mixer with extremely low intermodulation distortion, high power handling capability and excellent isolation between all ports.

Frequency Range, all ports	0.2 to 100 MHz
Conversion Loss and Noise Figure	9 db max.
Two Tone Intermodulation Ratio (3rd and 5th Order) Two RF tones, each 0 dbm	80 db
Compression Level (2 db compression)	+30 dbm
Dynamic Range	155 db
Isolation	To 50 db
DC Power Required	None

WIDE BAND BALANCED MIXERS

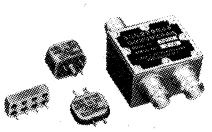
Low intermodulation and spurious products

Frequency Range	rom 10 KHz to 12.4 GHz
Conversion Loss	As low as 5 db
Isolation	To 85 db
Two Tone Intermodulation Ratio, Third Order Two tones, −30 dbm	To 115 db
Dynamic Range	To 140 db
Temperature Range	−65°C to +125°C

Hermetically Sealed

Standard Pin Packages, Connector Versions, Custom Packaging. High power versions of mixers and product detectors available on special order.

WIDE BAND ELECTRONIC SWITCHES



RF Frequency Range	1 to 100 MHz
Switching Frequency Range	DC to 50 MHz
RF Input Level for 1 db Compression	To +15 dbm
Insertion Loss, ON Condition	To 2 db
Insertion Loss, OFF Condition	To 70 db
Temperature Range	−65°C to +125°C

Hermetically Sealed

Standard Pin Packages, Connector Versions, Custom Packaging

WIDE BAND HYBRID JUNCTIONS and POWER SPLITTERS

2, 3, 4, 5, 6, 8 and MULTIWAY

Frequency Ranges	From 10 KHz to 400 MHz
VSWR	1.2 to 1
Isolation	To 35 db
Phase Balance	±1°
Amplitude Balance	0.1 db
Temperature Range	−65°C to +125°C
Input Power	To 50 watts

Hermetically Sealed

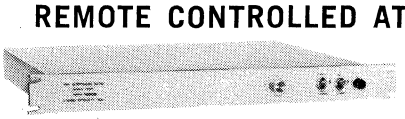
TO-5 Can, Standard Pin Packages, Connector Versions, Custom Packaging

HF PRESELECTION FILTER, Model PF-290

A low insertion loss filter bank locally or remotely controlled, designed to reduce interference in the congested HF range. Available with or without a built-in preamplifier.

Frequency Range	2 to 32 MHz
Number of Pass Bands	10
Pass Band Insertion Loss	2 db max. (without amplifier)
Rejection below (Low frequency cut-off −20%) and above (High frequency cut-off +20%)	35 db
Rejection above 38 MHz	60 db min.
Noise Figure (with amplifier)	7 db
Gain (with amplifier)	10 db
Switching Time	5.0 milliseconds

REMOTE CONTROLLED ATTENUATORS



Model AT-300
Model AT-310

This family of attenuators may be locally or remotely controlled. Attenuators are available in a large variety of values.

Frequency Range	DC to 100 MHz
Number of Positions	Six (AT-300) Ten (AT-310)
Attenuation Accuracy	±0.5 db
Switching Time	5 milliseconds
Minimum Insertion Loss	0 db (nominal)
Maximum Attenuation	60 db

FET LINEAR ATTENUATORS, FREQUENCY MULTIPLIERS, RF TRANSFORMERS, DIRECTIONAL COUPLERS, WIDEBAND AMPLIFIERS

LORCH ELECTRONICS CORP.

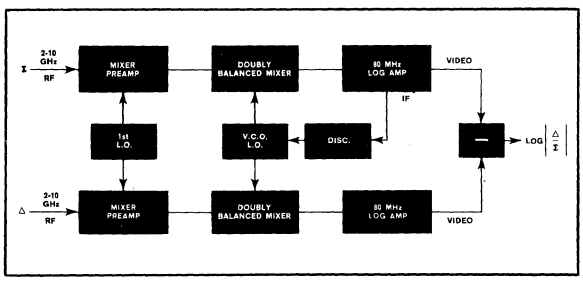
LEL System and Subsystem Capabilities

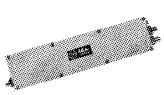
LEL is particularly well qualified and eminently capable in the design, development and production of systems and sub-systems equipment for ECM, monopulse, pulsed radar, phased array and similar applications. In addition to our long and varied experience in these areas, the LEL/Varian organization is well provided with the advanced techniques and equipment required to produce complex systems equipment in volume . . . on a quick reaction basis. Some recent LEL projects indicative of these capabilities are presented herein.

ECM and ECCM



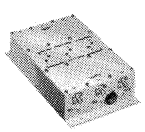
The diagram above is typical of systems work in which LEL has been recently involved. Many Component parts of such systems are standard, catalogued LEL units like these:

Mixer-preamplifiers Series BMP-1-160 operate over 2-10 GHz



Log Amplifiers Series ITL-6 have 1 dB matching referred to input

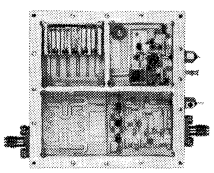
Octave amplifiers Series OTX 10-2000 MHz, 4-6 dBNF 0 dBm power output



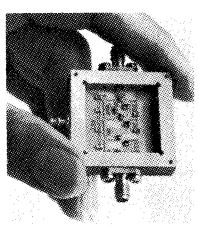
IF amplifiers Series ITA 8 3 Triple channel, phase and gain matched

Integrated Circuit Subsystems

Utilizing advanced in-house design, test and production equipment, LEL is applying integrated circuit techniques to a wide variety of microwave subsystems. The program has already resulted in several microwave products combining the size and reliability advantages of IC's with the electrical performance normally yielded by conventional techniques.

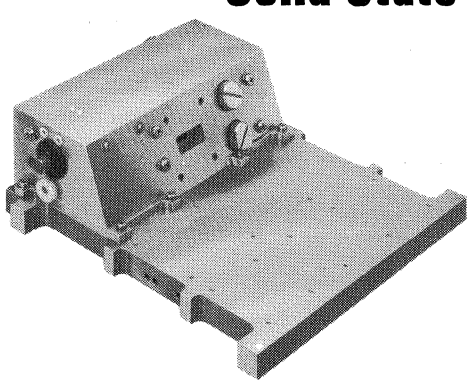


One such product, a telemetry down converter, consists of four 1″ x 2″ alumina substrates packaged in an aluminum housing which occupies a total space of 2.5 cubic inches. Included in the package are local oscillator, multiplier, mixer and IF amplifier with associated circuitry. Total power drain of the unit is only 2 watts.



Similarly, LEL's new model IHP-1 IC preamplifiers, available with either 10 MHz or 100 MHz bandwidth, are low noise, (2-3 dB) high dynamic range devices measuring only 0.5 cubic inches. Coming along in comparably small packages are low noise RF amplifiers, log amps, mixer-preamplifiers and other receiving subassemblies.

Solid State Microwave Receivers



Typical LEL capabilities in this area are the series OMR airborne receivers available for operation from 500 MHz through 40 GHz.

The X-Band model shown here features a field tunable RF input and an L.O. search range of 40 MHz. Model shown incorporates a klystron. Similar models with all solid state L.O.'s are available. The AFC lock-on sensitivity is −95 dBm and the video output is held constant for signals between −90 dBm and −25 dBm input. The receiver is designed in accordance with MIL-E-5400. Other solid state microwave receivers and receiver/converters are available, some with special characteristics which may be particularly suitable for your appiication.

MAIN AND POST IF AMPLIFIERS

- **low noise**
- **high gain stability**
- **wide bandwidth**
- **high gain**
- **fast recovery**
- **light weight**

LEL main amplifiers provide sufficient amplification to bring weak signals to levels adequate for detection. LEL post amplifiers, for use with preamplifiers, provide the major portion of system gain.

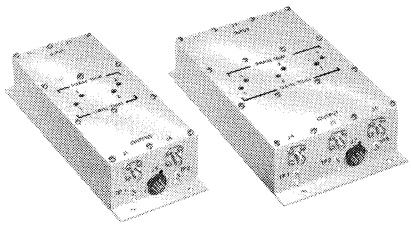
ITL-6-80-20-50	80	20	70	20

limiters, IF, constant phase

Series ITLM limiters have extremely low phase shift, typically less than 7.5° over a dynamic range of 70 dB. For both phase and amplitude information, specify model ITLL which combines a log amplifier with the ITLM constant phase limiter in a single chassis.

Model No.	CF MHz	BW MHz	Input dynamic range dBm	Limited output dBm
ITLM-2-30-10-50	30	10	–70 to 0	0
ITLM-2-60-10-50	60	10	–70 to 0	0
ITLM-2-70-10-50	70	10	–70 to 0	0

PHASE-AND-GAIN MATCHED AMPLIFIERS



for multi-channel gain-and-phase tracking systems.

LEL gain-and-phase matched amplifiers may be used in varying combinations of the basic 2- or 3-channel units. Characteristics of these amplifiers are matched over the temperature and gain control ranges. Associated matched mixer-preamplifiers and monopulse comparators are also available from LEL.

specifications:

Phase match:	(Dual) 2.5°, (Triple) 3.5°
Amplitude match:	(Dual) 1 dB, (Triple) 1.5 dB
IF center freq.	30, 60 or 70 MHz
IF bandwidth	3 or 10 MHz
Gain	65 dB
Gain control	40 dB
Input	50 ohms
Output capability	+10 dBm
Power req.	–20 V @ 80 mA and 0 to +10 VDC/channel

DISCRIMINATORS AND AFC UNITS

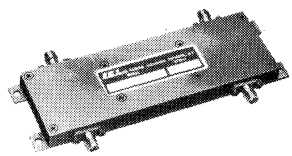
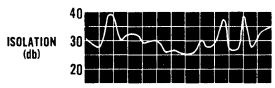
Inputs: 50 ohms for all models. **Outputs:** Video (ITF-1, IMF-1, IF-32), DC (ITF-2, IF-42, IF-32).

LEL STRIPLINE COMPONENTS

Broadband Directional Couplers: 0.5 to 11.0 GHz





Series BBC Directional Couplers permit use of a single coupler over an entire microwave frequency decade with excellent symmetry, directivity and VSWR at any included frequency.

- **Directivity: 20 dB (typ.), 15 dB (min.)**
- **Coupling tolerance: +1 dB**
- **VSWR: 1.35:1 (typ.), 1.5:1 (max.)**
- **Connectors: OMS**

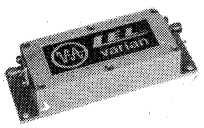
LEL RF Amplifiers Mixer-Preamplifiers

MICROWAVE AMPLIFIERS
10-4000 MHz



for maximum gain bandwidth coverage, more power and greater dynamic range in ECM, monopulse, guidance, telemetry and TWT replacement applications.

Low noise, solid state LEL amplifiers cover all frequencies between 10 and 4000 MHz. The design features the lowest noise figure commensurate with maximum input power handling capability, providing low intermodulation and low harmonic distortion. Other features include: small size, light weight (5 oz.), modular, all solid state construction, and operating temperature ranges between −40° and +70°C. Maximum power requirement is −20 VDC @ 50 mA. Standard models shown below can be qualified to MIL-I-16400 and MIL-E-5400 class II. Higher power outputs are readily available.

250	100	20	3.0	−5

Noise figure of mixer-preamplifiers is obtained by adding range given for the mixer selected and the figure shown under "IF N.F. over 1.2 dB" for the required preamplifier. EXAMPLE: A CBH mixer mating with a -3 preamplifier having a 60 MHz center frequency and 8 MHz bandwidth has a noise figure range of 6.5 to 7.0 dB plus 0.4 dB; thus the noise figure range is 6.9 to 7.4 dB.

†**RF to IF power gain:** 6 dB (assumed mixer loss) has been deducted from preamplifier gain in determining stated values.

‡**For linear operation,** an input power increase of 3 dB over the stated "mixer input signal" level will result in less than 1 dB of output signal compression.

BROADBAND MIXER PREAMPLIFIERS

LEL series BMP-1 Mixer-preamplifiers, for broadband receiver and MIL-E-5400 airborne applications, are particularly useful in ECM, multi-antenna, monopulse direction finding equipment.

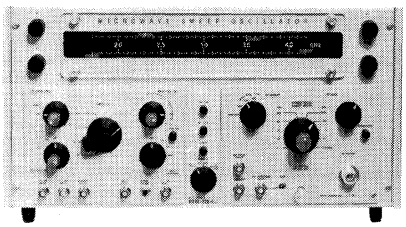
MICRO-POWER

Microwave Instruments and Power Supplies

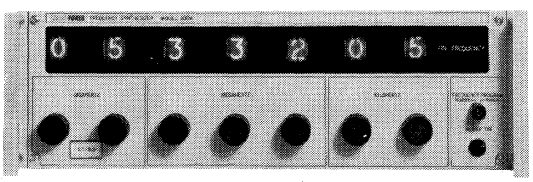
MICROWAVE SWEEP OSCILLATOR
Model 221 – 200 MHz to 40 GHz



- 2 ppm peak residual FM
- Extreme stability with line voltage change
- 0 to 100% calibrated △ f control
- Solid state or BWO plug-ins from 0.2 to 40 GHz

This easy-to-operate sweep oscillator offers the advantages of solid state devices in the 1 to 4 GHz frequency ranges, while also accepting a wide choice of BWO plug-ins for frequencies up to 40 GHz. Most bands are available with either internal or external, grid or diode leveling. All oscillators offer power meter leveling for exceptionally flat response. FM rate is DC to over 5 MHz.

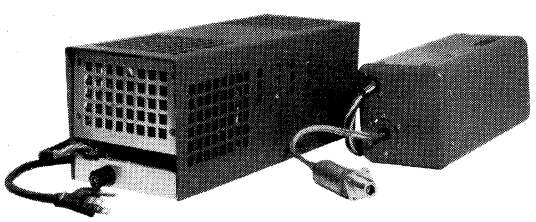
MICROWAVE FREQUENCY SYNTHESIZER – Model 300A
1.0 to 12.4 GHz



- Frequency stability $1x10^{-8}$ per day, $1x10^{-9}$ per sec. using internal reference; higher using 1 MHz external reference
- 15-30 mW output power (leveled)
- 10 msec. in-band frequency switching time

The new Model 300A extends the state-of-the-art of frequency synthesizers well into the microwave region by providing coherent phase-stable signals in the range of 1.0 to 12.4 GHz. Frequencies can be selected with 10 KHz resolution using either front-panel switches or external digital programming. A signal light positively indicates that the rf output frequency is the same as that shown by the digital frequency display.

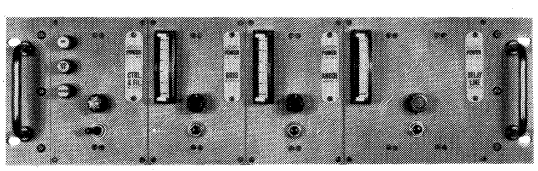
PROGRAMMABLE MICROWAVE SOURCE – Model 101 – 1.0 to 40 GHz
in octave or waveguide ranges



- Voltage and/or resistance controlled source of microwave frequencies
- Programming speed 1 msec. for full band
- Linearity ±0.5% for full band
- For use in ground checkout equipment, production test stands, etc.

Use of the Model 101 eliminates the need for the systems engineer to select the proper BWO and then design and build the necessary power supplies and linearizing networks. Instead, it is only necessary to specify the required rf output. The input can be swept by any function, stepped or set at a fixed value. It can also be programmed through a digital to analog converter.

POWER SUPPLIES FOR MICROWAVE TUBES



- Modular power supplies for greater flexibility
- High regulation and stability (0.002% for line, 0.005% for load, 0.001 to 0.0001% ripple) for low incidental FM of oscillators and high phase stability of amplifiers
- All modules are 3½ in. or 5¼ in. rack-mounting units

Micro-Power power supply modules are available in a wide variety of outputs for powering BWO's, voltage tunable magnetrons, medium and high voltage klystrons, and TWT amplifiers. Choice of standard module combinations increases selectivity in matching supply characteristics to specific tube types and project requirements. Electrode supply voltages can be swept or otherwise varied at up to 20,000 volts/sec/mA.

TYPE N, TNC, & BNC CONNECTOR GAGE

Model No. 31A

DESCRIPTION: The MSL Model 31A Connector Gage is a precision inspection tool for measuring the critical assembly tolerances for **both** male and female Type N, TNC, & BNC coaxial connectors. The dimension measured is the distance from the mating plane of the outer conductor to the mating plane of the inner conductor.

A female connector is measured by moving the sliding barrel to the recessed position, as shown in the photo on the left. A male connector is measured by moving the sliding barrel to the extended position, as shown in the photo on the right. The measured dimension is read directly from the dial gage. A go/no-go scale is superimposed on the dial face to provide the operator with a simple but accurate means of determining specification compliance.

- **ONE GAGE MEASURES TYPE N, TNC, & BNC CONNECTORS**
- **MEASURES BOTH MALE AND FEMALE CONNECTORS WITHOUT ADAPTERS, ADJUSTMENT, OR RECALIBRATION**
- **GO/NO-GO SCALE SUPERIMPOSED ON DIRECT READING DIAL**
- **ACCURACY—0.001 inch**
- **ASSURES CONFORMANCE WITH MIL-C-39012**

PRICE—$190 FOB VAN NUYS, CALIF.

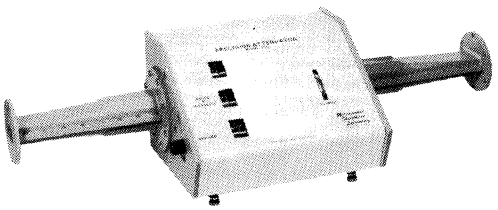
PRECISION ATTENUATORS

Model No. 250



- ABSOLUTE ATTENUATION STANDARD
- RANGE—0 to 60 decibels
- RESOLUTION—0.0001 degree of vane rotation
- LOW PHASE SHIFT
- LOW VSWR
- FREQUENCY INSENSITIVE

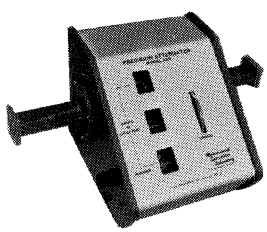
The MSL 250 Series Rotary Vane Waveguide Attenuator represents the ultimate in precision, accuracy and high reliability for microwave attenuation measurements. The angular rotation of the attenuating vane is displayed on three dials to a resolution of 0.0001 degree. Seven waveguide models cover the frequency range of 3.95 to 40.0 GHz.

Designed primarily as an absolute standard of attenuation for use by Primary Standards Laboratories and Advanced Research Laboratories, the Model 250 has also found special applications in sophisticated Operational Systems and Instrumentation Packages (including in-flight applications).

The Model 250 guarantees extremely high resolution, minimum phase shift, low VSWR, and frequency insensitivity, plus inherent stability. . .The requirements for an absolute standard of microwave attenuation.

Attenuation calibration services are available from the National Bureau of Standards in Boulder, Colorado. For information about current calibration accuracies and frequencies of calibration, contact Office of Coordinator, Calibration Services, Radio Standards Engineering Division, National Bureau of Standards, Boulder, Colorado 80302. (303) 447-1000.

Model No. 260



- ABSOLUTE ATTENUATION STANDARD
- RANGE—0 to 60 decibels
- RESOLUTION—0.02 degree of vane rotation
- LOW PHASE SHIFT
- LOW VSWR
- FREQUENCY INSENSITIVE

The MSL 260 Series Precision Attenuator is a rotary vane waveguide attenuator with a high precision drive mechanism, permitting vane angle readout to 0.02 degree. Seven waveguide models cover the frequency range of 3.95 to 40.0 GHz.

The Model 260 is well suited for both systems and laboratory applications where a reliable and high precision microwave attenuator is required. These devices are used extensively as attenuation standards for calibrating less accurate microwave attenuators.

The inherent frequency insensitivity, low phase shift, and high precision of this attenuator make the Model 260 an ideal transfer standard of microwave attenuation.

Attenuation calibration services are available from the National Bureau of Standards in Boulder, Colorado. For information about current calibration accuracies and frequencies of calibration, contact Office of Coordinator, Calibration Services, Radio Standards Engineering Division, National Bureau of Standards, Boulder, Colorado 80302. (303) 447-1000.

SPECIFICATIONS

Model 250

Frequency Range: 3.95 to 40.0 GHz (7 Waveguide Bands).
VSWR: 1.10:1 Max. Typically less than 1.05:1.
Insertion Loss: 1db Max. Typically Less Than 0.5db.
Power Dissipation: 10 W Average—3.95 to 12.4 GHz
5 W Average—12.4 to 18.0 GHz
2 W Average—18.0 to 26.5 GHz
1 W Average—26.5 to 40.0 GHz
Phase Shift Variation: 3 degrees max. Typically less than 0.5 degrees.
RF Leakage: Greater than 80db below input level.
Resolution: 0.0001 Degree of Vane Rotation.

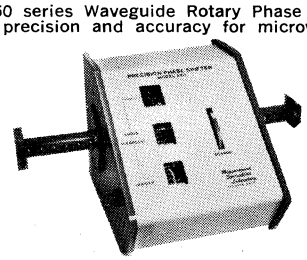
Model 260

Frequency Range: 3.95 to 40.0 GHz (7 Waveguide Bands).
VSWR: 1.10:1 Max. Typically Less than 1.05:1.
Insertion Loss: 1db Max. Typically less than 0.5db.
Power Dissipation: 10 W Average—3.95 to 12.4 GHz
5 W Average—12.4 to 18.0 GHz
2 W Average—18.0 to 26.5 GHz
1 W Average—26.5 to 40.0 GHz
Phase Shift Variation: 3 degrees max. Typically less than 0.5 degrees.
RF Leakage: Greater than 80db below input level.
Resolution: 0.02 Degree of Vane Rotation.

PRECISION PHASE SHIFTER

Model No. 550

The MSL 550 series Waveguide Rotary Phase Shifters provides the ultimate in precision and accuracy for microwave phase measurements. The electrical phase shift is displayed on three dials to a resolution of 0.02 degree. The units are well suited for laboratory applications where independent adjustments of phase and amplitude are required. Other applications include their use as direct transfer standards for less accurate standards used in areas such as component and systems production testing and inspection functions. The display features a −360° to +360° direct readout to permit rapid determination of the particular direction of phase shift encountered. Each 360° segment is clearly indicated by a color dot which appears in the display window to inform the user of the particular segment being used and to assure the accuracy of the Phase Shifter.



Frequency Range: 5.3 to 18.0 GHz (3 Waveguide Bands)
VSWR: 1.35:1 Max.
Insertion Loss: 3db Max.
Power Dissipation: 10 W Average— 5.3 to 12.4 GHz
5 W Average—12.4 to 18.0 GHz
Differential Phase Angle Range: −360° to +360°
Resolution: 0.02 Degree

NOTE: ABOVE INSTRUMENTS ALSO AVAILABLE FOR REMOTE COMPUTER CONTROLLED APPLICATION. INFORMATION AND PRICES AVAILABLE UPON REQUEST.

Phase calibration services are available from the National Bureau of Standards in Boulder, Colorado. For information about current calibration accuracies and frequencies of calibration, contact Office of Coordinator, Calibration Services, Radio Standards Engineering Division, National Bureau of Standards, Boulder, Colorado 80302. (303) 447-1000.

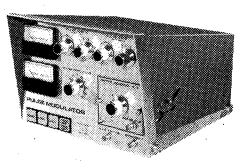
MODEL 10330, SERIES "E" PULSE MODULATED SIGNAL GENERATORS

Complete With Power Supply

Powerful and versatile test instruments built around Series "E" triode oscillators. Available as complete, rack-mounted signal source, with integral pulse modulator (same circuitry as Model 10299B below). Coverage from 150 to 4000 MHz is facilitated by interchangeable RF heads supplied according to specified generator model number. Models 10330-8046 through 10330-8051 cover 150 to 1000 MHz in six individual ranges at 1.5 kilowatts output. Models 10330-8052 through 10330-8056 cover 600 to 4000 MHz in five individual ranges at 1.0 kilowatt output.

SERIES 10299B HIGH POWER PULSE MODULATOR

Designed as companion modulators to Series "E" pulsed oscillators.



- **Available in three standard, adjustable output voltage ranges:** 0-1.5 KV@ 6.0amperes, peak; 0-3.0 KV @ 3.0 amperes, peak; and 0-6.0 KV @ 1.5 amperes, peak. Peak voltage readout accurate to 2.0% of full scale, from 100 pulses per second up. (Other voltages and currents at average power levels to 100 watts, available on special order.)
- **Pulse characteristics:** repetition rate: 100 Hz to 12 kHz. Width, variable, 0.5 to 10 microseconds. Rise and fall time: as low as 200 nanoseconds into resistive load.
- **Duty cycle:** .001 to .01 with 2.0% readout accuracy. Overload cut-off, adjustable over same range.

MICROWAVE CAVITY LABORATORIES, Inc.

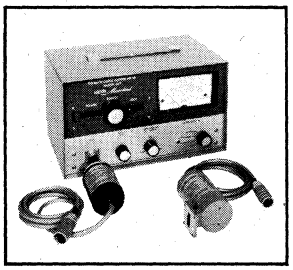
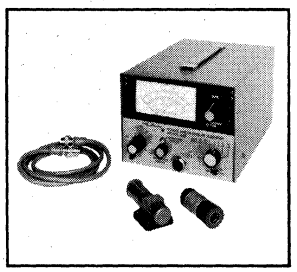
POWER METERS



Model 443 — $550. plus mounts

Thermocouple Power Meter For Average and Peak Power Measurements

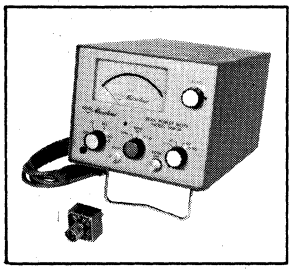
- Wide dynamic range: 0.3 μw to 100 mw full scale (—35 DBM to +20 DBM)
- High accuracy: 1% full scale, 2.3% total RF error



Model 447 — $450. plus mounts

Temperature Compensated Meter For Power Calibration and Monitoring in Production Tests

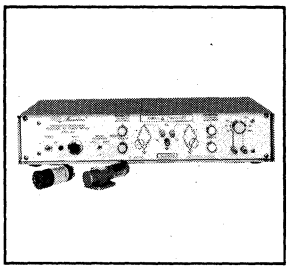
- Good accuracy: 3% for meter, 4% total RF error
- Direct reading: from 1 μw to 10 mw (—30 DBM to +10 DBM)



Model 66A3A — $890. plus mounts

Peak Power Meter For Continuous, Instant Readings of Peak Power

- Direct readout: 3 to 300 mw independent of pulse width, shape and PRF
- Accuracy: within 8% total rms error — RFI shielded

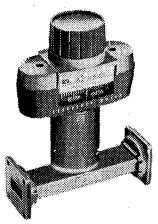


Model 445 — $975.

Precision RF Power Bridge For Standard Use For Precise Calibration

- Very high accuracy: 0.15% for bridge, 1.15% total RF error
- Automatic temperature compensation — range of 10μw to 10 mw from 10 MHz to 12.4 GHz.

FREQUENCY METERS — Coaxial .2 to 10.5 GHz, Waveguide 2.6 to 26.5 GHz



Coaxial — provided as a packaged unit Waveguide — for reaction-type frequency measurements, direct reading

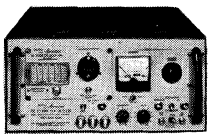
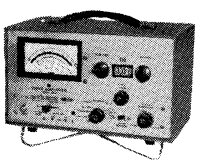
PULSED SIGNAL SOURCES and KLYSTRON POWER SUPPLIES



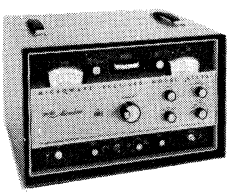
Model 18500 — High Power Pulse Signal Sources from 200 to 9500 MHz with 5 KW output with 11 interchangeable RF heads. Get continuously variable peak power, repetition rates and pulse widths. External pulse capability.

Model 62A1A — Universal Klystron Power Supply features automatic switching of meter scales as the beam voltage is advanced for continuously variable beam from 200 to 4000 volts. Precise regulation of 0.01%. Maximum ripple of 3 mw. ONLY $1650.

ATTENUATION CALIBRATION



VSWR Amplifier Model 441F is qualified to meet MIL-I-38702. Sensitivity — 0.1 μVolt for full scale deflection. Recorder output for full scale deflection — 1ma into 1500 ohms. Digital indication in 2 db steps, up to 70 db. Temperature compensated from 0° to +55°C for accuracy. $450.



Model 61A1B — Attenuation Calibrator is capable of highly accurate measurements over the frequency range of 10 MHz to 40 GHz. Features: 100 db single-step attenuation measurements; built-in noise generator; power and attenuation measurements to below −117 DBM; precision and resolution better than 0.05 db. $2825

High-reliability structures... Quick Reaction Capability... at lowest cost

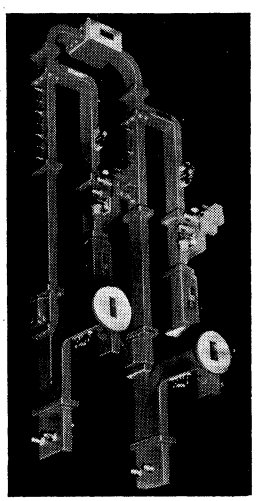
Production is our business. **Value Engineering** is our most important product. Add to the broad-based facilities of Premier Microwave Corporation the specialized facilities of its wholly-owned subsidiary, Portchester Instrument Corporation... and you have a combined capability uniquely equipped to handle your toughest, tightest production and quickest delivery problems in the microwave field.

Complex rigid and flexible waveguide structures? Coaxial structures? FLATLINE® and balanced strip transmission line structures? Ferrite devices? Invar cavities? With your order, you get the **plus-value** of Premier/Portchester capability in virtually all phases of microwave transmission.

Beginning with our complete tool and die department, where we produce our own precision-built jigs, fixtures, dies, and gages... to our model shop... to our brazing and welding department... to our finishing department, equipped to handle all specification painting, plating, and other finishing operations... to our extensive test laboratory and antenna pattern range... the know-how we have accumulated over 25 years enables us to manufacture complex microwave components to exacting mechanical and electrical requirements **in volume** and at **low cost.**

The large body of Premier tools and designs amassed over 25 years is supplemented by our recent acquisition of Budd-Stanley tools and designs. This extensive storehouse of experience is yours to draw on.

Why not try us. Phone, TWX, write, or call. Or contact the Premier sales representative nearest you.



Latest advances in microwave link fabrications for tomorrow's communication needs.

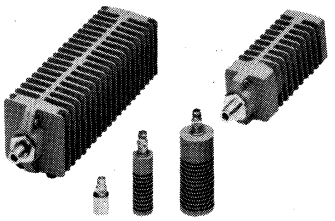
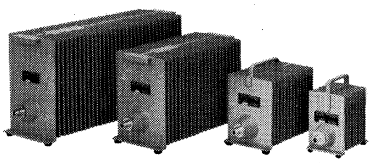
Model 164B In-Line RF Wattmeter



Model 160 Series Dry Coaxial Loads



Model 160B Series Silicone Dielectric Coaxial Loads

Model 164B In-Line RF Wattmeter

- Measures both incident and reflected power on 50-ohm transmission systems
- Power ranges from 100 milliwatts to 5000 watts
- Frequency ranges from 2 to 1000 MHz
- Ten plug-in elements, each with four full-scale power ranges
- Insertion VSWR, with Type N connector, less than 1.08, except on 1-watt ranges
- Direct-reading VSWR scale
- Accuracy, ±5% full scale, all ranges
- "Twist-Off" r-f connectors, eight different types
- Weight, 7½ lbs. with one plug-in element
- Price, in standard FMN configuration, $95.00

Plug-In Elements for 164B Wattmeter

Model	Frequency Range (MHz)	Power Ranges (Watts)	Price
180A-52	25–52	1, 5, 10, 50	$110.00

Model 160 Series Dry Coaxial Loads

- Power ratings to 100 watts
- Frequency ranges from DC to 11 GHz
- Impedance, 50 ohms
- Dry construction, no dielectric coolant
- Operate in any position
- "Twist-Off" connectors accepted by 50- and 100-watt models

1. Delivered with Type N connectors, male or female.
2. Delivered with Type N or UHF connectors, male or female. Types C, HN, and BNC are $10.00 additional. Types LC and TNC are $30.00 additional.

Model 160B Series Silicone Dielectric Coaxial Loads

- Power ratings of 150, 300, 600, and 1000 watts
- Frequency coverage to 5 GHz
- Impedance, 50 ohms
- Sealed aluminum housings
- Long-life, non-carbonizing silicone dielectric fluid
- Up to ⅓ smaller than comparable loads
- "Twist-Off" connectors, eight different types

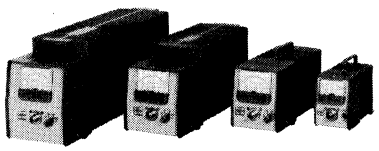
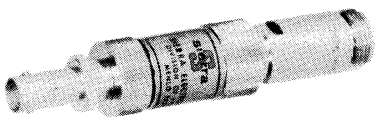
1. Delivered with Type N or UHF connectors, male or female. Types C, HN, and BNC are $10.00 additional. Types LC and TNC are $30.00, and 1⅝" rigid line is $70.00 additional.

Prices and specifications subject to change without notice.

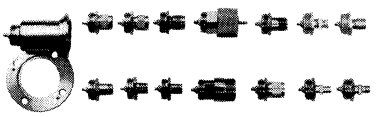
for the measurement of RF Power



Model 401A Series RF Termination Wattmeters



Model 148 Crystal Detector



Sierra "Twist-Off" Connectors

Model 401A Series RF Termination Wattmeters

- Power ratings of 120, 250, 500, and 1000 watts
- Four switch-selectable power ranges on 250-, 500-, and 1000-watt models
- Frequency ranges from 2 to 1000 MHz
- Wide dynamic range (500 to 1)
- Accuracy, ±5% full scale
- Maximum VSWR, 1.2
- Partially expanded meter scale simplifies measurements in low power ranges
- Sealed terminations (no bellows, no air vents)
- Long-life, non-carbonizing silicone dielectric fluid
- "Twist-Off" connectors, eight different types

Summary Specifications, 401A Series RF Termination Wattmeters

Model	Maximum Power Rating (watts)	Power Ranges (watts)	Frequency Range (MHz)	Size & Weight	Price
401A-120L	120	0–30 0–120	2–30	3½" W x 6" H x 8⅝" L, 4⅞ lbs.	$195.00[1]

401A-1000M	1000	0–30 0–100 0–300 0–1000	30–500	same	$450.00[1]

1. Delivered with Type N or UHF connectors, male or female. Types C, HN, and BNC are $10.00 additional. Types LC and TNC are $30.00 additional, and 1⅝" rigid line is $70.00 additional.

Model 148 Crystal Detector

- Functions in either 50- or 75-ohm coaxial systems (converts simply by replacing an interchangeable terminating resistor)
- Frequency range, 30 to 1200 MHz
- As a detector or a demodulator, will accept input powers up to 80 milliwatts
- Maximum VSWR, 1.5
- Price, $75.00 (75-ohm resistor available as Part No. SP 5129-1-75, price $5.00)

Sierra "Twist-Off" Connectors

- Readily replaceable in the field
- Choice of eight different connector types
- Accommodate virtually all 50-ohm transmission lines

Ordering Information, "Twist-Off" Connectors

Type	Stock Number
N	914600012 male 914600013 female

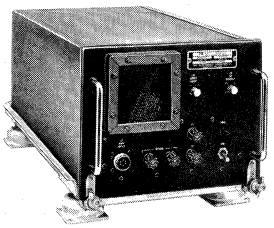
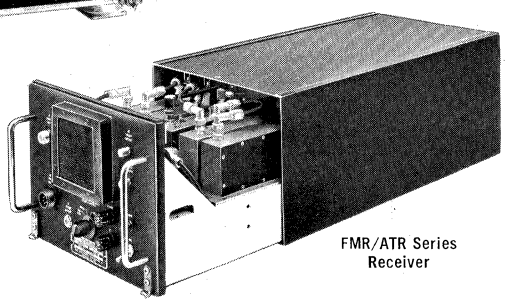
RHG all solid-state FM MICROWAVE RELAY EQUIPMENT

AIR-TO-AIR RELAY LINKS

- Meets Mil-E-5400
- Basebands to 20 MHz
- Power to 100 watts



FMT/ATR Series Transmitter



FMR/ATR Series Receiver

This series of Microwave FM-TV links is intended for high resolution FM-TV transmission and reception. Links are available in L, S, C, and X bands and are all solid state with the exception of the output TWT amplifier used with some of the higher power models.

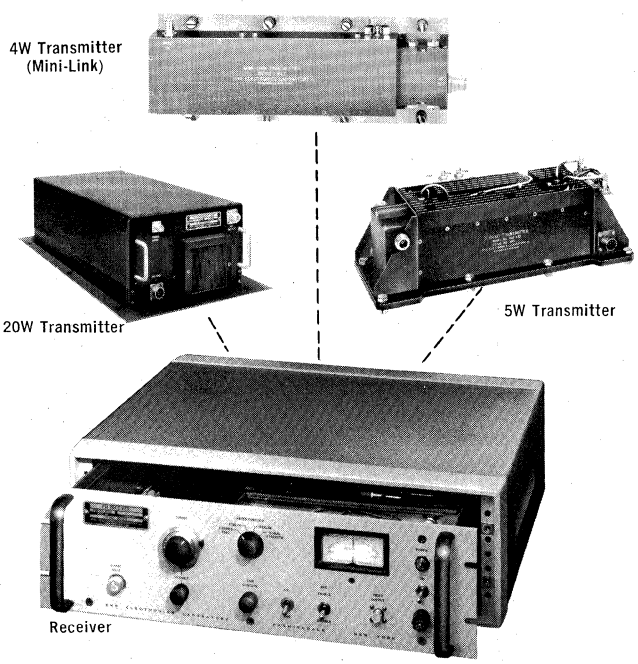
RANGE OF SPECIFICATIONS

SYSTEM SPECIFICATIONS

Frequency	Fixed tuned from 0.5 to 10 GHz
Baseband Response	±0.5 db, 10 Hz to 12 MHz (<1% tilt on 60 Hz square wave)
Differential Gain	±0.5 db
Differential Phase	3°
Video Signal-to-Noise	50 db p-p/RMS at —40 dbm received input level
Transmitter Power	to 5 watts (all solid state) to 100 watts (with TWT booster)
Receiver Noise Figure	11 db typical (without TDA) 5 db typical (with TDA)
IF/Discriminator Bandwidth	50 MHz
Dynamic Range (AGC/MGC)	>45 db
Video Level	1.4V p-p input produces ±9 MHz deviation, producing 1.4V p-p receiver output
Pre and De-emphasis	Supplied to appropriate CCIR and EIA recommendation

AIR-TO-GROUND RELAY LINKS

- Meets Mil-E-5400
- High Resolution
- Power to 100 watts



4W Transmitter (Mini-Link)

20W Transmitter

5W Transmitter

Receiver

RHG offers a complete capability in air-to-ground Relay Link Systems for aircraft and missile applications. These systems offer a proven performance capability for transmission of TV, Telemetry, and other wideband information.

While the configurations shown are typical, several other standard packages are available.

RANGE OF SPECIFICATIONS

SYSTEM SPECIFICATIONS

Operating Frequency	0.5 to 10 GHz
Transmitter Power	to 100 watts
Video Baseband	Basebands to 20 MHz available
Video Levels	Input and Output: 0.5-1.5V (adjustable)
Video Impedance	75Ω ±5%
Differential Gain	±0.5 db (50% APL)
Differential Phase	<2° (50% APL)
Signal/Noise	>50 db (p-p signal/RMS noise)
Pre/De-Emphasis	Per CCIR rec. #405 Switchable in or out
System Deviation	Up to 30 MHz p-p

MECHANICAL AND ENVIRONMENTAL

The ground receivers are packaged for standard 19″ relay rack mounting. Transmitter configurations fall into three general categories. The high power systems are housed in standard ATR cases, with integral cooling. The low power units are mounted on an aluminum plate suitable for conduction cooling. The receivers meet the requirements for military ground environments. The transmitters are designed to MIL-E-5400, Class 1A, with Temperature-Altitude per Figure 6, Curve A.

SPECIAL OPTIONS

- Auxiliary equipment, such as camera, monitors, and antennas can be supplied.
- A complete range of power inputs can be accommodated on special order.
- Special packaging for non-standard form factor applications can be supplied.

FOR ADDITIONAL MODELS AND COMPLETE INFORMATION, SEND FOR CATALOG 69B

all solid-state FM MICROWAVE RELAY EQUIPMENT RHG

SYSTEM PERFORMANCE

Model	Frequency	Output Power (min.)	Antenna Gain (nom.)	Received Signal Level at 10 mi.	at 20 mi.
MRS 2APM	fixed tuned in 1.7 to 2.4 GHz band	2.0 watts (+33 dbm)	50 db	—40 dbm	—46 dbm
MRS 7APM	fixed tuned in 5925 to 8400 band	0.5 watts (+27 dbm)	72 db	—35 dbm	—41 dbm

Note 1:
Indicated received signal levels are based on free space path loss without allowance for profile. Calculations made at 2.0 and 7.0 GHz, respectively. Note that received signal levels as low as —75 dbm will result in a 30 db signal/noise ratio (P-P/RMS).

SYSTEM SPECIFICATIONS

Baseband Response	10 Hz to 4.5 MHz (±0.5 db); ±1 db to 6 MHz <(1% tilt on 50 Hz square wave)
Differential Phase	±0.5°
Differential Gain	±0.25 db
Video Signal-to-Noise	58 db p-p/RMS (EIA Weighting)
Video Signal-to-Hum	50 db
Operative Temperature Range	—10° to 50°C

Additional Transmitter Specifications

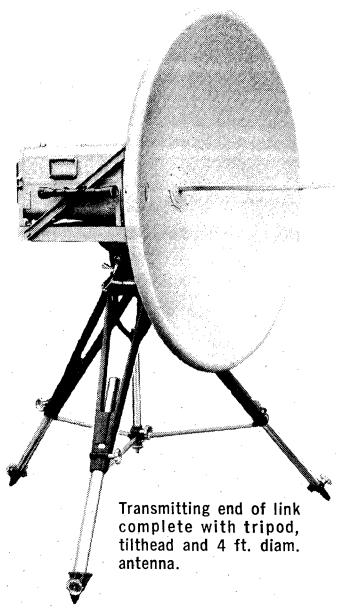
Output Power	2W at 2 GHz 0.5W at 7 GHz
Stability	±0.05%
Video Input	0.7 to 1.4V p-p (adjustable)

Additional Receiver Specifications

Noise Figure	11 db (typ)
Dynamic Range	45 db (—75 to —35 dbm)
Video Output	0.7 to 1.4V p-p (adjustable)

GROUND STATIONS—PORTABLE

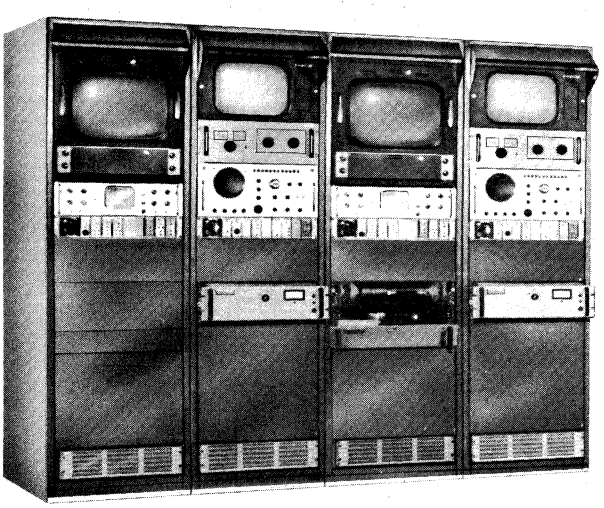
• All solid state • L, S, C, and X bands



Transmitting end of link complete with tripod, tilthead and 4 ft. diam. antenna.

The "MRS" series of portable microwave FM-TV relay links are completely self-contained transmitter-receiver combinations which include the antenna tripod and tilt head for both ends. The link is intended for the transmission of color or monochrome FM-TV, wideband video data, or multichannel telephony.

GROUND STATION-FIXED



All solid state FM Microwave Relay equipment is available from RHG for:

- Color or Monochrome TV Transmission
- Telephony
- Wide Band Video Data Links

FEATURES

1. All solid state
2. High Resolution—to 20 MHz baseband
3. Wide Frequency Coverage UHF thru X-Band

Also Available:

- Complete Antenna & Waveguide installation
- Auxiliary test equipment, monitors and cameras
- Multiplex and Demultiplex gear
- Diversity or hot standby

Write or call RHG where experienced telecommunications engineers are available to discuss your relay link problem.

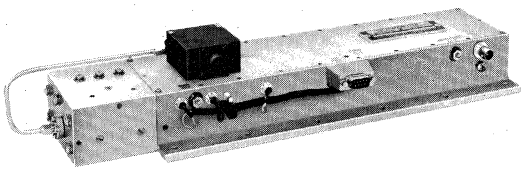
MINI-LINK SERIES

• <75 cubic inches • 5 lbs.



The "MLT" miniature series is designed for those applications requiring a compact module, which incorporates only the essential elements and features without sacrifice of performance.

"MLT" WIDEBAND MODELS

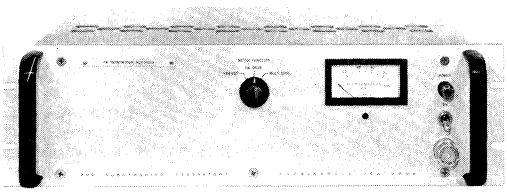
Model No.	(in band of) Frequency GHz	Baseband	Output Power (watts)
MLT1.7	1.71 to 1.85	10 Hz to 6.0 MHz ±0.5 db <1% tilt on 50 Hz square wave	4.0
MLT2.2	2.2 to 2.3		2.0
MLT3.7	3.7 to 4.2		1.0
MLT4.4	4.4 to 5.0		0.75
MLT5.9	5.9 to 6.5		0.50
MLT7.1	7.1 to 8.4		0.30

"MLTW" VERY WIDEBAND MODELS

MLTW1.7	1.71 to 1.85	10 Hz to 12 MHz ±1.0 db <1% tilt on 50 Hz square wave	4.0
MLTW2.2	2.2 to 2.3		2.0
MLTW3.7	3.7 to 4.2		1.0
MLTW4.4	4.4 to 5.0		0.75
MLTW5.9	5.9 to 6.5		0.50
MLTW7.1	7.1 to 8.4		0.30

NOTES:
1. Power: +24 VDC @ 1.5 A (typical)
2. Size: 17″ x 4½″ x 2¼″ (nominal)
3. Weight: 5 lbs. (approx.)

19″ RACK MOUNTED



The "FMT" series is designed for standard 19″ rack mounting. This unit is completely self contained, all solid state, and fully RFI protected.

"FMT" WIDEBAND MODELS

Model No.	In Band of (GHz	Baseband	Output Power (watts)
FMT1.7	1.71 to 1.85	±0.5 db 10 Hz to 6 MHz <1% tilt on 50 Hz square wave	4.0
FMT2.2	2.2 to 2.3		2.0
FMT3.7	3.7 to 4.2		1.0
FMT4.4	4.4 to 5.0		0.75
FMT5.9	5.9 to 6.5		0.5
FMT7.1	7.1 to 8.4		0.5
FMT1.7HP	1.71 to 1.85		20
FMT2.2HP	2.2 to 2.3		20
FMT3.7HP	3.7 to 4.2		20
FMT4.4HP	4.4 to 5.0		20
FMT5.9HP	5.9 to 6.5		20
FMT7.1HP	7.1 to 8.4		20

"FMTW" VERY WIDEBAND MODELS

FMTW1.7	1.71 to 1.85	±1.0 db 10 Hz to 12 MHz <1% tilt on 50 Hz square wave	4.0
FMTW2.2	2.2 to 2.3		2.0
FMTW3.7	3.7 to 4.2		1.0
FMTW4.0	4.4 to 5.0		0.75
FMTW5.9	5.9 to 6.5		0.5
FMTW7.1	7.1 to 8.4		0.5
FMTW1.7HP	1.71 to 1.85		20
FMTW2.2HP	2.2 to 2.3		20
FMTW3.7HP	3.7 to 4.2		20
FMTW4.4HP	4.4 to 5.0		20
FMTW5.9HP	5.9 to 6.5		20
FMTW7.1HP	7.1 to 8.4		20

NOTES:
1. All models listed above are available in "ATR" configuration. Add suffix "ATR" to model number shown. Packaging is B1D1 size to mate with shock mount tray M591405-B1D1 (not supplied). These units require 115 V 400 Hz power. Other power options available.
2. Std. units require 115 V 60 Hz.

"ATR" STYLE—AIRBORNE

The "FMT-ATR" series is designed for airborne applications, and offers electrical performance identical to the regular "FMT" series.

ADDITIONAL INFORMATION

1. Deviation: Wideband models ±4 MHz; Very wideband models ±8 MHz
2. Video levels: Rated deviation produced by 0.7 to 1.4 V p-p (adjustable)
3. Output load: All models designed for 50Ω load. "FMT" and "FMTW" models incorporate terminated 3 port circulator, protecting against open, shorted, and poor VSWR loads
4. Stability: ±0.5% from −20 to +55°C. (all models.) Up to ±.003% with AFC option
5. RFI: All models incorporate RFI protection
6. Fidelity: Typical linearity <5% over full deviation, <2% over 50% deviation. Complete fidelity data related to intended usage available on request

AVAILABLE OPTIONS

1. Deviations: Up to ±24 MHz
2. Video: Up to 24 MHz
3. Power: Up to 100 watts
4. Frequency: 0.5 to 13 GHz
5. Selectable Frequency: Models with step or continuous tuning available
6. Pre-emphasis: Standard or special networks are available
7. Subcarriers: Standards at 6.5, 7.5 and 8.5 Specials up to 20 MHz
8. AFC: Stabilities to ±.002% available
9. Multiplex: Complete multiplex facilities for TV, Telemetry, Telephony are available

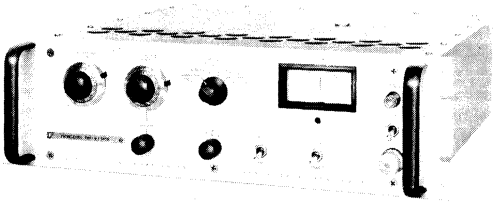
ADDITIONAL SPECIFICATIONS:

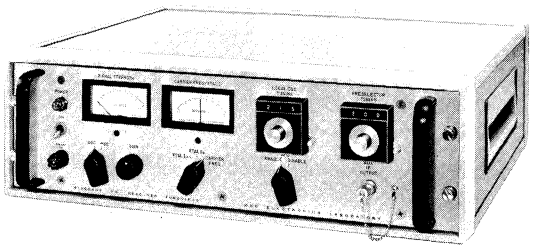
1. Noise Figure: 9 db (typ.) all units plus preselector loss, if applicable.
2. RF Isolator: Standard on all units.
3. AGC: 45 db (min.)
4. Video Baseband: ±0.5 db over 10 Hz to 6 MHz (12 MHz, ±1.0 db) on wideband models with <1% tilt on a 50 Hz square wave.
5. Video Output: 2 supplied at 75Ω impedance level. (1.4 V-P-P).

STANDARD MODIFICATIONS

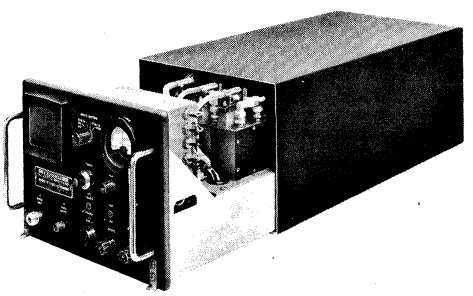
1. De-emphasis: Standard CCIR plug-in networks are available.
2. Power Input: Units designed for 12, 24 or 28 VDC are available.
3. Diversity Operation: Manual and automatic diversity operation can be supplied with post detection combining.
4. Subcarrier Demodulators: Available to meet customer needs.



The photos on this page show three packaging options available for the FMR series. They are available in L, S, C or X-band and have low thermal and intermodulation noise characteristics. They are wideband, phase equalized and can provide distortion-less baseband signals of up to 12 MHz.



Receivers intended for mounting in standard 19″ relay racks require 5¼″ of panel height. The unit illustrated above is shown in a bench type instrument case, which is an optional extra.



RHG's complete line of FM receivers are also available for airborne applications. They are packaged in B1D1 size standard "ATR" cases with built-in cooling. They utilize shock mount tray MS91405-B1D1 (not supplied).

SYSTEM PERFORMANCE CONSIDERATIONS

When individual transmitters or receivers are ordered, RHG utilizes a suitable laboratory standard mating test receiver or transmitter to perform final test on this unit.

When a transmitter-receiver combination is ordered, RHG will perform applicable system tests on the units, as well as individual tests. These tests are conducted with the transmitter and receiver connected by suitable attenuators to provide a received signal level of −40 dbm nominal.

Typical fidelity characteristics are as follows:

TV TESTS: (Std. 525 line pre and de-emphasis utilized)
Using std. test signals per EIA RS-170
Diff. gain: ±0.25 db
Diff. phase: ±0.5°
Video Signal to noise: 58 db p-p/rms (EIA weighting)
Video Signal to hum: 50 db

NPR TESTS: (Using Marconi noise loading test set TF2091 & TF2092)
At baseband loading of 4 MHz. providing p-p deviation of 8 MHz, typical NPR is −40 db at the midband slot.

HARMONIC DISTORTION:
Single tone harmonic distortion, measured over this system baseband, at rated deviation is typically <2%.

INTERMODULATION (Two tone):
Utilizing two signals, each producing one-half the rated deviation, and producing in band 2nd and 3rd order products, these products are typically greater than 40 db down.

SPECIAL TESTS:
Any special testing requested to document some particular or unusual aspect of performance can be performed on a complete system, or an individual receiver or transmitter. RHG engineering personnel are available to discuss these requirements when applicable.

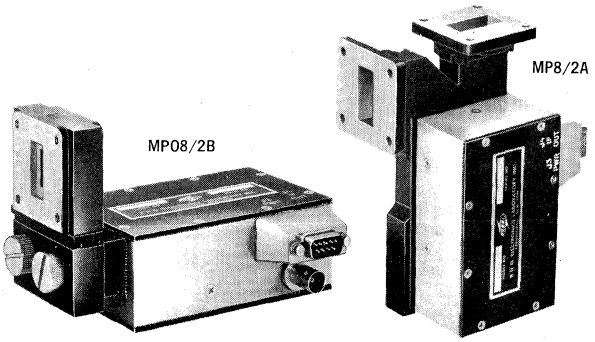
WAVEGUIDE SERIES

• Hybrid and Crossed-Field • Premium Diodes

MP8/2A

MPO8/2B



The waveguide series of mixer-preamps consist of a low-noise all-silicon preamplifier, integrated with either a short-slot hybrid mixer or a crossed-field mixer. Frequency coverage from X- through K-band is provided.

RF Band & Price	Hybrid Model No.	Crossed Field Model No.	IF Freq/BW	N.F. (db)

MPX Series $595	MP4-8/2D	MPX4-8/2D	70-10	8.0 db

NOTES:
1. Gain: 25 db Min.
2. LO Injection: 0 to +3 dbm
3. LO-RF Isolation: 6 db (typ.)
4. Input VSWR: 1.5/1 (typ.)
5. Supply Voltage: +12VDC

STANDARD MODIFICATIONS

1. RFI Protection: Standard on MPX and MMP series, $50 additional on all other units.
2. High Power Preamps: Providing +20 dbm output capability are available on most models.

LOWER NOISE UNITS

Noise figures shown are single sideband, and represent typical performance for production units. Lower noise units, especially for spot RF frequencies can be supplied on special order. The use of "super-premium" diodes and/or transistors will generally result in improved noise figure. An AIL-type 70 Hot-Cold noise standard assures accuracy. Noise figures under 6.0 db have been achieved on special designs.

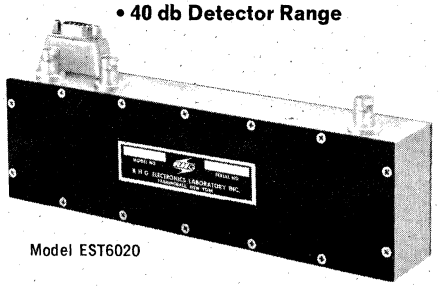
"SUPER" IF AMPLIFIER

• All Silicon • Closed Loop AGC
• Phase and Gain Matching Available
• 40 db Detector Range



Model EST6020

The "EST" Series is designed for use in military receiving systems requiring the utmost in performance and reliability. The units are built to comply with MIL-E-5400 and MIL-E-16400 and operate from −54°C to +71°C providing MTBF's in excess of 25,000 hours. Units may be obtained in gain and phase matched sets.

"EST" SERIES

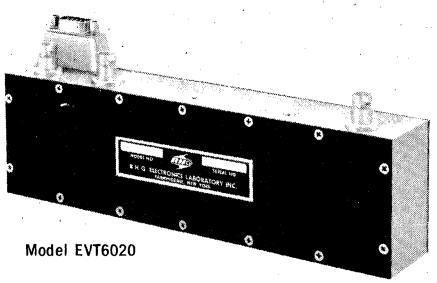
Model	Center Freq. (MHz)	Bandwidth (MHz)	Rise-time (μsec)	Gain to IF (db)	Gain to Video (db)	Noise Figure (db)	Price
EST3002	30	2	0.50	80	90	2.5	$545
EST3004	30	4	0.25	80	90	2.5	545
EST3010	30	10	0.10	80	90	2.5	545
EST6004	60	4	0.25	80	90	2.5	545
EST6010	60	10	0.10	80	90	2.5	545
EST6020	60	20	0.05	80	90	2.5	595

NOTES:
1. IF output capability >+13 dbm (1 V at 50Ω for <1 db compression
2. IF input and output: designed for 50Ω system. Input VSWR1.5:1 Nom.
3. Video output: emitter follower, direct coupled. Capability 5V into 93Ω
4. AGC: Closed loop provision built in with AGC delay to establish desired output level. Compression ratio 60 db in to 3 db out. AGC may be disabled and MGC will provide 60 db of manual control.
5. RFI protection consists of special filtered power connector assembly and RFI gasketing standard on all models
6. Power requirements: +12V at 160 ma (nom.), −12V at 160 ma (nom.)

STANDARD MODIFICATIONS
1. Units can be gain matched to ±2 db and phase matched to ±10° over 50 db AGC range. Add suffix "MAT" $200 additional per unit.
2. Wide Range Linear Detector—A new exclusive RHG detector circuit offering a linear detected output (±0.5 db over 30 db) is available. Add suffix "LD." $200 additional.

SOLID STATE

• All Silicon • IF and Video Outputs
• MIL Grade • Risetimes to 25 Nanoseconds



Model EVT6020

The "EVT" Series are all solid state, high gain amplifiers. They feature a high power IF output plus a low impedance detected output. They are capable of pulsed and CW amplification. Power required is ±12 VDC at 160 ma.

"EVT" SERIES

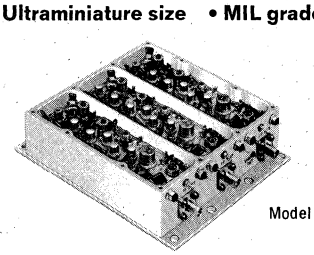
Model	Center Freq. (MHz)	Bandwidth (MHz)	Rise-time (μsec)	Gain to IF (db)	Gain to Video (db)	Price
EVT1002	10	2	0.50	80	90	$425
EVT2004	20	4	0.25	80	90	425
EVT3002	30	2	0.50	80	90	345
EVT3004	30	4	0.25	80	90	345
EVT3010	30	10	0.10	80	90	345
EVT4510	45	10	0.10	80	90	395
EVT6010	60	10	0.10	80	90	345
EVT6020	60	20	0.05	80	85	375
EVT7010	70	10	0.10	75	85	375
EVT7030	70	30	0.03	60	70	495
EVT12020	120	20	0.05	65	75	525
EVT16040	160	40	0.025	60	70	895

NOTES:
1. IF Output: +10 dbm (min.)
2. Video Output: +5 V into 93Ω
3. Gain control range of 50 db is obtained with 0 to −5 VDC (typical)
4. Low noise input with VSWR <2:1. Standard on all models from 30 to 70 MHz. (NF ≃ 4 db).

STANDARD MODIFICATIONS
1. Low Noise Mixer Input (for reversed mixer xtals): 2 connectors plus crystal monitors. Add suffix "M" $75.00 additional
2. RFI Protection: Includes power line filtering and RF gasketing. Add suffix "RFI" $50 additional

MATCHED 3 CHANNEL IF AMPLIFIERS

• Phase matched to 5° • Gain matched to 1 db
• Ultraminiature size • MIL grade



Model ETM3010

The "ETM" series provides three matched IF amplifier channels suitable for use in monopulse and similar applications. Its small size and low power drain make it ideal for airborne applications.

"ETM" SERIES

Model	Center Freq. (MHz)	Bandwidth (MHz)	Gain (db)	Rise-time (μsec)	Price
ETM3004	30	4	80	0.25	$2950
ETM3010	30	10	70	0.10	3150
ETM6010	60	10	70	0.10	3250
ETM6020	60	20	65	0.05	3450

NOTES:
1. AGC range: 50 db (min)
2. Tracking: Channels A and B will be within 5° and 1 db of Channel C over 50 db AGC range, and temperature of −30 to +70°C.
3. Input Impedance: 50Ω at VSWR <1.15:1
4. Output Impedance: Designed for 50Ω load
5. Output Capability: 0.5 VRMS (+6 dbm) at <1 db compression
6. Noise Figure: <10 db—low noise versions to 2.5 db available. Specify suffix "LN"—$100 additional.
7. Power: +12 V at 150 ma (typical)
8. Size: Approx. 7 cubic inches per channel

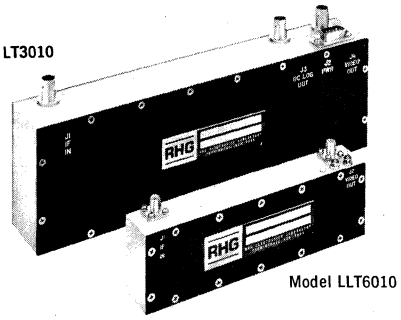
1. Std. Models—9 1/16 x 3 x 1½. Min. Models—6 x 1¾ x 1.
2. Video output voltage: 0.25 to 2.5 volts into 93Ω (typical most units)
3. Log accuracy: ±1 db over 60 db range; ±2 db over balance of range
4. Dynamic range: 50μv to .50 volts on all units except LT12040 and LT200100 are 100μv to 0.1V and LT16020 is 40μv to .125 V.

OPTIONS:
1. RFI Protection—includes power line filtering and RF gasketing. Add suffix "RFI" $50 additional. (Std on LT200100.)
2. DC coupled Video Amplifier. Replaces the standard AC coupled video amplifier. Add suffix "DC" $75 additional. (Not avail. LT200100).

SOLID STATE

- **Risetimes to 10 nanoseconds**
- **Center frequencies to 200 MHz**
- **Miniature and Standard Models**



The "LT" series provides the widest range of performance parameters. Their high performance coupled with their built in quality make these units ideal for "new system" requirements. Power required is ±12 VDC at 160 ma.

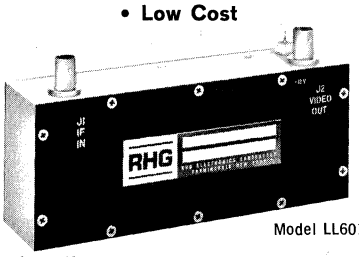
"LL" SERIES

Model	Center Freq. (MHz)	Band-width (MHz)	Rise-time (μsec.)	Input Dynamic Range Volts	db	Price
LL3002	30	2	0.5	250 μv to .25 v	60	$325
LL3004	30	4	0.25	250 μv to .25 v	60	325
LL3010	30	10	0.15	250 μv to .25 v	60	325
LL6002	60	2	0.5	250 μv to .25 v	60	325
LL6010	60	10	0.15	250 μv to .25 v	60	325

NOTES:
1. Input Impedance: 50Ω, VSWR 1.5 (typical)
2. Video output voltage: 0.2 to 2.0 volts into a 93Ω load (typical)
3. Log accuracy: ±1 db over the dynamic range
4. Power required: −12 VDC @ 60 ma

SOLID STATE – ECONOMY

- **Low Cost**



Model LL6010

The "LL" series offers true log amplification in an economical package design. Features not required in all applications have been eliminated providing a low-cost high- quality design.

"TSL" SERIES...The RHG Model TSL log test sets facilitate the specialized alignment and testing of log IF amplifiers.

Log Linearity: A dynamic test method permits adjustment of linearity while viewing a "plot" of signal input power versus output voltage on an ordinary oscilloscope (not supplied). Non-linearities can be measured to within ±¼ db. Front panel attenuator provides calibration.

Log Slope: A calibrated control provides settings from 10 to 100mv per db in 10 steps. A vernier provides non-calibrated continuous adjustments between steps.

Dynamic Range: Direct measurement is provided with a display showing the entire curve from "lift off" to saturation. A built-in source provides levels from +10 dbm to—90 dbm. A meter and screwdriver adjust provides calibration.

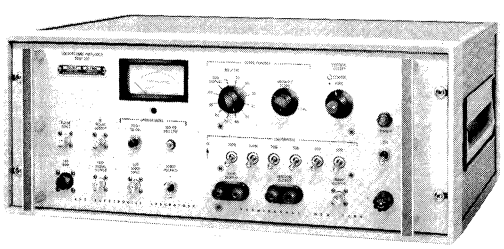
Pulse Response: An RF source capable of complete "turn off" and fast risetime (several RF cycles) is provided. This tunnel diode oscillator can be gated on and off by any standard pulse generator providing 10 volts or more. (Pulse generator not supplied.)

Matching*: An optional attachment permits two log amplifiers to be observed simultaneously, thus facilitating the matching of the units.

Modulation Check*: An optional attachment provides a modulated (constant percentage) RF signal which is swept, in amplitude, over the dynamic range. Variations in the demodulated output can be measured, providing a sensitive indication of the change of log slope over the dynamic range.

LOG AMPLIFIER TEST SET

- **Rapid Dynamic Testing of Log Amplifiers**



Additional Specifications

IF Frequency	30 or 60 MHz (10 to 100 MHz available on order)
Test Signal Range	+10 to −90 dbm
Power Available	±12 V at 250 ma for unit under test
Metering	Carrier level

Prices: **Model TSL-30 (30 MHz) $3995**
Model TSL-60 (60 MHz) $3995
Model TSL-XX (any freq. between 10 & 100 MHz).....$4295

*Matching and modulation check options not included in price.

S - X	M5/1920	1920/9600	5	35/60	1

NOTES:

1. Impedance Level: Input and output designed for 50Ω system. The use of an output isolator recommended with poor VSWR loads.
2. Efficiency: Typical efficiencies range from 2/n to 1/n where "n" is multiplying factor.
3. Power Levels: Maximum input levels range from 15 watts for VHF inputs to 5 watts for S band inputs.
4. Connector Types: N and OSM with others available.

SPECIALS

The models shown are typical of the wide range of multipliers and multiplier chains produced by **RHG**. Special combinations covering a wide range of parameters are available. Contact factory for details.

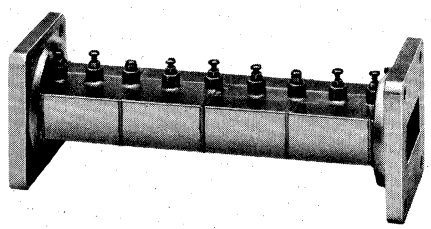
FC4-1.8



FW4-7.2

The FC and FW series of microwave filters offer the user a wide range of characteristics from L through X band. The FC series provides multipole performance coupled with a very wide tuning range utilizing advanced combline techniques. The FW series offers low insertion loss and a readily adjustable passband characteristic to facilitate trimming overall system parameters.

These filters are ideal for use in wideband FM systems where phase linearity and group delay are important considerations. RHG engineers can provide designs tailored to specific requirements in this area.

COAXIAL

Model	(GHz) Tuning Range	Bandwidth (1db)	Poles	Ins. Loss (typ)	VSWR (typ)
FC2-1.3	1.3-1.8	2-10%	2	0.5	1.2

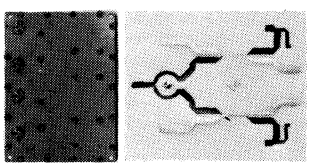
MICROWAVE SUBSYSTEMS

A family of microwave subsystems featuring integrated components has been developed in Raven Electronics' engineering laboratories, and produced for a number of applications. Units operating from S-band through Ku-band are included in the capability.

Both stripline and waveguide subsystems have been fully lab-tested and are currently undergoing field study.



In addition, Raven is also delivering microwave subsystems making use of traveling-wave tube amplifiers, YIG filters, broad band upconverters, and solid state test oscillators.

UFH/L Band Dual Blade AM-110

SPECIFICATIONS

UHF: Frequency — 225 to 420 MHz, VSWR 225 to 420 Mc — 2.0:1 Max. referenced to 50Ω, Polarization — Vertical, Gain — Equivalent to a λ/4 monopole, Power Capability — 50 watts average, Radiation Pattern —Omni-azimuth.

L-Band: Frequency — 950 to 1220 Mc, VSWR — 1.8:1 max., Polarization — Vertical, Gain — Equivalent to a λ/4 monopole, Power Capability Average — 2 watts, Peak — 2500 watts, Radiation Pattern — Omni-azimuth.

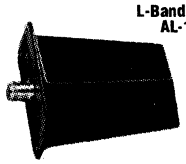
UHF and L-Band: Isolation — —50 db, Weight — 1.5 lbs.

L-Band Sleeved Dipole AL-106

SPECIFICATIONS

Frequency — 1.25 to 1.35 GHz, VSWR — 2.0:1 max. referenced to 50Ω, Gain — 1.0 db nominal, Polarization — Parallel to dipole axis, Power Handling Capability — 100 watts average, Temperature Range — +65 to +165°F, Pattern — Omnidirectional, Weight — 2 oz. max.

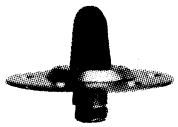
L-Band Blade AL-109



SPECIFICATIONS

Frequency — 500 to 1000 MHz, VSWR — 2.0:1 referenced to 50Ω, Pattern — Omnidirectional, Polarization — Vertical, Efficiency — 85%, Weight — 7 oz. max.

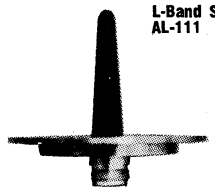
S/C/X-Band Stub AM-142



SPECIFICATIONS

S/C/X-Band AM-142: Frequency — 2.0 — 10.0 GHz, VSWR (ref. to 50Ω) — 2.0:1 max., Polarization — Vertical, Pattern — Omnidirectional, Power Handling — 100 watts average, Efficiency — 85%, Weight — 3 oz.

L-Band Stub AL-111



SPECIFICATIONS

Frequency — 1.435 to 1.485 GHz, VSWR — 1.6:1 max. referenced to 50Ω, Polarization — Vertical, Power Handling Capability — 100 watts average, Weight — 4 oz. max.

S/C/X-Band Spiral Antenna AM-139

SPECIFICATIONS

Frequency — 2.0 to 11.0 GHz, VSWR — 2.5:1 max., Gain — 0 db @ 2.0, 2 db @ 3.0, 4 db @ 5.0, 6 db @ 7.0, 8 db @ 11.0 GHz, Beamwidth — 70° ±15°, Beam Tilt — 3° nominal, 7° maximum, Polarization — Circular with ellipticity ratio on axis less than 1.0 db, at —10 db beamwidth less than 4.0 db. Designed to MIL-E-5400 Class 2, Weight — 7 oz.

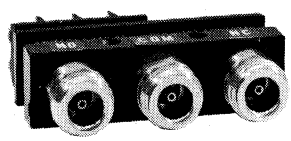
MICROWAVE COMPONENTS

Stripline Switch SL-101

SPECIFICATIONS

Frequency — DC to 1.0 GHz, VSWR — 1.2:1 max., Isolation — 40 db min., Insertion Loss — 0.3 db max., Switching Time — 5 milliseconds max., Operating Power — 13 volts DC, 100 milliamps, Configuration — SPST, Life — Ten million cycles, Weight —1 oz.

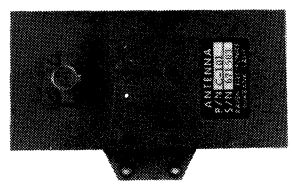
Coaxial Switch SU-101



SPECIFICATIONS

Frequency — DC to 400 MHz, VSWR — 1.2:1 max. referenced to 50Ω, Isolation — 40 db min., Insertion Loss — 0.3 db max., RF Power Handling Capability — 25 watts average, Switching Time — 5 milliseconds max., Operating Power — 26 volts DC, 200 milliamps, Configuration — Single pole, double throw, Life — Ten million operations, Weight — 4 oz. max.

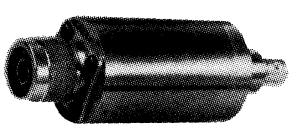
Balun C-101



SPECIFICATIONS

Frequency — 108 to 122 MHz, Input — 50Ω coaxial, Output 200Ω balanced, Weight — 6 oz. max.

S-Band Detector DS-101



SPECIFICATIONS

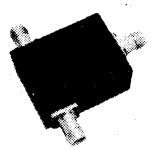
Frequency — 2150 to 2250 MHz, VSWR — 1.2:1 max. referenced to 50Ω, Output — 100 mv at —6 dbm (500Ω load), Tracking — 0.1 db, Weight — 3 oz. max.

Detector Mount DX-106

SPECIFICATIONS

Frequency — 8.0 to 12.0 GHz, VSWR — 2.5:1 max. referenced to 50Ω, 2.2KΩ video load, Tangential Sensitivity — 50 dbm with 2.0 MHz video bandwidth, Weight — 1.5 oz. max.

3-port Circulator CS-102



SPECIFICATIONS

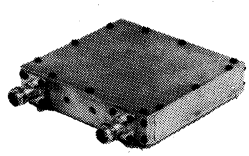
Frequency — 2.5 to 3.5 GHz, Isolation — 20 db min., Insertion Loss — 0.5 db max., VSWR — 1.2:1 max. referenced to 50Ω, Weight — 8 oz. max.

Low Pass Filters FL-105 and FX-104

SPECIFICATIONS

FL-105 (Shown): Cut-off frequency — 1.40 GHz, VSWR — 1.31:1 below 1.35 GHz, Insertion Loss — 0.5 db from DC to 1.30 GHz, Rejection (at 1.6 GHz) — 15.0 db, Weight — 3 oz. max. **FX-104:** Cut-off frequency — 12.4 GHz, VSWR — 1.35:1, Insertion Loss — 0.25 db max in pass band, Isolation (at 13.75 GHz) — 20 db min., Weight — 1 oz. max.

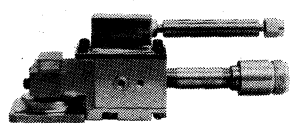
Band Pass Filter FL-106



SPECIFICATIONS

Pass Band — 900 to 1100 MHz, Insertion Loss — 1.0 db in pass band, Rejection — 40 db from DC to 800 MHz and from 1200 to 10,000 MHz, VSWR — 1.6:1 max. in pass band, Weight — 8 oz. max.

Mixer (Frequency Translator) MS-111



SPECIFICATIONS

Input Frequency — 2.0 to 6.0 GHz, at 0 dbm max., L. O. Frequency — 14.0 GHz at +10 dbm, Output Frequency — 8.0 to 12.0 GHz, Conversion Loss — 8 dbm nominal, Input VSWR — 2.5:1 max. referenced to 50Ω, Weight — 5 oz.

MINIATURE COAXIAL COMPONENTS

COAXIAL FILTERS

MINIATURE LOW PASS FILTERS

R L C Electronics' miniature low pass filters are available with cut-off frequencies ranging from 100 MHz to 5 GHz. These filters combine minimum insertion loss and low VSWR in the Pass Band, together with sharp skirt selectivity and high rejection in the Stop Band. This is accomplished by the utilization of multi-section, modern network design. Miniaturization of these units is accomplished by utilizing advanced coaxial techniques and optimum selection of materials. Both lumped constant and distributive techniques are utilized in the fabrication of these filters.

Model No.	Pass Band (MHz)	3 db Point (Typical) (MHz)	30 db Point (Typical) (MHz)	60 db (Min) Stop Band (MHz)
F-10-100	DC-100	125	150	180-500
F-10-200	DC-200	250	300	360-1000
F-10-300	DC-300	375	450	540-1500
F-10-400	DC-400	500	600	720-2000
F-10-500	DC-500	625	750	900-2500
F-10-600	DC-600	750	900	1080-3000
F-10-800	DC-800	1000	1200	1440-4000
F-10-1000	DC-1000	1250	1500	1800-5000
F-10-1500	DC-1500	1875	2250	2700-7500
F-10-2000	DC-2000	2500	3000	3600-10,000
F-10-3000	DC-3000	3750	4500	5400-15,000
F-10-4000	DC-4000	5000	6000	7200-20,000
F-10-5000	DC-5000	6250	7500	9000-25,000

Pass Band VSWR: 1.5
Pass Band Insertion Loss: 0.5 db max.
Power Rating: 25 watts average
Impedance: 50 ohms
Connectors: Type N, BNC, TNC, RSM *Male and female
Price: $60.00

MINIATURE HIGH PASS FILTERS

R L C Electronics' miniature high pass filters are available with cut-off frequencies from 100 MHz to 1000 MHz. These filters have no spurious response below the cut-off frequency. High dielectric materials and unique construction assure reliable operation for this miniature line of coaxial filters. Low VSWR and low insertion loss in the pass band are inherent in the design of these filters.

Model No.	Pass Band (MHz)	3 db Point (Typical) (MHz)	30 db Point (Typical) (MHz)	60 db (Min) Stop Band (MHz)
F-20-100	100-170	90	70	DC-50
F-20-200	200-340	180	140	DC-100
F-20-300	300-510	270	210	DC-150
F-20-400	400-680	360	280	DC-200
F-20-500	500-850	450	350	DC-250
F-20-600	600-1020	540	420	DC-300
F-20-800	800-1360	720	600	DC-400
F-20-1000	1000-1700	900	700	DC-500

Pass Band VSWR: 1.5
Pass Band Insertion Loss: 0.5 db max.
Power Rating: 25 watts average
Impedance: 50 ohms
Connectors: Type N, BNC, TNC, RSM *Male and Female
Price: $60.00

* To designate connector type, add suffix N, B(BNC), T(TNC), or R(RSM) to model number. (Example: F-20-100-R).

PRECISION LOW PASS FILTERS

R L C Electronics' precision low pass filters are available with cut-off frequencies ranging from 600 MHz to 12.4 GHz. These filters combine extremely sharp skirt selectivity and high rejection in the stop band, together with minimum pass band insertion loss, low VSWR and reasonable size. Extremely low pass band, VSWR and insertion loss are maintained by proper impedance matching of these filters. Sharp skirt selectivity is obtained by the utilization of multi-section modern network design. These filters incorporate extremely rugged features allowing them to be utilized in severe environments.

Model No.	Pass Band (MHz)	3 db Point (Typical) (MHz)	30 db Point (Typical) (MHz)	60 db (Min) Stop Band (MHz)
F-30-600	DC-600	630	720	810-3000

F-30-12.4	DC-12400	13000	14900	16,740-62,000

Pass Band VSWR: 1.35
Pass Band Insertion Loss: 0.5 db max.
Power Rating: 100 watts average
Impedance: 50 ohms
Connectors: Type N, BNC, TNC, RSM *Male and Female
Price: $40.00

PRECISION HIGH PASS FILTERS

R L C Electronics' precision high pass filters are designed for operation over the frequency range of 1000 MHz to 10,000 MHz. Sharp rejection below the cut-off frequency and no spurious responses are assured in the use of these filters. Low insertion loss and low VSWR in the pass band are accomplished by the utilization of impedance matching and transforming end sections and combining them with precise coaxial fabrication. Rugged, lightweight construction makes the units suitable for extreme environmental conditions.

Model No.	Pass Band (MHz)	3 db Point (Typical) (MHz)	30 db Point (Typical) (MHz)	60 db (Min) Stop Band (MHz)
F-40-1000	1000-2000	900	700	DC-500

Pass Band VSWR: 1.8 nominal
Pass Band Insertion Loss: .8 db max.
Power Rating: 100 watts average
Impedance: 50 ohms
Connectors: Type N, BNC, TNC, RSM *Male and Female
Price: $60.00

MINIATURE TUBULAR BAND PASS FILTERS — BPF-500 series

R L C Electronics' miniature tubular band pass filters are designed for operation over the frequency range of 60 MHz to 4000 MHz. These fixed tuned filters are constructed utilizing 3 to 6 sections with 3 db bandwidths of 2, 5, 10 and 20% of center frequency. These filters utilize direct coupled sections and have a maximally flat (Butterworth) response. Outside of the pass band no spurious responses exist from DC to 12.4 GHz.

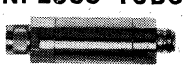
***VSWR:** 1.5 **Impedance:** 50 ohms
Connectors: Type N, BNC, TNC, RSM
Price: 3 Sections $ 75.00
4 Sections 90.00
5 Sections 110.00
6 Sections 130.00
Power Rating: 25 watts

MEDIUM POWER TUBULAR BAND PASS FILTERS — BPF-750 series

R L C Electronics' medium power tubular band pass filters are available with center frequencies from 60 MHz to 4000 MHz. These fixed tuned filters are fabricated utilizing either 3, 4, 5 or 6 sections with a variation of 3 db bandwidths from 2 to 20% of center frequency. There are no spurious responses of these filters from DC to 12.4 GHz. These filters utilize direct coupled sections for optimum response.

Price: 3 Sections $ 90.00
4 Sections 110.00
5 Sections 130.00
6 Sections 150.00
Power Rating: 50 watts

MINI-LOSS TUBULAR BAND PASS FILTERS — BPF-1250 series



R L C Electronics' mini-loss tubular band pass filters are capable of handling 200 watts of average power. These units utilize lo-loss components, which insure optimum selectivity and minimum loss in the pass band. They are constructed using 3 to 5 sections with 3 db bandwidths of 2 to 20%.

Price: 3 Sections $110.00
4 Sections 130.00
5 Sections 150.00
Power Rating: 200 watts

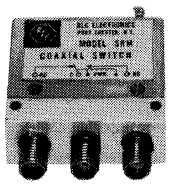
† **NOTE:** When ordering a filter, you must specify center frequency, 3 db bandwidth (A, B, C, D), number of sections (3, 4, 5, 6), and connectors (N, B(BNC), T(TNC) or R(RSM).
Example: BPF-500-60-C-5-T, i.e. — 60 MHz center frequency, 10% 3 db bandwidth, 5 sections with Type TNC connectors.

Special filters requiring closer tolerances, different frequency ranges, special connectors, higher power rating, etc. can be provided. Specifications subject to change without notice.

MINIATURE COAXIAL COMPONENTS

COAXIAL SWITCHES

REMOTE "MITI-MIN" COAXIAL SWITCHES

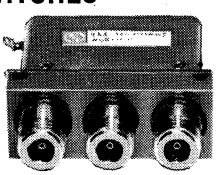


RLC Electronics' Remote "MITI-MIN" Coaxial Switch is of a single pole, two position type. The switch provides extremely high reliability, long life and excellent electrical performance characteristics over the frequency range of DC — 12.4 GHz. The characteristics of the switch feature extremely low insertion loss and extremely low VSWR over the entire frequency range and in addition, very high isolation over the same frequency range. The "MITI-MIN" package utilizes high density packaging techniques, hence the over-all volume of the switch is less than .75 cubic inch. Fail-safe operation is provided.

Model No.	Switch Type	Freq. Range	Insertion Loss	VSWR	Isolation	Power Rating RF	Impedance	Connectors—RF	Operating Voltage	Connectors—Power	Life	Switching Time	Weight	Price
SR-2 Min.	Single pole, two position	DC — 12.4 GHz	0.4 db max.	1.5 max.	60 db min.	50 watts, average	50 ohms	RSM Female	28 V dc at 200 ma nom.	Feed through solder lugs	1,000,000 cycles min.	20 milli-seconds max.	2 oz.	$125 each

Add $25.00 for indicator — Add $15.00 for AC operation

REMOTE COAXIAL SWITCHES



R L C Electronics' remote coaxial switches employ advance techniques to provide maximum performance, reliability and long life. These switches are of the single pole, two position type. Features of these switches include low VSWR and low insertion loss from DC to 12.4 GHz, as well as extremely high isolation over this extended frequency range. These switches are suitable for either laboratory or production use. The size, weight and reliability enhance its inclusion as an integral part of a complex system. An indicator circuit is available, if needed. Fail-safe operation is provided. **SR-2** Price $100.00. Add $25.00 for Indicator. Add $15.00 for AC operation.

Model No.	Switch Type	Freq. Range (GHz)	Insertion Loss	VSWR	Isolation	Power Rating, RF	Impedance	Connectors, RF	Operating Voltage	Connectors, Power	Life	Switching Time

REMOTE MULTI-POSITION COAXIAL SWITCHES

R L C Electronics' remote multi-position coaxial switches are precision assemblies, employing advanced RF techniques to provide maximum performance, reliability and long life. Features of these switches, include low VSWR and low insertion loss from DC to 12.4 GHz, as well as extremely high isolation over this extended frequency range. These switches are suitable for either laboratory or production use. The size, weight and reliability enhance their inclusion as an integral part of a complex system. An indicator circuit is available, if needed. Fail-safe operation is provided.

Model No.	Switch Type	Freq. Range GHz	Insertion Loss	VSWR	Isolation

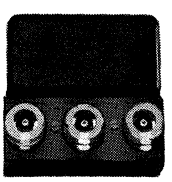
Add for AC operation	$21.00	$28.00	$42.00

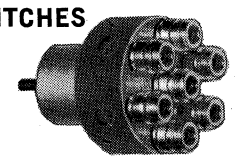
REMOTE MINIATURE COAXIAL SWITCHES



R L C Electronics' remote miniature coaxial switches provide a small, compact switch with excellent microwave characteristics. These switches are of the single pole, two position type. Features of this switch include extremely low VSWR and insertion loss over the frequency range of DC to 3.3 GHz. Fail-safe operation is provided. This series of switches operates on DC only.
Price: CS-221 $25.00

Model No.	Switch Type	Freq. Range GHz	Insertion Loss	VSWR	Isolation
CS-221-*	Single pole, two position Break before make.	0 - 1 1 - 3.3	0.1 db 0.3 db	1.1 1.5	50 db 30 db

MANUAL COAXIAL SWITCHES



R L C Electronics' manual coaxial switches employ precision mechanical assembly, together with advanced microwave techniques, to afford a highly reliable small, efficient coaxial switch. Standard switches are available in single-pole, two position; single-pole three position; single-pole four position; and single-pole six position. Features of the switch include low VSWR and low insertion loss from DC to 12.4 GHz and high isolation extended over this frequency range.
Price: SM-2- $100.00 SM-3- $150.00
SM-4- $160.00 SM-6- $170.00

Model No.	Switch Type	Freq. Range GHz	Insertion Loss	VSWR	Isolation
SM-2-*	2 position	0 - 7 7 - 12.4	0.3 db max 0.6 db max	1.25 max 1.6 max.	60 db min
SM-3-*	3 position	0 - 7 7 - 12.4	0.3 db max 0.6 db max	1.25 max 1.6 max.	40 db min
SM-4-*	4 position	0 - 7 7 - 12.4	0.3 db max 0.6 db max	1.25 max 1.6 max.	40 db min
SM-6-*	6 position	0 - 7 7 - 12.4	0.3 db max 0.6 db max	1.25 max 1.6 max.	40 db min

HOW TO ORDER
Specify model number of switch. Add suffix N, B(BNC), T(TNC), or R(RSM) for connector. Add suffix to designate operating voltage and suffix to add indicator circuit, if required. Thus, SR-2-N-A-I is an SR-2 switch with an N connector, operating voltage of 115 Vac and equipped with an indicator circuit.

Special switches requiring closer tolerances, different frequency ranges, special connectors, higher power rating, etc. can be provided. Specifications subject to change without notice.

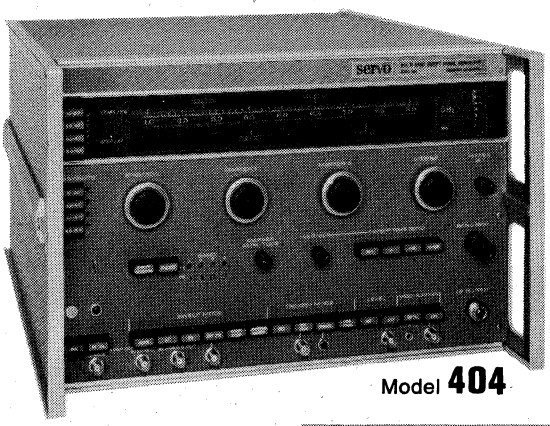
SPECIFICATIONS (ALL SWITCHES)

Impedance: 50 ohms
Life: 1,000,000 cycles, min.
Switching Time: 15 milliseconds, max.**
Power Rating: 50 watts average (except for CS 221, which is rated at 100 watts, average)
Connectors, RF: Female N, TNC, BNC or RSM**
Operating Voltage: 115 Vac (specify suffix A)*
28 Vdc (specify suffix D)*
Indicator Circuit: To specify, add I to model number.*
Connectors, Power: Feed through solder lugs*

***APPLICABLE TO REMOTE SWITCHES ONLY** **Except SR-2 MIN

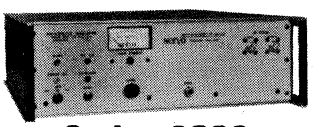
servo 4-BAND MICROWAVE SWEPT SIGNAL GENERATOR



Model **404**

- **Covers from 1.0 to 12.4 GHz in one continuous, automatic sweep**
- **Self-contained, built-in programmer, no plug-ins required**
- **Versatile, automatic/manual band selection**
- **Solid state, integrated circuit design**
- **Human-engineered with push-button controls for ease and speed of operation**
- **Compact package, only 10½" high**

servo MICROWAVE TWT AMPLIFIERS



Series 2000

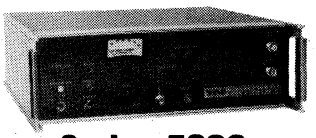
- 1.0 to 18.0 GHz frequency range
- Gain at least 30 dB
- 10 or 20-watt power output
- TWT thermal sensor
- Helix overload and current meter

Series 3000

- Ultra-broad frequency range of 1.0 to 12.4 GHz in a single instrument
- 1-watt power output
- Pulse modulation capability
- Complete TWT protection

Series 4000

- 1.0 to 11.0 GHz frequency range
- 10-watt power output
- Pulse modulation capability
- Front panel gain and helix controls
- Excellent gain and phase stability



Series 5000

- NEW—All solid state power supply
- 1.0 to 12.4 GHz frequency range
- 1-watt power output

servo "SERVOMATIC"® SYSTEM ANALYZERS

Model **1999**

For design, analysis and production testing of complex servo-mechanisms and control systems

- **Function Generator**
- **Internal Modulator**
- **Phase Shifter**
- **Precision Attenuator**

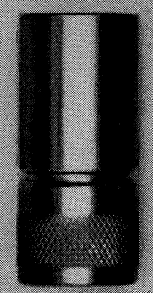
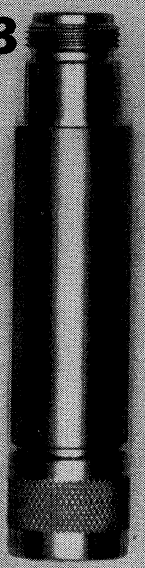
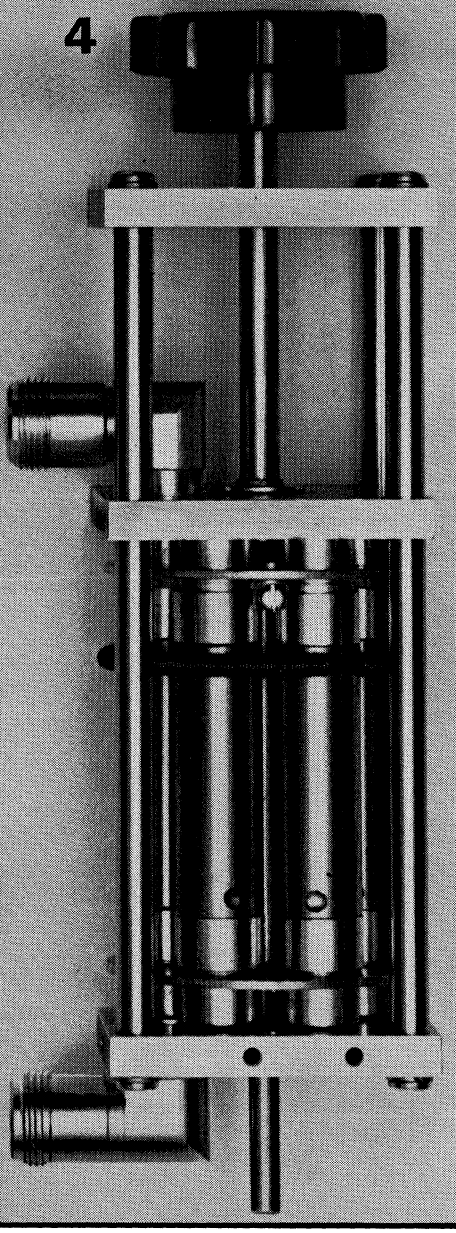
75 OHM IMPEDANCE RF ATTENUATORS WITH ELECTRICAL SPECIFICATIONS SIMILAR TO 50 OHM MODELS (UP TO 900 MC) ARE AVAILABLE ON REQUEST. CONNECTORS ALL MODELS TYPE BNC.

STODDART COAXIAL ATTENUATORS

A COMPLETE LINE OF ATTENUATOR PADS, TERMINATIONS, TURRET AND MULTI-TURRET MODELS







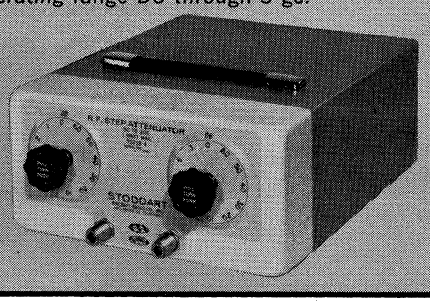
1 ***NO. 90594.*** *50-ohm termination. Operating range DC through 10 gc.*

2 ***NO. 90513.*** *Attenuator available in any values between 0 and 60 db, including fractional db. Operating range DC through 3 gc.*

3 ***NO. 90595.*** *Attenuator available in 20, 40, and 60 db. Operating range DC through 10 gc.*

4 ***TURRET ATTENUATOR.*** *Precision step attenuator operates on "pull-turn-push" principle. Smooth, positive positioning. Turrets contain 6, 10, or 12 pads. Extremely wide range of db values, plus combinations.*

5 ***RF STEP ATTENUATOR.*** *Available in two- or three-turret models, the step attenuator offers any combinations of db values from zero to 120 db, including fractional db. Operating range DC through 3 gc.*



Stoddart Electro Systems offers precision coaxial attenuators and terminations for all applications. They are available in all commonly used db values, with Type C, N, or TNC connectors in any desired combinations. Power rating is 2 watts average for high-power carbon types, and 1 watt average for standard platinum-film types.

Stoddart-developed coaxial attenuator pads are made of a thin, very stable resistive film fired to a special ceramic substrate. These units combine inherent high accuracy from DC up to 10 gc with exceptionally low phase shift, minimal noise figures, and negligible skin effect. In addition, these units are dimensionally stable, shock and vibration resistant, and essentially unaffected by moisture and chemicals. Performance is stable to temperature from 4°K (liquid helium) to 500°K. On request, precision calibration with certification traceable to the National Bureau of Standards will be provided.

The turret mechanism was developed by Stoddart for use in its own high-precision RI/FI measuring instruments. Design is extremely rugged, positive, and trouble free.

Stoddart attenuator products are available from stock, and quantity discounts may be obtained. Request Attenuator Catalog AT-6:

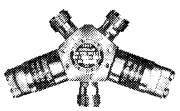
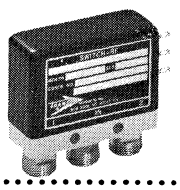
TRANSCO PRODUCTS, INC. 27th Anniversary 1942-1967

Transco Products, Inc. • 4241 Glencoe Ave. • Venice, Calif. 90291 • (213) 391-7291 • Telex 65-2448 • TWX 910-343-6469

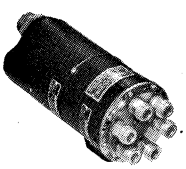


TYPE-Y was designed to meet the requirement for a small, lightweight, coaxial switch having good R.F. performance over a broad bandwidth (0-11 GHz) with million cycle reliability. Two independent solenoids allow make-before-break or break-before-make operation; both may be on or off simultaneously. Approx. size 4" X 2½" X 1".

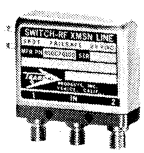
TYPE-A coaxial switch weighs only 12 oz. - extremely light for a multi-position switch. It has a broad bandwidth, 0-11 GHz. Four independent solenoids allow complete control over make/break contact operation. All positions can contact simultaneously. Fail-safe is easily provided by solenoid selection. Approx. size: 3" X 3" X 4" high.



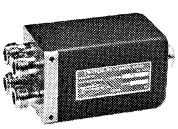
TYPE-D is a SPDT, 0-12.4 GHz, coaxial switch available with 3 actuators - LATCHING, FAIL-SAFE, and PULSE. In the TYPE-DS, solid state circuitry replaces all auxiliary contacts and provides a high input impedance for pulse operation; fail-safe but only .84 watts for holding. Connectors: N, TNC, OSM. Approx. size: 1" X 2¾" X 2" high.



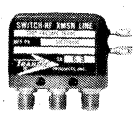
TYPE-E and TYPE-EM are rugged, service proven switches which have been continually improved ...frequency to 12 GHz with over 60 db isolation and life to 100,000 operations. TYPE-E is motor actuated. TYPE-EM is manual. Switches qualified to MIL specifications with SA nomenclatures. Approx. size: dia. 3", length E - 7" and M - 3".



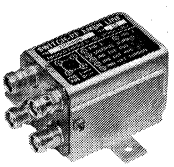
TYPE-DT is a SPDT, 0-12.4 GHz, coaxial switch for small connector types. It offers the following choices: (1) TNC or OSM connectors, (2) latching or fail-safe, (3) 28 VDC or 115 VAC, and (4) with or without indicator circuits. 1,000,000 operation reliability. All this flexibility in about 2 cubic inches, 5 oz. Approx. size: 5/8" X 1¾" X 1¾" high.



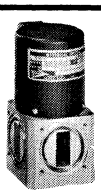
TYPE-H is a coaxial transfer switch with excellent R.F. performance thru 12.4 GHz. Options: TYPE-N or other connector types, LATCHING ...with PM latch or FAIL-SAFE...rotary solenoid, 28 VDC or 115 VAC, with or without indicator circuits. Features: high isolation, 60 db, and high vibration spec., 20 g's. Approx. size: 1¾" X 1¾" X 2½" to 3¼".



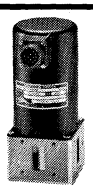
TYPE-DO is a micro size coaxial switch with excellent R.F. performance from D.C. to 18 GHz. It is the result of Transco's fast reaction to meet the need of the ECM industry for extended frequency in less than 1 cubic inch with state-of-the-art R.F. performance and reliability of one million actuations Approx. size: ½" X 1¼" X 1" high.



TYPE-HT is a very small, lightweight, 0-12.4 GHz, coaxial transfer switch for connector types TNC or smaller. Available LATCHING or FAIL-SAFE, It has the same features and options as the TYPE-H. The latching is a 2 coil rotary design with PM latch. The fail-safe is a one coil rotary solenoid design. Stringent environmental specifications. Approx. size: 1¼" X 1½" X 2".



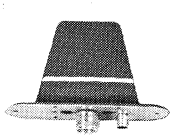
TYPE-GH are lightweight, 90° E-Plane switches available in WR-62, WR-90, WR-102, and WR-112. They are remote control, spring return, solenoid operated. Designed for use in a pressurized system, they feature: anti-bounce rotor braking device for more consistent switching action, printed circuitry, and switch position indicator. Size related to frequency.



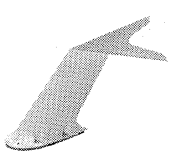
TYPE-GV variable waveguide switch; fast, reliable switching...without blanking the transmitter. May be used as 3-port 2 position (SPDT) or as a power divider. (Five position power divider shown). See TYPE-GH for waveguide sizes available. Features: low VSWR and Insertion Loss with high reliability. Size related to frequency.

TYPE-T11 is a blade antenna, UHF and L-BAND, aerodynamically shaped and qualified for high performance Mach 2-3 aircraft. The radiation pattern is omnidirectional for both UHF and L-BAND. Pattern shaping elements control patterns and improve horizon coverage. Filters and test probes are incorporated. Approx. size: 3½" X 7½" base, 8" high.

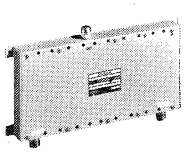
TYPE-T20 omnidirectional, spiral antennas, normal mode Archimedes, broadband with pattern maxima at 45° are available in L, S, and C bands. They have approx. one octave bandwidth. Antennas are omnidirectional with VSWR less than 2:1, have TNC connectors, and meet MIL-E-5400. Approx. diameters: L-Band 18", S-Band 6", and C-Band 3½".



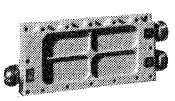
AT-741/A was designed to meet MIL-A-25708 (USAF) Amendment 1 for airborne IFF and/or TACAN application. The "A" signifies the addition of a probe coupled 17.5 ± 1.5 db to a BNC type connector. Frequency 960 to 1220 MHz with VSWR 1.5 from 1000 to 1100 MHz. Transco also manufactures flush mounted AT-740/A. Approx. size: 1¾" X 5¼" X 3¼" high.



TYPE-T16 communication antenna is omnidirectional and has VSWR under 2:1 from 118 MHz to 152 MHz. It was designed to meet MIL-A-6271 and MIL-E-5274 for both military and commercial VHF communication bands. Features reduced height, narrow profile for low side loading, true airfoil shape for reduced drag. Size: 10½" high.



TYPE-IM Interdigital Diplexer allows two equipments of adjacent frequency bands to operate with one broadband antenna. Diplexer has low VSWR and Insertion Loss for each equipment in its operating band and also provides high isolation between each equipment. Band-A 650 to 890 MHz, band-B 960 to 1220 MHz. Approx. size: 4½" X 8½" X 1".



TEEBRID is a 3-port hybrid with internal termination for in-phase power dividing or power combining, octave and multi-octave bandwidths. Unequal or equal power division (or combining) is independent of termination mismatch. All three ports are impedance matched. High R.F. power...stringent environmental specifications. Approx. size: 2" X 3½" X ¾".

In MICROWAVE SOURCES*

TRAK'S developments today are Industry's standards tomorrow

Trak development engineers are an intent, imaginative and dedicated group. Keeping abreast of the state-of-the-art is not enough. They seek to advance it . . . and do. Trak production engineers, technicians, draftsmen, skilled machinists, production and assembly workers transform microwave sources from the breadboard into your system . . . in prototype models or production quantities.

The value of Trak products is measured in performance and not just the competitive price. Is it any wonder that Trak sources are found in the most advanced microwave systems?

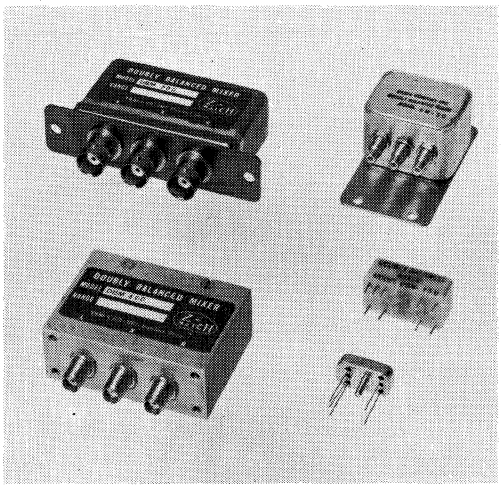
Z-MATCH

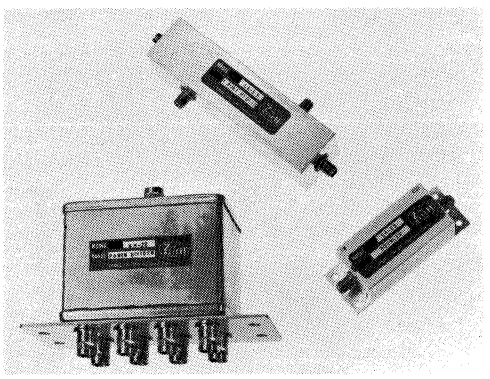
DOUBLY BALANCED MIXERS



Doubly balanced mixers are rapidly becoming indespensible in receiver work and many other applications because of their ability to produce the fundamental sum and difference of two signals while greatly reducing spurious outputs. They are also very useful as modulators, current controlled attenuators, switches, and phase detectors. The Z-Match line of doubly balanced mixers employ four carefully matched Schottky-barrier diodes arranged as a ring modulator, with input and output circuits connected through wide band transformers especially designed for this function. This combination of components plus careful pruning in our test department produces a package that has very low conversion loss, wide bandwidth, and high isolation between ports. It greatly simplifies the circuitry usually needed with conventional mixers. Intermodulation products are greatly reduced; 1/F noise is low, and there is minimal feed-through of carrier and LO signals.

As illustrated in the photograph above, we make a wide variety of mixer shapes to fit different needs. We have a full line of models with coaxial connectors suitable for bench use in test set-ups or for circuits using cable-connected modules, and there is a complete series designed for economy and use in high-volume PC board or stripline packaging. There are also sub-miniature units and special designs tailored to make optimum use of available space or meet stringent electrical requirements. All are designed for high reliability and most are potted, using the techniques which we have developed over many years in manufacturing military components. The range of frequencies covered extends all the way from 2000 Hz to 8.0 GHz. Full specifications are given in our Wideband Data, Bulletin 104.

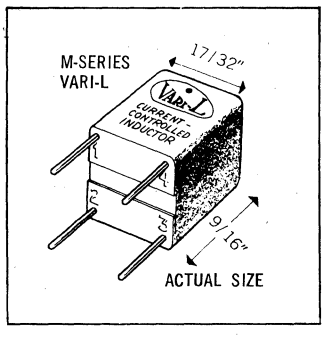
OTHER WIDEBAND PRODUCTS



It is our policy to make as complete and representative a line as possible of signal processing components and to have them on the shelf for quick delivery. We direct our primary efforts toward these ends. Many times, however, we asked to help solve a particularly difficult circuit problem or to make combined modules incorporating two or more mixers, wideband transformers, hybrids, etc. As a result of this type of activity we have numerous special devices including Frequency Doublers (Model WD-100 for instance which produces a flat output from 2 to 4 GHz), Power Dividers, closely phase-balanced 5° at 2.5 GHz) mixer pairs or triads, directional couplers, 3 and 4 port hybrids, and so on. These devices are not stocked in depth but are readily available for engineering evaluation and for quoting purposes. We invite your specific inquiry.

VARI-L

ELECTRICALLY VARIABLE INDUCTORS



The VARI-L inductor consists of a high-Q coil wound on a ferromagnetic core, and an electromagnetic element for controlling its inductance. The coil is connected into an oscillator, amplifier or filter, along with suitable capacitance to establish the initial resonant frequency, and current in the control winding then does the tuning. The rate of control can be slow — for semi-fixed operation — or fast, up to several thousand Hz, for sweep or frequency modulation. The control current is usually in the milliampere range or can be made in the ampere range for transistor drive circuits.

The component is entirely solid-state, with no moving parts to get out of adjustment or wear out, so it can safely be located remote from the tuning point or potted as part of your own intricate sub-assembly.

VARI-L tuning has been in use for 16 years in numerous industrial instruments and in critical military applications including outer space (one of our units is still telemetering back data after seven years in orbit) and oceanography. It is a natural choice for such sweep services as TV alignment generators, spectrum analyzers and panoramic receivers, but it is often selected because of its non-mechanical advantages such as remote control, subminiaturization, or automatic (closed-loop) tuning.

Our most popular variable inductors are in the "MITE" series illustrated above, but we also make larger units for higher-power circuits or multi-function service. Send for Bulletin 167 or write and describe your special requirements.

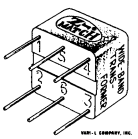
Z-MATCH

WIDEBAND TRANSFORMERS



Standard in the industry for — **Impedance matching • Antenna matching • Balanced mixers • Phase detectors • Wideband input, output, and interstage coupling • Frequency doubler • Bal. to unbal. transformations • Pulse transformer • Reflectometry devices • Voltage/current step-up or step-down.** 16 years experience in the design and manufacture of wideband devices back up the design of these highly reliable circuit components. Max. insertion loss is .5 dB, max. VSWR is 1.3:1, and power handling (except for starred types below) is 2 watts over the low/part of the range and 4 watts toward the high end. They may be used reciprocally. Operating temperature range is −55° to +85°C. Applications bulletin is packed with the units or is available upon request.

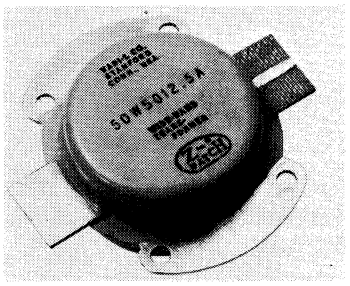
WIDEBAND POWER TRANSFORMERS



Z-Match wideband power transformers handle up to 50 watts C.W. over their specified frequency range at an ambient temperature of 25°C. They are constructed in a stripline configuration best suited to circuits employing the new high-frequency planar transistors and are equipped with a copper heat sink which bolts firmly to the circuit board ground plane. Their brass enclosure is filled with a high-temperature, low-loss potting material rated for good electrical and mechanical stability over a temperature range of −55° to +125°C. All types shown below are DC coupled.

Pulse performance is excellent, the rise time being less than .5 nanosecond, and the peak power handling ability is 1 KW. The internal conductors will carry steady-state currents up to a total average value of 4 amperes. The transformers are reciprocal and may be used for impedance/voltage step-up or step-down at the ratios shown below.

TYPES AVAILABLE FROM STOCK:

Model	DESCRIPTION	Range of Frequency for Response = −1 db max.
50W5012.5A	50 ohm unbal./12.5 ohm unbal.	2 MHz - 1 GHz
50W5050C	50 ohm unbal./50 ohm bal. sym.	2 MHz - 1 GHz

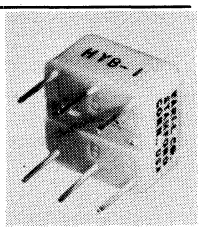
WIDEBAND HYBRID JUNCTION/TRANSFORMERS



These are DC isolated transformers, identical in size and packaging techniques to the wideband transformers above, that comprise a four-port network which splits the outputs into signals of equal amplitude, either in phase or 180° out of phase with one another. The primary winding has an impedance of 50 ohms and the impedance ratio is 4:1. They are shown in our Bulletin 368 connected in various ways including such applications as Vectoral addition or subtraction, DC-isolated power division/addition, Doubly or Single balanced mixers, and Phase comparison/injuection. They also serve as conventional, DC isolated wideband transformers.

TYPES AVAILABLE FROM STOCK:

Model	Useful Range, MHz
HYB-1	.250 - 500
HYB-2	.250 - 300
HYB-3	.100 - 200

Model	Useful Range, MHz
HYB-4	2.5 - 250

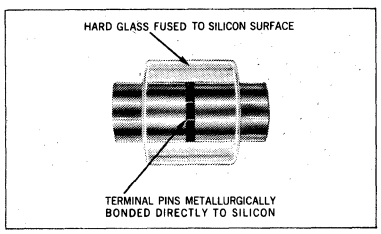
UNITRODE

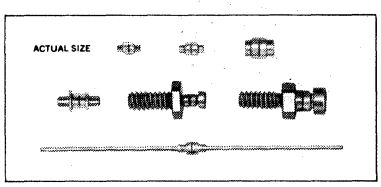
HIGH POWER **PIN MICROWAVE** SWITCHING DIODES



The unique Unitrode package for the first time makes it possible to use PIN diodes in high peak and average power applications. A hard-glass sleeve fused to the terminal pins and to the periphery of the silicon chip assures ultimate reliability under severe RF stress conditions.

A Family of PIN Diodes Designed for High Power, Low Loss Microwave Switching Applications from 2MHz to Above X-Band.

Applications are in high power Duplexers, Phase Shifters, Receiver Protectors, RF Attenuators and RF Modulators.



Special packaging, such as insulated studs, ribbon leads, and pills for stripline, are also available.

- **Series resistance to 0.1 ohms; Total capacitance to 0.5 pf**
- **Low reverse loss at zero volts bias**
- **Low parasitic inductance from whiskerless construction**
- **Megawatt peak-power duplexing now economically feasible due to diode high-current capability (up to 1000 amps peak RF)**

UM 7000 Series 20 watt average dissipation 75 KW peak dissipation for 1 μsec pulse	UM 7002 UM 7004 UM 7006 UM 7008 UM 7010	200 400 600 800 1000	Forward series resistance Capacitance Cutoff frequency Average thermal impedance	0.3 ohms max. 0.9 pf max. 300 GHz typ. 10°C/watt max.

Notes:

1. *Leakage current at PIV at 25°C is 10 μa. max.*
2. *Series resistance R_s measured at 1 GHz and 500 ma bias current.*
3. *Total capacitance is measured at 1 GHz and zero reverse bias and remains relatively constant at all reverse bias levels at frequencies above 100 MHz.*

Typical forward voltage drop at 500 ma is 1.0 volt for UM 2000 and UM 7000, 1.1 volt for UM 6000 Series, and 0.9 volt for UM 4900 Series.

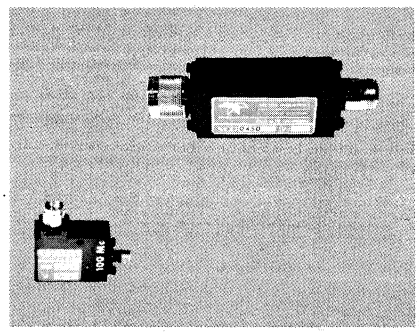
MICROWAVE COMPONENTS

FREQUENCY MULTIPLIERS



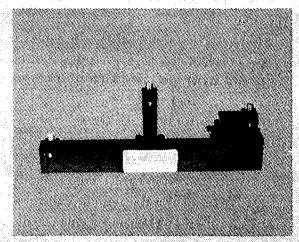
Specifications

F_o	100 MHz to 18 GHz
Multiplication	2X to 4X
Spurious Rejection	50 dB, typical
Instantaneous Bandwidth	35%
Insertion Loss	10 dB, typical

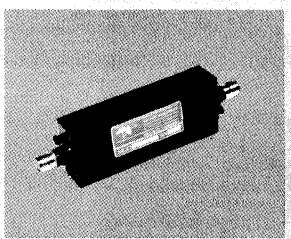
FREQUENCY TRANSLATORS

Specifications

Input Frequency	50 MHz to 18 GHz
Output Frequency	50 MHz to 18 GHz
L. O. Frequency	50 MHz to 18 GHz
Conversion Loss	8 dB, typical
VSWR (All Ports)	1.6:1, maximum
Interband Isolation	45 dB, typical



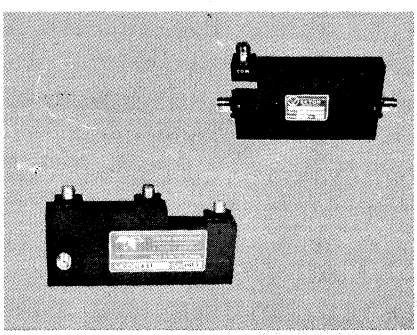
BAND REJECT FILTERS



Specifications

F_o	1 to 12.4 GHz
Rej. Band Atten.	60 dB, min
Rej. Bandwidth	60 dB $\pm$0.015 F_o 1 dB $\pm$0.025 F_o
Passband Width to 1 dB	Dc to 0.975 F_o & 1.025 F_o to 1.2 F_o
Passband Inser. Loss	1 dB, max

MULTIPLEXERS



Specifications

Passband Width	0.25 to 18 GHz
Stopband	Dc to 18 GHz
Inband Inser. Loss	0.3 to 1 dB
Outband Rejection	30 to 90 dB
VSWR	1.5:1, typical
Number of Bands	2 to 8, contiguous or non-contiguous

INTEGRATED COMPONENTS

Filters, detectors, multiplexers, couplers, doublers, mixers, diode switches and isolators integrated into single, compact package. No interface problems!

AND MORE!

Directional filters, coax and waveguide adaptors, low and high pass filters, power samplers, directional couplers, microwave switches, tunable filters, waveguide filters, power limiters, terminations, etc. All filter designs computer derived. Choice of parameters . . . configuration . . . connectors. VECTOR INDUSTRIES, A Teledyne Company, 821 San Antonio Road, Palo Alto, California 94303.

BANDPASS FILTERS

Specifications

F_o	0.25 to 18 GHz
Passband Width	1% to 135%
Stopband	To 18 GHz
Insertion Loss	0.3 to 1 dB

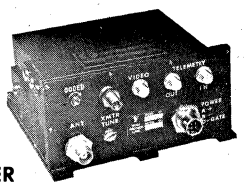
C-BAND RADAR TRANSPONDER

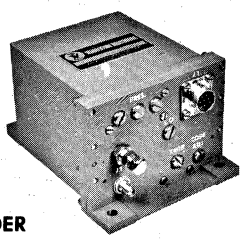
MODEL 302C-2 **Freq:** 5.4-5.9 GHz; **Receiver Type:** Superhet with sensitivity of - 70 dbm; **Transmitter Type:** Magnetron wity 400 w min. peak power output; **Input Power:** 22 to 32 VDC; **Size:** 43 cu. in.; **Weight:** 43 oz.; **Temp:** - 35° to + 75° C; **Altitude:** 230,000 ft.; **Humidity:** 100%; **Shock:** 125 g in any direction, 3 shocks in opposite directions along each axis for 6 μ sec each; **Acceleration:** 125 g applied along any axis for 3 minutes; **RFI:** Per MIL-I-26600. **Vibration:** sinusoidal, 5 to 25 Hz 0.4 in. DA and 15 g 15 to 2500 Hz.



S-BAND RADAR TRANSPONDER

MODEL 312S

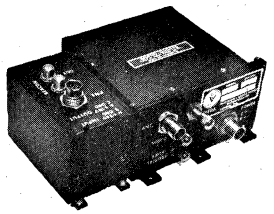
Freq: 2775 - 3000 MHz; **Receiver Type:** Superhet with sensitivity of -70 dbm; **Transmitter Type:** Triode cavity with 300 w min. peak power output; **Input Power:** 22 to 32 VDC; **Size:** 50 cu. in.; **Weight:** 47 oz.; **Temp:** -55° to +75° C; **Altitude:** 230,000 ft.; **Humidity:** 100% **Shock:** 125 g in any direction, 3 shocks in opposite directions along each axis for 6 μ sec each; **Acceleration:** 125 g applied along any axis for 3 minutes; **RFI:** Per MIL-I-26600; **Vibration:** sinusoidal, 5 to 25 Hz, 0.4 in. DA and 15 g 15 to 2500 Hz.



C-BAND RADAR TRANSPONDER

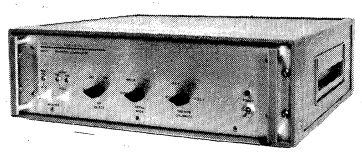
MODEL 321C

Freq: 5400-5900 MHz; **Receiver Type:** Superhet with sensitivity of - 70 dbm, 100% firing; **Transmitter Type:** Triode cavity with 300 w min. peak power outputs; **Input Power:** 24 to 32 VDC, 45 w; **Size:** 38 cu. in.; **Weight:** 44 oz.; **Temp:** -37° to +75° C.; **Altitude:** 230,000 ft.; **Acceleration:** 125 g; **Shock:** 125 g; **Vibration:** Sine, 5 to 25 Hz, 0.4 DA 25 to 2500 Hz, 15 g. **RFI:** Per MIL-I-26600.



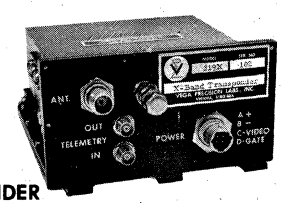
TELESPONDER TELEMETRY SYSTEM

MODEL 603C is used in missile, satellite, drone, target and aircraft application as an enchancement device and telemetry system for a C-band tracking radar. The Model 603C telemetry system is designed to work in conjunction with Vega Models 202CD, 302CD transponders. The 603C telemetry system is comprised of two separate units: the Model 706-7 Seven Channel Telemetry Airborne Encoder and the Model 707-7A Seven Channel Telemetry Ground Demodulator. The 706-7 airborne unit is mated with the desired transponder whereas the 707-7A ground unit is mated with an appropriate C-band tracking radar, Model 706-7. **Encoder specs include: Telemetry Input Impedance:** 200,000 ohms min; **Telemetry Input Channels:** 1 to 7, serial or parallel combinations; **Telemetry Input Voltage:** 0.0 V to +5.0 VDC; **Sync Channels:** one; **Sampling Rates per Channel:** 80/sec. (160 prf); **Spacing Between Transponder and Telemetry Reply Pulse:** min. 50 μ sec., max. 137 μ sec.; **Accuracy of Voltage to Time Conversion:** ± 1% of + 5 v.



7-CHANNEL TELEMETRY DEMODULATOR

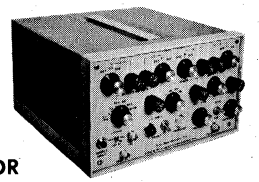
MODEL 707-7A is compatible for use with the FPS-16 and FPQ-6 radars and is an active portion of the ground readout system of the return pulse from a Vega transponder and 706-7A encoder. The demodulator outputs are suitable for readout onto a Model 1508 Minneapolis Honeywell Visicorder or for storage by a digital tape unit. The digital output for recording is a continuous serial binary train using either NRZ-M or NRZ-C format.



X-BAND RADAR TRANSPONDER

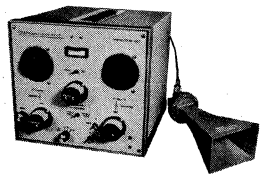
MODEL 319X

Freq: 9100 - 9600 MHz; **Receiver Type:** Superhet with sensitivity of -65 dbm; **Transmitter Type:** Magnetron with 400 w min. peak power output; **Input Power:** 22 to 32 VDC; **Size:** 43 cu. in.; **Weight:** 43 oz.; **RFI:** Per MIL-I-26600; **Humidity:** 100%; **Temp:** -35° to +75° C.



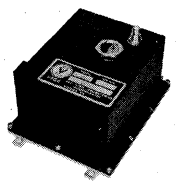
PULSE CODE GENERATOR

MODEL 715 is capable of producing up to five pulses, independently variable in position from 0 to 100 μ sec. Pulse width is variable from .25 μ sec. to 1000 μ sec. in four overlapping ranges. Incorporated is a recovery time feature which allows a coded pulse pair to be delayed from the first pair, up to 1000 μ sec. Any of the five pulses may be used without the presence of any others. **Other specs include:** Repetition rate of 5 pps to 500 KHz; Stability of 2% at 1000 pps; Amplitude of 0.15 v into 50 ohms and 20 v into 1000 ohms; Polarity, neg. or pos.; Rise and fall time of 10 nanosec or less; Delay from .25 μ sec. to 100 μ sec.



C-BAND INTERROSPONDER

MODEL 609C is a C-band transponder test set which is essentially a small radar device used in operationally checking a C-band transponder as it would be normally interrogated by the tracking radar. The unit is also designed to operate with the Vega Model 707-7A Telemetry Demodulator for checking out the Vega Telesponder Telemetry System. The unit provides either single or double pulse interrogation with a code spacing adjustment. The self-contained unit operates on 24 to 30 VDC and/or 115 V, 60 - 400 cps. An internal battery supply with self-contained charging circuit is optional. A waveguide horn antenna is available with the unit or can be user supplied. Checks the following transponder parameters: Receiver Frequency; Receiver Sensitivity; Transmitter Frequency; Transmitter Power Output; Code Spacing. X-Band available.



S-BAND RADAR TRANSPONDER

MODEL 206S

Freq.: 2700 - 2950 MHz; **Receiver Type:** Crystal video with sensitivity of -41 dbm (min.); **Transmitter Type:** Triode cavity with 150 w power output and 300 - 500 w on special order; **Input Power:** 6.9 VDC ± 10% or 28 VDC ± 10%, 9 watts quiescent; **Size:** 25.5 cu. in; **Weight:** 26 oz.; **Pressurized:** 15 PSI; **Temp.:** - 20° to +70° C; **Vibration:** 5 to 200 cps at 10 g 3 min. sweep; **Shock:** 100 g all planes, 11 msec duration; **Acceleration:** 80 g in all planes.

Full specifications are available on request and quotations can be made to your requirements and special applications. All these units are of high environmental specifications for space, aircraft, targets and other uses.

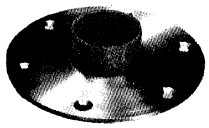
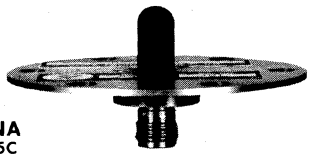
VEGA® PRECISION LABORATORIES



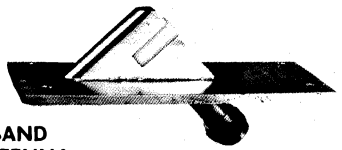
X-BAND ANTENNA
MODEL 835X

Loop Vee Antenna was developed primarily for aircraft application in association with an X-Band radar transponder. The antenna is a circularly polarized omni-directional antenna enclosed within a fiberglass radome. The antenna is characterized by its compactness and is extremely lightweight while still maintaining the electrical and environmental characteristics required by this type antenna. The height of the radome is approximately one-half inch and the diameter of the radome is approximately one inch. Mounting of the antenna is accomplished via a three-inch diameter mounting plate which also serves as a ground plane for the antenna. A C-Band version (Model 836C) of this antenna is available. **Freq.:** 9.0 - 9.69 GHz; **VSWR:** < 1.5:1; **Beamwidth:** 70° ; **Pol:** circular; **Power:** 1.5 kw peak; **Connector:** TNC; **Weight:** 1.5 oz.

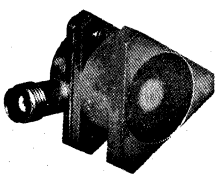


C-BAND ANTENNA
MODEL 845C

Stub Antenna was developed primarily for aircraft application in association with a C-Band radar transponder. The antenna is a vertical polarized omni-directional antenna enclosed within a radome. The antenna is characterized by its compactness and is extremely lightweight while still maintaining the electrical and environmental characteristics required by this type antenna. The height of the radome is approximately three-quarter inch and the diameter of the radome is approximately three-eighth inch. Mounting of the antenna is accomplished via a three-inch diameter mounting plate which also serves as a ground plane for the antenna. **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 1.5:1; **Beamwidth:** 70°; **Pol:** Vert.; **Power:** 1.5 kw peak; **Connector:** TNC; **Weight:** 1.5 oz.

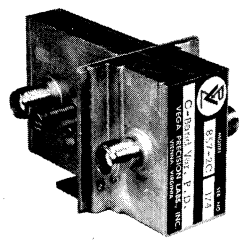


C-BAND ANTENNA
MODEL 801C is a lightweight slotted blade antenna developed as part of a C-Band Radar Transponder System for use on the Nike Apache Vehicle. Linear radiation coverage with minimum aerodynamic drag were key requirements in the design of this antenna. The body of the antenna is constructed of stainless steel which gives excellent reliability in missile environments with no degradation in electrical performance. The antenna may be used as a single element or in multi element arrays depending on the particular application and desired pattern coverage. The companion dividers are Models 853-2C, 854-3C and 855-4C (two-way, three-way and four-way respectively). **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 2.0:1; **Imp:** 50 ohms; **Pol:** Linear; **Connector:** TNC; **Weight:** < 3.0 oz.; **Power:** 1.0 kw peak.



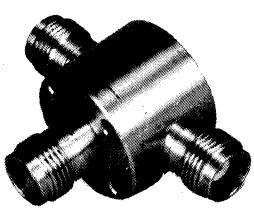
C-BAND ANTENNA
MODEL 820C

Antenna is an optical quartz-loaded, cavity backed helix radiator which produces a right hand circular polarized radiation pattern. The use of quartz material provides for high and low temperature stability with no degradation in electrical performance. Flush mounting is normally used on reentry vehicles with no performance deterioration as a result of reentry heat. Low thermal conductivity of the quartz material controls the heat transfer from the face of the antenna so that very little reentry heat is conducted to the antenna connector. This permits the use of standard mating connectors. Companion power dividers Models 853-2C, 854-3C and 855-4C are used for arraying two, three or four antennas about the missile. **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 1.5:1; **Pol:** RHC; power 1.5 kw peak; **Gain:** 6.0 db; **Beamwidth:** 130°; **Temp.:** 1700° front surface exposure; **Weight:** < 2.0 oz.; **Shock:** 300 g's.

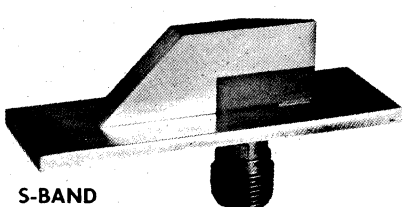


C-BAND POWER DIVIDER
MODEL 857-2C Variable Power Divider was designed to divide the output power of a C-Band Radar Transponder equally between two antenna elements when mounted in airborne vehicles and using unequal lengths of coaxial transmission lines. The design is such that the output power to each leg can be varied from a balanced condition to that of all power in either output leg. With the power divider adjusted to compensate for unequal cable losses, equal power will be radiated by each element of a two element array. The input VSWR is less than 1.3:1 and is tunable over the frequency range of operation. Also available are Models 856-2S (S-Band, 2.7 - 3.0 GHz) and 858-2X (X-Band, 9.1 - 9.6 GHz). **Freq.:** 5.4 - 5.9 GHz; **Insertion Loss:** < 0.5 db; **Power:** 1.0 kw peak; **Size:** 3 1/4" x 2 1/2" x 2"; **Weight:** 12 oz.

S-BAND ANTENNA
MODEL 815S was developed as part of a lightweight S-Band Antenna System for use in the Nike Tomahawk missile for purpose of transmitting tracking data. The antenna is a cavity backed helix with the helix embedded in quartz which is also used as the dielectric cavity. Mounting is accomplished via a mounting flange which can be adapted to a variety of mounting configurations. Flush mounting is used on reentry vehicles with no performance deterioration as a result of reentry heat. Low thermal conductivity of the quartz allows little of the heat to be conducted to the antenna connector therefore standard mating connectors may be used. A C-Band version of this antenna is also available. **Freq.:** 2.7 - 2.95 GHz; **Pol:** RHC; **Gain:** 7.0 db; **Beamwidth:** 130° nominal; **VSWR:** < 1.5:1; **Temp:** 1000° F, front surface exposure; **Vibration (random):** 48 g. rms; **Shock:** 78 g; **Acceleration:** 100 g.

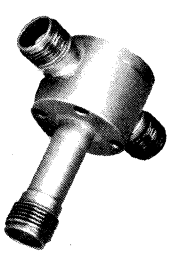


C-BAND POWER DIVIDER
MODEL 853-2C was developed as part of a lightweight C-Band Antenna System which can be installed in any of a large groupe of missiles. Model 853-2C and 855-4C, three-way and four-way respectively, are also available. The body of the power divider is constructed of stainless steel which gives exellent reliability in missile environments. The interior of each power divider consists of an output arm which goes through one or more transformer stages, and then couples with two or more output arms to complete the power division. Each power divider has pre-drilled holes for mounting purposes. **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 1.3:1; **Imp:** 50 ohms; **Insertion Loss:** < 0.5 db; **Power Div:** ± 0.5 db; **Power:** 1.5 kw peak;; Weight: 853-2C, 2.3 oz.; 854-3C, 2.5 oz.; 855-4C, 2.7 oz.



S-BAND ANTENNA
MODEL 802S

Slotted Blade Antenna was developed for Telemetry and Command functions on the Nike Apache vehicle. The antenna provides linear radiation coverage with minimum aerodynamic drag. The body of the antenna is constructed of stainless steel which gives excellent reliability in missile environments with no degradation in electrical performance. The antenna may be used as a single element or in multi element arrays depending on the particular application and desired pattern coverage. The companion power dividers are Models 850-2S, 851-3S and 852-4S (two-way, three-way and four-way respectively). **Freq.:** 2.2 - 3.3 GHz; **VSWR:** 2.0:1; **Imp:** 50 ohm; **Pol:** Linear; **Power:** 1.0 kw peak; **Connector:** TNC; **Weight:** < 2.0 oz.



S-BAND POWER DIVIDER
MODEL 850-2S was developed as part of a lightweight S-Band Antenna System for use in the Nike Tomahawk missile. Models 851-3S and 852-4S, three-way and four-way respectively, are also available. Tracking coverage may be obtained with two, three or four antennas in operation with the use of the appropriate power divider. The interior of the power divider consists of an input arm which goes through one or more transformer stages, and then couples with two or more output arms to complete the power division. TNC connectors are brazed to the power divider body in which mounting holes are provided: **Freq.:** 2.7 - 2.95 GHz; **VSWR:** < 1.25:1, **Insertion Loss:** < 0.5 db; **Vibration (random):** 48 g rms; **Shocks:** 78 g; **Acceleration:** 100 g; **Weight:** 850-25, 2.2 oz.: 851-3S, 2.4 oz.; 852-4S, 2.7 oz.

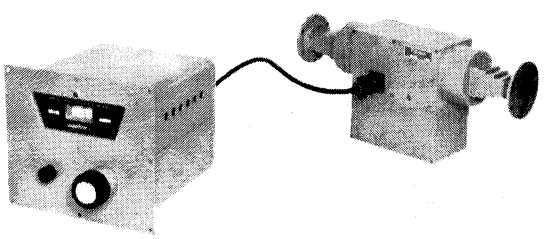
ATTENUATORS:



ATTENUATORS: 100 units are available from simple vane to remotely controlled Rotary Vane Types. This selection enables you to satisfy every requirement of attenuation, phase measurement and control in waveguide and coaxial lines. **SWITCHES:** Solenoid and manually operated four way units in "E" and "H" planes provide switching in all bands from 2.6 to 40.0 GHz. Isolation greater than 60 db; VSWR less than 1.10. Special units are available. **DIRECTIONAL COUPLERS:** Available for every application in any frequency band include broad wall, narrow wall, ultra-flat coupling, cross-guide and high directivity coaxial units. Hundreds of custom units have been produced to meet special requirements. **SPECIAL DEVICES:** Waveline's capability to design and manufacture special components offers the widest range of engineering and production skills possible from one facility. Waveline is capable of generating basic designs in the form of a prototype or production of system components in strict compliance with your specifications. **TEST INSTRUMENTS:** A complete line of instrumentation is available for all testing functions in bands from DC-12.4 GHz for coax and 2.6-40.0 GHz for waveguide. Over 1300 standard units are available. Send for our new 1969 catalog, showing one of the most complete microwave component lines in the industry. Write—Waveline Inc., P.O. AEROFLEX

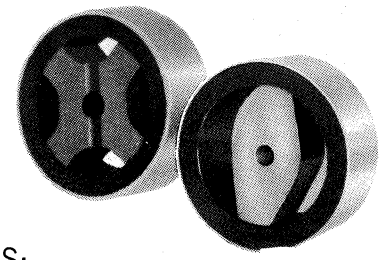
brushless-wide angle D. C. Torque Motors



TYPICAL APPLICATIONS:

Inertial Systems . . . Remote Positioning Devices . . . Stable Platforms . . . Process Control Systems . . . Vane and Control Surface Actuators . . . Throttle Control Systems . . . Chart Recorder Pen-Motor . . . Special Meter-movements . . . Precision Load Testing . . . Multi-input Summing Transducers . . . Low Velocity, High Sensitivity Tachometers . . . Direct Servo Drives.

FEATURES:

- No commutator, brush or contact friction
- Unlimited life
- Infinite resolution
- Linear torque output vs. current input
- No radio noise or explosion hazard
- No motor ripple or "slot lock"
- Proven in outer space
- Fully submersible

Illustrated is a partial selection of the many and varied products available from Airflyte's complete line of rotating components. Airflyte's extensive services and facilities, from research and design to prototype and mass production, enable the manufacture of both standard and modified components, geared to customer specifications and application. Tooling costs can be eliminated in most instances by the availability of a large selection of company-owned jigs, fixtures, dies and molds. Airflyte Electronics invites your inquiry.

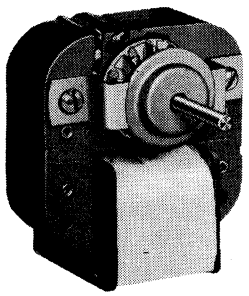
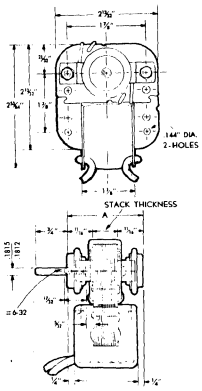
another motor-custom built... by Alliance

PUT ALLIANCE IN YOUR APPLIANCE

If you want custom motors, our full complement of engineers is at your service. We build from raw material to completed motor. This assures you of the superior performance you expect. In appliances, business machines, sound equipment and most other applications, if a subfractional h.p. motor makes it go, it probably goes with Alliance. We supply the majors . . . we know about costs.

model JS





shaded pole induction motors

The Model JS Motors are mass produced with minor variations to meet the demands of specific jobs which require a highly efficient miniature power plant. It can be used as the vital power source on all kinds of electrical and mechanical devices for electronic, electro, radio and time controls, TV and radio tuners, turntable drives for phonographs and Hi-Fi, can openers, fans, hair dryers, coin operated mechanisms, switches, signals, business machines and other special uses. These motors are equipped with impregnated bronze bearings for continuous duty. They can be furnished with or without internal fans and for clockwise or counter-clockwise rotation.

The specifications shown can be varied within limits to meet your design requirements. This would include such things as corrosion resistant finish, water resistant (impregnated coil), threaded or stepped shaft, variation of the mounting arrangement, and variations in the torque and watts input.

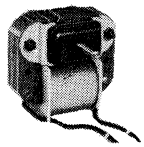
custom motors for many applications

H



High starting torque, making it suitable for remote controls, air circulation, gear trains, valve controls, pumps, and many other special applications.

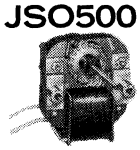
4 speed JPQ phonomotor

Single lever shifts, indexes speeds and neutral position with free movement. Electronic dynamically balanced rotor. Vibration-proof mountings. Minimum rumble and hum. Unexcelled speed regulation. Designed to meet U. L. requirements. Occupies minimum space. The Model JPQ is also available with transformer winding for transistor amplifier applications.

JS long life

Built on standard Alliance frame, has a large oil reservoir on each bearing to extend motor life. In order to reduce wear, the mating parts are given precision treatment. Ideal for long life applications.

JSO500

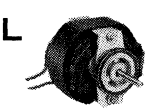


Built on standard Alliance frame. Large sealed oil reservoir and the mating parts are given precision treatment to give extended life. The mounting shown is not standard but illustrates the flexibility of mounting.

JSG

Variations can be made for mounting, temperature of operation, clutching, torque, output shaft speed, humidity, etc. This type unit also available with friction drive of extremely quiet operation but having limited torque ranges. Duty cycle may vary from intermittent to continuous, dependent upon torque and ambient temperature. The JSG is used for TV tuners, rotisseries, remote controls, vending machines.

L

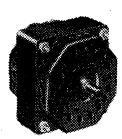


A shaded pole induction motor for typewriters, business machines, fan applications, and similar equipment demanding high torque, compact design and low cost. Standard motors are wound with Class "A" insulation, 117 volt, 60 cycles. Available in 1¼" and 1½" stack thickness. A clutch is available with this type of motor. Further details can be obtained through our Sales Department.

R

A compact power source for reversible rotation requirements. This motor requires a capacitor. The motor can be provided in various stack thicknesses providing a range of electrical and torque characteristics. The specifications shown here are typical for a .375 stack motor.

S



This motor is for transcription type turntables, **stereo** tape, **stereo** disc and Hi-Fi applications. It is designed and manufactured to give the ultimate in motor performance for High Fidelity equipment. The motor's electrical and physical characteristics can be changed to meet your torque, heat and mounting requirements.

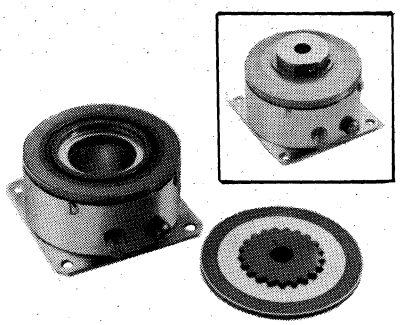
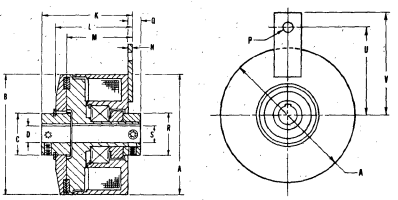
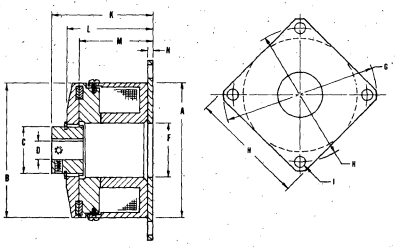
100-MILLION-CYCLE APILON®-FACED CLUTCH AND BRAKE

Longer Life • Cleaner Operation with Apilon® (Ceramic Type) Friction Faces





- Typical life of wear surfaces at least ten (10) times conventional material.
- Life expectancy approximately 120 million cycles (based on work performed per cycle of 144 in. oz. for Size 20 and 288 in. oz. for size 40).



- Dust due to wear products substantially reduced.
- Physically and electrically interchangeable with most conventional units.
- A.P.I. Engineering available to establish life expectancy for specific application.

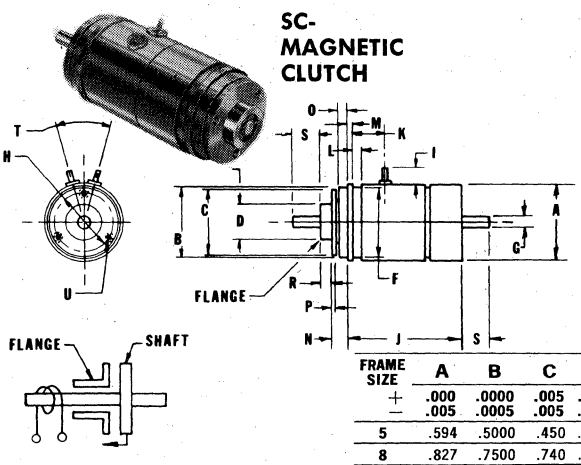
SUBMINIATURE CLUTCH & BRAKE

SC-MAGNETIC CLUTCH



Typical A. P. I. Specifications for ultra precision clutch and brake units ... combining excellence in design, materials, workmanship and reliability. All units contain precision ball bearings fully protected from moisture and contamination by special seals. A. P. I. units meet government specifications for environmental tests. Infinite variations of design and mountings are available.

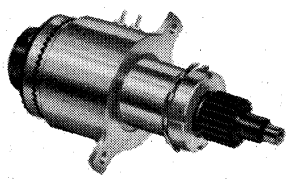
ENERGIZED — Output Shaft Coupled to Input Flange.

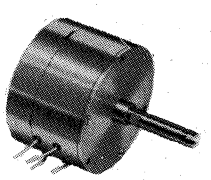
DE-ENERGIZED — Output Shaft and Input Flange Free to Rotate.

SPECIAL ENGINEERED UNITS



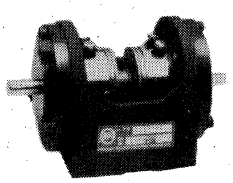
TOOTH TYPE CLUTCH

Special design to meet military reliability for airborne electronics. Specifications include operation in an explosive vapor, temperature, altitude, vibration, salt spray and humidity environments.



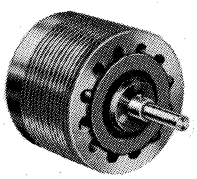
DUPLEX BRAKE

Compact Brake for use in a missile tape drive system. Hysteresis and friction brake with separate coils for excitation applied to a common shaft.



APILON®-FACED CLUTCH BRAKE PACK

Precision pre-aligned clutch/brake package eliminates installation problems. Ball bearing supported shafts permit direct coupling or belt drives. Packs available to house above Commercial Models 10, 20 and 40.



HYSTERESIS CLUTCHES / BRAKES

A continuous slip device capable of providing precise, infinitely adjustable torque control. Units are basically direct current sensitive . . . having excellent reliability, repeatability and linearity.

Precision Rotating Components

SERVO MOTORS

Cedar has long been a leader in the manufacture of precision servo motors and motor tachometers and offers a complete line of sizes and types, both with and without gear heads. Machine winding and other advanced production techniques along with large volume manufacture assure the most economical price available. At the same time, rigid reliability testing and quality assurance programs built up through years of experience guarantee the finest quality and dependability.

SYNCHROS

Cedar synchros are of uniformly high quality and reliability. The quality is a result of advanced design concepts, modern manufacturing techniques and materials and meticulous care in assembly and testing. Cedar Synchros are tested per MIL-S-20708C and ARP-461B-SAE and are available in a variety of windings and shaft configurations.

SERVO PACKAGES

Cedar servo packages have been successfully used on leading missles and aircraft, ranging from the LTV A7A autopilot synchronizer to the Polaris A3 pulse sum-to-analog converter. Other Cedar packages include integrators, in-line servos, geared assemblies and custom units.

STEPPER MOTORS

Because their output is in discrete increments, Cedar stepper motors have many advantages over conventional motors for precise positioning applications. They are bi-directional and have high torque output. They can be run at high stepping rates or as slow as you wish. Because shaft rotation is incremental, damping is not required. Cedar Stepper Motors are available in both permanent magnet and variable reluctance types, and with a wide variety of stepping angles. All meet the full requirements of MIL-E-5272.

DC LOW INERTIA MOTORS

Cedar proprietary manufacturing techniques produce DC low inertia motors that match or exceed printed circuit motor performance, at lower cost. The motors are designed to power computer peripheral equipment, control systems, business machines or any application requiring fast acceleration and deceleration.

SUBMINIATURE RATE GYROS

Cedar's high performance rate gyros have been designed for stability augmentation systems, autopilot damping, radar antenna stabilization and fire control applications. Two and three axes rate gyro packages can also be provided to include demodulators, amplifiers, phase splitting capacitors, chokes, etc., as required.

AC MOTORS • MOTOR TACHS • MOTOR GEARHEADS • RESOLVERS • STEPPER DRIVE CIRCUITS • ROTARY SOLENOIDS • DC TORQUERS • DIGITAL INDICATORS • DC HI PERFORMANCE MOTORS • ACCELEROMETERS • LVDT's • SYNCHRONOUS HYSTERESIS MOTORS

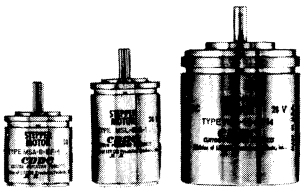
BUY CLIFTON QUALITY IN SERVO MOTORS

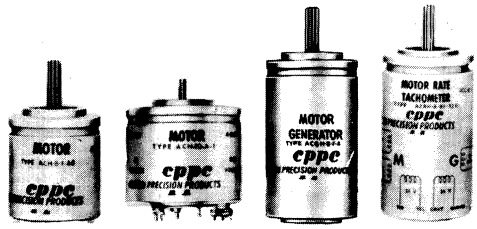


STEPPER MOTORS

Clifton offers a wide variety of permanent magnet or variable reluctance type stepper motors in sizes 8 through 15.

We also design and manufacture the logic and pulse source modules which control our stepper motors.

Stepper motors are extremely useful where signals are presented as pulse trains rather than analog voltages.



AC MOTORS, GENERATORS, AND TACHOMETERS

Clifton offers a wide variety of AC motors in sizes 8, 10, 11, 15. Our motors exhibit a very high degree of efficiency, also higher torque to inertia ratios and lower and more uniform starting voltages. All motors are high temperature resistant.

Because of higher torque/inertia ratios, our generators and tachs are smaller and lighter.

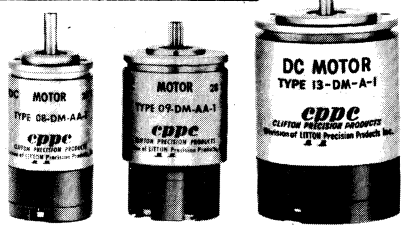
Clifton also offers temperature compensated integrating tachs and high signal to noise integrating type tachs. Gear heads available on motors and tachometers.

TORQUERS

Clifton can custom design torque motors to your special need. Our deep experience in the flat, "hollow shaft" configuration qualifies us uniquely in this field. A Clifton torque motor actuates the fins on Redeye, the Army ground to air missile.

BLOWER MOTORS

This typical Clifton Blower conforms to MIL-B-23071. It exhibits remarkable reliability i.e. "life" in the order of 1000 hr. accelerated life with temperature variations. It is very low in self-generated vibration.



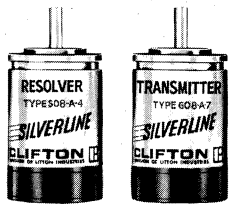
DC MOTORS

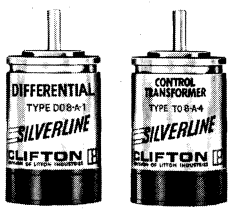
Clifton offers many different types including a new line of low cost sizes 8, 9, and 13.

Units are available which accept either 28, 20 or 14 volt inputs; also with governor which maintains constant speed within ±1%. Gearheads available for our DC motors. DC tachometers also available.

AND SYNCHROS

SILVERLINE THE NEW GENERATION OF CLIFTON SYNCHROS





Higher Accuracy. 5′ Standard • Outstanding Repeatability of Calibration Pattern • Stability of Calibration over Temperature • 150°C Standard Operating Temperature • Lower Null Voltage

Keeping pace with the developing aerospace field, Clifton has developed SILVERLINE, a new, superior line of standard synchros.

These units, a natural evolution from our present line of quality synchros, embody certain new manufacturing techniques and space age materials. The result is a standard synchro which outperforms present synchros in the above five distinct ways.

CLIFTON
DIVISION OF LITTON INDUSTRIES

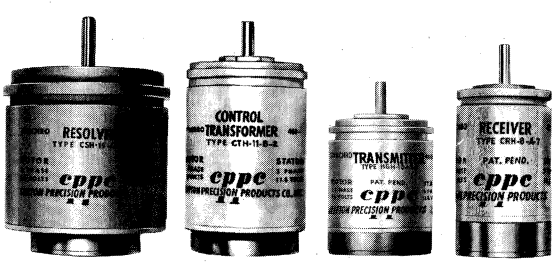
General Sales Office: 5050 State Rd., Drexel Hill, Pa.
215 622-1000 TWX: 510 669-8217

SEE SECTION 4900, page 2664 for a description of our wide line of Servo Packages, Servo Amplifiers, Digital Indicators and S/D, D/S Converters.

GYRO PICKOFF SYNCHROS AND RESOLVERS

Gyro pick-offs generally require individual mounting configurations and electrical parameters. Clifton can custom design them for your particular needs. Beryllium, aluminum or stainless steel housings. A wide selection of bores, stack heights, widths and diameters are available from existing laminations. Our gyro pick-offs are used extensively in the Apollo program.

Custom designed torque motors also available.

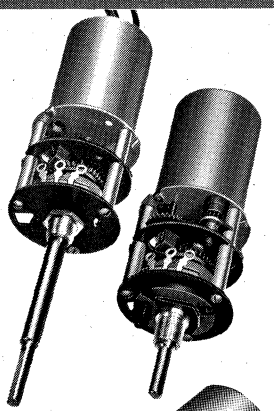


SYNCHROS

Clifton synchros offer high accuracy (7′ max. error is typical), low nulls, low phase shifts, corrosion resistant construction, stainless steel or aluminum housings. Double ended shafts, BuWeps types and ultra high temperature resistant types (450°F) are available. Clifton manufactures an extremely wide variety of transmitters, receivers, control transformers, differentials, resolvers, precision computing resolvers. linear transformers, as well as a complete line of motors and motor rate tachometers.

DALE® SIOUX DIVISION ELECTROMECHANICAL PRODUCTS

REVERSIBLE AC MOTOR DRIVEN POTENTIOMETERS



FOR USE IN ■ Home Entertainment Appliances ■ Instrumentation ■ Controls

FEATURES

■ Available with all standard potentiometers: Single, ganged, or with power switch—dimensions change accordingly. ■ Patented Dale Motor Load Decoupler eliminates coasting and allows manual control independent of gear motor inertial load.

■ Long life expectancy ■ No lubrication in normal use ■ Operates in any position ■ Special terminal configurations available

SPECIFICATIONS

Operating Voltage: 6, 12, 24, 117 V.A.C., or any specified

Power Input: 7.5 Volt Amperes

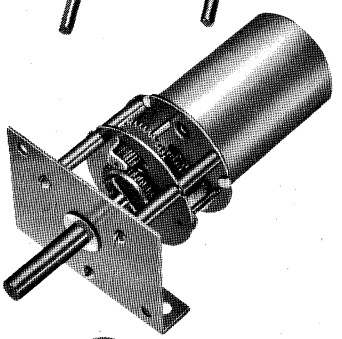
Output: Approximately 5.6 R.P.M.

Torque at Potentiometer Shaft: 10 in./oz. minimum (with decoupler); 21 in./oz. minimum (without decoupler).

Reversing: Accomplished by switching capacitor as shown in hysteresis motor circuit diagram below.

Dimensions: Length: 3.275" (not including shaft) Diameter: 1.531

REVERSIBLE AC GEARHEAD MOTORS



FOR USE WITH ■ Switches ■ Potentiometers ■ Ideal for light industrial and consumer product controls

SPECIFICATIONS

MECHANICAL

Overall Dimensions: Length: 3.275" (not including shaft) Diameter: 1.320"

Shipping Weight: .32 lbs.

Will meet normal industrial environmental requirements.

Mounting: Horizontal standard, vertical optional; bracket provided for chassis mounting and mounting control.

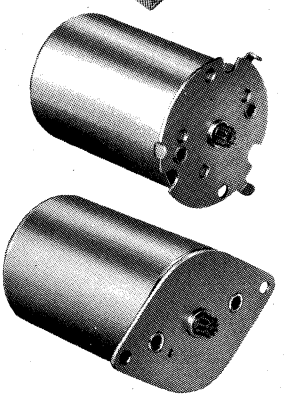
Output Torque: 14 in./oz. at 5.3 and 1.8 R.P.M.

ELECTRICAL

Operating Voltage: 117 volts AC, 60 cycles standard. Available from 6 to 220 volts AC, 60 cycles. D.C. versions available.

Capacitor size: Dependent on input voltage. (Capacitor not part of motor.)

REVERSIBLE AC HYSTERESIS SYNCHRONOUS MOTORS



FOR USE IN ■ Low Power Driving Mechanisms ■ Control Circuits ■ Entertainment Appliances

FEATURES

■ Output shaft configuration can be specified. Standard units provided with gear.

■ Mounting arrangement can be varied to meet customer requirements.

■ Self-lubricating bearings.

■ Aluminum housing.

■ Long life expectancy.

■ Reversing accomplished by switching external capacitor as shown in circuit diagram.

SPECIFICATIONS

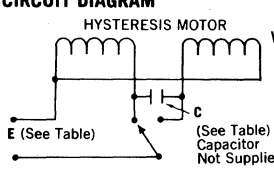
Operating Voltage: 6, 12, 117 V.A.C., or any specified.

Power Input: 7.5 Volt Amperes

Output: Approximately 1800 R.P.M.

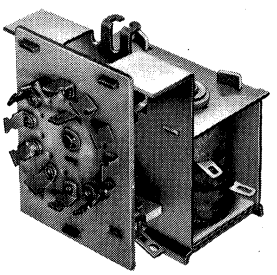
Torque: 0.125 in./oz.

CIRCUIT DIAGRAM



E VOLTAGE	C CAPACITANCE	C VOLTAGE
6	170 MFD	20
12	50 MFD	25
24	16 MFD	50
117	.68 MFD	300

AC & DC STEPPING RELAYS



FOR USE IN ■ Control Circuits ■ Television Controls ■ Hi-Fi, Stereo & Radio ■ Appliance

FOUR TYPES AVAILABLE ■ Uni-Directional A.C. & D.C. ■ Bi-Directional A.C. and D.C.

SPECIFICATIONS

ELECTRICAL

Coil: Wound to any resistance to operate up to 150 volts.

Power Required: 2.5 watts with Plate Sequence Switch (Fig. A); 4.5 watts with Wafer Sequence Switch (Fig. B).

Contact Arrangement: Single Pole 4, 6, 10, 12 or 13 throw sequence. Auxiliary power switch operates at predetermined position of sequence.

Contact Rating: From Dry Circuit to 1 amp at 24 V.A.C. on Sequence Switch. Optional power switch 5 amps at 117 V.A.C.

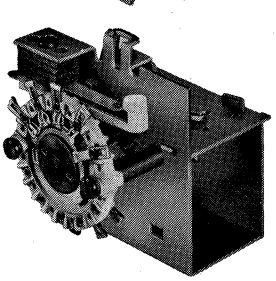
MECHANICAL

Overall Dimensions: Height: 2.200"
Width: 2.190"
Depth: 2.005"

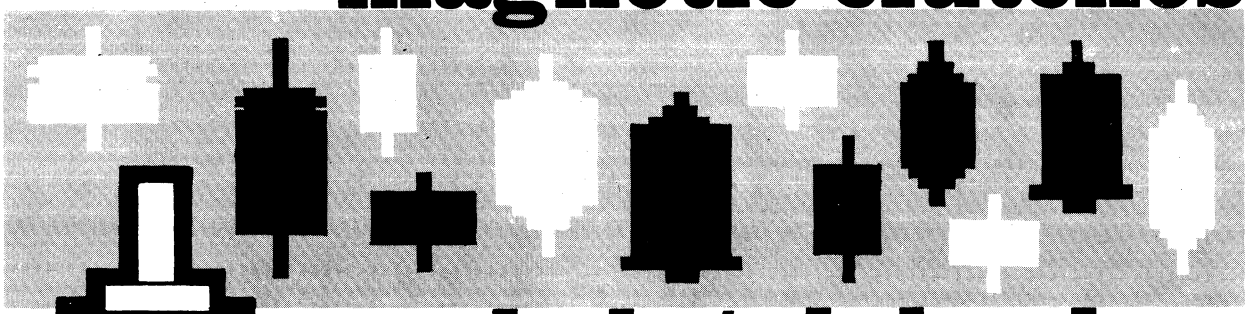
Shipping Weight: 0.27 lbs. Uni-Directional; 0.40 lbs. Bi-Directional

Will meet normal commercial environmental requirements. Standard auxiliary power switch may be omitted.

Mounting: Vertical or horizontal using one screw and two locating tabs.

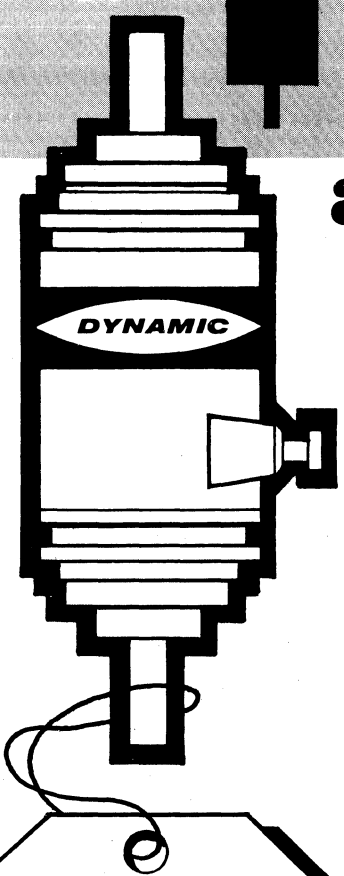


magnetic clutches



and clutch brakes

(frame sizes 5 to 18, operating voltage 24-26 volts DC)



The broadest, most complete off-the-shelf selection of precision magnetic clutches and clutch brakes is always available to fit your servo design requirements. Units are available to be either engaged or disengaged when coil is energized. Dynamic, a pioneer and leader in such devices, provides four basic types of units.

1 **Electro-magnetic friction.** Available in standard and the new wafer length. For electro-magnetic coupling / control requiring high torque to size/ weight ratio. Used in commercial and military projects.

2 **Hysteresis.** Provide extreme stability under all ambient conditions. Free from engagement shock. Output torque is linear to the input control current.

3 **Magnetic particle.** For smooth, shock-free engagement. Low power control for fast responses.

Special orders only.

4 **Eddy current.** For inversely speed sensitive, extremely smooth, shock-free engagement.

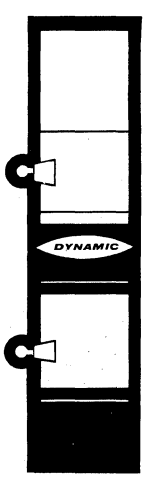
Special orders only.

features

of the clutches and clutch brakes:

- Designed to meet environmental MIL-E-5272C
- High torques
- Long life — in excess of 3,000,000 cycles at 60% full rated torque
- Unaffected by wide temperature ranges
- No fungus nutrients
- No loss of torque when wet from condensation, etc.
- Close concentricity and squareness of shafts to mounting diameters and faces
- No rotation of shafts when engaging or disengaging
- Fast response
- Low breakaway
- No magnetic thrust load
- Epoxy sealing of complete coil provides absolute moisture protection and insulation
- Molded phenolic terminals
- Optional Servo mounts
- Optional flange type mounting adapters

Special units on short notice—however check the extensive Dynamic line first.



unitized modules

Dynamic unitized modules for in-line assemblies include: magnetic clutches and brakes, spring returns, potentiometers, encoders, commutator switches, synchros, gearheads, tachometers and servomotors.

For 50 page comprehensive brochure containing outline drawings, specifications and application data send request on company letterhead.

CHARACTERISTICS

RINGS: Coin Silver 5 AMP ring.
Copper 50 AMP ring.

BRUSHES: Silver Graphite.
Fabricast Grade FAG 180 (80% AG — 20% C)
Two brushes per ring.
Brushes individually removable and replaceable

NOISE: 10 Milliohms dynamic resistance MAX.
5 Milliohms MAX with 4 brushes per CKT.

CURRENT: Noted in tabulated block.
Rating may be doubled with 4 brushes per CKT.

HI-POT: 1200 VAC 60 CYCLE for 15 seconds.

ROTOR: One piece steel sleeve
Ring complement vacuum cast on sleeve as unit with epoxy dielectric.

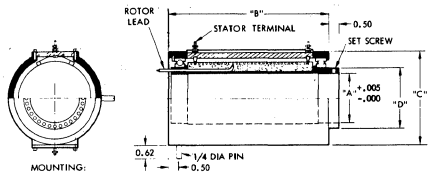
LEADS: 5 AMP Leads — 20 GA. per MIL-W-16878 TYPE "E"
50 AMP Leads — 8 GA. per MIL-W-16878 TYPE "B"

HOUSING: Bell, Bell Spacer and Cover type construction

COVER: Easily removable for brush and ring inspection.

BEARINGS: Shielded or sealed ball bearings.

SLIP RING ASSEMBLY — SELF CONTAINED — RIGID HOUSING



STANDARD METHOD - SLIP RING ASSEMBLY SECURED TO CUSTOMER SHAFT BY SET SCREWS IN ROTOR ASSEMBLY. STATOR RESTRAINED FROM TURNING BY 1/4 DIA PIN IN HOUSING.

OPTIONAL METHOD - STATOR FLANGE MOUNTING WITH DRIVE SLOT IN ROTOR SLEEVE.

CHARACTERISTICS

RPM: Rigid one piece housing eliminates bearing alignment problems at high RPM

RINGS: Coin Silver 5 AMP Rings. Copper 50 AMP Rings.

BRUSHES: Silver Graphite. Fabricast Grade FAG 180 (80% AG — 20% C). Two brushes per ring. Brushes individually removable and replaceable.

NOISE: 10 Milliohms dynamic resistance MAX. 5 Milliohms MAX with 4 brushes per CKT.

CURRENT: Noted in tabulated block. Rating may be doubled with 4 brushes per CKT.

HI-POT: 1200 VAC 60 CYCLE for 15 seconds.

ROTOR: One piece steel sleeve. Ring complement vacuum cast on sleeve as unit with epoxy dielectric.

ROTOR LEADS: 5 AMP Leads — 20 GA per MIL-W-16878 TYPE "E". 50 AMP Leads — 8 GA per MIL-W-16878 TYPE "B"

HOUSING: One piece steel tubing construction.

COVER: Easily removable for brush and ring inspection.

BEARINGS: Shielded or sealed ball bearings.

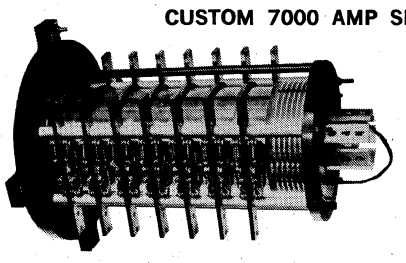
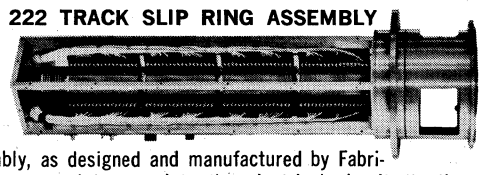
CUSTOM SLIP RING CAPABILITY

CUSTOM 7000 AMP SLIP RING ASSEMBLY



This slip ring assembly, as designed and manufactured by Fabricast, Inc., is used to supply 7000 amperes of current to the rotating mandrel of the world's second largest spin forging machine.

CUSTOM 222 TRACK SLIP RING ASSEMBLY



This slip ring assembly, as designed and manufactured by Fabricast, Inc. was used to complete the electrical circuits to the rotating arm of an astronaut carrying centrifuge.

The unit consists of 50 amp. power, 5 amp. instrumentation and 50 megacycle coaxial modules.

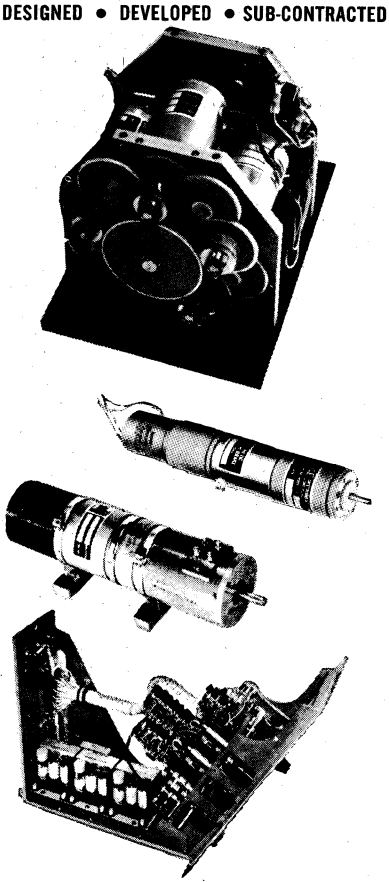
FAE PRECISION ROTARY COMPONENTS

PRECISION INSTRUMENT PARTS AND COMPONENTS AVAILABLE FROM STOCK!

SPECIAL APPLICATIONS

DESIGNED • DEVELOPED • SUB-CONTRACTED



WE MANUFACTURE—

- CLUTCHES
- BRAKES
- CLUTCH-BRAKES
- DIFFERENTIALS
- GEAR HEADS
- SPEED REDUCERS
- BELLOWS COUPLINGS
- GEAR CLAMPS
- GEAR DEVICES
- SERVO PACKAGING

CUSTOM MADE UNITS—

All components can be custom engineered to your specific applicational requirements and MIL specifications.

EXCELLENT DELIVERY—

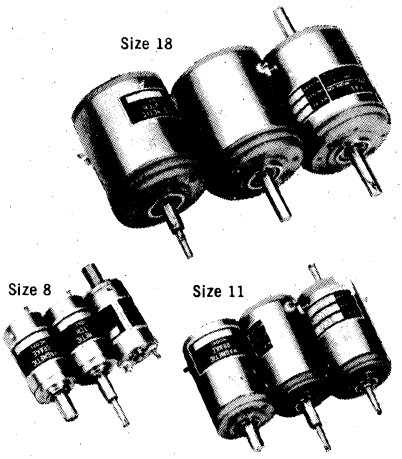
FAE maintains large and complete standard parts inventories. Most popular items are available from stock. Special shafts offer negligible delays.

Engineering Representatives—

FAE Representatives are highly skilled and experienced specialists as well as veteran engineers. Phone or write for immediate service. Consult **eem** for nearest office.

SEND FOR COMPLETE CATALOG ILLUSTRATED WITH DRAWINGS AND DETAILED SPECIFICATIONS

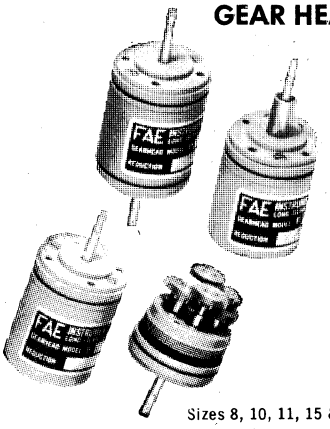
MINIATURE MAGNETIC CLUTCHES • CLUTCH BRAKES • BRAKES



FEATURING—

- ★ Torque range to 100 inch/ounces
- ★ Friction or crown-tooth clutch faces
- ★ Direct action and reverse action types
- ★ Engagement time—3 to 20 milliseconds
- ★ 24-28 Volts, D.C. standard. No delay penalties for special voltages or special shaft configurations.
- ★ Precision ball bearings used throughout
- ★ Designed to meet MIL-E-5272A environmental specifications

GEAR HEAD AND SPEED REDUCERS

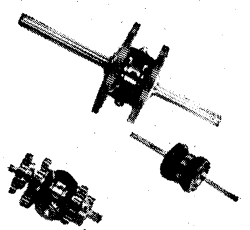


Sizes 8, 10, 11, 15 & 18

FEATURING—

- ★ Precision ball bearings throughout
- ★ Hardened stainless Class II precision gearing
- ★ Large selection of standard ratios. Special exact ratios for timing systems available
- ★ Integral safety slip clutch. Eccentric output shafts, pinion or special output shafts available.
- ★ Special frame sizes, adapters for all non-standard motors

HOLLOW AND SOLID SHAFT PRECISION DIFFERENTIALS

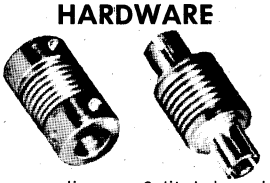


All Sizes to 1/16 Shaft Dia.

FEATURING—

- ★ High accuracy and long life
- ★ Precision ball bearings used throughout
- ★ Hardened stainless steel gearing. Choice of end gears to order
- ★ Simple pinion gear adjustment for desired backlash vs. starting torque
- ★ Zerol 3-bevel, extremely rugged high torque models available
- ★ Sub-miniature 3/32 enclosed planetary type available

PRECISION MINIATURE HARDWARE



Bellows couplings • Split hub and solid hub • Phosphor bronze • Induction soldered Palladium plated • All sizes plus any special.

HARDENED STAINLESS STEEL BALANCED CLAMPS

ALL SHAFT AND HUB SIZES AVAILABLE

FAE INSTRUMENT CORPORATION 16 NORDEN LANE HUNTINGTON STA., N. Y. 11746

SPECIALTY MOTORS

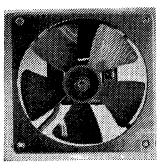
NEW! Cooling-fan Assemblies

For Electronic-equipment Cabinets

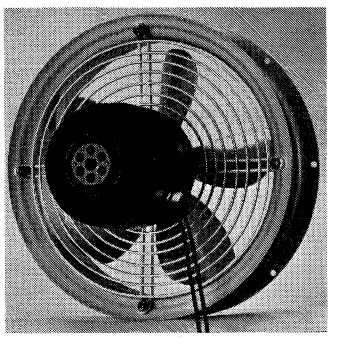
New 100 CFM fan assembly is powered by reliable GE shaded-pole motor and is equipped with a durable, five-blade molded fan and brackets. The two-pole Unitized® motor features a recirculating oil lubrication system for extra long bearing life. The assembly is only 2⅞ inches deep from mounting plate to end of motor, and measures slightly under 4¾ inchs square with mounting holes 4⅛ inches between centers.

500 CFM fan assembly is powered by GE unit-bearing, four-pole, shaded-pole motor with recirculating oil lubrication system, and includes five-blade metal fan and grill. Measuring less than 6¼ inches deep from front to back, it has a ten-inch diameter fan venturi with eight holes around venturi flange for easy mounting. Also available with two-pole motors for even greater air-flow.

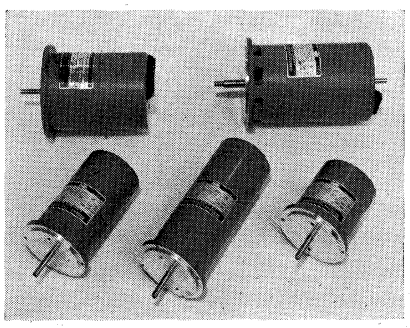
The units, which require only simple ON-OFF switches for operation, are designed for years of quiet, dependable, continuous-duty operation without maintenance. These blowers are available for 115- or 230-volt, 60-cycle duty. 50-cycle designs are available with somewhat lower output. For complete information, write for Bulletin GEA-8258.



100 CFM fan assemblies



500 CFM fan assemblies



NEW . . . ADVANCED

Hyper-Servo MOTORS* | ***for electronic drives***

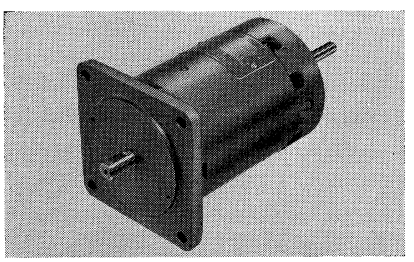
For such demanding computer applications as single-capstan tape transports, disc packs, high-speed printers, card sorters and card readers, General Electric has created this new line of high performance d-c servo motors. The motors respond in less than one millisecond with acceleration rates faster than any motor previously offered by General Electric. Write for Bulletin GEA-8251. Characteristics: Torque-to-inertia ratio approaches one-half million rad/sec^2; pulse torque-to-inertia ratio exceeds one-half million rad/sec^2; inertial time constant is as low as one millisecond; diameter is 3.4 inches and larger; weight is as little as five pounds.

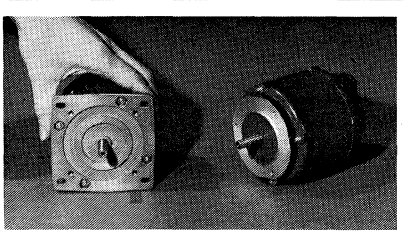
* Trade-mark of the General Electric Company.

Reel Drive Motors

For Computer Tape Transports

GE's full line of fhp direct-current motors includes four frame sizes widely used for reel drives: 3⅝″, 3 13/16″, 4⅝″, and 6⅝″ diameters. Special end mountings and shaft extensions meet exacting application requirements. Series, split-series, compound, shunt, and compensated-shunt winding designs offer a broad design choice. Stall torque ratings from 3 to 120 ounce-feet and higher span various application needs, and motor voltage requirements are normally matched to your system design. Write for Bulletin GEC-1795.





SYNCHRONOUS, REVERSIBLE

Low-speed Gearless Servo Motors

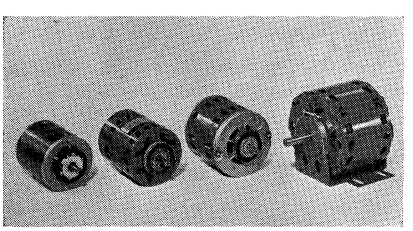
For servo, stepping, and other low-speed high-torque applications, General Electric provides a line of low-speed, synchronous inductor motors in 4⅛-inch diameter models. These motors provide a choice of 50, 75, 150, or 250 oz. in. torque at exactly 75 rpm without the use of speed-reducing devices. The motors provide fast starting, stopping, and reversing for 50- or 60-cycle applications at either 120 or 240 volts. For complete information write for Bulletin GEC-1294.

Small, Compact, A-c Induction Motors

Provide High Power in a Lightweight Package

Small in size, but high in reliability, General Electric compact, powerful, a-c induction motors are available in four sizes from 15 mhp to ½ horsepower. These reversible motors provide consistent, quiet, long-life operation in any mounting position. Synchronous motors for constant-speed applications are available in 3-, 3.4-, and 3⅞-inch diameter models. Special designs can be provided for various torque motor applications such as tape reel drives. For dimensions, features, ratings, and application information, write for Bulletin GEA-8254.

Typical Electronic Applications: Computer memory drums, tape reels, capstans, disc filers, card stackers, card printers, card punchers, and data cells.



For complete information contact nearest GE Sales Office listed on inside front cover, or write to General Electric Co., Section 998-50, Schenectady, N. Y. 12305.

APPLIED AC MOTOR EQUIPMENT

STANDARD STOCK GEARMOTORS

Gaylord-Rives Standard Gearmotors feature rugged, economical, planetary gearheads in many different ratios, driven by standardized Size 13 high quality production motors. Maximum package length is 3.062 inches, and mounting is by means of 1⅜" diameter forward flange, with four (4) holes. Shaft diameter is .1875, and standard shaft length is 1.00 inches from the mounting. Write for complete data in Bulletin GM-1301.

TYPE BCH60 SYNCHRONOUS GEARMOTORS 115V, 60 HZ., 1ϕ

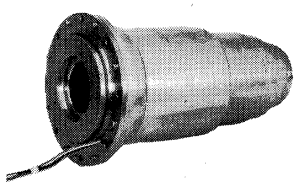
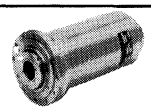
HOLLOW SHAFT MOTORS





Gaylord-Rives offers a complete service in the design, development, and supply of Hollow Shaft Motors for use in the fields of radar, optics, and other demanding military and special industrial applications. Many special designs, not listed here, have already been developed, and are available to the system designer. Special housing and bearing materials, adapters for waveguide couplings, balancing services for attached loads, and other engineering services are also provided.

Inquiries regarding special motor designs are solicited. Many special types not shown have been produced and are available for use in optics, infra-red, underwater application, valve-drives, actuators, etc. etc. Special units also available for space use, or extremely high-vacuum environment. New designs will be proposed for specific applications, including high-temperature, separate rotors and stators, high frequencies, etc.

Special Motor Development

Write for complete catalog information — special proposals promptly supplied.

HORSEPOWER

or

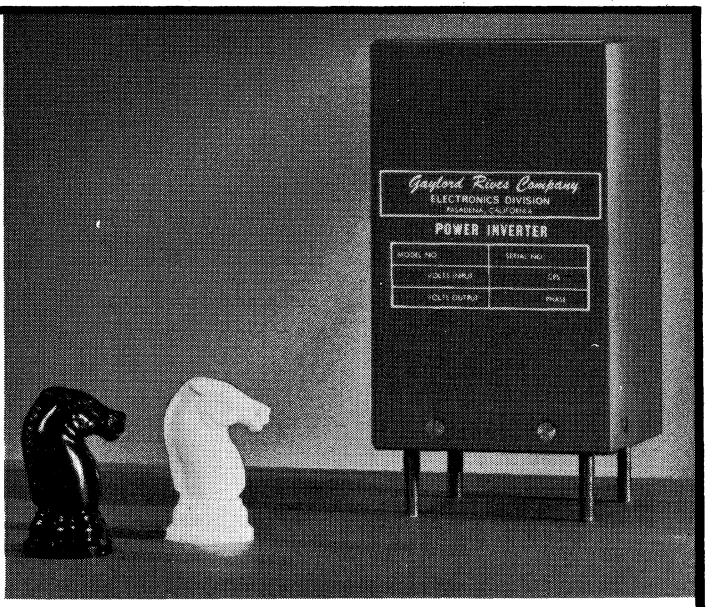
Mini-power?

High motor power, or low, or all through the range between, Gaylord-Rives has matched inverters and motors to meet the demanding specifications for modern inverter/motor systems. All of the motors are also available with precision gearing, allowing an extremely wide range of speeds and torques. Multiple-speed systems, described in separate bulletins, solve many system problems for the designer interested in wide-range dynamic performance.

SPECIAL FEATURES AVAILABLE

- Temperature Compensated Frequency Control to ±¼%
- Mu-Metal Housings for High Shielding of Unit
- Simple, Instant Reversal of Phasing in Two-phase Units
- External Adjustment of Inverter Frequency
- Reverse Polarity and Short-Circuit Protection
- Units can be synchronized from external signal

Fully Developed **Low Cost** **Dependable**



GAYLORD-RIVES MOTOR/INVERTER SYSTEMS

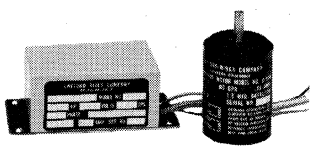
Truly matched, highly efficient and reliable motor and inverters are now available for the system designer, removing problems of coordination between these items, and allowing motors and inverters to work together for the best end result.

Gaylord-Rives **matched motor/inverter combinations** are produced for operation from the 1 watt D.C. range to the 500 watt range, with drive frequencies from 30 CPS to 2000 CPS for both synchronous and induction motors.

Coordinated design between inverter and motor results in proper voltage and current wave shape to the motor, and Gaylord-Rives **Full-Phase Drive** design increases motor performance through elimination of bi-filar motor windings.

Several different package sizes are available, allowing freedom in selection of inverter form factor and correct physical inverter size for the motor to be driven. All units are completely solid-state, mechanically rugged, and components are totally encapsulated against environmental effects.

TYPICAL SYSTEM PERFORMANCE



MODEL SIG-24 INVERTER
B-177 MOTOR

System Input: 28 V.D.C.
Motor Output: 1.8 oz. in Torque at 12,000 RPM

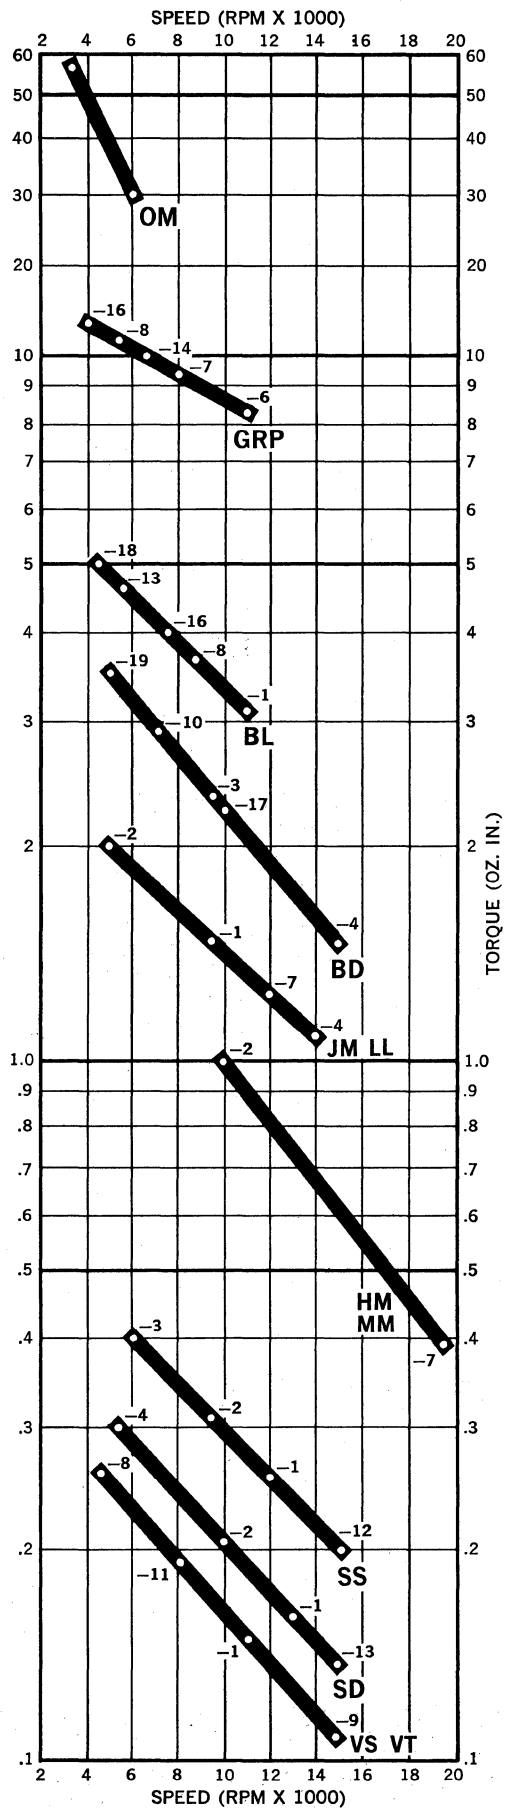
RELATIVE SIZE & DIMENSIONS



Your best source for MIL-spec D.C. motors

Globe makes it easy to get the motors you need by the thousands or one at a time. Most applications requiring small d.c. motors can be met with Globe catalog standard units. A few standard armatures are shown. Integral geartrains can be supplied in a variety of ratios. We also maintain a shelf stock of many units for 24-hour prototype shipment. Globe's complete line of compact, permanent magnet and wound field motors adds up to your best source for precision miniature d.c. motors and gearmotors. Request catalog A, for details.

SLIP RINGS
Solid Coin Silver

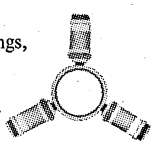
Standard Coin Silver Slip Rings, both *cylindrical* and *flat* types, are illustrated at right. We recommend the cylindrical type rings with three brushes per ring . . . spaced at 120°. The cylindrical type are designed for press fitting over standard steel shafting. The flat type rings are designed for nesting either on an insulated plate or for molding into insulation. Insulated slip rings of either type or slip-ring assemblies can be furnished with leads attached.

No. 168 Series flat type **to 20" O.D.**

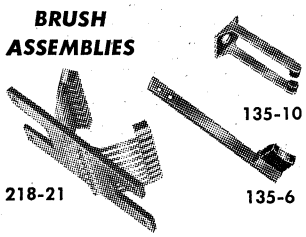
Standard "Flat" rings have ¼" radial contact surface and ⅛" radial spacing between adjacent rings.

No. 116 Series cylindrical type **to 36" O.D.**

Copper Slip Rings, flat or cylindrical, are available.



BRUSH ASSEMBLIES



CONTACTS

GRAPHALLOY, because of its inherent non-welding and arc-quenching characteristics, is used widely for contacts. Ask for Data Sheet 950.

BUSHINGS, Oil-free

Replace oil-lubricated bushings in synchros, instruments, timers and missiles.

Advantages: 1) Lower friction at room temperatures. 2) No oil to solidify at low temperatures. 3) No oil to carbonize at prolonged elevated temperatures.

*Ask for Data Sheets 270 and 277 on Miniature Bronze-*GRAPHALLOY *Bushings.*

CONNECTORS

(garter springs)

These silver-plated coil spring Connectors make for positive electrical connection to the brass body of the brush holder by snapping into the groove on the holder. The connecting lead can be pre-soldered to the Connector.

GARTER SPRING CONNECTORS	BRUSH SIZE	BRUSH HOLDER NO.
127-9	1/8" sq.	14326
127-9	5/32" sq.	11509

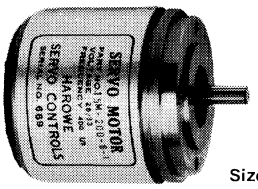
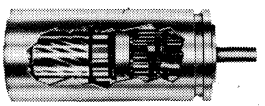
Harowe SERVO, STEPPER & SYNCHRONOUS MOTORS

SERVO MOTORS

- Standard: Sizes 5, 8, 10, 11, 15 and 18 . . . 60 and 400 Hz
- Braked, viscous-damped, inertially damped, and high acceleration types available
- Also BuWeps and QPL types
- 2, 4, 6, or 8 poles
- Wide choice of torque and speed ratings plus mechanical options
- Low starting voltage: typically 2% of control voltage
- High torque per watt efficiency
- Integral-gearhead types have one-piece stainless steel case for better cooling.
- **Throughbore** construction guarantees maximum alignment accuracy by simultaneously grinding the I.D. of stator, bearing cap, and housing in one pass.



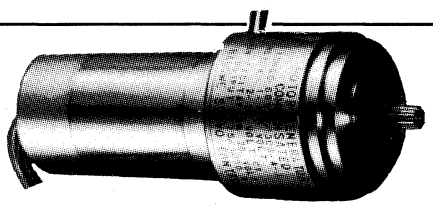
Size 15



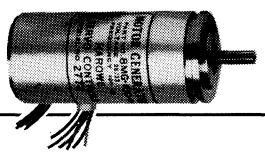
Size 8 with Integral Gearhead

MOTOR-GENERATORS & INTEGRATING TACHOMETERS

- Standard: Sizes 5, 8, 10, 11, 15, and 18 . . . 60 and 400 Hz
- Damping, rate, and integrating types available
- Also high acceleration — low inertia types
- Short length designs available for space-critical applications
- Outputs up to 4 volts/1000 rpm (uncompensated types)
- **Integrating Tachometers** — Temperature-compensating thermistors operate below 10% of rated dissipation for long life. Typical linearity: ±0.25% from −55° to 125°C.



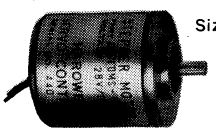
Size 11 Integrating Tachometer with Size 15 Motor



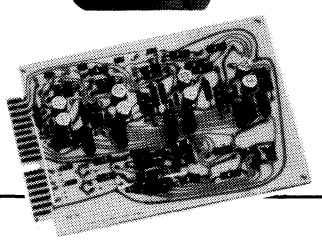
Size 8 Motor-Generator

STEPPER MOTORS & CONTROLLERS

- Standard: Sizes 5, 8, 10, 11, 15, 18 and 23
- High stepping rates — a product of high stall torques and low rotor inertia
- Permanent Magnet and Variable Reluctance types
- Stepping rates to 1000 steps/second synchronizing; 8000 slewing
- Step angles of 15°, 30°, 45°, 60°, and 90° standard
- Stepping accuracy — 2% non-cumulative
- **Complete line of logic controllers** incorporate Schmitt trigger circuit permitting either sine or square-wave inputs. Industrial types employ printed circuit cards; military types in hermetically sealed cans.



Size 10 Stepper Motor



Industrial Type Controller

SYNCHRONOUS MOTORS

- Sizes 5, 8, 10, 11, 15, 18, 23 and 25
- Single, 2, and 3-phase winding; 2 to 8 poles
- Patented design gives highest torque per watt
- Pull-in torque always exceeds pull-out torque — assuring synchronization
- BuWeps and pancake types
- Special designs for fast acceleration, minimum power input, minimum flutter
- Available with integral gearheads — motor and gearhead combinations are the shortest available
- All motors can be driven by sine or square-wave sources.

Size 11 Synchronous Motor

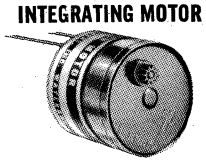
H·S·I® ELECTRO-MECHANISMS

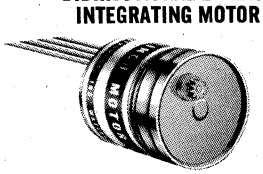
Advanced concepts for integration of electrical and mechanical energy into useful components and systems.

SERIES 33000 "BIG INCH" SINGLE PHASE, SYNCHRONOUS INTEGRATING MOTOR



Ideal drive for elapsed time indicators, stop clocks, pulsers and interrupters, chart drives. **Fast Start-Stop:** Rotor locks in on first line frequency cycle; stops instantly without coast. **Compact:** Approximately 1" diameter by 1" long. **High Torque:** Higher than many motors twice its size. **Low Wattage:** One watt input at rated voltage. Standard voltage ratings 20V and 115V 60 Hz. Cool operation. **Unidirectional:** Shaded pole starting. No mechanical no-backs. **Sealed Gears:** Heavy duty, permanently lubricated. Standard speeds 360, 300, 60 and 3.6 RPM. **Low Cost:** For high volume applications. Tooled for mass production.
Reference: Bul. No. 33-1

SERIES 33600 "BIG INCH" BIDIRECTIONAL 2-PHASE INTEGRATING MOTOR

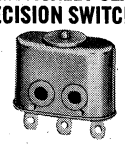


Instantly reversible by switching capacitor from one coil to the other.

The fast start/stop and reversing characteristics of 33600 series motor makes it ideally suited for control functions where shafts, potentiometers, indicators, etc. must be precisely positioned.

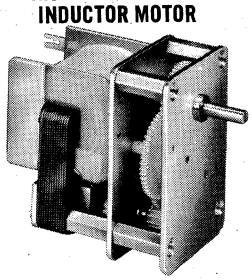
The motor can "inch" in either direction in small increments and stop without coast. **Compact:** Approximately 1" in diameter by 1¼" long. Standard voltage ratings 20V and 115V 60 Hz 2 watt. Other characteristics same as for 33000 series motor.
Reference: Bul. No. 33-2

SERIES 6100 HERMETICALLY SEALED PRECISION SWITCHES



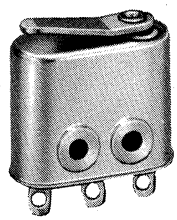
Patented Elastomer Seal and one-piece snap action blade performs reliably under extreme vibration conditions. **Temp. rating:** −65° +300°F. Available to +400°F. **Electrical ratings:** 28 VDC/115 VAC. 5 amp resistive, 3 amp inductive. Meets requirements of MIL-S-8805. **Actuators:** Leaf, roller, toggle and push button. Low operating force.
Reference: Cat. No. 72

SERIES 38 A.C. SYNCHRONOUS INDUCTOR MOTOR



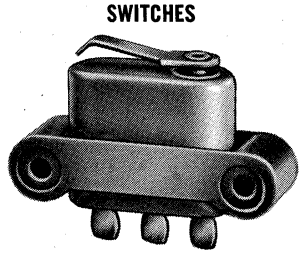
High Torque: Low power input. **Instant Start:** Locks in with line frequency within one cycle. No mechanical device needed to insure correct rotation. Readily adaptable to chart and other drives requiring constant speed output. **Compact:** 1¼" x 1 13/16" x 2". Standard speeds 60, 30, 20, 10 rpm.
Reference: Bulletin No. 38-1

SERIES 6300 HERMETICALLY SEALED PRECISION SWITCHES



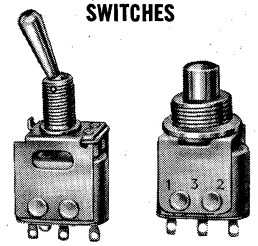
Housing: Corrosion resistant housing with integral wobble diaphragm. One piece snap action blade as in 6100 Series, proven in years of performance. **Standard rating:** −85°F +300°F. **Electrical ratings:** 28 VDC/115 VAC. 5 amps resistive, 3 amps inductive, 3 amps motor. Meets requirements of MIL-S-8805. **Operating force:** recommended for extreme environmental conditions.

SERIES 6200 HIGH TEMPERATURE HERMETICALLY SEALED SWITCHES



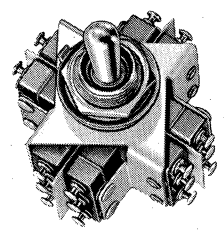
With metal to metal and glass to metal seals corrosion resistant steel base and housing heliarc welded to avoid use of fluxes normally used in solder sealing. Actuator operates switch through metal diaphragm integral with housing. **Standard rating:** −65° +660°F. **Electrical ratings:** 28 VDC/115VAC: 5 amps resistive, 3 amps inductive, 3 amps motor. Meets requirements of MIL-S-8805.
Reference: Cat. No. 72

PUSH-BUTTON AND TOGGLE ACTUATED, HERMETICALLY SEALED SWITCHES



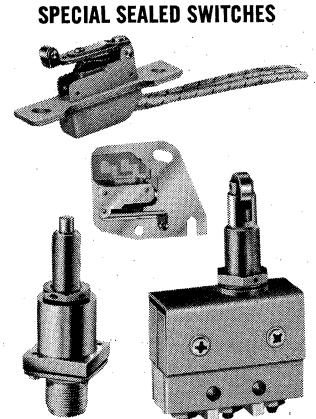
Incorporate Series 6100 basic switch to meet requirement of MIL-S-8805, enclosure 4. Also available with 6300 Series switch to meet enclosure 5 requirements of MIL-S-8805. Toggle switches are available in various configurations of one-pole and 2-pole, 2-position and 3-position. Push-Button switches are single or double pole, momentary. Corrosion resistant materials used throughout.
Reference: Bul. No. 61T-1

SERIES 5300 4 WAY TOGGLE SWITCH



2 pole double throw each position. Center off. Momentary contact, maintained contact, or combinations. 28 VDC/115 VAC: 5 amps resistive, 3 amps inductive. **Reference: Bul. No. 53T-3.** Available with water tight panel seal.

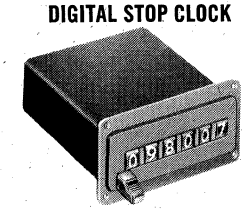
SPECIAL SEALED SWITCHES



H.S.I. has had years of experience in providing answers to difficult switching problems. Let our engineers help you.

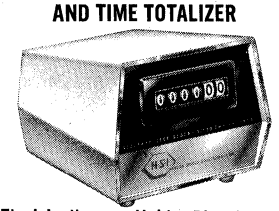
For information on all product lines, send for Catalog 101; and for complete data on individual products, refer to Bulletin Number indicated.

SERIES 42 HIGH SPEED DIGITAL STOP CLOCK



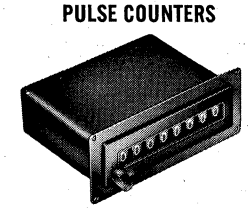
Planetgear® totalizer measures or integrates time intervals in 1/100 second increments. Operates on 115V 60 Hz line power. Time readings displayed in large easily read numerals. Available with 6 or 8 digits. Non-reset, manual reset or electrical reset. Accurate — long life.
Reference: Bul. No. 42-3 for panel mounting models.

SERIES 42005 DIGITAL STOP CLOCK AND TIME TOTALIZER



Electrically resettable Planetgear® totalizer enclosed in attractive instrument type case with line cord, remote reset switch and cord for laboratory use. Totalizes in 1/100 second increments to 9999.99 seconds on 115V 60 Hz supply.

SERIES 44 PLANETGEAR® PULSE COUNTERS



Non-Reset, Manual Reset, Electrical Reset Models. AC or DC comprise unique Planetgear digital counter driven by an HSI stepper motor. Large 5/16" high figures easily read. Long life, reliable. Pulse rate: up to 40 PPS standard; up to 100 PPS on special order. 6 and 8 digits standard.
Reference: Bul. No. 44-1R

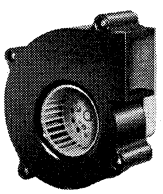
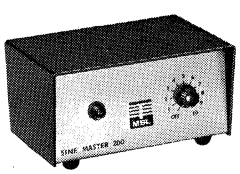
- **All metal construction**
- **Fans standard mount on 4⅛" centers**



SAME-DAY SHIPMENT OF STANDARD MODELS

NEW SINE MASTER SOLID STATE AC MOTOR SPEED CONTROLS for HOWARD Fractional HP Motors

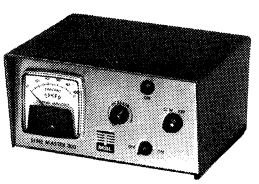


SINE MASTER 200

Regulated speed control for shaded pole induction and universal motors.

- Motor speed regulated by controlling the energy input to the motor
- Power is self-controlled to meet motor demands
- Maintain rated starting torque over entire control range
- Computer-mated to selected Howard fhp motors
- Priced competitively with DC-type controls
- Eliminate brush problems and maintenance of DC motors
- Electrical limit of 130 VRMS maximum and 4 amps in 40° C ambient
- Speed range of 20:1 for two-pole induction motors

COMPLETE DATA SHEETS ON REQUEST



SINE MASTER 300

Automatic, governed speed control for permanent capacitor induction motors, universal and shaded pole induction motors.

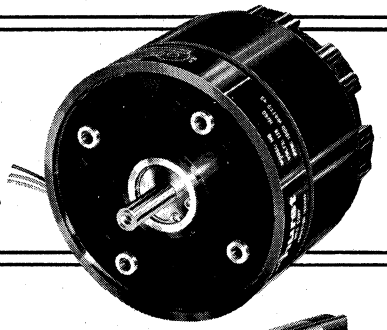
CALL ON hurst-POWER HEAVY DUTY HYSTERESIS SYNCHRONOUS MOTORS

HEAVY DUTY SYNCHRONOUS MOTORS

hurst NEW! Honey Bee

Ideal for tape drive applications. Inverted rotor construction for reduced flutter. 1/50 HP, start torque 12 in. oz. at 1800 RPM; pull in torque 11 in. oz. 40°C heat rise, full load. Sealed ball bearings. Stainless steel shaft 5/16" x 1". (Special shafts available.) Also available at 900 RPM.

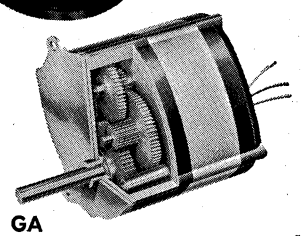


MODEL HB

hurst MODEL GA
600 IN. OZ. OF TORQUE AT 1 RPM (Reversible)

For long life and higher torque applications. Offers instrument manufacturers high performance and economy. Wide range of speeds.

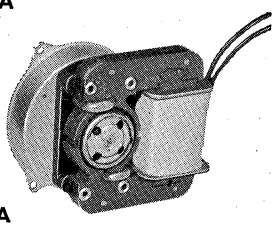
- HEAVY DUTY GEARING
- NO LUBRICATION REQUIRED
- CAPACITOR INCLUDED



MODEL GA

hurst MODEL EA
150 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional)

Open frame, shaded pole, extremely cool running. Bronze bearings, brass gears, hardened steel pinions and wheel shafts, stainless steel output shaft. For dependable, low-cost timing applications. Wide range of speeds.



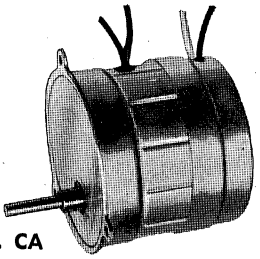
MODEL EA

hurst MODEL DA
120 IN. OZ. OF TORQUE AT 1 RPM (Reversible)

Timing accuracy both clockwise and counter-clockwise, SPDT switching. Case 2½" diam., 1¾" long. Will not overheat. Capacitor included. Wide range of speeds.

hurst MODEL CA
100 IN. OZ. OF TORQUE AT 1 RPM (Reversible)

Features 1200 rpm rotor speed for quiet performance. Extremely versatile (animated displays, program instruments, outdoor advertising, etc.). Wide range of output speeds. Will not overheat. Capacitor included.



MODEL CA

hurst MODEL SM
RATED 40 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional)

For tough jobs demanding accurate timing. Excellent shock and vibration resistance. Starts instantly at full torque. Will not overheat. Wide range of output speeds.

hurst MODEL PC-SM / MODEL PC-DA
CLUTCH AND BRAKE MOTOR 40 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional) / **CLUTCH AND BRAKE MOTOR 120 IN. OZ. OF TORQUE AT 1 RPM (Reversible)**

Both are positive clutch and instantaneous brake motors. For extremely fast starts and stops. Motor runs continuously with clutch and brake controlled by switching actuator only. Clutch starts output shaft within 20 milliseconds; brake stops output shaft within 1/5° at 1 rpm; within 12° at 60 rpm. Motor on AC voltage; actuator AC or DC. Either can be supplied in any voltage combination when motor is AC. Will not overheat. Wide range of speeds.

MODELS DA SM

hurst MODEL AR-DA / MODEL AR-SM
100 IN. OZ. OF TORQUE AT 1 RPM (Reversible) / **40 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional)**

Automatic reset. Planetary-type clutch operates directly upon output shaft. When de-energized, shaft is manual or automatic reset. Addition of external return spring to output shaft provides automatic reset on either model. Motor on AC voltage; actuator on AC or DC. Either can be supplied in any voltage combination when motor is AC. Will not overheat. Capacitor included. Wide range of speeds.

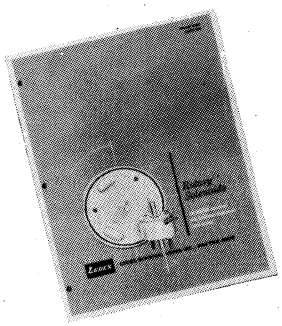
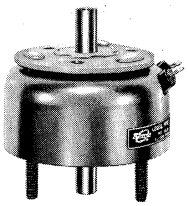
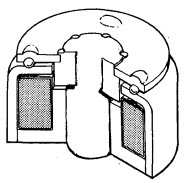
OVER 350 STOCK MODEL SOLENOIDS

LEDEX ROTARY SOLENOIDS







Ledex Rotary Solenoids step, turn, pull, push, index, hammer, punch or trigger — whenever there's a need for fast and dependable direct rotary action. Known for high force-to-size, ability to resist shock. Family of 8 basic sizes with right and left hand strokes from 25 to 95 degrees. Torque to 117 pound-inches. Wide choice of stock models offer economy and quick starts on prototypes. LIFE: 100,000,000 actuations.

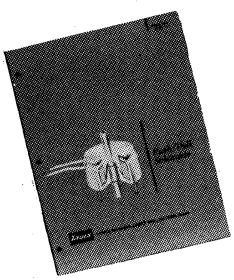
* 3B and 5B have random wound coils; all other are precision wound.

LEDEX PUSH/PULL SOLENOIDS



Ledex precision push/pull solenoids are designed for extremely rapid response and high force to size, and are engineered to respond in less than 10 milliseconds at intermittent duty. They are available with conical or flat-face plungers. A comparison of the two designs (table below) demonstrates the performance at 1/10 duty.

For short strokes, the flat face model really packs a wallop. The conical face gives more mid-range punch.

Catalog lists 35-stock models for quick starts on prototype work, technical data, force and stroke curves, and graphs showing hold-in resistor values and resistance factors.

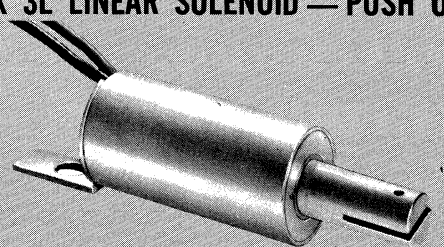
TYPICAL PERFORMANCE OF LEDEX SIZE 5, FLAT FACE SOLENOID

LEDEX 3L LINEAR SOLENOID — PUSH OR PULL



The 3L linear solenoid has an output force of 1.75 to 15 pounds, depending on input, stroke, and duty cycle. Originally developed for the automotive industry, it offers top performance at economy prices. Stroke from .040 to .50 inches. Stock model part 171707-001 for 24 to 56 VDC and 171707-008 for 12 to 24 VDC, priced at $5.00; below $3.00 in lots of 500 or more.

SERIES 50 STEPPING MOTORS with torque to 160 ounce inches

Running torque of the New Series 50 design is about four times that of stepping motors previously available from Ledex Inc. A key to the superior performance is in a newly developed tooth clutch drive. It has a positive action, self-locking drive that contributes to greater usable torque output. For friction loads the clutch provides a positive grip (no slip). When driving inertia loads, the drive also acts as a built-in electromechanical clutch brake to eliminate the natural tendency of overdriving at the end of a step.

Torque of the Series 50 stepping motor is further increased by the incorporation of a new spring-loaded ball detent, accurate to ±1°, non-accumulative. This accuracy provides near-perfect alignment of the internal mechanism to assure consistently high starting torque.

Engineered for construction simplicity and economy, all parts are permanently lubricated and completely enclosed for protection and tamper-free operation. Minimum life expectance is three million steps. For bidirectional models this means three million steps for each end.

The Series 50 stepping motor is designed for uniform torque distribution throughout the stroke. A common output shaft permits direct coupling of a load at one end and a manual knob or position indicator at the opposite end. The shafts of both unidirectional and bidirectional models can be manually turned in CW and CCW directions.

Some typical positioning uses include potentiometers, counters, switches, tape advances, gear trains, valves, cams, gate actuators, indicators, governors, and a variety of indexing and control mechanisms.

18 POSITION, 20° STEP INCREMENTS

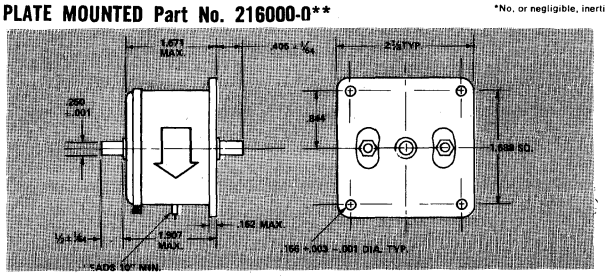
TOP CURVE When friction component of the load is high in the beginning—as in driving a valve. Lower curve applies when friction load is consistent throughout the stroke.

The number of copper wire turns and the current magnitude determine torque available.

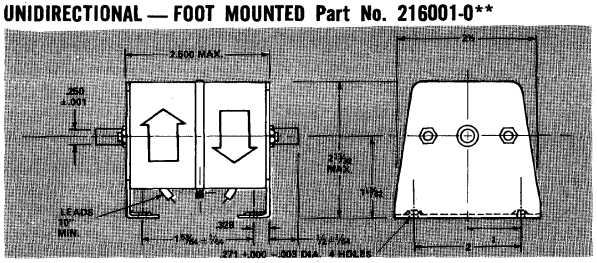
$$\text{Ampere turns} = \frac{E}{R} \times \text{Turns}$$

With E, R and number of turns given for each coil at specified operating conditions, using these curves it is possible to interpolate torque output at other operating conditions.

UNIDIRECTIONAL — PLATE MOUNTED Part No. 216000-0**



UNIDIRECTIONAL — FOOT MOUNTED Part No. 216001-0**



**To order a stepping motor same as a stock model but with a different coil awg, substitute the awg desired for the last two digits of the part number.

APPROXIMATE PRICE RANGE*

	Unidirectional	Bidirectional
1 to 9 stock models	$23 - $24	$37 - $39
1000 production	$10 - $12	$16 - $18

* Contact factory for firm prices.

How to use performance data

EXAMPLE 1: Load is consistent friction of 32 oz.in. The stepping motor must step as rapidly as possible for a minute or less, then is allowed to rest for a minimum of 30 minutes. Input is 24 VDC.

From the performance chart (short period of operation —maximum speed), 2730 ampere turns are required to obtain 20 steps per second. The ON pulse at this speed would be 30 ms, OFF interval 18 ms. Referring to coil data and the lower section of the chart, the coil for a 24 VDC stepping motor to operate under these conditions is 24 awg. Unidirectional stock model is 216000-024.

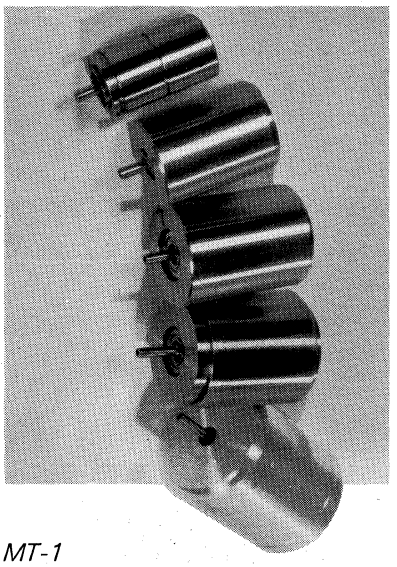
EXAMPLE 2: Load is consistent friction of 64 oz.in. The stepping motor must step for an extended period (continuously or for more than one minute). Input is 120 VAC rectified (90-100 VDC). From the chart under 1/10 duty cycle 2730 ampere turns are required to move the 64 oz.in. load. The ON pulse is 42 ms and the OFF interval is 398 ms, for a stepping rate of 2 steps per second. Referring to the coil data and the lower section of the performance chart, the closest operating voltage value between 90 and 100 is 96 VDC. Coil awg is 30. Bidirectional stock model part number is 216001-030.

THE BASIC DIFFERENCE between the "extended" and "short" periods of operation columns is in the length of the OFF interval and the speed obtainable. A longer OFF interval is required between ON pulses during sustained or continuous operation to allow for coil cooling. For short periods (one minute or less), the OFF interval is reduced to a minimum, but a 30 minute cooling period is required between operations.

Kintron MOTORS

PRECISION INSTRUMENT AC/DC

Kintron motors are custom designed for applications where efficiency and precision are particularly important . . . meeting MIL and other stringent specifications. Quick response for prototype requirements.



AC

HYSTERESIS SYNCHRONOUS — *Type AH*

Frame Sizes	*5, 8, 10, 11, 13, 15, 18, 20*
Wave Shape	*Square or sine wave*
Frequency	*20 to 1200Hz*
Phases	*1 (with capacitor), 2 or 3*
Poles	*2, 4, 6, 8, 12, 16*
Efficiency	*To 55% for 4 poles (1200 rpm) @ 400 Hz*
Windings	*Single or bifilar. Multiple windings for 2 or 4 speed operation (as high as 8:1 speed ratio).*

Similar specifications to above

SERVO — Low Inertia *Type AS*

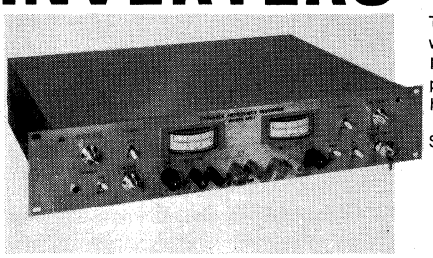
TORQUERS *Type AT (pancake configuration)*

DC

PM MOTORS — *Type DM* — High efficiency, 6-28 VDC, 2000 to 25,000 rpm.

HIGH RESPONSE SERVO MOTORS *Type DMT* — Sophisticated position servo systems customized for each application. Utilizes high resolution optical tachometer feedback.

INVERTERS



TEST INVERTER — Lab Type — *Model MT-1*

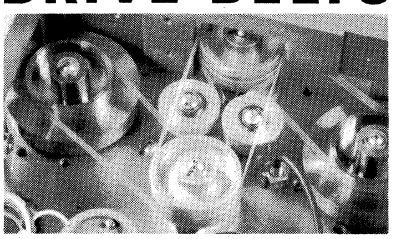
The MT-1 is a test instrumentation inverter, variable frequency, square wave power source for operating and testing small instrumentation motors. It may be used for any purpose requiring one or two phases of square wave power 90 degrees apart. Of prime value in quality assurance testing of hysteresis synchronous motors and engineering experimentation.

Specifications

Input: *115 volts AC, 60 cycle, single phase.*

Output:
(1) AC voltage w/equivalent DC voltage readings on two meters 0-15 scale and 0-45 scale.
(2) Frequency range adjustable from 55 Hz to 1250 Hz.
(3) 2 Phase, reversible by panel switch.
(4) 150 Watt output.

DRIVE BELTS

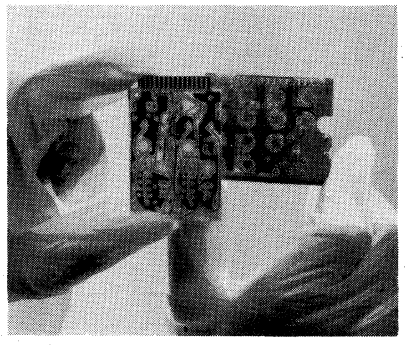


SEAMLESS — Mylar*/ Polyurethane / Kapton*

Ultimate in smooth, low flutter, precise power transmission due to uniform thickness — ideal for tape recorders, servo systems, speed reduction systems, etc. PERMIT SIMPLIFIED DESIGNS: 15:1 ratio stages (or greater) — precise/stable belt length eliminates need for tension idlers — direct drives from shafts as small as 0.040 inch. BETTER DRIVE: Over 20,000 PSI tensile strength — flexure to 10^6 belt cycles — stable, no creep, no set, no stretch — high immunity to environment. WIDE RANGE OF SIZES: 1 to 100 inches circumference, 0.05 to 1 inch width (max: 5% of belt length), 1, 1.5, 2, 3, 5, 7.5, 10 and 14 mils thickness. All orders are computer-analyzed at no charge, assuring system design validity.

*DUPONT TRADEMARK

PRINTED CIRCUITS



HIGH QUALITY — *Conforming to MIL-Q-45208, MIL-5511O & MIL-P-275*

Kintron manufactures a full range of single- or double-side, plated-through, multi-layer printed circuit boards and flexible circuits. Laminating techniques assure precision registration and flatness. Analytical and research chemistry lab (resident chemist) supports printed circuit function, maintains qual levels. Short run capability. Modern facilities and highly-qualified staff of designers, process specialists and technicians mean that your most exacting requirements will be delivered right the first time, on time.

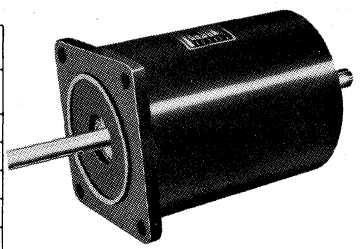
59	1200	55 oz-in.	8 Mfd.
59	1800	60 oz-in.	6 Mfd.
59	1200/3600	45/25 oz-in.	9 Mfd.



REQUEST DATA SHEET CM 672

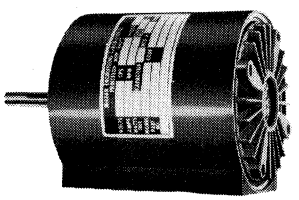
FEATURES

- The starting torque approximates the running torque. Self-starting.
- The motor runs at synchronous speed, but is not phase polarized as are the polarized synchronous motors shown elsewhere.
- The direction of rotation of the shaft is reversible externally.
- Dual voltage and/or dual speed motors available.

POLARIZED SYNCHRONOUS MOTORS

PERFORMANCE ON 115 VOLTS, 60 Hz., WITH INTERNAL FAN		
FRAME USED	47 FRAME	59 FRAME
Speed	3600 RPM	3600 RPM
Line current	1.2 amp.	1.5 amp.
Capacitor required	5 Mfd.	8 Mfd.
Stall torque	10-14 oz-in.	27 oz-in. max.
Pull-in torque	15-18 oz-in.	25 oz-in.
Pull-out torque	15 oz-in.*	14 oz-in.*
Reversible	yes	no

*Must not be exceeded for continuous duty.



REQUEST DATA SHEET CM 673

FEATURES

- Ideal where repeated phase synchronization is required between line voltage and shaft position for one or more motors.
- Single or dual voltage, but only single speed, motors available.
- Currently available for 3600 rpm only at 60 Hz. Other speeds and frequencies available when the need materializes.

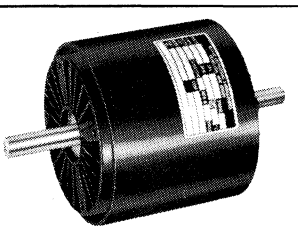
3200	100	4⅛	400	open, with circulation	single
3200	130	4⅛	400	open, with circulation	three

FEATURES

Optimum design achieved using McLean high speed electronic digital computer with our internally programmed analysis.



Starting and running torques matched to fan and blower loads, where the motors are so used.

Direction of rotation of the shaft is reversible externally.

Dual voltage and/or dual speed motors available.

Face mount is standard, but base mount is available in 47 Frame Size Motor and flange mount is available in 59 Frame Size Motor.

Available for single-phase use in 2, 4, 6, 8, and 12-pole speeds, and for three-phase use in the same speeds.

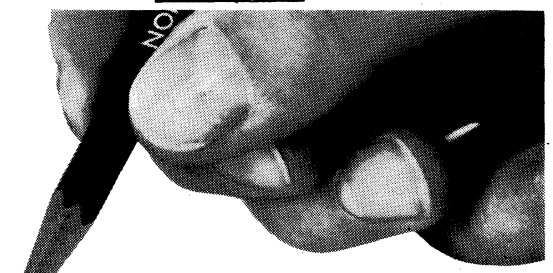
Northfield miniature precision instrument bearings- interchangeable with ball bearings -at only ⅓ the cost!



HERE'S HOW DESIGN ENGINEERS CUT BEARING COSTS WITHOUT LOSS OF ACCURACY

Here are the reasons why:

- ⅓ the cost of miniature precision ball bearings
- I.D., O.D., concentricity and facial squareness held to .0002″
- Precision made of sintered bronze (MIL-B-5687, Type I, Comp. A) with 4% Molybdenum Disulphide added at sintering
- Vacuum impregnated with instrument oil (MIL-L-6085A)
- Low coefficient of friction and excellent resistance to radial loads and impact
- Full range of sizes — flanged and sleeve types
- Immediate delivery from stock
- Used in gyro stabilizers, airborne compasses, analog and digital computers, inertial guidance systems, ground control approach instruments, infrared guidance systems, sound recording equipment, etc.

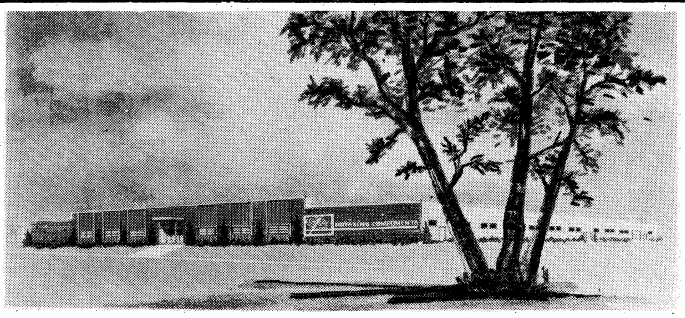
AC PRECISION MOTORS by RC

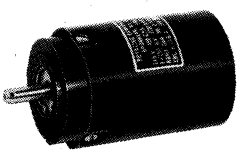


RCI is a leading designer and manufacturer of precision rotating equipment. The RCI engineering and production staffs combine a wealth of experience and know-how to provide components of high quality at low cost. This team constantly accepts and meets the challenge of special design problems in today's dynamic electronic field, which demand greater reliability under more severe environmental conditions... and in smaller packages. Our customers have come to rely on our ability to achieve this on a production basis.

THE SOURCE FOR THE BROADEST VARIETY OF ROTATING COMPONENTS FOR THE MILITARY AND INDUSTRIAL ELECTRONICS INDUSTRY

- SYNCHRONOUS MOTORS
- INDUCTION MOTORS
- PM GENERATORS
- BRUSHLESS DC MOTORS
- SERVO MOTORS
- GEAR MOTORS
- TACHOMETER GENERATORS
- DRAG CUP MOTORS
- INDUCTION GENERATORS
- FANS
- BLOWERS

INDUCTION DRIVE MOTORS

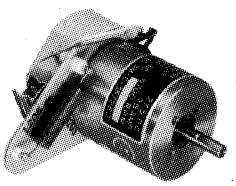


Powerful • Rugged • Extremely Reliable • Versatile in Application

Frequencies:	50-60-400 cps • Variable Frequency • Dual Frequency
Speeds:	450 thru 22,000 rpm • 1-2-3 Speeds
Horsepower:	1/2000 to ¼ H.P.
Voltages:	To 440V AC • Single or Dual Voltages
Phases:	1-2-3 • Reversible or Unidirectional
Bearings:	Precision Life Lubricated Ball Bearings
Mounting:	Face, Base, Flange, Servo
MIL SPECS:	Exceed MIL-M-7969, MIL-M-17059, MIL-M-13787, MIL-E-16400, MIL-E-5400, MIL-E-5272, MIL-STD-202 Also for quality commercial applications
Life:	In excess of 10,000 hours in many designs
Gearheads:	Available with all models Hundreds of models available

BRUSHLESS DC MOTORS

• **IMPROVE YOUR PRODUCT** • **REPLACE BRUSH TYPE MOTORS, FANS, BLOWERS.**



OPERATE FROM DC POWER SOURCES • SOLAR CELLS.

LIFE — extremely long — no brushes to replace — no brush dust.

SAFER — no sparking in explosive atmosphere.

RFI — minimal.

MIL SPEC APPROVED for severe environments.
SPEEDS — wide selection as required.
QUIET — no brush noise.
EFFICIENT — low input power.
SUPERIOR at high altitudes.
USES — Aircraft — Submarines — Spacecraft — Ground Equipment — Any Electronic Equipment.

RCI PRODUCTION MODELS QUICKLY AVAILABLE — SEND FOR DATA

GEAR MOTORS

R.C.I. offers a wide range of integral motor-gearhead combinations with synchronous and induction motors as well as Servo motors in all R.C.I. frame sizes including 8, 10, 11, 15, 18, on up to 3⅞ O.D.

- Precision engineered for long life.
- Torque up to 4000 in oz.
- All Ratios.
- Backlash: 30 minutes maximum.
- Temperature Range: −55°C to + 150°C.
- Lubrication: MIL-L-6085, MIL-G-3278.
- Environmental Testing: MIL-E-5272.
- Mechanical slip clutch available on request.
- Ball bearings are stainless steel ABEC 5 or better as reqd.
- All gears precision class 2 or better per AGMA 236.04

BALL BEARING STEP-UP MOTORS

NOW — HIGH SPEED (8000 RPM) is possible with 60 CPS supply.

LONG LIFE — MIL TESTED AND APPROVED 10,000 hours in extreme environments.

SAVE SPACE — REPLACE large, slow speed blowers and fans.

QUIET — REPLACE geared speed increasers.

BRUSHLESS — REPLACE noisy troublesome DC and Universal Motors.

DC BRUSHLESS MOTORS

IMPROVE YOUR PRODUCT

Transistorized: No Maintenance
Eliminates Brushes
No Brush Dust
Interchangeable with DC Motors

Life: Extremely Long & Reliable • No Brushes to wear • Silent • Frictionless • No Arcing • Explosion Proof.

RFI: Reduced to Minimum.

Low Input Power: 50% Efficient.

Altitude: Superior at High Altitudes.

Dielectric: Vastly Improved.

Environmental: Passes severe environmental conditions of all MIL SPECS.

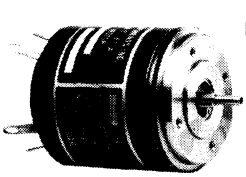
Continuous Duty:

Speeds: Wide Selection of High Speeds attainable. Available with speed variation feature.

Applications: To replace Brush Type DC Motors, Blowers, Fans in any Electronic Equipment. • In Explosive Atmosphere • Aircraft • Submarines • Space Vehicles • Powered by Solar Batteries.

Motor Types: Induction Motors • Blowers • Fans.

— Send For Data



ALSO NEW FROM RC

NOT AN AC MOTOR WITH INVERTER BUT A TRUE DC BRUSHLESS COMMUTATORLESS MOTOR

FEATURES

- SPEED CONTROL ±10%
- VOLTAGE REGULATION 17V - 38V
- RFI REDUCED TO MINIMUM
- LIFE EXTREMELY LONG AND RELIABLE

AC SYNCHRONOUS MOTORS
HYSTERESIS • POLARIZED • RELUCTANCE

The RC STANDARDS shown are representative of a broad selection of of sizes, speeds and torques which RCI will be pleased to modify or custom design to your exacting specifications. Call or send your requirements for a prompt proposal.

CHECK THE WIDE RANGE OF THE RC LINE

SIZES: 0.937" to 3.875" OD (21 Frames).

FREQUENCIES: 15 to 400 CPS (60 and 400 are standard).

SPEEDS: 600 to 24,000 RPM.

HOREPOWER: 1/1000 to 1/10.

PHASES: 1, 2, 3.

VOLTAGES: Up to 440 volts.

ENCLOSURES: Enclosed or open, self cooled.

BEARINGS: Ball or sleeve.

GEARTRAINS: Large variety of ratios.

MOUNTING

face • base • servo.

SHAFTS

- pinion • flatted
- tapered • threaded
- slotted • plain.

HOOKUP

- leads • terminals
- connectors • lugs.

WINDING PROTECTION (UL)

- thermal overload protection.
- current overload protection.
- high impedance protection.

FEATURES . . .

- meet military and UL specs • for airborne, shipboard, and ground equipment.
- quality controlled per MIL-Q-9858.
- ambient temperature range −55°C to +125°C and up • high altitude.
- long life • rugged construction • permanently lubricated.
- superior performance • greater efficiency.
- compact • operate in any position • dynamically balanced.

***HOW TO ORDER OR INQUIRE**

START With type design number (this is not a part number).
ADD Features and specifications you require.
WE Will supply a final drawing and part number to meet your needs.

CHARACTERISTICS AND APPLICATIONS

HYSTERESIS TYPE

CHARACTERISTICS

- Constant speed regardless of load or voltage variation. Speed will vary directly with frequency.
- Capable of pulling high inertia loads into synchronism
- Smooth starting.
- Free of noise, hunting, vibration.
- High efficiency.
- Locks into synchronism in an infinite number of positions.
- Adapts to multi speed designs.

RELUCTANCE TYPE

CHARACTERISTICS

- Locks into synchronism at fixed positions.
  2 pole — any of 2 positions 180° apart.
  4 pole — any of 4 positions 90° apart.
- High starting torque.
  Not recommended for inertia loads.

APPLICATIONS:
HYSTERESIS AND RELUCTANCE MILITARY & INDUSTRIAL

• Computers • Teleprinters • Aircraft landing lights • Audio tape recorders • Video tape recorders • Turntables • Timing devices • Frequency conversion (when coupled with PM Generator) • Positioning devices • Light choppers • Facsimile equipment • Scanners.

POLARIZED TYPE

CHARACTERISTICS

- For complete control of shaft position where phasing is a requirement.
- Locks in at one fixed position with respect to the input signal. (4 pole will lock in at one of 2 positions 180° apart.)

APPLICATIONS

- X-Ray cameras.
- Light choppers.
- Multipole devices at remote points.
- Facsimile equipment.
- Positioning devices.

NOTE: Electrical characteristics are nominal and are measured at stall

Environment: up to 125°C. Standard models listed above are Class F insulated for 90°C max. ambient.

Applicable MIL Specs: MIL-E-5400, MIL-E-5272, MIL-S-22432

Shafts: plain or pinion, in all standard lengths and diameters.

Special Motors: RC's servo motors can be supplied in a wide range of modified or special designs to meet user needs. Call or write for quotations on your requirements.

• SYNCHRONOUS MOTORS • INDUCTION MOTORS • P. M. GENERATORS • BRUSHLESS DC MOTORS • SERVO MOTORS
• TACHOMETER GENERATORS • DRAG CUP MOTORS • INDUCTION GENERATORS • FANS • BLOWERS

TACHOMETER GENERATORS

AVAILABLE WITH GEAR HEADS

SIZE 8 THRU 25

FEATURES

- Available in 60 ~ and 400 ~ configuration — other frequencies on special order.
- Rear shaft extension available.
- Integral gear heads — ratios from 1:5 to 78, 125.
- Made to exacting standards to meet all applicable Mil Stds.
- Special configurations available combining drag cup motors with generator to obtain the characteristics of a very low inertia unit.

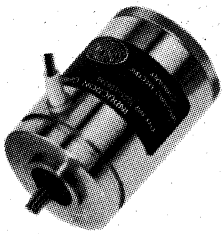
INSTRUMENT SERVO COMPONENTS
AC INDUCTION TACHOMETERS • AC DRAG CUP MOTORS

AC INDUCTION TACHOMETERS



10G1-654946

CHARACTERISTICS

- Also known as rate generator, tachometer-generator or damping generator. It is a two phase instrument with drag cup rotor.
- When operated with one phase excited, the induction generator produces an output voltage proportional to the shaft speed and a frequency identical to the supply.

APPLICATIONS

- Speed Indication.
- System stabilizer or damping generator in closed loop servo system.
- Rate generator in a velocity servo system.

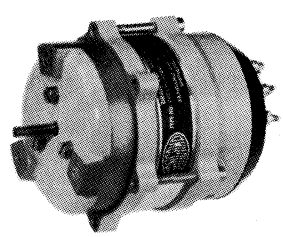
FEATURES OF AC INDUCTION TACHOMETERS AND DRAG CUP MOTORS

- Quality controlled per MIL-Q-9858.
- Meet MIL specs.
- Precision engineered.
- 60 or 400 cps, other frequencies available.
- Available from size 8 to size 24.
- Wide temperature range.
- Variety of mountings available.

DRAG CUP MOTORS
AVAILABLE WITH GEARHEADS



• Very low inertia for special servo motor applications • Very low starting voltage • Cog free operation at low speeds — no slot lock • Straight line torque — speed curve • High torque to inertia ratio • Will meet or exceed applicable portions of MIL-E-5272.

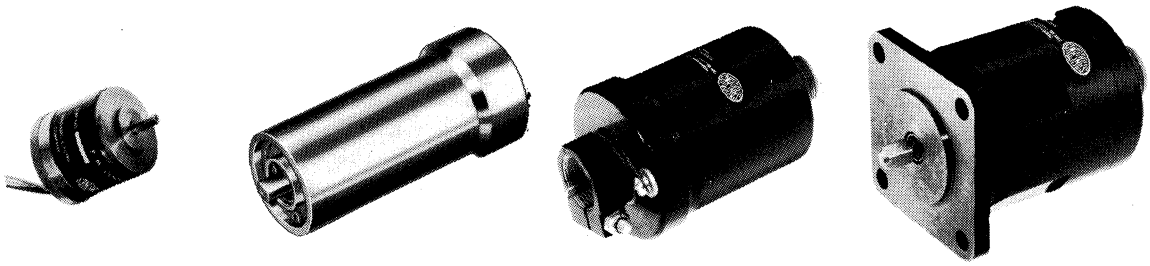
AC PERMANENT MAGNET TACHOMETER GENERATORS



10PMG1-654945 14PMG1-656303 25PMG1-65554 33PMG1-656341

Available from RC in many variations of two general classifications: — MINIATURE INSTRUMENT TYPE & INSTRUMENTATION TYPE.

The RC line of PM Generators provide an AC voltage and frequency output which are directly, proportional to the speed of the driven shaft.

MINIATURE INSTRUMENT TYPE

FEATURES

- Generates a pure sine wave with extremely low harmonic content.
- Available — 2, 4 or 8 pole; single or 2 phase.
- High reliability • Precision construction.
- Meets or exceeds MIL-E-5272.

APPLICATIONS

- Use as a speed sensing device based on either amplitude or frequency.
- As a source for variable frequency voltage.
- As a miniature frequency converter when coupled with a synchronous motor.

AIRCRAFT INSTRUMENTATION TYPE

FEATURES

- Generates a three phase A.C. sinusoidal signal.
- High resistance to rotor demagnetization by use of special Alnico magnets and improved stator design.
- Rugged and reliable under extreme aircraft environmental conditions of vibration, shock and temperature.
- Meet or exceed MIL-G-9398, MIL-E-5413, MIL-E-5272.

OPTIONAL MECHANICAL FEATURES

- **MOUNTING** — Servo - Flange (Pad) - Face - Base.
- **SHAFTS** — Plain - Floating with Shear Feature per MS28054 - Flatted - Slotted.
- **HOOKUP** — AN Connectors - Leads - Terminals.

APPLICATIONS FOR...

- HELICOPTERS • JET ENGINE AIRCRAFT • TURBO PROP AIRCRAFT • PROPELLER AIRCRAFT • ANY ROTATING DEVICE.

AS

- SPEED INDICATOR — In conjunction with a tachometer indicator utilizing change in frequency due to change in shaft speed.
- With a voltmeter measuring output voltage amplitude.
- SPEED CONTROL — Synchronize two or more rotating shafts by using two PM Generators driving a synchronous differential. Difference of speed (and therefore frequency) will actuate a differential to make the correction.
- FREQUENCY CONVERTER — When coupled with a synchronous motor.
- SOURCE for variable frequency voltage.

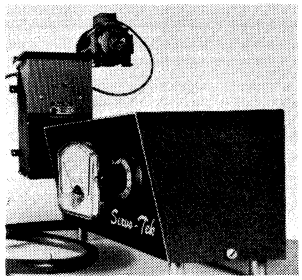
SERVO-TEK—FOREMOST IN SPEED MEASUREMENT AND CONTROL

Proven Performance, Reliability and Ease of Maintenance for the Most Demanding Industrial Applications

SOLID-STATE

"500" SERIES PRECISION ADJUSTABLE-SPEED DRIVES

ALL MOTORS TOTALLY ENCLOSED, FAN-COOLED



SPEED RANGE Infinitely adjustable from less than 24 rpm to more than 3600 rpm (150:1) while delivering full-rated torque. Continuous duty rating at all speeds.

REGULATION Temperature-compensated tachometer feed-back provides both line and load regulation of better than ⅓ of 1% of rated speed.

MAINTENANCE Design eliminates vacuum tubes, selenium rectifiers and time delays. Utilizes silicon diodes, transistors and a magnetic amplifier for exceptionally long service life. Modular plug-in construction requires only a screwdriver for servicing.

REMOTE CONTROL A 10-turn potentiometer provides precise adjustment and can be placed in any convenient location. Meter monitors operation and continuously indicates speed.

GEARED MOTORS Motors are available with integral gear reducers.

BRAKING-REVERSING Relay-controlled braking and reversing models available.

1 HP AS ILLUSTRATED

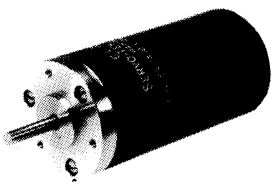
$687.00*

Other Models from ⅛ hp to 1½ hp proportionately priced

D-C PERMANENT-MAGNET

TACHOMETER GENERATORS

TEMPERATURE-COMPENSATED



Applications

SERVOS—The highly linear output and wide speed range are ideal for velocity or integrating servos. Low-driving torque permits its use as a damping or rate signal in all types of servos.

TEMPERATURE-COMPENSATED — The voltage output @ +25°C. will not deviate from this amount by more than 1/100 of 1% per degree of change when operated at any temperature within the designed temperature range of −20°C. to +75°C.

SIZE — Miniature. Approx. Dia. 1⅛".

OUTPUT — Various models with outputs as high as 45v/1000 rpm.

LINEARITY — Linearity from 0 to 12,000 rpm is better than 1/10 of 1% of voltage output at 3600 rpm.

BRUSH LIFE—Better than 100,000 hours (10 years) of continuous operation at 3600 rpm.

BIDIRECTIONAL OPERATION — Output in either direction is held to a ¼ of 1% tolerance.

RIPPLE — The rms value will not exceed 3% of the d-c value at any speed in excess of 100 rpm.

CONSTRUCTION — Aluminum housings with protective treatment; stainless steel shafts; fully-shielded stainless steel ball bearings; Mylar insulation.

D-C PERMANENT-MAGNET

SERVO MOTORS

Model SU-680D-29 delivers 12.7 watts of Continuous Power Output at 8600 rpm

Applications:

Chart Recorder Pen Drives, Null-seeking Devices, Capstan Drives for Tape Transports, Proportioning Applications, Prime Mover in Servo-Mechanisms.

Specifications:

DYNAMIC: Maximum No-Load Speed @ 23v D-C — 10,000 ±500 rpm; Full Load Torque @ 8600 rpm—2.0 Oz.-In. (max.); Stall Torque @ 23v D-C (Theo.) — 15.0 Oz.-In. (min.); Frictional Torque — 0.25 Oz.-In. (max.); Acceleration at Stall (Torque/Inertia) — 38,000 RAD/SEC² (min.); Case Temperature Rise @ Full Load (Free Air Dissipation) — 55°C. (max.); Case Temperature Rise Per Watt of I^2R loss (Free Air Dissipation)—6°C.

STATIC: D-C Resistance — 4.24 Ohms (typ.); Inductance—1.85 Millihenry (typ.); Rotor Inertia — 30.0 GM-CM² (typ.); Total Weight — 8.25 Oz. (max.); Length—3.25 in., excluding shaft; Maximum Ambient Temp. — 40°C.

FUNCTIONAL CONSTANTS: Inertial Time Constant — 30.0 Milliseconds (max.); Electrical Time Constant—0.45 Milliseconds (typ.); Torque Constant—2.8 Oz.-In./Amp. (min.); Voltage Constant (Back E.M.F.)—0.019v @ (1) RAD/SEC. (min.); Viscous Damping Factor—1.25 x 10^{-3} Oz.-In./rpm (min.)

Model SU-680D-29

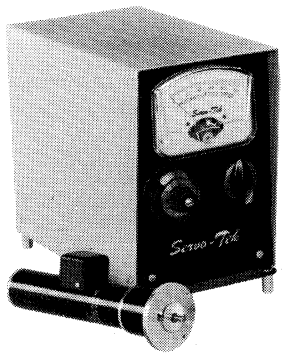
Oher Models Available from $26.00

MINIATURE SOLID-STATE D-C

VELOCITY SERVO

COMPLETELY NEW TOOL FOR AUTOMATION, INSTRUMENTATION



This precision electronic Adjustable-Speed Drive replaces small synchronous motors for chart drives, sequence switches, programmers, etc. Provides adjustable or preselected speeds from rated down to less than ½ of 1% of maximum (200:1) without loss of torque.

Features

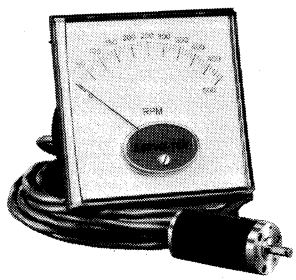
Solid-state — Instant response — Tachometer feed-back — Stability better than ½ of 1% of rated speed—Line or load regulation better than ½ of 1% of rated speed —Visual speed indication—Modular plug-in construction — Input power frequency 50 to 400 cps — Two basic models provide either ¼ or 1.2 in.-oz. @ 3600 rpm — Various geared torque units with ratios as high as 7200:1 provide full speed outputs of as low as 0.5 rpm with torque to 100 in.-oz. — Components separately available for incorporation into your equipment.

SINGLE UNITS PRICED FROM

$242.50*

ACCURATE

SPEED INDICATING SYSTEMS



A truly versatile "package" provides accurate speed indication for almost anything that moves. Nearly every industrial process or machine can benefit by the economy and safety of continuous speed indication.

SELF-POWERED—No batteries or external power required.

LOW VOLTAGE—Connecting cable can be as long as 500 ft.

PERMANENTLY LUBRICATED BALL BEARINGS.

EASILY READ 4½" INDICATOR.

TAUT BAND MOVEMENT — Withstands vibration and shock.

STANDARD RANGES — 0 to 100, 250, 500, 1000, 2000, 3000, 4000, 6000, 8000, 10,000 and 12,000 rpm. These speeds can also be provided to read "Percent of Full Speed" or "Percent of Capacity."

0 to 10 rpm available at small additional cost.

Complete System includes Generator, Indicator (specify range), Mounting Base, Coupling and 15 ft. of Connecting Cable.

SINGLE UNITS PRICED FROM

$88.00

PRICES shown are subject to a quantity discount schedule.

*An additional discount is available to resale organizations and original equipment manufacturers using these drives as an integral part of their product.

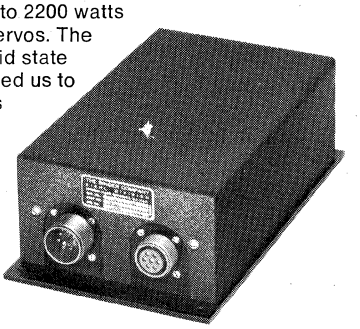
Diehl Built-in Performance to help you build in Performance

At Diehl we build in not only reliability, but performance as well. Diehl components are designed to perform efficiently, economically and with a maximum product life. Our experience, design and production capabilities all add up to top performing components which help you build top performance into your products.

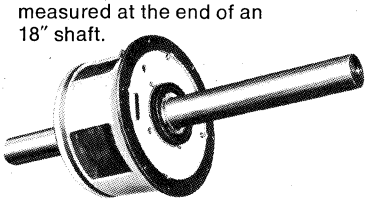
Servo Amplifiers

A full line of servo-amplifiers to fulfill requirements of less than 800 watts with 60 Hz or 400 Hz outputs up to 2200 watts needed for 1 HP servos. The introduction of solid state circuitry has enabled us to produce amplifiers that are lighter, more efficient and more stable.



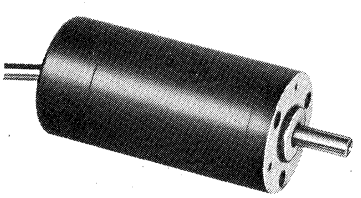
Spindle Drives

Both synchronous and induction types from fractional to 10 Hp. 80% to 95% efficiency for cool running and minimal thermal expansion. Life expectancy, 3 to 30 years depending on specifications and design. Shaft run out of .0001 for fractional ratings or .0005 for integral ratings when measured at the end of an 18″ shaft.



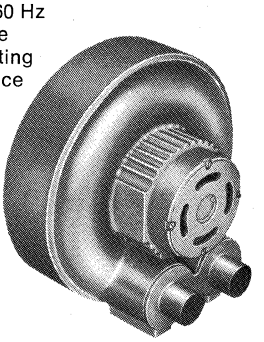
Tachometers

Low ripple. For systems requiring a highly linear (0.1%) speed/voltage relationship and low ripple performance. Life expectancy exceeds 10,000 hours at 3600 RPM and 25°C. Available with servo type mounting, face or flange mounting configurations. Operating temperature —55° to 75°C.



Vortex Blowers

High pressure or vacuum air delivery in single stage blowers at low RPM. Operate on unique principle of regenerative flow. Performance from a single stage means less weight, less bulk, lower cost, lower noise, longer life and easier servicing. Available for 60 Hz or as belt drive design permitting your own choice of drive motor.



Whatever your problem call your Diehl Representative today—or call us.

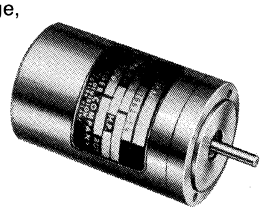
Diehl Built-in Reliability to help you build in Reliability

With our seventy-nine years of experience, building reliability and performance into our components comes naturally. That's why our motors have high-strength aluminum alloy housings and end bells... stainless steel shafts... dynamically balanced rotors with spring-loaded precision bearings. Why our spindle drives have pre-loaded ABEC-7 bearings to insure no end play... our tachometers, high silver content commutators. These are just a few examples, but enough, we feel, to point out why Diehl components can help you build reliability into your own products.

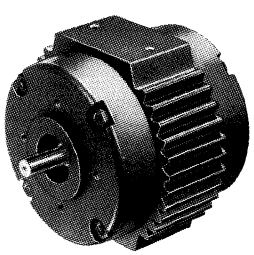
DC Motors-Gears

Permanent magnet and wound field (shunt, series, compound) ¾" to 2½" diameter with wide RPM range, wide ambient temperature range, plus many options such as a variety of gear trains, brakes, etc.



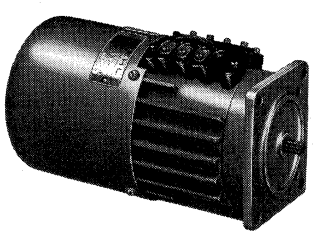
AC Motors

Induction or synchronous motors of the hysteresis or reluctance type. A broad range of power running from sub fractional up to 15 HP. Noise and vibration free with total shaft runout and concentricity error to meet the most exacting specifications.



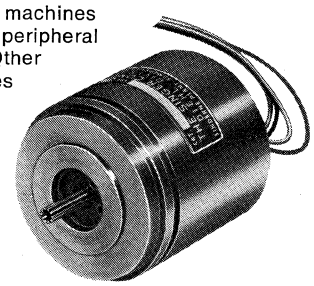
Servomotors

Complete line of instrument servo components, power servo components, servo amplifiers and commercial instrument motors to fit just about any design. Self-contained, fan cooling for precise control.



Stepper Motors

Precision control via discrete steps and high slew rates. Typical 15° stepping angle is compatible with all 24 tooth sprockets. High holding torque, high stepping speed and fast response. Ideal for business and office machines and small peripheral devices. Other step angles readily available.



Whatever your problem call your Diehl Representative today—or call us.

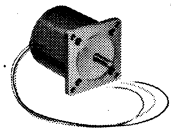
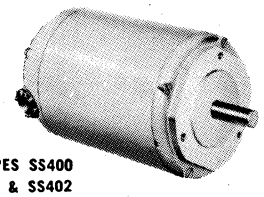
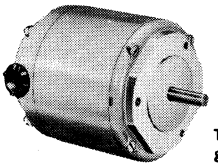
SLO-SYN®



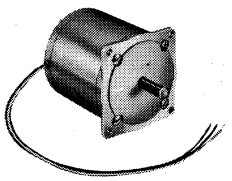
TYPE SS25



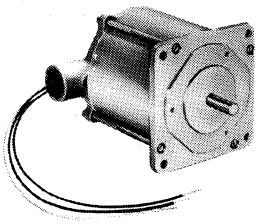
TYPES SS400 & SS402



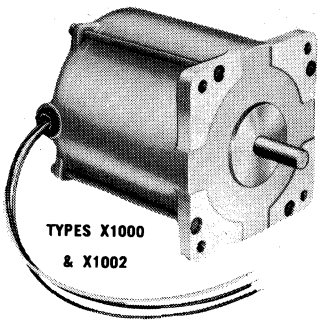
TYPES SS150 & SS152



TYPES HS50 & HS52



TYPES X250 & X252



TYPES X1000 & X1002

A-C OPERATION — Standard SLO-SYN Synchronous/Stepping Motors are permanent magnet a-c motors having extremely rapid starting, stopping and reversing characteristics and a slow basic shaft speed of 72 rpm synchronous with a line frequency of 60 hertz. Three-lead types need only a single-pole, three-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating current are nearly identical. Can be completely stalled without overheating and with no harmful effects on components. Starts or stops in less than 5° of shaft rotation; no need for mechanical or electrical braking. When used with an auxiliary high speed motor, the SLO-SYN motor can remain coupled to the load and safely overdriven. Phase shifting resistor and capacitor must be used when operating from a single-phase source but not from two-phase. All standard motors are rated for continuous duty at maximum ambient temperature of 40°C. Types SS150 and SS152 use Class A insulation; all others have Class B.

D-C STEPPING — When used for phase-switched d-c stepping, the motors can be connected to provide either 100 or 200 steps per revolution. Accuracy of the steps is ±.09° noncumulative. Three-lead types require a center-tapped d-c supply and single-pole, double-throw switching; four-lead types require a single-ended power supply and single pole, double-throw switching. Bifilar motors can also be used with transistorized switching circuits. With a suitable control potentiometer instead of switches, a SLO-SYN motor can be made to rotate steplessly, permitting extremely accurate positioning. All motors have lubricated-for-life bearings.

PRECISION STEPPING

For phase-switched d-c stepping, types HS25, HS50, HS50D and HS50L make 200 steps per shaft revolution. Each 1.8° step is accurate within ±3% (.06°) noncumulative. May be operated at speeds greater than 500 steps per second if accelerating and decelerating circuits are used. With proper circuitry, the motors may be operated at speeds of 1000 steps per second or higher without missing any steps.

200 RPM

Types TS25, TS50 and TS52 are similar to standard models but operate at synchronous speeds of 200 rpm and take 36 or 72 steps per revolution when used for d-c stepping.

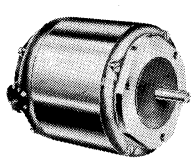
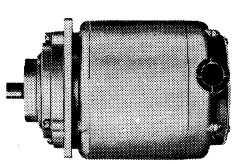
BIFILAR

Used for d-c stepping where use of push-pull circuitry and center-tapped power supply is not possible or where increased torque at high stepping speeds is required.



SPECIAL ENVIRONMENT

High Vacuum types for vacuums to 10^{-6} Torr; High Temperature types for temperatures to 130°C; High Radiation types withstand dosage of 3,000 megarads. All available from 50 to 1800 oz-in; High Vacuum 25 oz-in also.

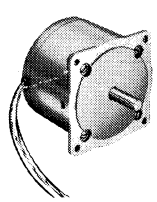


PLANETARY GEAR

Basic .50 and 150 oz-in types and type X250 available with planetary gear assemblies in speeds of 16.6, 3.32, 0.665, 0.133 or 0.027 rpm; 16.6 rpm available in other 250 and on 400 oz-in types.

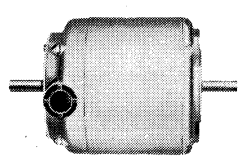
FOUR-LEAD

Designed for d-c stepping to provide the flexibility needed for use with equipment requiring isolated windings with no common connection.



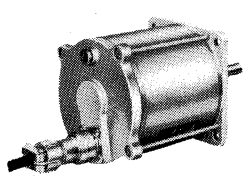
DOUBLE END

Three-lead, bifilar and four-lead types with output shaft at each end of motor available in all listed torque ratings. 50, 150 and 250 oz-in types available also with planetary gear assemblies in 16.6, 3.32, 0.665, 0.133 or 0.027 rpm speeds.



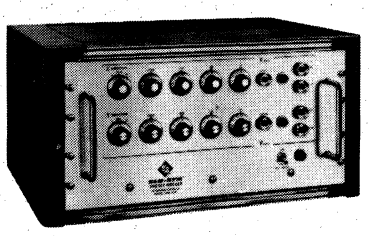
VISCOUS DAMPED

Type HS50D precision stepping motor has a unique fluid system resulting in a step function approaching critical damping. Speed of response and running characteristics are essentially unaffected by the silicone viscous damping fluid. Possesses characteristics of types described under PRECISION STEPPING on facing page.



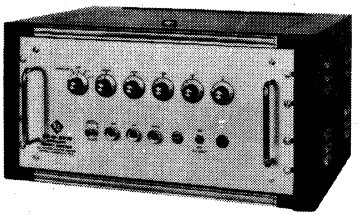
IN SECTIONS 2100, 4000 AND 5600

SLO-SYN® *Preset Indexers*



TWO-AXIS
TYPE 2SP1800-4

SINGLE-AXIS
TYPE SP1800B-4

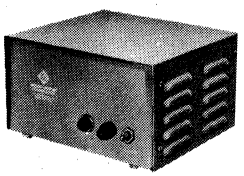


ABSOLUTE
TYPE SA1800-5

Used to control indexing of SLO-SYN bifilar motors. The index angle, or position, can be preset by dial setting on the control panel the number of 1.8° steps to be driven. Have provision for actuating any external equipment needed to perform related operations. Index, jog and free run can be initiated manually from the control panel or from an external switch. Can be made to cycle automatically with proper external switching. Single- and two-axis models are available with counting ranges to 99,999 steps. Two-axis models provide independent control of two SLO-SYN motors. Speed adjustable from 4 steps/second up to maximum possible with motor used. Optional backlash take-up circuit.

ABSOLUTE PRESET INDEXERS permit either absolute or incremental positioning modes. In the absolute positioning mode, the number set on the controls determines the final position of the motor relative to the starting, or "zero" point. When incremental positioning is used, the motor will move the preselected number of steps each time the INDEX button is pressed. Optional backlash take-up circuit.

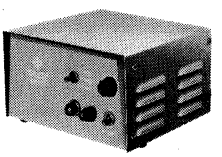
SLO-SYN® *Translator*



TYPE ST1800B

Pulse-to-step converter designed for use with appropriate bifilar SLO-SYN motors converted for incremental stepping. Convert low level signal pulses or square waves into the correct switching sequence needed to step a SLO-SYN motor at 200 steps/revolution (1.8° per step). Input is 105-125 volts a-c, 1 ampere. Signal input impedance is 500 ohms. Used for programmed positioning, indexing and indicating operations.

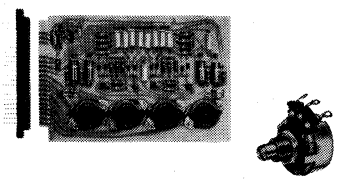
SLO-SYN® *Adjustable Speed Drive*



TYPE ST1800BV

Essentially, SLO-SYN Adjustable Speed Drive type ST1800BV is a translator which includes a built-in oscillator to supply the triggering signals. Oscillator frequency can be adjusted to vary the speed from 4 steps/second up to the maximum permissible with the motor used. Direction of rotation can be controlled either from the front panel or from a remotely located switch.

SLO-SYN® *Translator Module*



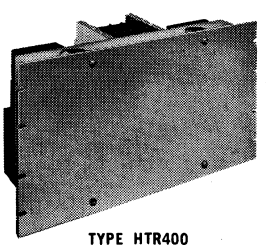
TYPE STM1800V

Plug-in circuit boards with logic capabilities for stepping a SLO-SYN motor in 1.8° increments. Type STM1800 is a basic translator which will provide bi-directional motor operation. Type STM1800V is similar but includes a built-in oscillator which can be adjusted to drive the motor at speeds from 4 steps/second up to maximum at which the motor will drive the load.

SLO-SYN® *High Speed Drives*

Translator

Drive SLO-SYN Precision Stepping Motors up to 2000 steps per second without losing any steps. Triggering the translator circuits is an internal oscillator which can supply a variable frequency range adjustable from 50 to 2000 steps per second. Triggering pulses can be supplied by tape readers, computers, oscillators, pulse generators and other signal producing equipment.



TYPE HTR400

Preset Indexer

Drive SLO-SYN Precision Stepping Motors in indexing and other positioning operations. Acceleration and deceleration circuits permit driving motors up to 2000 steps per second without missing any steps. Decade counter controls on front panel allow the operator to select any desired positioning increment. Optional backlash take-up circuit.

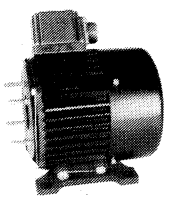
We have the motor you have in mind.

We have all types of precision motors, precision gears, and gear trains for commercial and government end use in electronics, avionics, and aerospace industries. If you need a particular custom model, our engineering group is backed by a complete manufacturing capability to produce reliable, long-lasting products.

AIRCRAFT MOTORS—AC AND DC

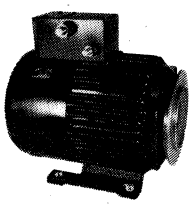
Frames from 2" to 8" diameter. DC and 400 cycle AC. Outputs from ⅛ to 30 hp; any required speed. Designed to military specifications. Can be equipped with gearheads and brakes, face or foot mounts.

Applications: Pumps, actuators, hoists, radar antennas, vane axial blowers.



AC Aircraft Motors. Diameters from 2" to 8". Outputs to 30 hp.

Model shown: 400 C.P.S. Self cooled, aircraft pump drive. 5" dia. by 6.00 LG, 3.0 hp. @ 5,600 rpm. Weight 12 lbs.

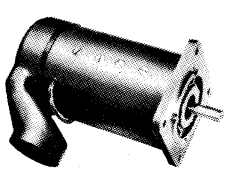


DC Aircraft Motors. Shunt, series or compound. Diameters from 2" to 6.5". Outputs from 1/100 to 10 hp.

Model shown: A 28-volt DC motor with radio noise filter, 6 hp at 6,000 rpm, used to drive a pump on a missile vehicle launcher.

TORQUE MOTORS

Typical Applications: Reel drive motors for magnetic tape transports and other closed servo loop systems such as antenna drives. (1) small time constant (2) fast response (3) high reliability (4) long life. Diameters up to 5⅜". Lock rotor torque up to 2,000 oz-in.



Model shown: 5⅜" dia. by 10½" long, special attachment for forced-air cooling, 115 VDC, 1,750 oz-in lock rotor torque.

SMALL MOTORS—AC AND DC

Typical Applications: Aerospace and ground systems equipment; drives for safe-arm devices, blower and fans, small actuators. Diameters as low as ⅞" in DC and 1.0" in AC. Can be equipped with gear reductions, brakes, clutches, governors and radio noise filters.

Small 400 cycle AC Motors. Five frames from 1" to 2" diameter. Induction and synchronous types. Any phase, voltage or speed.

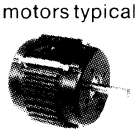
Model shown: High-slip fan motor, 1 oz-in @ 10,000 rpm. 1.45" dia. x 1.87" long. Weight 8 oz.

Small Permanent Magnet and Wound Field DC Motors. Seven frames from ⅞" dia. to 2" dia. Outputs up to ⅛ hp. Speeds from 1,000 to 30,000 rpm.

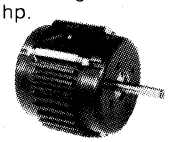
GENERAL PURPOSE AC MOTORS INDUCTION-SYNCHRONOUS

Fifteen different frames from 2¾" to 5⅜" diameter. Any frequency, phase, voltage or poles. Outputs up to 12 hp. Commercial or military specifications. Motors available in face or foot-mounted smooth housings, or cooling fins with mounting flats.

Here are two motors typical of this group.



Frame 211: 2¾" dia. over cooling fins, 2½" over mounting flats. Output from 1/250 to ¼ hp.

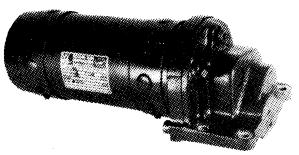


Frame 441: 5⅜" dia. over cooling fins, 5.0" over mounting flats. Output from ¼ to 12 hp.

GEAR MOTORS—AC

Model shown: A 208-volt, 400 cycle gearmotor, 10.7 hp. @ 2,400 rpm, used on a heat exchanger. 23 lbs. weight.

GEAR MOTORS—DC



Model shown: 29 VDC two speed motor. 25 lb/in. @ 3,600 & 1,800 rpm. 6.6 lbs. weight.

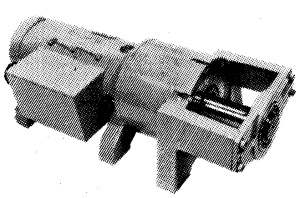
HYSPERSYN SYNCHRONOUS MOTORS

Typical Applications: Computer memory drums; facsimile devices. Patented features offer high torque, efficiency, and power factor; excellent damping. Any frequency. Rotor-Stator sets or complete motors.

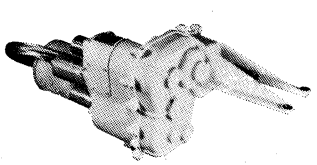
Hyspersyn: High starting, synchronizing and pullout torques; no drift. Diameters 2½" to 18". Outputs up to 5 hp.

ACTUATORS

Special actuators, AC or DC, linear or rotary, can be supplied to fit your requirements.



Model shown: A 115-volt DC motor with clutch, brake, noise filter, and gear box; output: 285-lb-ft @ 20 rpm; used on an antenna-drive system.



Model shown: 24 VDC four speed actuator. 1,000 oz-in @ 6,000, 3,000, 1,500, 750 rpm. Capable of reversing & shifting. Utilizes unique two speed motor. Weight 27 lbs.

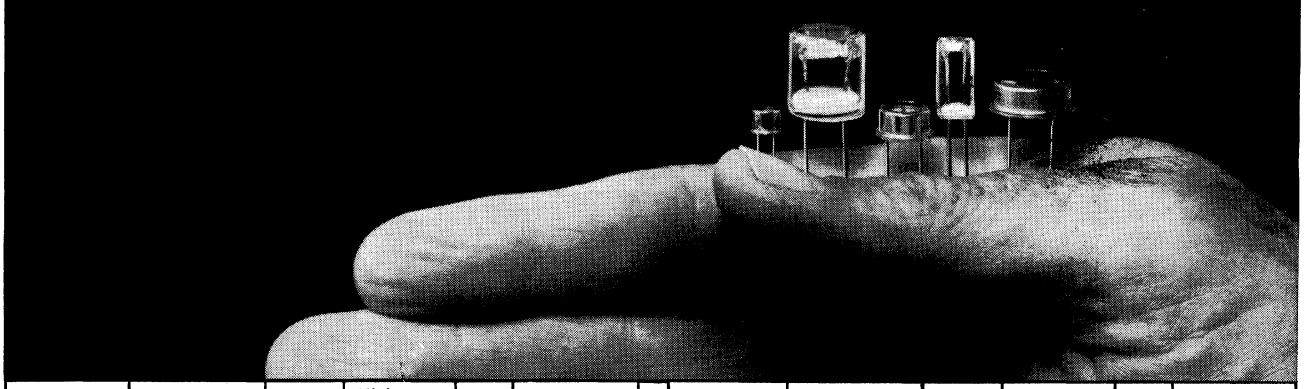
Photoconductive Cells

This listing represents less than half of the Clairex standard and special photocells available. A 16-page design manual is available on request.



Photocell ordering abbreviation	Diam. X Length (inches)	Resistance @ 2 fc ± 33⅓%	Minimum resistance ratio from 2 ftc to Dark within 5 sec.	Maximum voltage	Power Dissipation @ 25°C (mw)
CL5M2	.55 X .18	55K	1:100	250	2000-500[1]
CL602	.25 X .5	1 meg.		300	75
CL702	.36 X .18	1 meg.		300	125
CL902	.21 X .15	1 meg.		250	50

Type 2 CdS (photosensitive material designated by last number in ordering abbreviation, i.e. CL5M2). Peak spectral response 5150 angstroms, bluest response photosensitive material, high stability, lowest temperature error.

CL503	.5 X .5	7.2K	1:10,000	250	500-250[1]
CL5M3	.55 X .18	7.2K		250	2000-500[1]
CL603	.25 X .5	133K		300	75
CL603A	.25 X .5	75K		300	75
CL603AL	.25 X .5	3.5K		170	75
CL703	.36 X .18	133K		300	125
CL703A	.36 X .18	67K		300	125
CL703L	.36 X .18	2.7K		100	125

CL5M4L	.55 X .18	0.25K		170	2000-500[1]
CL604	.25 X .5	30K		300	75
CL604L	.25 X .5	1.5K		170	75
CL704	.36 X .18	30K		300	125
CL704L	.36 X .18	0.6K		100	125
CL904	.21 X .15	30K		250	50
CL904L	.21 X .15	2K		100	50

Type 4 CdSe, peak spectral response 6900 angstroms, lowest resistance photocells available. Can be used for "on-off" applications when low resistance is desired. For use with incandescent or neon lamps.

CL505	.5 X .5	9K	1:100	250	500-250[1]
CL5M5	.55 X .18	9K		250	2000-500[1]
CL505L	.5 X .5	1.5K		170	500-250[1]
CL5M5L	.55 X .18	1.5K		170	2000-500[1]
CL605	.25 X .5	166K		300	75
CL605L	.25 X .5	7.5K		170	75
CL705	.36 X .18	166K		300	125
CL705L	.36 X .18	3.3K		100	125
CL905	.21 X .15	166K		250	50
CL905L	.21 X .15	10K		100	50

Type 5 CdS, peak spectral response 5500 angstroms (closely matches the human eye), most stable, lowest memory photocell available. Can be used in light measuring applications and precision low speed switching. For use with incandescent, fluorescent or neon lamps.

CL705HL	.36 X .18	28K	1:1000	100	125
CL905HL	.21 X .15	100K		100	50
CL905HN	.21 X .15	700K		100	50

Type 5H CdS, peak spectral response 5500 angstroms (closely matches the human eye). Combines high speed, stability, linearity, and uniform color temperature response.

Photocell ordering abbreviation	Diam. X Length (inches)	Resistance @ 2 fc ± 33⅓%	Minimum resistance ratio from 2 ftc to Dark within 5 sec.	Maximum voltage	Power Dissipation @ 25°C (mw)
CL507	.5 X .5	7.2K	1:1000	250	500-250[1]
CL5M7	.55 X .18	7.2K		250	2000-500[1]

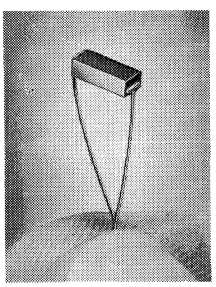
SILICON SOLAR ENERGY CONVERTERS

Excellent photovoltaic components for systems feature high reliability, instant response, and long life characteristics. No other power supplies needed. Amplification of cell output immediately gained with simple transistor circuitry. Normally used in the following categories: A) photo-electric where control mechanisms are activated by light. B) power for converting light directly into DC power or storing in rechargeable batteries. C) read-out when "read-out" information from punched cards and tapes is obtained by cells arranged in mosaic patterns.

STANDARD READOUT PHOTOCELLS

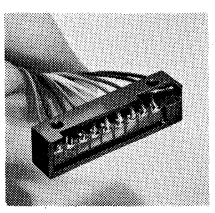
Standard Type Numbers	Overall Dimensions cm x cm	Photo-Active Area cm^2	Average Weight grams	Min. Current Output mA	Voltage Output volts	Power Output mW
ST-100	1 x 2	1.8	0.25	35	0.4	14.0
ST-101	1 x 1	0.9	0.12	17	0.4	6.8
ST-102	1 x .5	0.45	0.06	7.5	0.4	3.0
ST-200	.5 x 2	0.8	0.14	15	0.4	6.0
ST-201	.5 x 1	0.4	0.07	7.5	0.4	3.0
ST-202	.5 x .5	0.2	0.04	3.8	0.4	1.5
ST-203	.5 x .25	0.1	0.015	1.8	0.4	7.2
ST-300	1⅛" diameter	4.8	0.82	90	0.4	36.0
ST-301	¼ of SS-30	1.2	0.20	20	0.4	8.0
ST-400	2 x 2	3.8	0.50	80	0.4	32
ST-500	.5 x 2.5	1.0	0.17	15	0.4	6.0

Speed of Response — Dependent upon the load resistance, the response time is 20 microseconds. Can be as low as from 3 to 5 microseconds. *Reverse Voltage* — Cells can be engineered to operate with reverse voltage. Bias voltage should not be in excess of —10.0 volts DC. *Temperature* — —65°C to +175°C is the recommended operating temperature range.



EDGE-CONTACT SILICON PHOTOVOLTAIC READOUT CELLS

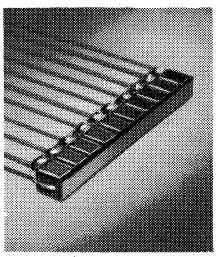
Electrically identical to common top and bottom contact types, but with new and distinct advantages: smaller size by attaching to side of active area and saving valuable light conversion area, easier to mask, closer positioning to light sources, easier to mount accurately. Flat unobstructed surfaces permit designs previously impossible, with more efficiency and lower cost. Available with any number of segments up to 1.5" total length (nine segments). Ideal for applications such as punched card, punched tape and related readers as well as rotary pulse generators, encoders and the general line of optical transducers where close spacing of the input mechanism is necessary.



ULTRA CELL®

New silicon photovoltaic devices with remarkable reverse leakage and speed of response. Available in all physical geometries presently supplied for devices with normal characteristics. Improves, sometimes even makes practical, applications using single cells, arrays or groups of cells.

Reverse Leakage: 2μA@—5.0VDC Speed of Response: 1—3.5μSec.



SILICON PHOTOCELLS FOR READOUT ASSEMBLIES

Offer distinct advantages over other photocells because of short transient response time. Function over extreme temperature ranges without affecting built-in characteristics. Feature low impedance output for matching transistor input networks. Also provide excellent speed of response, stable output characteristics and low noise output for application to perforated tape readers, punched card data systems, analog-to-digital encoders, shaft positioning equipment, and industrial control systems. Available in numerous cell forms and specialized packages for any need.

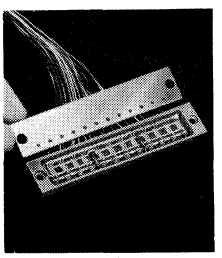
1. Overall width (in.) 0.200 2. Contact width (in.) 0.040 3. Thickness (in.) 0.150

	Typical Load Current (μa)	Typical Load Voltage (mv)	Typical Short Circuit (μa)	Open Circuit Voltage (mv)
100 Series	270	270	315	325
800 Series	180	180	250	225

Maximum Response Time: 20 μseconds. *Operating Temperature Range:* —65°C to +175°C. *Reverse Voltage:* —1.0 VDC bias voltage produces best results. —5.0 VDC is possible, but special design is required for higher voltages.



Typical Twelve Position Card Reader

CUSTOM PHOTOVOLTAIC THIN-FILM READOUT ASSEMBLIES

Provides the system designer with previously unavailable capability in the area of light sensitive arrays. Features small size, modular layout, intimate sensor/amplifier connections and adaptability of the entire unit to most forms of optical housing. Reduces the complexity of final product design. Initial amplifiers are DTL or TTL compatible. Complete opto-hybrid subsystems possible.

Power Requirement: +5V ±.25V @ 5mA/circuit. *Switching Time:* 1μs or less from full off to full on. *Light Level:* 500 foot candles. *Operating Temperatures:* —25°C to +80°C Non-operating temp. —55°C —100°C.

CUSTOM HYBRID CIRCUITS

Sensor Technology can produce thin-film hybrid circuits according to a wide assortment of customer specifications. All phases of production, from thin-film layout to production and testing, are undertaken at our plant by a highly qualified staff. Both epoxy molded and hermetically sealed packages are available.

CUSTOM CAPABILITY

Sensor Technology has a staff of skilled engineers well able to meet the requirements for creativity and adaptability in today's fast moving electronics industry. Let them innovate for you if none of our standard units meet your requirements. Their capability for developing custom products is equal to the quality of our standard line. Call Sensor Technology today.

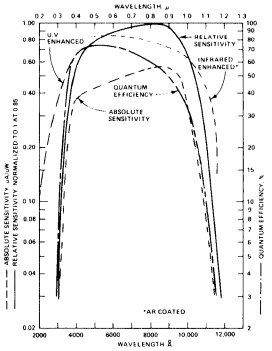
Photodetector Features for all UDT Models

- ☐ SPEED TO 4 NANOSECONDS
- ☐ MAXIMUM SENSITIVITY
- ☐ BROAD SPECTRAL RESPONSE
- ☐ ACTIVE AREAS TO 8 CM²

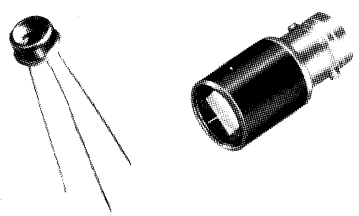
GENERAL NOTE

Employing the Schottky Barrier technology, United Detector Technology has capitalized on the improved sensitivity and spectral response characteristics offered by this proprietary technique. The response curves to the right represent all UDT devices. These curves depict the quantum efficiency, absolute sensitivity and relative sensitivity of all devices. The first dotted line (on the left) shows the increase in quantum efficiency that can be expected with U.V. enhancement.. The dotted line farthest to the right represents the increase in quantum efficiency that can be expected with infrared enhancement. Both U.V. and I.R. enhancement features are optional.

SPECTRAL CHARACTERISTICS OF ALL MODELS OF UDT PHOTODIODES



STANDARD SERIES PHOTODETECTORS



United Detector Technology's standard series of detectors are circular configured and mounted in specially formed anodized aluminum housings terminated to a BNC connector. Two exceptions, the PIN-3 and PIN-5, because of their small size are mounted in TO-18 and TO-5 transistor cans respectively. "LC" designates the low capacity series. The low capacity group is constructed on particularly high resistivity (40 K ohm-cm) silicon. The PIN-12LC has the lowest distributed capacity per unit area of any other detector on the market. The capacity given for each detector is the value when fully depleted, usually about 90 volts.

SPECIFICATIONS

Pin No.	Area (cm^2)	Min. Capacity (pf)
3	0.01	1
5	0.03	5
10	1.3	130
6LC	0.08	31
8LC	1.0	50
12LC	3.0	35

LIGHT POSITION SENSING PHOTODETECTORS

	PIN SC/10	PIN SC/25

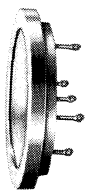
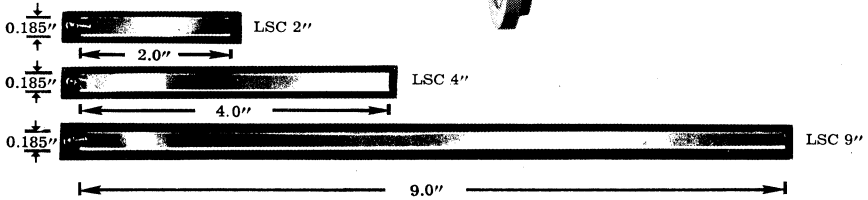
Active Area Dimension (L)	.4″	1.25″
Active Area	.16 in.	1.56 in.





SPECIFICATIONS

UDT No.	Area (cm^2)
SC/10	1.0
SC/25	15
LSC 2″	3.2
LSC 4″	6.4
LSC 9″	14.5

United Detector Technology light position sensing devices are sensitive silicon photodetectors that give two electrical output signals. One corresponds to the position of a light spot on the surface and the other corresponds to the intensity of the light spot.

The single axis LSC series offer position sensing over standard lengths of ½, 2, 4 and 9 inches. Non-standard lengths are available on special order.

The two-axis SC-10 and SC-25 detectors provide position sensing over a 0.4 and 1.25 inch square area respectively.

Position sensitivity is 0.2 microamperes/milliwatt/mill with resolution of one millionth of an inch and linearities better than 5%.

Both single and dual axis models offer all the advantages of United Detector Technology's high quality line of standard model Schottky barrier photodetectors.

CUSTOM ENGINEERED PHOTODETECTORS

The Schottky technology employed by United Detector Technology is very readily adaptable to new geometries and to modified characteristics. Many specialized photodetectors have been designed for our military and industrial customers, and in most cases without the high cost of custom engineering.

Geometries possible include lengths to 10 inches, widths to 1 inch, diameters to 2 inches. Linear arrays with densities up to 50 elements per linear inch. Single element size down to 10 mils.

Special characteristics include UV response from 1000Å to 3000 Å, greater than 10% of maximum. Capacitance at 90 volts less than 30 pf/cm . Quantum efficiency at 1.06 micron greater than 50%; at 1.15 greater than 30% with IR enhancement.

Standard Unit	Hermetic TO-5	LED Hermetic	LED	Dual Isolated Photo-conductor LED	Low Profile TO-5 LED
1.5v (incand.) to 115v (neon). Less than $1.00 for 1000 or more.	25c to 30c more than standard VACTROL in modest quantities.	Low signal require-ments compared to lamp devices. All solid state. Less than $7.00 in volume.	Epoxy sealed Epoxy sealed. Less than $7.00 in volume.	Compliments the complete line. Expensive compared to others.	Coming soon. A smaller LED package. Anticipated price $6.00 in volume.

PHOTOVOLTAIC CELLS

Photovoltaic cells start with a layer of selenium onto which a junction of CdSe is formed. A subsequent layer of CdO or Au acts as a current collector. The two types are specified as A for the Au layer and B for the CdO type. B is high output for low light and best for amplifier use. Specify A or B after part number, e.g. S100 E**B**.

NOTE: Unmounted Cells less than 045" thick

NOTE: The above microampere output based upon a cell temperature of 75°F., a color temperature of the light source of 2850°K, 100 foot candles, 150 ohm load.

PAM-1 PHOTOCELL AMPLIFIER MODULE

The Vactec Photocell amplifier module (PAM) consists of a matched selenium photocell and a high gain operational amplifier. All solid state unit replacement for phototube and associated amplifier.

Specifications

Input	± 15 VDC; ± 15 ma max.
Output	0-10 VDC; 2 K min. load resistance (1)
Sensitivity	Below 0.001 fc.
Photometric Response (min. with 2850° K Source)	6u V/fc/ohm

(1) Load resistance is the parallel combination of feedback and external load.

BULOVA LIGHT CHOPPERS/SCANNERS

APPLICATION AREAS

- Spectrophotometers
- Mass Spectrometers
- Radiometers
- Bolometers
- IR Detectors
- Star Trackers
- Horizon Sensors
- Burglar Alarm Systems
- Intrusion Systems
- Telemetry Systems
- Colorimeters
- Densitometers
- Ion Beam Choppers
- Information Storage Systems

A NEW CONCEPT OF LIGHT MODULATION THAT OUTMODES MOTOR DRIVEN TYPES

Light choppers are used to chop light and similar energy beams, switch a radiation source to two or more sensors, switch two sources alternately to one sensor, scan an area with a radiation source, and for many other purposes. Based upon the balanced vibrating members of a tuning fork, optical choppers offer outstanding advantages over motor driven types. **Features**— • Power requirements as low as 500 mw • No lubrication needed • No wearing parts • Lightweight—1/2 to 3 ounces maximum • Reference signal voltage available • Small size—as small as 7/8″ x 3/4″ x 3″

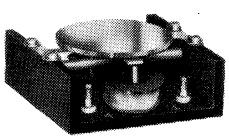
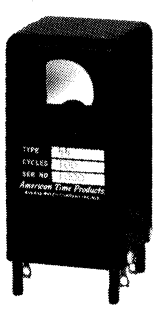
OPTICAL SCANNERS

(Patented)



MODEL L-50



MODEL L-44

Performance Benefits

- No wearing parts
- Low power requirements
- Small size
- No lubrication needed
- Lightweight
- Reference signal voltage available

TORSIONAL TYPE

L44 for frequencies 100 to 1099 Hz
L45 for frequencies 1,100 to 10 KHz

A fixed frequency device which can, in its simplest form, be used to cause a light, or energy beam to scan a target in a harmonic manner.

SPECIFICATIONS

Fixed Frequency (CPS-HZ)	Angular Amplitude (Peak to Peak)*	Maximum Mirror Size (MM)
100	20°	30 x 30
200	14°	20 x 20
400	10°	15 x 15
800	7°	10 x 10
1000	6°	10 x 10
2000	5°	7 x 7
4000	4°	7 x 7
6000	3°	5 x 5
10000	2°	2-1/2 x 2-1/2

*Angle is doubled upon reflection.

Standard mirrors 9 x 10.5 MM
Maximum angular velocity in degrees per second is π F 0
ACCURACY: Normally ±2; better on request.
REFERENCE SIGNAL: Squared wave; 5V rms min. into 50K ohms.
OPERATING TEMPERATURE: −55°C to +85°C. Other ranges available.
INPUT: Approx. 400 mw at 24 to 28V DC Driver Amplifier for 115V AC also available.
SIZE: 1-1/2 in. sq. x 3 in. high max.
WEIGHT: 4 ounces approx.

TAUT BAND TYPE L-50

A mechanically resonant device in which the restoring force is a taut ribbon. Power to start and maintain the oscillations is furnished by a solid state driver powered from d.c., optional 110V AC drivers are also available.

Freq. Range HZ	Mirror Angle Peak to Peak	Stock Mirror Size
5 to 24	30°	25 x 25 MM
25 to 40	25°	15 x 15 MM
41 to 99	20°	15 x 15 MM
100 to 149	15°	10 x 10 MM
150 to 199	10°	10 x 10 MM
200 to 400	5°	10 x 10 MM

ACCURACY: Normally ±2% from 0 to 40°C (higher on request).
REFERENCE SIGNAL: 1V p to p min. into 50K ohms.
OPERATING TEMPERATURE: −40 to +50°C.
INPUT: To driver unit 6 to 28 V DC.
SIZE: 1-1/2 x 1-1/2 x 3/4″ high.
WEIGHT: .75 oz. approx.

Manufacturer of the widest range of Frequency Control Components: Crystals • Crystal Oscillators • Crystal Filters • LC Filters • Tuning Forks • Fork Oscillators • Ovens • Coils • Servo Amplifiers

GAMMA SCIENTIFIC

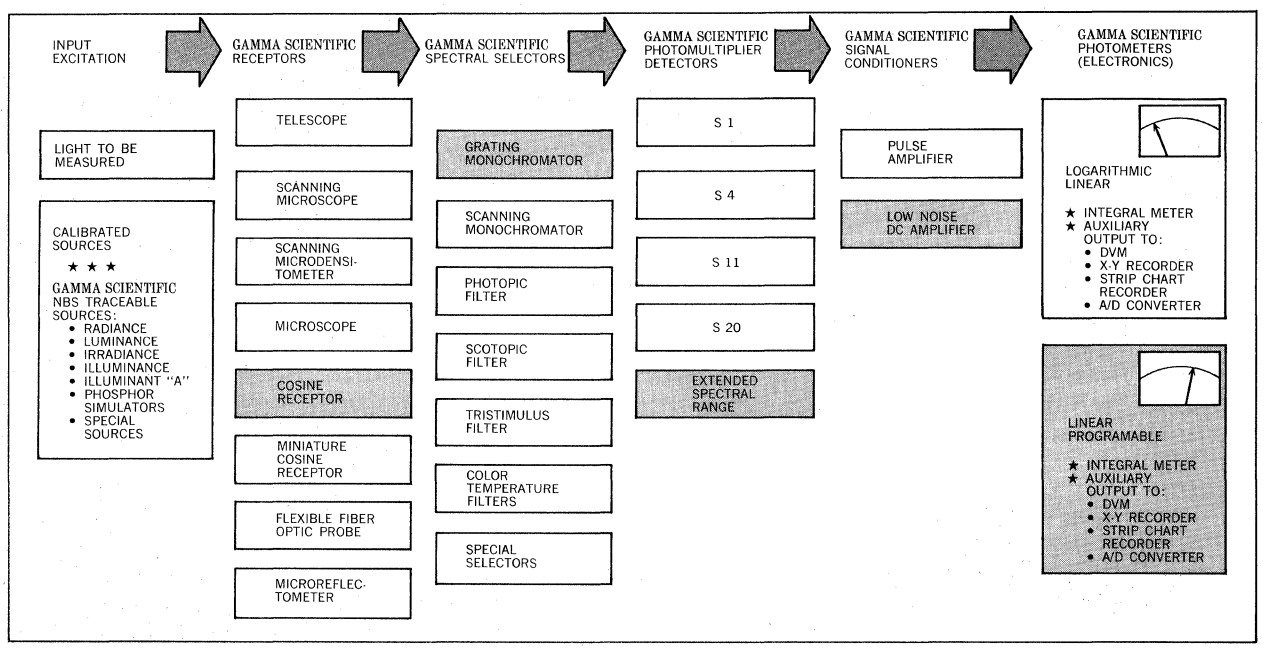
Systems to solve light measurement problems.

You'll find two basic differences in Gamma Scientific's light measurement instrumentation.

First, we offer a **systems approach.** No special engineering. No special adapters to build. No calibration problems. All Gamma Scientific instruments and accessories are fully compatible. You can build a complete, operable **system** in minutes using **standard** modules like those shown on the right. And we'll guarantee the performance from input to output.

The second difference is **flexibility.** We build a complete line of fully compatible plug-in heads, accessories and attachments. You can change from one configuration to another quickly... meet your various instrumentation needs with **the same basic system.** This flexibility eliminates the limitations of single-purpose equipment.

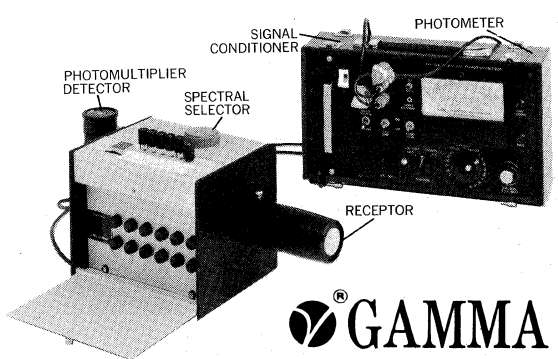
Here are the standard building blocks for your system:



For example:

System 2020SR, indicated by the shaded blocks above and photo at right, is a subnanowatt spectroradiometric system. It provides:

- ★ Wavelength range 350-750nm
- ★ Direct reading at any 7 selectable wavelengths
- ★ High efficiency (f3.5) diffraction grating
- ★ Half-power bandwidth 4nm
- ★ Maximum sensitivity 0.01nw/cm²/nm
- ★ Wavelength accuracy ±2.5nm
- ★ Price $2590.00



Let us help you select the light measurement system to meet your requirements. Call 714/291-2230 **collect.** Or, write to Manager of Applications Engineering, Dept. 301, Gamma Scientific, Incorporated, 2165 Kurtz Street, San Diego, California 92110.

LINEAR FLASHTUBES

Amglo manufactures 36 different types of standard pyrex and quartz linear tubes. New standard tubes include designs in excess of 500 types.

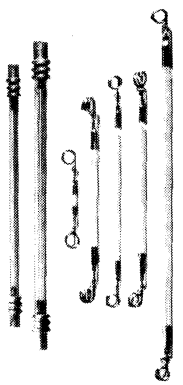
Listed below are a few of the various types:

Part No.	Arc Lgth. (inches)	OD mm	Typical Input Joules*
LSP160	1" Pyrex	6	100
LSP360	3" Pyrex	6	150
LSP380	3" Pyrex	8	200
LSP680	6" Pyrex	8	250
LSP12100	12" Pyrex	10	350
LSP20100	20" Pyrex	10	700
LXQ360	3" Quartz	6	300
LXQ660	6" Quartz	6	600
LXQ380	3" Quartz	8	600
LXQ680	6" Quartz	8	800
LXQ6100	6" Quartz	10	1200
LXQ6150	6" Quartz	15	2500

* Depending on pulse width Ratings for 1-2 MS pulse width.

Other Linear Tubes available with special electrodes.

Tube Diameter to 25mm OD and lengths to 30".

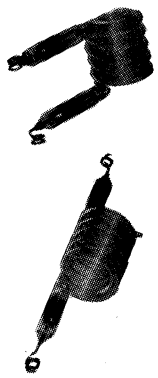


HELICAL FLASHTUBES

Amglo Helical Tubes are available in Pyrex and Quartz in ID's from ¼" to 4" and tubing diameter to 25mm.

Part No.	Turns	DIA.	Tubg. Dia. mm	Typical Input Joules
HSP28-½A	2	½" Pyrex	8	200
HSP48-½A	4	½" Pyrex	8	400
HSP58-½A	5	½" Pyrex	8	450
HSP510-½A	5	1½" Pyrex	10	1000
HXQ28-½A	2	½" Quartz	8	800
HXQ48-½A	4	½" Quartz	8	2000
HXQ510-1½A	5	1½" Quartz	10	4000
HXQ515-1A	5	1" Quartz	15	10000

Helical Lamps available in 6mm OD to 25mm OD Quartz and Pyrex and ID's to 4".



H-88 SERIES SIGNAL, STROBOSCOPE AND PHOTOGRAPHIC FLASHTUBES

The H-88 series tubes were especially created for applications requiring heavy duty use under exacting conditions. The tube is constructed of 6mm O.D. Pyrex with Iron triple carbonate coated electrodes. The H-88 is ideal for aircraft strobe beacons, high intensity warning lights, photographic speed-light and high speed stroboscope applications.

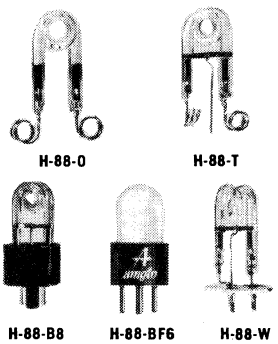
H-88-O
Tube only — two turn Helix ⅜ I.D. 1 1/16" Centers, 1¾" Overall length. Flexible braid connection. Triggering may be accomplished with a fine wire wrapped around tube making contact with silver stripe.

H-88-T
Same as H-88-O except with trigger band.

H-88-B8
T-88-T Mounted in Octal Base. Mounts in standard octal socket type 78S8 Dia. 1⅛ x 2¼" high exclusive of pins.

H-88-BF6
H-88-B series with frosted cover for flat diffused light.

H-88-W
With White Reflective Base.
The H-88 is available in 4 pin, Octal and 3 pin wafer bases.



GENERAL SPECIFICATIONS:
Operating voltage: 450-900. *Maximum Input:* 125 joules/flash. *Maximum recommended average power:* 10 watts. *Output:* 4500 Lumen seconds at 125 joules. At 10 joules (450 volts) the peak output is approximately 1 million lumens (250 lumen-seconds) at a flash rate of 60 per minute.

TYPE HD-2

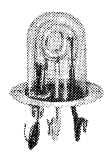
Operating voltage 350-500V. Energy input 30 to 150 Watt-seconds. For use with electrolytic condenser of 450 volt rating. Use AMGLO ST25 Trigger Transformer.

Part & Description

HD-20
Tube only

HD-2
Tube mounted in Reflective Base with Glass Cover

HD-2R
HD-2 mounted in AR 365 Reflector



TYPE HD-2A

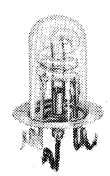
Operating voltage and energy input similar to HD-2. Employs two turn helix with central cathode housing, producing longer life characteristics than HD-2. Use with AMGLO MT55 Trigger Transformer.

Part & Description

HD-2AO
Tube only

HD-2A
Tube mounted in Reflective Base with Glass Cover

HD-2AR
HD-2 mounted in AR 365 Reflector

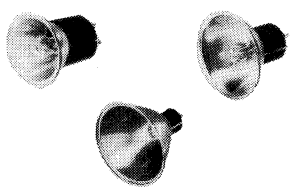


REFLECTOR ASSEMBLIES

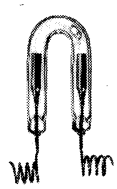
FOR USE IN STROBOSCOPES, WHEEL AND BALANCING EQUIPMENT.

ARA400SD-H88P4 Semi Diffused Flat Field
ARA400S-H88P4 Specular Finish
ARA400S-H88TP4 with built in Trigger Coil

ARA400 Series is 4 7/32" Diameter x 3⅞" Deep, operating at 350-600 Volts. Other sizes available.
Ratings (H88 type tube)
Max. Energy: 125 Joules per flash
Repetitive Flashing: 60/minute
10 Joules/flash — 100 flashes/second — .1 joules/flash



U-35-O



Glass portion of 6 MM tube 1½" long x ¾" wide. Mounts on ½" Centers. Flexible Braid Electrode Connections. For noncritical applications, a fine wire may be wrapped around nose of tube to apply trigger pulse.

U-35T

Same as U-35-O except with adjustable Trigger Band. Ideal for Stroboscopes and Amglo Flat Field Series Reflectors.

U-35-B

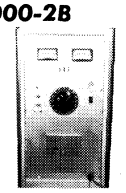
U-35-T Mounted with white Reflective Disc in 3 Pin Base. Plugs into standard 6 Prong Radio Tube Socket Type 78S6. Dia. 1⅛" x 1¾" high, exclusive of pins.

ELECTRICAL SYSTEMS AMGLO PS-4000-2B

Energy charging supply for use in Flash Photolysis. High Energy Stroboscopes, Flash Photography, Laser Excitation.

The PS 4000-2B is a versatile equipment designed for reliable continuous use. The unit features Variable Energy up to 1200 Joules/Flash at a rate of up to 6 Flashes/second. Pulse width is variable from 20 Microseconds to 1 Millisecond, depending on Flashead selected.

The PS 4000-2B is truly representative of the Quality and Workmanship expected of the No. 1 Source for Light.



AMGLO AC 5000-1

Energy Storage Charging Supply

The AC 5000-1 is a low cost 0-5KV supply containing a versatile trigger module. The AC 5000 will charge an External 50 MFD Capacitor to 4000 Volts in 10 seconds.

EXPERIENCE

The production of reliable and efficient flashtubes is an art understood and practiced by relatively few organizations in the world. The development of these devices involves an intimate and extensive knowledge of plasma physics, precious metal properties, vacuum technology and electronic control systems. In addition, the ability to produce these devices requires the utilization of skilled and highly specialized craftsmen. The AMGLO Corporation is a leader in this field because it has the background, craftsmen, and over 30 years of practical experience in producing flashtubes.

DATA RECORDING CAMERA SYSTEMS

FEATURING:

RAPROMATIC® 35mm processing with On-Camera developing, fixing and viewing.

Adaptable for recording a wide variety of visible phenomena such as: Oscilloscope Traces • Large Screen Radar Displays • Ionosphere Patterns

RAPROMATIC PROCESSING provides built-in film processing and viewing "On-Camera" within 60 seconds of exposure. Development and fixing are fast and thorough. Film is processed and fed thru "On-Camera" viewer where it can be evaluated within one minute of shooting.

TYPES

3800-C
FOR CONTINUOUS MOTION FILM ADVANCE

3800-P
FOR PULSE MOTION FILM ADVANCE

FEATURES

- Automatically develops and fixes up to 100 feet of 35mm film.
- Produces high quality negatives viewable in 60 seconds. No loss of resolution.
- No pumps, applicators, time/temperature devices, free fluids.
- Mounts on Type 3625 cameras.

SPECIFICATIONS

POWER REQUIREMENTS: 115 volts, 60 cycles, 1.5 amp.
DIMENSIONS: Approx. 11¾" high, 6½" wide, 14½" deep.
WEIGHT: 13 pounds.
FINISH: Magazine—black wrinkle; viewer—buff enamel.

PORTABLE FILM PROCESSOR TYPE 3801

This processor makes the advantages of the Rapromatic system available for developing films used in conventional magazines or in other types of photography. It will handle up to 100' of 16mm or 35mm film. In addition to its delivering high quality negatives which can be viewed immediately, very short lengths of film can be processed from cassettes or daylight loading spools. Electric and manual/electric drive units are available.
For washing film prior to storage the Type 3803-1 Washer Dryer is an ideal companion accessory.

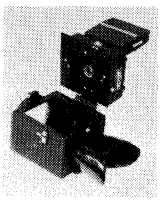
RAPROROLL®

Raproroll Developing Web Type 3802A is designed for use in Type 3800. Rapromatic Magazines. Raproroll 3802B is for use with Type 3801 Portable Film Processor, described below. Shelf life: unlimited if kept in freezer; 3 months at normal room temperature. Type 3809 (DuPont 931B Rapid Reversal) 35 mm film is recommended for use with Raproroll, but other pre-hardened-emulsion films may be used. Consult Spedcor for advice. When ordering Raproroll specify film type, size, length; e.g., Raproroll Type 3802A, 35mm, 100 feet, for Type 3809 (DuPont 931B) film.

JUNIOR WASHER DRYER TYPE 3806

This unit was designed expressly for use with Type 3800 Rapromatic magazines. Freshly processed film can be completely washed, dried, and placed on a storage reel automatically and continuously, immediately after passing through the viewer on the magazine. It is sufficiently compact to mount on an oscilloscope. Its 2-quart water capacity will handle a fully loaded magazine without interruption.
This unit is so compact and convenient that it is being widely adopted by photo labs for small-run 35mm processing.

TYPE 3625 for 35mm FILM



FEATURES

- Binocular viewing through dichroic mirror — no parallactic errors.
- Flat-field, non-distorting optics; slip hinge construction for quick access to exposure controls.
- Able to photograph fast transients by holding shutter open until the transient occurs.
- Data chamber permits simultaneous recording of data and scope traces.
- Can be used with most oscilloscopes.
- Negligible camera-to-scope RF and inductive interference, with RFI suppressed models.

SPECIFICATIONS:

Power requirements: 115 volts, 60 cycles, 0.5 amp.

Weight: 11½ pounds

Size: Approx. 13½" high, 7½" wide, 13½" deep.

Finish: Black wrinkle.

CAMERAS: The complete Type 3625 camera assembly consists of a periscope incorporating a binocular viewer with viewing port control, light hood, and bezel clamp; a camera with 38mm f/1.9 Wollensak Raptar lens, an electrically operated holding shutter synchronized with the film advance system, a ground glass focusing slide, and a 3-element data chamber.

The data chamber permits insertion of a card with written information into a data frame for simultaneous recording with the scope trace. The data chamber has its own optical system for projecting the data onto the edge of the film, and in addition incorporates a 4-digit counter for numerical frame sequencing and a 24-hour clock which operates for 36 hours per winding. The data elements are strobe illuminated and easily accessible.
NOTE: Data chambers cannot be subsequently added to camera assemblies ordered without them.

The camera assemblies are electrically controlled by means of a cable-connected momentary contact push-button switch. Circuitry in the camera housing controls the shutter and the drive mechanism of its associated magazine. Automatic actuators are optionally available.

The Type 3625 cameras are designed for use with Rapromatic Type 3800 magazines and with the conventional 35mm magazines Type 3642 and 3643, all described below.

TYPE 3003-A FOR SINGLE FRAME POLAROID FILM

This single frame camera system consists of:
1. A periscope with light hood and bezel clamp, permitting binocular viewing of the CRT screen through a dichroic mirror, which reflects image to film holder without parallactic error; **2.** A camera with 75mm f/1.9 flat-field lens, apertures from f/1.9 to f/16, Alphax #3 heavy duty shutter with speeds of T, B, 1, 1/2, 1/5, 1/10, 1/25, 1/50, and 1/100 second, 1:0.9 and 1:0.7 object-to-image ratios. Designed to multiple images on a single frame; **3.** Type 3640-A Polaroid roll film holder which accommodates all types of 3¼" x 4½" print size Polaroid films.

TYPE 3050 FOR POLAROID FILM PACK

1. Same description as for 1 and 2 of Type 3003-A; **2.** Type 100 Polaroid film pack holder; accommodates all Polaroid films available in film pack form.

MAGAZINES WITHOUT RAPROMATIC PROCESSING FOR TYPE 3625 CAMERAS

Type 3642 Continuous Motion Film Magazine

Variable drive—1/16" to 8" per second • Remaining film footage indicator provided

Type 3642 continuous motion film magazine accommodates 100 feet of 35mm daylight loading film. A synchronous motor drives the film through a variable gear train, providing film transport speeds of 1/16, 1/8, 1/4, 1/2, 1, 2, 4 and 8 inches per second, linear with respect to line frequency. Speeds as low as 1"/minute and as high as 16"/second are available with modification. Aperture size is 1" x 1½".

The magazine is electrically connected to the camera assembly, closing the camera actuating switch opens the shutter and starts continuous motion of the film; releasing the switch closes the shutter and stops the film. Opening and closing operations each require 25-30 milliseconds. The mechanism may be readily hooked up for continuous monitoring or remote programming.

Rapromatic portable processing equipment, described above, is recommended for convenient processing of film used with this magazine.

Type 3643 Pulse Advance Film Magazine

Capable of operation to rate 1 frame/second • Frame counter provided

Type 3643 pulse film advance magazine holds up to 100 feet of 35mm daylight loading film. Aperture size is 1" x ¾" (16 frames per foot). A modification is available with aperture size 1" x 1½" (8 frames per foot), for large screen recording applications. The drive motor is synchronized with the shutter mechanism and, when actuated, advances the film by one frame (±0.030"). A built-in neon light indicates advance of film to a new frame each time the shutter switch is released.

The magazine is electrically connected with the camera assembly. Closing the camera actuating switch opens the shutter. Releasing the switch closes the shutter and advances the film one frame. Opening and closing operations each require 25-30 milliseconds; successive shots can be taken as rapidly as 1 shot per second. Electronic devices are available for automatic operation.

CAMERA ACCESSORIES

Type 3600-C Hood. Enables the camera system to be used with any size cathode-ray tube for PPI, weather radar displays, etc.

Type 3625-5 Lens Modification. Enables the camera to be used in large screen applications.

Type 3625-4 Adjustable Shutter Timer. Pulses the Type 3625 Series Cameras at repetitive rates ranging from 1 second to 3 hours, with shutter speeds ranging from 1 second to 6 seconds.

Type 3625-6 Fixed Shutter Timer. May be ordered to pulse at fixed repetitions ranging from 1 pulse per second to 1 pulse in 24 hours.

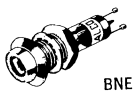
Type 3625-7 Transient Porgrammer. Triggered by the negative slope of the scope gate pulse, this device illuminates the scope graticule and data chamber, closes shutter, advances film, and reopens shutter for next event. Variations in sequence can be provided for computer-monitored and other applications.

SPECIFICATIONS

INPUT SENSITIVITY: Trigger pulse amplitude — 1.4v minimum; Negative slope of trigger pulse — .25v/μsec minimum; Maximum input voltage — ±25v.
INPUT IMPEDANCE: 50KΩ.
EXT. SOURCE: Source resistance 50KΩ maximum; Time constant (source resistance x shunt capacitance) not to exceed 50μsec, e.g., if source resistance is 10KΩ, total shunt capacitance must be less than .005μf.
OUTPUT RELAY CONTACTS: 1 form A to operate camera system; 1 form C for external use.
NOTE: Relay de-energized for approx. 1 sec. after application of input trigger.
REPETITION RATE: .9 pulses/sec. maximum.

PILOT LIGHTS

PILOT LIGHT ASSEMBLIES

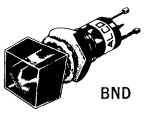


BNE

BNE Series — featuring a 1-piece body construction, this miniature neon pilot is ideally suited to indicate toggle switch positions, or for other display configurations with space limitations. A particular characteristic of this model is the compact lens system protruding slightly above the panel. Operating voltage, 75 VAC without resistor; for 115 VAC operations use external resistors (150K for standard intensity, 33K for high intensity) not supplied. Single 5/16-32 mounting.

BNF

BNF Series — similar to the BNE Series except that the lens system extends a greater distance beyond the panel for a bright illumination. This model has a permanent built-in neon and operates on 75 VAC. An external resistor required for 115 VAC. Turret type lugs are used for simplified hookup. Single 5/16-32 mounting.



BND

BND Series — combines an entirely new look in a space-saving pilot assembly. The neon protrudes beyond the panel to provide maximum light intensity. This model is available with or without built-in series resistor for 75V or 115V operation, and is also available as standard or high intensity. Single 3/8-32 mounting.

Model	Color	Description	One-24	25-99	100-499	500-999
BNE-2	*	Standard, less resistor	.49	.33	.29	.24

MNE-4L

MNE-4SL

BRITE-GLO® NEON LAMPS

Extremely small size lamp (equivalent to T-1 3/16). Smallest neon in the industry. Bullseye appearance gives the largest glow where needed on top. Rounded top places the illuminated area closer to the viewing point. Metal base (Model MNE-4SL) increases light output and protects lamp from damage.

Model	Description	One-24	25-99	100-499	500-999

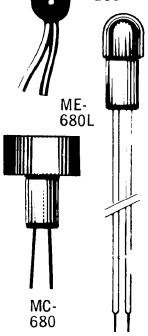
PL-105



ME-680L

MC-680

BRITE GLO® INCANDESCENT

Ultraminiaturized series that mounts in a 3/16" hole. Available only with the most popular 5V @ 60 ma. rated lamps having a 100,000-hr. life. Sealed high temperature plastic assembly contains a standard #680 T-1 lamp. Supplied either with long wire leads (Type ME-680L), or with pin contacts (Type ME-680). The ME-680 can also be used for PC boards. Colors available: Red, White, Green, Blue, Yellow — specify

RELAY FOR REMOTE CONTROL APPLICATIONS

MODELS FR-101 SPST AND FR-102 SPDT BASIC. This remote control component combines an isolated step-down transformer and a sensitive AC relay in a single laminated core that fits in a compact midget size package measuring on 2 1/8" x 1 3/4" x 1 1/4". It converts a 95-125 VAC power source to 30V that can be run through ordinary surface wiring without shocks and hazards. Operations of devices and machinery from remote distances are made possible for low voltage requirements. Typical uses are for safe switching and remote control applications, modern appliances, machine tools, and other automatic apparatus demanding remote control circuits thereby eliminating shock hazards. Contact rating 5 amp @ 117 VAC.

Maximum Load:
5 amps @ 117 volts.

Operating Voltage:
95 to 125 volts.

Current Consumed:
Under 40 ma.

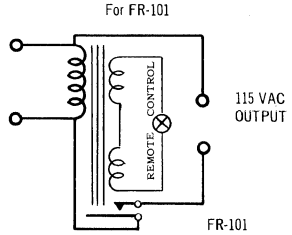
Isolated Voltage:
Under 30 volts.

Terminals:
6-inch leads for FR-101 & 2.
Plug-in for FRE-103.
Octal Base for FRP-104

Life:
Over 50,000 operations.

Size With Cover:
2 1/8" x 1 3/4" x 1 1/4" (FR-101 & 2).

SCHEMATIC DIAGRAM
For FR-101



FR-101

FRP-104 SPDT OCTAL PLUG — A standard octal base plug feature is added to the basic relay for the industrial user. The relay is protected by a plastic dust cover. SPDT @ 5 amps. Specifications are the same as FR-102.

FR-103 SPDT PLUG-IN — Simply plug relay into outlet; it provides the actuating voltage to a 117 VAC alarm or remote accessory. Has a 3-way receptacle to select N.O. or N.C. circuit. Side jack serves as plug-in for remote switch or sensor. Specs same FR-102.

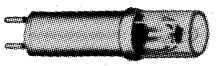
DRAKE INDICATOR LIGHTS..

BI-PIN CARTRIDGE-



— **LAMPS,** bodies aluminum, 6 volts and up, long life incandescent or neon, fit Drake or any mfgr.'s holders. Inexpensive all plastic cartridges also available.

— **LAMPHOLDERS,** black anodized aluminum, indexed to accept lamps with legends; ideal for data processing or other computer applications — commercial or Military.

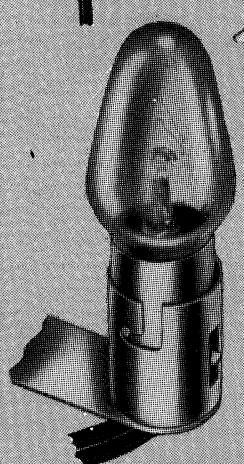
— **CONNECTOR AND FASTENER,** economical for commercial application with cartridge lamp eliminating lampholder.

LAMPHOLDERS

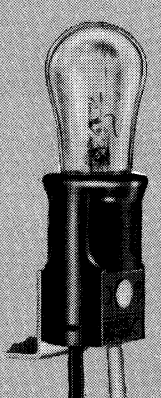
Thousands of lampholder and bracket combinations for any application. The more popular are detailed in Brochure 6504.

MINIATURE BAYONET— For instruments, radio, TV, automotive, marine and other miniaturized devices.

← Shell without & with housing

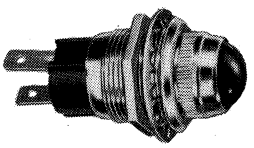


CANDELABRA SCREW — For illumination, on-off indicators in appliances and other equipment. →



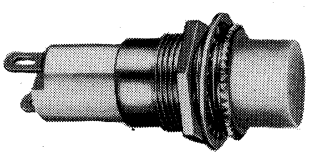
DC CAND. BAYONET — Rugged construction for appliances, vending machines and automotive. ←

"PSB" SLIDE BASE INDICATOR LIGHTS



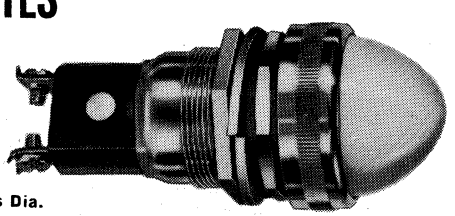
Uses Sylvania PSB slide base lamps; choice of 9 styles of lenses and solder or screw base lugs.

"Deluxe Molded" Indicator Lights

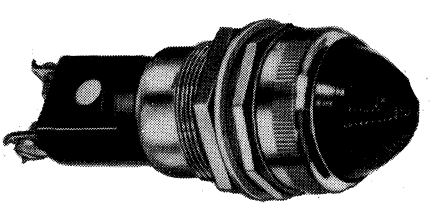


Drake's durable and finest — using T3¼ min bayonet lamps and 120 V. incandescent for commercial application. Incandescent or neon. Screw or friction fit lenses of many shapes and variety, also mech. dimmer for Military use. "Titelite" type for water-proof and oil-tite application.

"TITELITES"



1¼" Lens Dia.

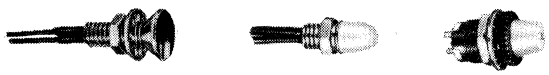


1" Lens Dia. Available for MIL-L-3661/38

Oil, water or dust-proof indicator lights with many lens styles for most incandescent lamps.

..LAMPHOLDERS...Reliability Since 1932

"ASTROLITES" and "GEMLITES"



"Astrolites" — Military or commercial — are Drake's tiniest, with built-in long life incandescent T1 lamp. Choice of 5, 12 volts; wire leads.

"Gemlite," small for commercial application with 2 lug termination using T1 Sub-Midget Flanged replaceable lamp in 5, 12, and 28 volts.

"TINYLITES"

Exclusive Drake, economical, with midget screw based lamp, for limited space requirements, choice of dome, or flat faced lens, with or without legends.

"MF" INDICATOR LIGHTS

Incandescent and neon Midget Flanged lamps are used both for commercial and Military having hundreds of varieties, lens shapes and colors including "Press-to-Test," "Titelite," etc.

ELDEMA INDICATOR LITES

C-LITES

Eldema C-Lites are 2-pin cartridge lamps that are easily inserted from the front of the panel into the D-Holder assembly. C-Lites are in three basic series: CF—incandescent, CG—neon, and CR—neon with built-in resistor. Clear anodized aluminum case — stainless steel pins — plastic lens cap — high dielectric insulation — meets Mil-L-3661. Mate with all DH Series holders.

For example: DHO-10B-D14B
DHN-60B-D06BRT

For clear anodized finish change letter B in terminal - finish and in lamp collar or lens cap to S - DHN-60S-D06SRT.

An installation wrench that mates with the knurled ring on rear mounting holders and switchlites is available. Part number — Z-090-375

LAMP COLLARS

D14B - Use with DHO
D15B - Use with DHN or DHO

Note: No lens color specified for collars. For use with C-Lite cartridges with colored lenses.

LENS CAP STYLE

D06B - Smooth lens
D07B - Long smooth lens
D09B - Fluted lens, clear colors only
D25B - Shroud lens, translucent colors only.

Note: For use with C-Lite cartridges with water clear lenses.

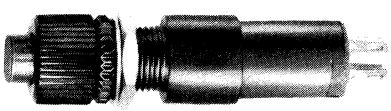
LENS COLORS

AC - Amber Clear*
BC - Blue Clear
CC - Cloudy Clear*
GC - Green Clear
RC - Red Clear*
WC - Water Clear*
YC - Yellow Clear*
AT - Amber Translucent
BT - Blue Translucent
GT - Green Translucent
RT - Red Translucent
WT - White Translucent
YT - Yellow Translucent

*Recommended for neon C-Lites

DH SERIES - TYPE DHS MOMENTARY SWITCH-LITE

Rear mounting, 3/8" hole
Mate with CF, CG and CR C-Lites



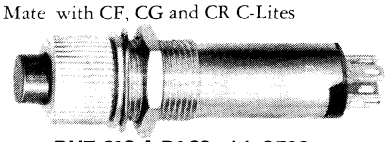
DHS-60B-A-D16B with CF03
Black anodized finish

DHS-60B-A-D16B normally open
DHS-60B-B-D16B normally closed
DHS-60B-P-D16B press-to-test

Black or clear finish — specify B — black, S — clear (underlined letters in part numbers by illustrations, 2 places)

DH SERIES - TYPE DHT MOMENTARY SWITCH-LITE

Front mounting, 15/32" hole
Mate with CF, CG and CR C-Lites



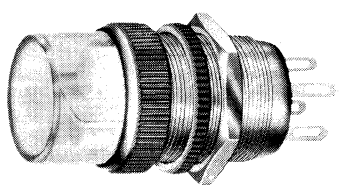
DHT-61S-A-D16S with CF03
Clear anodized finish

DHT - 61B-A-D16B normally open
DHT - 61B-B-D16B normally closed
DHT - 61B-P-D16B press-to-test

Four lug terminals — separate light and switch circuit — 1/2 amp rating for normally open and closed types.

DH SERIES - TYPE DHF DUAL LAMPHOLDER

Front or rear mounting 3/4" hole.

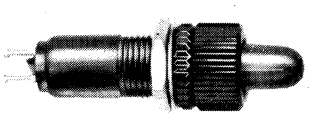


DHF-61B-D17BWC

Mates with any two CF, CG, or CR C-Lites. Four lug terminals — clear lens. Black anodized finish.

DN SERIES SINGLE LAMPHOLDERS

Rear mounting 3/8" Hole.
Mate with CN neon C-Lites

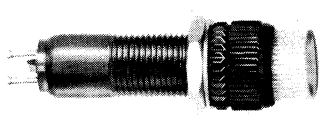


DNO-10B-D14B with CN01

Slightly longer than DHO holder, otherwise identical and specified in same manner except use DNO instead of DHO. Rear mounting 3/8" hole only.

DL SERIES SINGLE LAMPHOLDERS

Rear mounting 3/8" Hole.
Mate with CL24 C-Lites

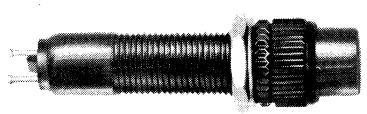


DLO-10B-D09BWC

Medium length holder for high voltage incandescent CL24. Specify in same manner as DHO — requires lens cap.

DM SERIES SINGLE LAMPHOLDERS

Rear mounting 3/8" Hole.
Mate with CM65 C-Lites



DMO-10B-D06BRT

Long length holder for high voltage CM65 C-Lites. Specify in same manner as DHO — requires lens cap.

For complete Technical information and detailed catalogs contact our representative listed in the EEM yellow pages.

ELDEMA INDICATOR LITES

R – LITES

R-Lites are Eldema's product family of relampable holders and lens caps for the midget flange based T-1 ¾ incandescent and T-2 neon bulbs. The lamps and lens caps are replaceable from the front of the panel. There are five R-Lite groups — each with its own features — the holder and lens cap part numbers in each group start with the same two letters to insure mating parts.

RM AND RN SERIES

The RM-RN groups meet MIL-L-3661 and MIL-L-6723. The RM is for incandescent lamps — the RN Series with a built in resistor is for neon lamps. Standard types RMA and RNA — waterproof types RMW and RNW — two tin plated lug terminals — black anodized aluminum cases — high impact plastic lenses. Mount from the front in 15/32" holes.

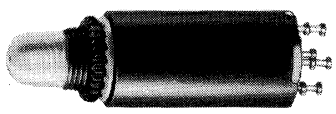
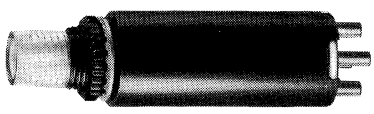
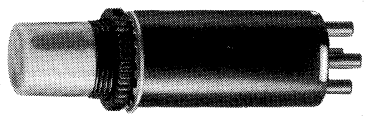
LOGIC-LITES

Indicator lights with built-in transistorized lamp driver networks. Available in neon and relampable incandescent types for operation from IC and discrete component circuits. Matching indicator lights and switchlites are also available. Contact Eldema for more detailed information.







H-LITES

Eldema Series HL holders and lens caps are for sub-miniature based T-1 incandescent lamps. Military type construction — brass housing — either single or two terminal style — relampable from the front of the panel — mount on centers as close as 0.360. RFI/EMI shielded versions available-see H-Lite brochure.

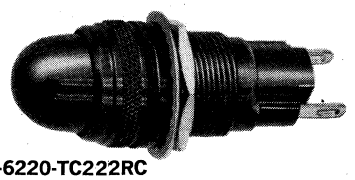
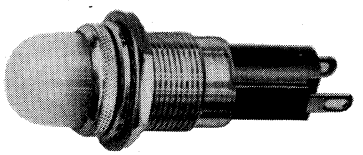
ELDEMA INDICATOR LITES

T-SERIES

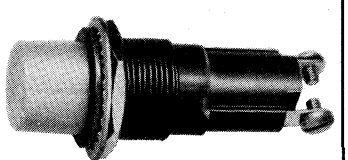
Eldema T-Series lampholders and lens caps are for the T-3¼ bayonet based incandescent and neon lamps. Four basic types — TAF and TCF for incandescents — TAG and TCG with built-in resistors for neons. Meets Mil-L-3661 — polished chrome, black nickel or bright nickel finish — front mounting in 11/16" holes water proof types — lug or screw terminals.



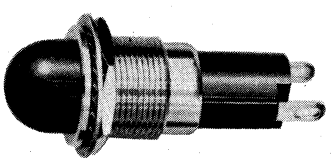
TCF-6220-TC222RC



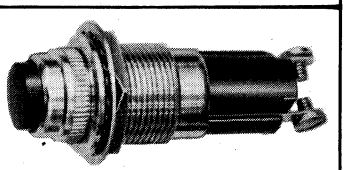
TAG-6032-TA263CD



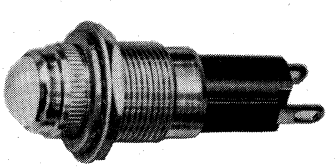
TAF-7020-TA160AT



TAF-6030-TA120RT



TAF-7030-TA243RT



TAF-6030-TA223CD

HOLDER STYLE

TAF - Incandescent lampholder Screw-in lens caps

TAG - Neon lampholder Screw-in lens caps

TCF - Incandescent lampholder Screw-on lens caps

TCG - Neon lampholder Screw-on lens caps

NOTE: TAF and TAG holders mate with lens caps starting with letters TA. TCF and TCG holders mate with TC lens caps.

HOW TO SPECIFY HOLDER FEATURES:

Example — 6010

First digit: (Terminals)	6 = Solder lug 7 = Screw terminal
Second digit: (Mounting)	0 = Standard part 2 = Water proof
Third digit: (Finish)	1 = Bright nickel 2 = Black nickel 3 = Polished chrome
Fourth digit: (Resistor)	0 = None (TAF & TCF) 2 = 27KΩ for NE51H lamp 4 = 56KΩ for NE51 lamp 7 = 100KΩ for NE51 lamp 25,000 hour life rating

SCREW-IN LENS CAP STYLE

TA120	- Smooth dome — clear or translucent colors
TA130	- Fluted dome — clear colors only
TA140	- Semi-Fluted dome — clear colors only
TA160	- Flat top — clear or translucent colors
TA223†	- Convex — clear or diffusing colors (no cloudy clear)
TA243†	- Flat top — clear, translucent or diffusing colors
TA263†	- Smooth dome — clear or diffusing colors (no cloudy clear)
TA283†	- Fluted dome — clear colors (no cloudy clear)

SCREW-ON LENS CAP STYLE

TC223† Smooth dome — clear or diffusing colors (no cloudy clear)

TC243† Fluted dome — clear colors only (no cloudy clear)

† These lens caps have a metal ring with polished chrome finish specified by the digit 3. For bright nickel, change to 1, black nickel, change to 2. For example: TA221RC and TC242RC.

To specify water proof lens caps in the TA styles change the first digit as follows: TA100 series to TA400, TA200 series to TA300. For example: TA120RC to TA420RC. Standard TC lens cap may be used. All necessary sealing gaskets are on the TC holder when it is specified water proof.

LENS COLORS

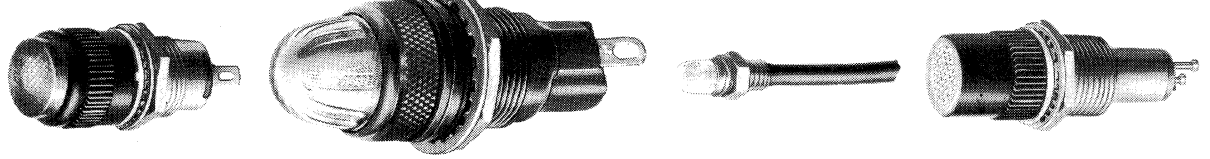
RFI/EMI SHIELDED INDICATOR LITES

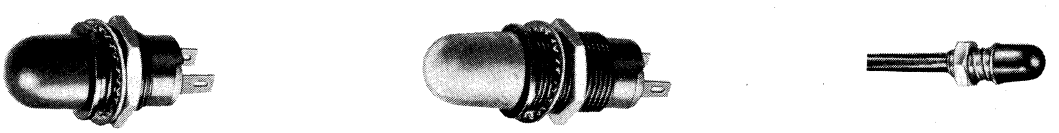
Special lens caps with internally retained wire mesh cloth used in lampholders with a conductive finish provides effective attenuation for interference shielding requirements. Shielded versions of most Eldema products are available and match the standard units. Contact Eldema for the technical bulletin covering complete RFI/EMI tests and results of these shielded indicator lights.



R-LITES T-SERIES J-LITES D-HOLDER

MIL-LITES

Specific Eldema parts meet MS25256, MS25257 and MS25446 per MIL-L-6723. Under MIL-L-3661 Eldema meets almost all configurations for lamp holders (LH nos.), Lens caps (LC nos.), and indicator lites (LHC nos.). Complete cross reference information is available upon request.



Complete catalogs and cross-reference information to Military parts and those of other manufacturers are available from our representative listed in the EEM yellow pages.

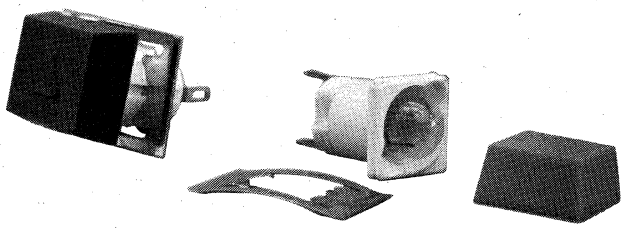
INDICATING LIGHTS

CR103 TYPE B MINIATURE SQUARE INDICATING LIGHTS



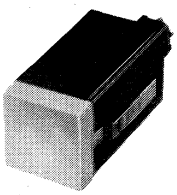
The CR103 Type B general-purpose miniature indicating light is a small, "square look" unit that provides positive visual indication on control panels and consoles, data processing equipment, and wherever production and automated systems exist. A complete light consists of a base unit with bulb, lens and spring clip.

FEATURES

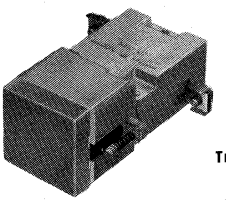
2-pin type lamp replaceable from front of panel; interchangeable lenses of snap-on construction; choice of red, white, green, or yellow lenses; optional arrow indicator on lens ideal for flow charts; low power requirement of 6, 12, or 24 volts; simple one-hole mounting.

Write for Bulletin GEA-7398

CR103 TYPE C SQUARE INDICATING LIGHTS



Full-voltage type



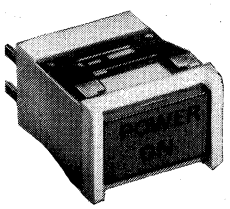
Transformer type

CR103 C square indicating lights are designed for use in a wide variety of applications such as: business machines, operator panels, consoles, control desks, motor control centers, and for the panel building, electronic and intrumentation fields.

Full voltage and transformer types in a variety of colors are available. Lenses may be translucent type or transparent type used with a diffuser. Legends can be engraved and filled on translucent lenses.

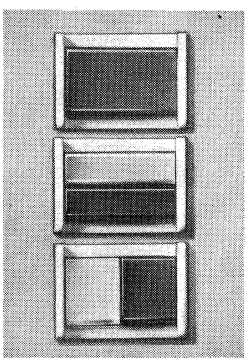
Write for Bulletin GEA-7366

CR103 TYPE D INDICATING LIGHTS



With solid lens cap installed

Solid or split color fields give added flexibility. Colors can be mixed in the split field forms for even more combinations.



General Electric's new line of CR103 Type D indicating lights are designed for a wide variety of applications such as control and instrument panels, office machines, laboratory instruments, computers and other data processing equipment. Matching illuminated push button switches are shown in Section 5100 on page of General Electric switches.

FEATURES

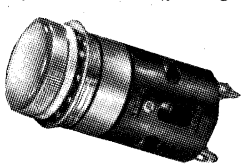
- Units snap into panels from front without tools, and can be gang-mounted horizontally to save space or for group functions.
- Convenient slide-on lens caps in five colors; four housing colors. Units are single button only, and have solid horizontally- or vertically-split color fields. 2-lamp and 4-lamp forms are available.
- Legend inserts for all forms can be printed or engraved on acetate or similar material of 10 mils or less thickness.

Write for Bulletin GEA-7390

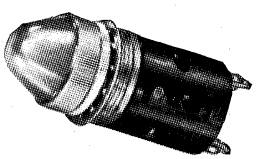
CR103 TYPE H INDICATING LIGHTS

With spherical lens for $^{11}/_{16}$-in. mtg. hole

With crown lens for $^{15}/_{32}$-in. mtg. hole



With crown lens for 1-in. mtg. hole



With torpedo lens for 1-in. mtg. hole

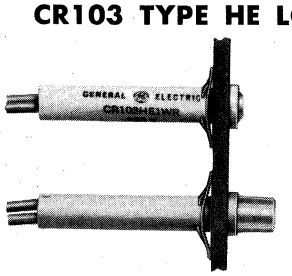
CR103 Type H indicating lights give bright visual indication of circuit operating conditions for applications where oil-tightness is not required.

FEATURES

- **Vivid Colors** — yellow (amber), blue, green, red, white and clear.
- **Even Illumination** — Lexan diffuses light and gives off an even glow.
- **Durable** — lenses will not shatter, resist high temperatures.
- **Compact** — forms for $^{15}/_{32}$, $^{11}/_{16}$, or 1-inch mounting holes.
- **Rating Flexibility** — wide variety of lamp voltages available. Lamp is supplied by the customer.
- **Ease of Installation** — lamps and lenses install from the front.

Write for Bulletin GEA-8119

CR103 TYPE HE LOW-COST MINIATURE INDICATING LIGHTS



CR103 Type HE indicating lights are new, low-cost units for applications requiring a minimum of space. They are ideally suited for business machines, major appliances, small panels, meters, gages, timers, illuminated pointers, dial indicators, and many other places where panel appearance and visual display are important.

Only $1^{11}/_{16}$" long, they mount with a speed nut in a $^{5}/_{16}$" dia hole. Choice of amber, clear, red, or white lenses in flush or cylindrical lens style. Body colors are black, gray, tan, or white. For 120, 240, or 480 volts.

Write for Bulletin GEA-8119

For complete information contact nearest GE Sales Office listed on inside front cover, or write to General Electric Co., Section 998-50, Schenectady, N. Y. 12305.

[1] At 5 volts; at 6 volts, approximately 0.6 cp

[2] Coated Aviation Red

SUB-MINIATURE LAMPS

(Top Section of chart at right.) Designed for maximum service life under conditions of shock and vibration. Will not introduce noise into audio circuits. Manufactured and tested to rigid quality control standards.

"TU-PIN" SUB-MINIATURE LAMPS

Ideal for printed circuits and transistor sockets. Bases color coded to electrical characteristics. Easy to insert and remove, especially in difficult locations. So small twelve can be mounted in one square inch.

MICRO-MINIATURE LAMPS

(Lower Section of chart at right.) Design lives of 100,000+ hours is common. Tipless bulbs for undistorted end viewing. Pre-aged and photometered to assure reliability, stability, and electrical accuracy.

ENGINEERING ASSISTANCE

Hudson manufactures all standard miniature, sub-miniature, and micro-miniature lamps, most of which are described in our Catalog #106. If you have an application for which no standard lamp is suitable, Hudson will design and manufacture a special lamp to meet your requirements. Please ask us for recommendations, which are furnished to you without obligation, of course.

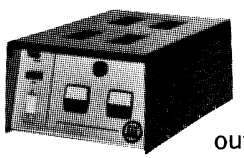
Where The Resource is Light and The Product is... Imagination!

Illumination Industries offers the highest concentration of experience and talent for creative and rapid response to standard and custom design requirements.

Our goal as a company from our beginning in 1965, has been to produce high quality, state-of-the-art products. We have gathered the best in management, technical, and engineering personnel to insure our high standards and to keep pace with the changing demands our our customers. Illumination Industries offers not only a line of reliable products, but an experienced capable staff unmatched by any competition.

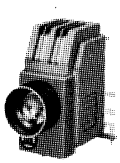
Xenon Flash & Strobe Lamps Outstanding features: seal integrity, extended life, reliable triggering, high conversion efficiency.
Operating characteristics: 8 to 18,000 joules, glass to metal seals and solder seals; output of 15 to 50 lumen-seconds per joule input.
Model Numbers: F-38, F-38-U, F-42, F-81, F-47, F-47-U, F-70, F-60, F-90, F-91, FRT-6, FFT-6, FRT-76, Mini Strobe.



Power Supplies Outstanding features: constant power to lamp throughout lamp life, solid-state, rugged design, low current ripple, ample starting energy to restart hot lamps.
Operating characteristics: 35 to 500 watts; integrated starter circuits, DC output, 50 or 60 cycle and 117 to 220 volts.
Model numbers: CA-35, CA-75/100, CA-150, CA-200, CA-350, CA-500, CA-610, modulators.

Mercury Short Arc Lamps Outstanding features: extreme arc stability, intense source of ultraviolet and visible radiation, performance proved reliability, constant lumen output throughout lamp life.
Operating characteristics: 100 to 500 watts; 2,000 to 30,000 lumens.
Model numbers: III-107, III-110, III-610, III-660, III-200-2, III-200-3, III-202, III-203, III-350, III-500-2, III-360, III-120.

Xenon Short Arc Lamps Outstanding features: ultra arc stability, intense sources of ultraviolet and infrared radiation, history-proven reliability, capable of continuous, modulated or pulsed operation.
Operating characteristics: 35 to 300 watts; 600 to 7,500 lumens.
Model numbers: X-35, X-36, X-50, X-75, X-76, X-150, X-200, X-300, X-80, X-160, X-310.



Lamphousings Outstanding features: 2″ or 3″ optics, positive linkage focusing adjustment in X-Y-Z axis, spherical rear mirror, detachable backplate for ease of lamp installation and prefocusing.
Operating characteristics: will hold 35 to 350 watt short arc lamps, pyrex or quartz optics, collimated light, integral filter sets.
Model numbers: LH-350, LH-350 Quartz, LH-360 W, LH-360 WO, LH-370, LH-370 Quartz.

Custom Design Capability Illumination Industries offers the highest concentration of experience and talent for creative and rapid response to unique customer requirements.
The company's engineering and manufacturing staff have a depth of experience unequalled in the industry and they welcome the opportunity of assisting customers in the solution of their lamp and power supply problems.

ILLUMINATION INDUSTRIES INC. 610 VAQUEROS, SUNNYVALE, CALIFORNIA 94086, U.S.A. (408) 738-2744

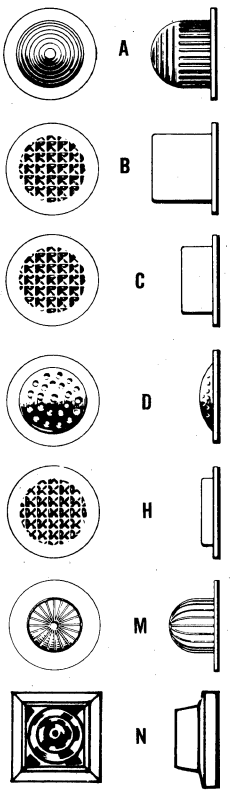
IDI PILOT LIGHTS AND

omni-glow

VERSATILE GENERAL PURPOSE NEON PILOT LIGHTS

. . . for all your line-voltage applications—usually outlasts the product on which it is installed. Mounts in a jiffy in a ½" hole. Tamperproof, resists vibration and shock. A variety of lens shapes and colors are available, with imprinted legends as required. Leads are tailored to your production needs. UL and CSA approved. OMNI-GLOW is also available with seasoned and selected neon lamps with associated resistors, capacitors and diodes to meet your circuit requirements.

- Choice of 7 lens shapes, variety of colors, imprinted legends (if desired), 4 standard ring finishes, 4 body lengths.
- Long-lived neon pilot lights operate more than 10,000 hours.
- Mount in a jiffy in ½" hole with choice of speednut, snap-fit, or tubular clip.
- UL and CSA approved.
- Choice of lugs or leads.
- Also available with long-lived incandescent lamps.

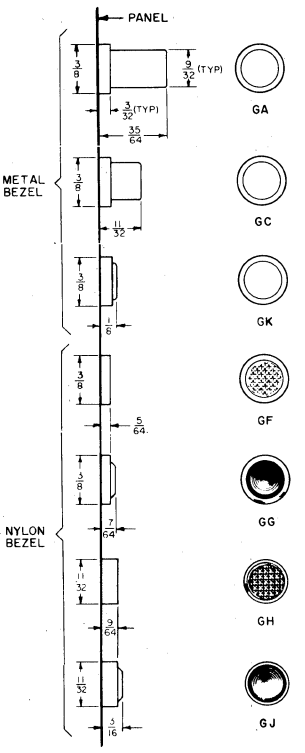


glo-dot

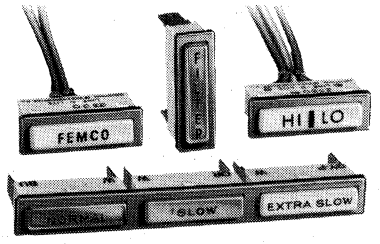
MINIATURE NEON PILOT LIGHTS

. . . tiny, yet complete neon pilot light mounts in 5/16" dia. hole with push-on speed nut. Rugged and long-lived. GLO-DOT is available with insulated leads and complete built-in strain relief—is UL approved. A variety of lens and body colors satisfy application and appearance requirements.

- Choice of 7 lens shapes, variety of colors, imprinted legends (if desired), 4 standard ring finishes, 4 body lengths.
- Complete with built-in resistor, neon lamps for extra-long life.
- UL and CSA-approved.
- Variety of leads and terminations.
- Also available with bare lamp leads for lowest cost applications not requiring UL or CSA approval.
- Also available with long-lived incandescent lamps.



LINE-O-LITE

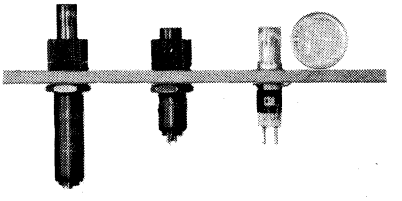


A series of neon pilot lights specifically designed to produce an attractively illuminated legend or bar of light. Line-O-Lite can be printed either vertically or horizontally on a variety of colored lenses. Message area ½" by 1 3/32". Easy installation—snaps into a 1.280 by 400/.395" rectangular hole. Can be provided with leads or quick-connect tabs—as desired.

- Ideal for display of illuminated legend.
- Wide selection of attractive bezel finishes.
- Long-lived lamp, resistor built-in.
- Wide variety of lens colors available.
- UL and CSA-approved.

MINI-CATOR

MINIATURE INDICATOR LIGHTS



For use in electronic instrumentation, computers, display panels, precision machinery and electronic equipment in general — including military applications. Neon models available for 65 VAC (90 VDC) and over, with or without built-in resistor. Incandescent models available for 6.3V-.20A, 14V-.08A and 28V-.04A, as well as other voltages and currents. MINI-CATOR consists of replaceable lamp cartridge and mating lampholder. Lamp cartridge has nylon body for long-life ruggedness. Lampholder with built-in resistor for neon cartridges available.

- Lens available in variety of colors, with or without imprints.
- Lampholders mount in 3/8" hole for space economy.
- Lamp cartridge may be mounted directly in 19/64" dia. hole with mounting clip and lamp connector.

INDUSTRIAL DEVICES, INC.
Edgewater 14, New Jersey

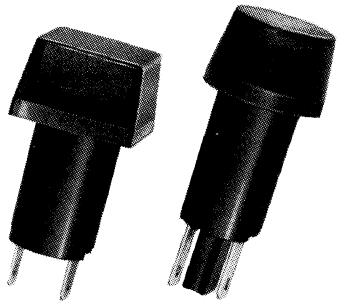
ELECTRO-MECHANICAL PRODUCTS

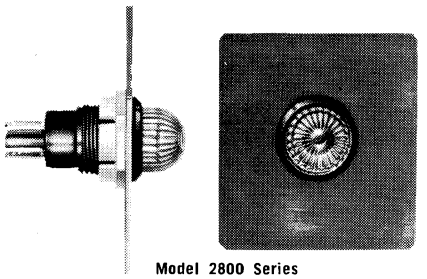
MINI-SLIDE

PILOT LIGHT ASSEMBLIES



Model 3040 Series Model 3060 Series

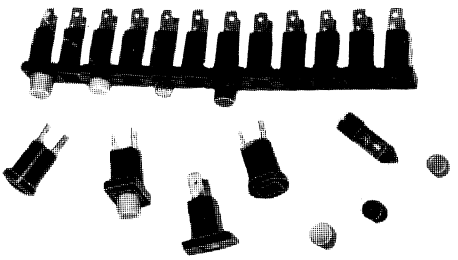
- Two lens shapes, round and square for either model series.
- Sockets for "Pilot" lamps including 120 volt lamp and "Indicator" lamps.



Model 2800 Series

- Screw-in design for easy relamping from front of pane.
- Unique torque-limiting, self-locking nylon mounting nut.

INDIVIDUAL SOCKETS
MULTI-SOCKET STRIPS • END CAPS



- Round and rectangular single sockets.
- Socket strips of 12 sockets on ½″ or ¾″ centers, individual or common ground.

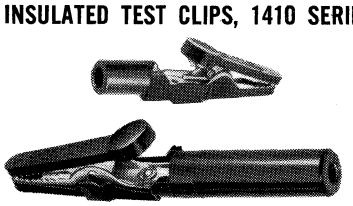
- Attractive on or off. Uniform brilliant light.
- Economical yet reliable and rugged.
- Lenses in a full range of colors.
- Easy to install with push-on speednut mounting, simple panel preparation. Keyed to prevent rotation.
- Lenses can be imprinted.
- Easy relamping from front of panel. No special tools needed.
- Lamps are extremely long-lived, rugged, reliable, available from 4 volts to 120 volts.
- U.L. approved (phenolic sockets) for 120 volts.
- Either solder or use quick-connect receptacles.

SHORT SLIDE-BASE LAMPS

A complete line of rugged, long-life miniature incandescent lamps is available to fit Industrial Devices individual and multi-socket strips. Several types are offered to cover a wide range of voltages up to 120 volts and ratings up to three watts. Lamps are available in two lengths; the shorter "Indicator" and the longer "Pilot" lamps.

safe-t-klip

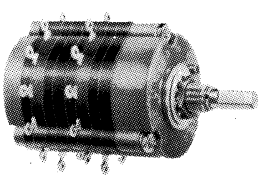
INSULATED TEST CLIPS, 1410 SERIES



- Provides protection from shocks or shorts.
- All surfaces protected with tough nylon.
- Six models for leads, test prods (2 types), banana plugs, and new Fused Safe-T-Klip.
- Protects in excess of 600 volts.
- Meets military requirements.
- Available in red and black.
- U.S. patent #2,754,490.

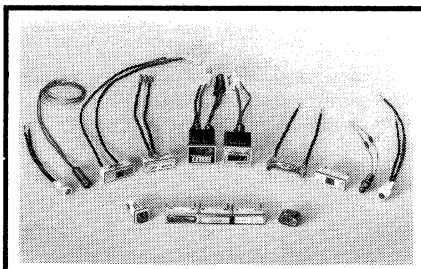
rotary instrument switch

Series 2000



- Extremely low contact resistance — Less than one milliohm.
- Extremely high insulation resistance — More than one million megohms.
- Totally Enclosed — Dust Tight
- Long Life — In Excess Of One Million Cycles.
- 12 Position, 1-6 Pole.
- External Adjustable Stops.

Series 2000 Rotary Instrument Switches are shorting types (make-before-break) which feature solid silver contacts, hardened beryllium copper detent spring, and nylon detents for smooth action. This exceptionally stable, long-lived rotary switch is available from one to six poles for a wide range of applications including precision bridges and decades, thermocouple switching, and laboratory test equipment.



specials . . . of every description

IDI specializes in designing or adapting pilot lights to particular specifications. Lights can be provided as complete assemblies to meet circuit design requirements — a capability that can drastically reduce cost by eliminating delicate assembly of resistors, capacitors or diodes. Whatever your requirement, special pilot light or pilot light assembly, IDI progressive manufacturing techniques and engineering capabilities will provide quick, economical service.

INDUSTRIAL DEVICES, INC.

Edgewater 14, New Jersey Phone: 201-943-4084

IEE Subminiature Incandescent Lamps

Handworkmanship insures accurate filament location and superior mechanical characteristics. • Handblown, seamless and tipless envelope provides unmatched clarity. • Machined bases for precision fit. • All lamps aged to stability and selected to insure long life and uniform brightness. • Cost savings as much as 40% below competitive manufacturers.

Orders for any one T-size lamp may be grouped for best price.

		Lamp No.	Volt	Amp	M.S.C.P.*	Average Life (Hrs.)	Price** (Each)	
T 7/8 LAMPS BASED		1	5	.115	.132	40,000	.44	A totally new lamp designed and developed by IEE. Now being widely accepted throughout the industry as a standard. This lamp offers all the features of a standard T1 lamp but requires much less space. Supplied in both standard types and commercial types for low cost applications.
		A3	14	.04	.132	16,000	.588	
		A5	12	.06	.132	16,000	.588

*Mean spherical candle power. **Qty. price on 100,000 and over.

IEE Subminiature lamps are used exclusively in IEE Rear-Projection Readouts. See page 1189

Industrial Electronic Engineers, Inc., 7720 Lemona Ave., Van Nuys, California

LAMPS, Inc. is the world's largest manufacturer of subminiature and microminiature lamps. And we got big because our specifying and quality control standards are higher than industry and military standards. Example: light output variations of ±15%, versus the conventional ±25%.

We'd like to tell you about all our LAMPS. But we just can't do that. You see, there are already about 1,000 design configurations of the 130 basic types of LAMPS. And, by the time you read this, we'll be producing LAMPS that just didn't exist—even as ideas—when EEM went to press.

Some of the most widely used LAMPS are described in the chart. They're only a sample. So, if you don't see what you want, ask for it. If we don't already stock it, we can probably make it. Call us collect or drop us a line. Right now. We'll be happy to send you a complete catalog, and to counsel with you about your particular LAMP requirement.

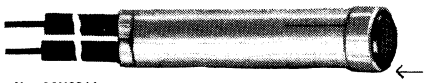
INDICATOR LIGHTS
NEON AND INCANDESCENT AND SPECIAL ASSEMBLIES

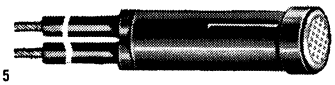
TINEON INDICATOR LIGHTS

Long Life, High Brightness Lamps — Press fit into 5/16" hole — For neon types rated 110-250V — Nylon housing in colors (white standard) — Speed nut furnished — Plastic lens in colors — Legends — Built-in Resistor — Insulated Leads.
All Tineons are available with Incandescent Lamp.



3600 Series (with built-in resistor) Available in 3 flange dimensions

No. 36N2311

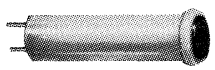


4100 Series (with neon less resistor or incandescent)

No. 41N1315

TINEONS
45 Series (Blade Terminals)

No. 45R2111T8



46 Series (Pin Type Terminals)

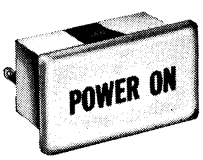
No. 46N2311

WITH ALUMINUM BEZEL
All Tineons may be furnished with aluminum bezel. Please specify when ordering.

No. 36EN2111 (Hi-Hat red lens) With aluminum bezel

RECTANGULAR INDICATOR LIGHTS

Long Life High Brightness Neon Lamps — Snap into panel securely without additional hardware — Choice of lens colors — Series 3100 has chrome bezel and plastic lens — Series 47 has one-piece plastic lens and body — Complete range of voltages — UL and CSA listed.

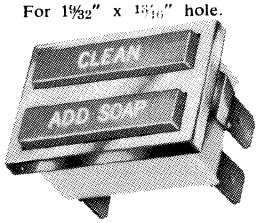


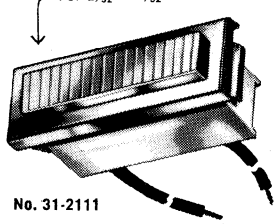
No. 47-3T (legend to specification)
For 1 3/16" x 5/8" hole

Barrier separates light into two separate message areas. Individual or simultaneous operation.

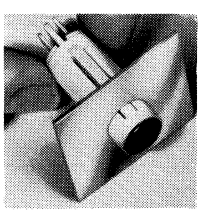
No. 31D-ORN
Dual Message Lights
For 1 9/32" x 13/32" hole

DUAL BEZEL
No. 31-ML2
For 1 9/32" x 1 3/16" hole.

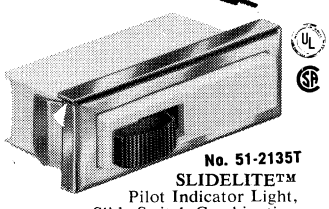




No. 31-2111



2900 Series
REAR - ASSEMBLY, SNAP - IN LIGHTS Neon or incandescent. All voltages. Snap in from rear, lock firmly. Simpler, swifter assembly. Eliminate threading leads as in front-of-panel lights. No additional hardware. Mtg. hole .510-.520".

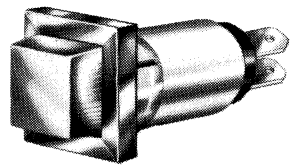


No. 51-2135T
SLIDELITE™
Pilot Indicator Light, Slide-Switch Combination
Ultra-compact. Simple snap-in installation. Wide voltage range, choice of lights. May be message stamped. Lens colors: red, amber, clear, white, blue, green, others on request. Leads or terminals. 1 25/64"x 15/32"x 23/32". Rating: 125 V. 6 Amps.

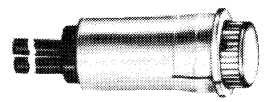
SNAPLITE INDICATOR LIGHTS

With long-life lamps, high brightness types. Built-in resistors — when neon lamps — to suit applied circuit voltage, provide required lamp life, eliminating replacement need. Features: Snap into place in 1/2" hole with no additional hardware. Wide variety of lens and housing colors. Tab or solder terminals; or wire leads. AVAILABLE WITH CHROME RINGS. To specify Chrome Rings add R after 1st 2 Digits, i.e., 32-2111 becomes 32R2111.

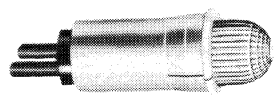
SQUARE LENS
32R2911T 7/32" high



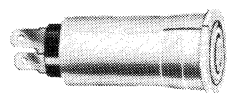
FLAT CYLINDRICAL LENS
32-2111 3/16" high



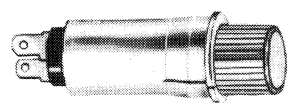
STOVE PIPE LENS
32-2211 13/32" high



FLUSH LENS
32-2311T 1/32" high



HI-HAT LENS
32-2511T 5/16" high



NOTE: Total height above panel equal to lens height plus 1/16" flange thickness. 5/32" flange thickness for Square Lens.

HOW TO ORDER LEECRAFT INDICATORS WITH INCANDESCENT LAMPS

Incandescent lamps to meet low voltage characteristics may be supplied in place of neon lamps with all indicators illustrated on this page. To specify incandescent in place of neon lamps insert lamp code after series number. Some of more popular voltages are listed.

CURRENT (Milliamperes)	VOLTAGE (Volts)	CODE LAMP
200	6	G1
40	6	G2
14	10	G6
80	14	G3
40	28	G5

EXAMPLE: 41N2313 with 14 Volt 80 Mil. LAMP becomes 41N-G3-2313.
32-2111 with 6 volt 200 Mil. LAMP becomes 32-G1-2111

Leecraft Series	Volts	Terminations
3200	110-125	Insulated wire leads
3500	210-250	Insulated wire leads
3200T	110-125	.187 tab terminals
3500T	210-250	.187 tab terminals

1/3W, 125V
1/3W, 250V

CATALOG NUMBERS • 3200 SERIES WIRE LEADS*

Lens Color	Cylindrical Lens	Flush Lens	Stove Pipe Lens
Red	32-2111	32-2311	32-2211
Amber	32-2113	32-2313	32-2213
Clear	32-2117	32-2317	32-2217
White (Translucent)	32-2115	32-2315	32-2215

To specify Square Lens, use 32R291 plus 1, 3, 7 or 5 for lens color. Example: With red lens—32R2911. To specify Hi-Hat Lens, use 32-251 plus 1, 3, 7 or 5. Example: With clear lens—32-2517.

* To specify TAB TERMINALS in place of WIRE LEADS, add "T" after number, i.e., 32-2111 becomes 32-2111T.

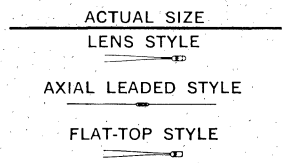
Pinlite® / WORLD'S SMALLEST INCANDESCENT LAMPS AND MICROMINIATURE ASSEMBLIES



The microminiature Pinlite® lamp is made possible through a unique manufacturing method developed by Pinlites Inc. Although the smallest standard size lamp is only .016" in diameter, smaller sizes are produced on special order. Pinlites Inc., with its vast experience and technical know-how in the production and design of microminiature components, also offers an additional service . . . the designing of micromodules and microminiature assemblies to meet specific customer requirements. Pinlites comply with Mil Spec 5422-E and can withstand shock and vibration in excess of 50 G's.

Use Pinlites when speed of response, small size, and low power are important!

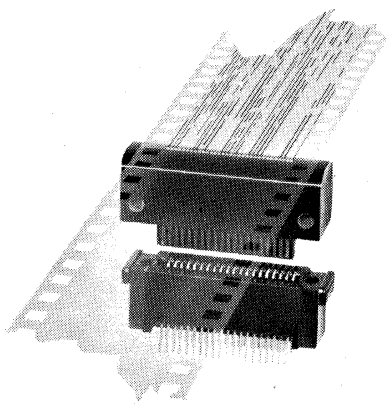
PINLITE® FEATURES

- Lowest Power Consumption
- Lowest Series "L" & Shunt "C"
- IR and UV Emission
- Smallest Size
- Fastest Response (Audio Range)
- Vibration & Shock Resistant
- Built-in Lens Concentrates Light Beam Up to 10X Normal Intensity
- Three Styles for Greater Versatility; lens, axial leaded, flat-top

PINLITE® APPLICATIONS

- Transistor Indicators
- Microwave Noise Sources
- Modulated Light Source
- Microwave Bolometers
- Optical Point Sources
- Medical & Industrial Light Probes
- Remote Electronic Attenuators
- Read Out Devices
- Pointer & Meter Scale Illuminators
- Photometric Instrumentation
- Light Actuated Switches
- Telemetry
- Indicator Lamps (colored Pinlites)

MULTI-TRACK HEADS . . . compact coding devices with up to 40 individually controlled light sources per inch



Coding devices by Pinlites Inc. are the only available microminiature light sources that mate with commercially available photo sensing heads. A number of sizes are being offered as standard models to be used in conjunction with perforated tapes, photo sensitive film or other optical sensing devices to provide a convenient means of relating time sequences and/or controlling intermittent on-off applications. By stacking these units a dense matrix can be obtained of up to 400 individually controlled light sources per square inch. For technical data on standard models, information and prices on non-standard models, write for our 1969 catalog.

Shown here are 32-lamp, Multi-Track Heads with printed circuit board connector, top, and integral cabling. Top photo illustrates use with photo sensitive film.

FLAT TOP

All specifications for the flat-top lamps are the same as lens style lamps. When ordering, simply prefix numbers at left in "TYPE" column with "F" in place of "L" (e.g.—L12-3 becomes F12-3).

DUAL FILAMENT

Same rigid characteristics apply as with other Pinlites plus the redundant feature for fail-safe operation. Write or call for details.

* f.o.b. Shipping Point. Prices subject to change without notice. DELIVERY — Most quantities from stock.

Precision Lamp Engineers

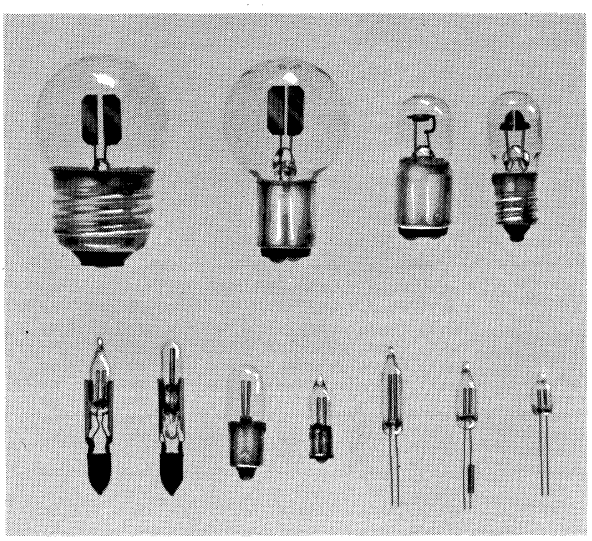
ENGINEERS AND DESIGNERS OF MINIATURE AND ULTRAMINIATURE LAMPS

25 WAYLAND STREET, SAN FRANCISCO, CALIFORNIA 94134 • 333-5466 (415)

SIGNALITE

MINIATURE GLOW LAMPS

Whether you use Glow Lamps as Indicators or as Electronic Circuit Components . . . the combination of features, offered by Signalite Glow Lamps make them suitable for a wide variety of applications. Signalite Glow Lamps have solved problems in these areas: voltage regulation and references, photocell drivers, SCR triggering, timing, photo choppers, oscillators, counters, regulated power supplied, digital voltmeters, timing circuits, suppressed 0 voltmeters, frequency and voltage dividers, indicating voltmeters, gating, transient and overvoltage protection, flip-flops, etc. Signalite's extensive line can provide you the design flexibility needed to achieve circuit reliability at low cost. For a creative approach to your design problem . . . contact Signalite's Application Engineering Department.



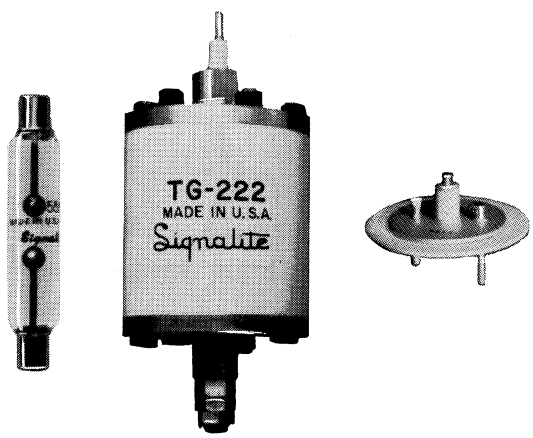
If there is a Gas Discharge Device or Glow Lamp to meet your needs,

SIGNALITE APPLICATION NEWS
is used to communicate new and proven techniques and applications of Signalite's neon lamps and gas discharge tubes. Signalite Application News provides a forum for an exchange of ideas to keep the design engineer aware of the versatility of neon lamps and their many applications. Copies are available from your Signalite representative or by contacting Signalite.

Your Single Source for Gas Discharge Tubes and Glow Lamps

SPARK GAPS

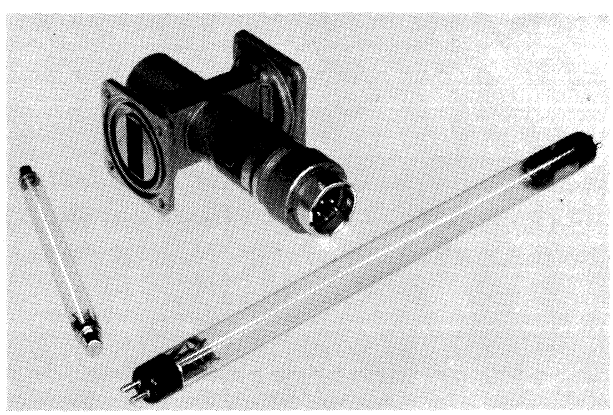
Signalite offers a wide range of two electrode and triggered spark gaps to protect your electronic components, transfer high energies, hold off a wide range of voltages, crowbar power supplies, etc. Over 300 standard gaps to fit 400 volt to 65,000 volt applications are available.



Signalite "300" Spark Gap Brochure . . . fully details the complete Signalite line of over 300 types of two-electrode spark gaps and triggered spark gaps, includes application notes, characteristics, mounting arrangements, photographs, etc.

NOISE SOURCES AND MINIATURE NOISE GENERATORS

Signalite is the largest source in the world for your noise source and noise generator requirements. With the addition of the TUCOR (ESCO) line, Signalite now offers over 200 different types for use in noise figure test equipment and for monitoring system receiver sensitivities, from UHF to 90 GHz.



Signalite "200" Noise Source Brochure . . . provides a complete dissertation on over 200 types of microwave noise sources and miniature generators available, including fundamental noise measurement discussions, typical applications, detailed characteristics, etc.

We'll have it. If there isn't, We'll Design it!

INDICATOR LIGHTS

Patent Number 3,300,638

301 *Contempo*

For use with T-1¾ based lamps.

- Front removable.

Push to install—pull to remove.

Two terminal mounts in 7/16" dia. *ROUND* hole.

Any number can be mounted touching side by side.

HOW TO ORDER

Description

Right angle, printed circuit board mounted, indicator light.

Lamp Accommodation

T-1 midget flanged base incandescent.

Mechanical

LAMPHOLDER BODY: Black general purpose phenolic.

LENS ASSEMBLY: Anodized aluminum bezel with plastic lens. (Twist lock attachment of lens assembly to lampholder body.)

MOUNTING: Lampholder is mounted by inserting the terminals directly into printed circuit board and flow soldering. Can be mounted on ¼" centers.

GENERAL COMMENTS (Models 864 and 101)

The Sloan Company "Pee Cee" replaceable lamp indicator light is designed specifically for printed circuit board mounting. This unit is mounted by inserting the terminals directly into the board and flow soldering directly into the circuit; two pins provide circuit contacts. Lamps are replaceable from the front by removing the lens. The "Pee Cee" series helps prepare the way for new packaging concepts:

- Permits elimination of front panel.
- Substantial contribution of soldered assemblies to production economy; can be automated.
- One central circuit board for indicator lights. (Mother Board)

SoLiCo PILOT & INDICATOR LIGHTS

- Complete range of voltages.
- Neon and incandescent lamps.
- Lenses in transparent and translucent colors.
- Lenses can be imprinted as desired.
- Decorative chrome plated bezels (other finishes upon request).
- Rectangular and round lights snap into panel.
- Round type lights can be supplied with speed-nut fasteners.
- Variety of terminals.
- Recognized under the component program of Underwriters Laboratories, Inc., and CSA approved.

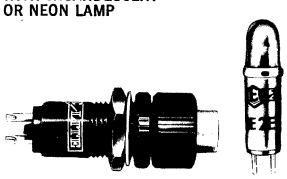
SYSTEMS
ASSEMBLIES
COMPONENTS

INDICATORS

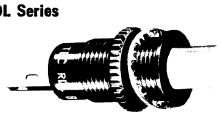
REPLACEABLE CARTRIDGE LITE
WITH INCANDESCENT OR NEON LAMP



RCL, RCLH Series

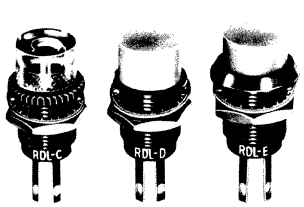
Replaceable Cartridge Lites feature neon or incandescent lamps, four lens styles and ten lens colors. Individually mountable, or, ideally, mounted in the RCLH Series Cartridge Lite Holder that permits fast, simple cartridge replacement.

REPLACEABLE LAMP DISPLAY LITE
RDL Series



RDL-B Series

RDL-A Series



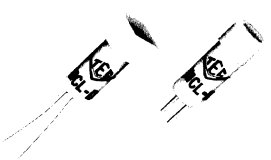
RDL-E Series

Five basic models offer unique variety in appearance, lens style and mounting methods. RDL-A and B Series use standard midget flange base neon or incandescent lamps; RDL-C, D, and E Series use incandescent only. Removable lens for fast lamp replacement.

FRONT MOUNTING LITE
FML Series

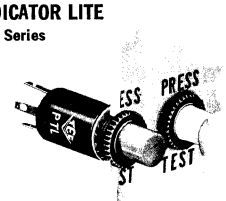
Slip-in installation (no hardware required) of this incandescent or neon lamp indicator is important where rear panel access is limited. Flexible nylon collet type body slides into panel mounting hole from the front and is locked firmly in place by the slip-in lens. Lite is insulated from panel and can contain 1/4 w resistor.

MINIATURE CARTRIDGE LITE
MCL Series



Economical, single unit construction with plastic lens-body in both neon or incandescent lamp models. Square or round lenses, internal series resistor, 2" long wire leads or .040 pin terminals are offered. Lite clip mounts or plugs-in by means of front or back mounted cartridge holders.

PRESS-TEST INDICATOR LITE
PTL Series



WITH REPLACEABLE LAMP

Unique design allows close mounting and combines lamp test and lamp replaceability into a single compact unit. Easy front panel relamping. Pressing the flat top lens tests the lamp independent of the circuit indicator signals.

MINIATURE DISPLAY LITE
MDL Series

An extremely versatile indicator that mounts from the rear with a single knurled nut and lock washer. A variety of optional features are available; spherical or flat top lens in 13 colors, wide range of permanently wired incandescent or neon lamps, internal current limiting resistor, two body colors and selection of terminals.

SWITCH INDICATORS

SUBMINIATURE BUTTON-LITE
SBL Series

Extremely small, the SBL Series Button Switch is designed for use in display and control panels where space is at a premium. The body diameter of the SBL Series is .360" and the back panel projection is only 9/16" including terminals. Lamp options are incandescent or permanently wired, long-life T-1 type neon. Integral switch has a SPST-NO-DB action.

SBS Series—Switch function only.

ALTERNATE ACTION SWITCH
ABL Series

CONVENTIONAL INDICATOR WITH REPLACEABLE LAMP & SWITCH

ABS Series

BUTTON SWITCH ONLY

Double break switch controls two circuits...when one circuit is closed the other opens—mechanical memory holds this status until switch is actuated again (SPDT-DB). Both series are rated for loads to 100 ma at 115 VAC. ABL includes replaceable neon or incandescent lamp.

MINIATURE BUTTON-LITE
MBL Series

Combines a permanently wired neon or incandescent lamp and isolated independent momentary contact switch... SPST-NO-DB or SPST-NC-DB options are available. Switch life exceeds 1 million operations at 100 ma at 115 VAC. Switch is activated by depressing the indicator's push-button lens.

REPLACEABLE LAMP BUTTON-LITES
RBL Series

Combination switch/indicator with replaceable neon or incandescent lamp. Three versions: RBL-1, snap-action SPDT momentary contact switch, operates with high currents to 5 amps; RBL-2, snap-action SPDT momentary contact switch, dry circuits or currents to 1 amp; RBL-3, snap action SPST-NO-DB momentary contact, 100 ma at 120 VAC; RBL-4, SPDT-DB or SPDT switch action, 100 ma at 115 VAC. Switch life exceeds 1 million operations at rated current.

SWITCHES

MINIATURE BUTTON SWITCH
MBS Series

A compact, highly reliable momentary contact push-button switch, the MBS Series is available with SPST-NO-DB, SPST-NC-DB or SPDT-DB options: Switch contact ratng is 100 ma at 115 VAC, non-inductive, with a switch life of one million operations at rated current.

SUBMINIATURE BUTTON SWITCH
SBS Series

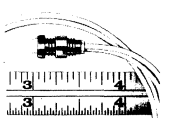
This extremely small push-button switch is only .360" in diameter and back panel projection is only .468". SPST-NO-DB momentary contact switch has a life of 1,000,000 operations at 100 ma at 115 VAC.

SBL Series—Adds integral incandescent lamp with switch.

SUBMINIATURE INDICATORS

SUBMINIATURE DISPLAY LITE
SDL Series

WITH INCANDESCENT OR NEON LAMP



Front mounted for use where panel space is limited or where indications must be small such as decimal points. Mounts on 1/4" centers horizontally or vertically. Only .240" diameter. Choice of connector hook-up or insulated wire leads.

SUBMINIATURE INDICATOR LITE
SIL Series

WITH NEON OR INCANDESCENT LAMP

Rugged, long life T-1 incandescent or neon lamp is permanently mounted in an extremely small body that is .360" in diameter and only .250" long. Ideal for applications where panel space is limited and many indications are required.

SUBMINIATURE TRI-LITE INDICATOR
S3L Series

This extremely small indicator offers three separate color indications; red, green, and amber. Ideal for use where a large number of indications are required in a limited amount of space. Three rugged long-life incandescent lamps with color filter boots are permanently wired in a .360" diameter by .600" long body.

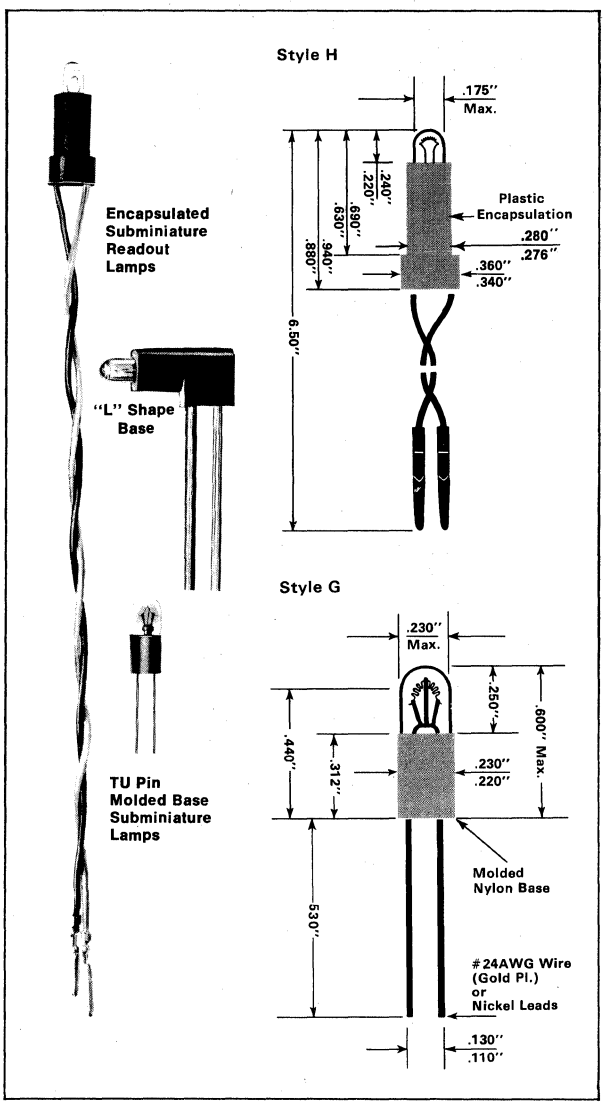
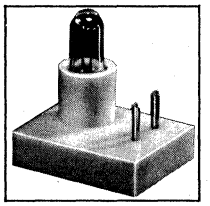
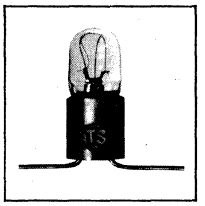
TUNG-SOL MOLDED BASE LAMPS AND SPECIAL ASSEMBLIES

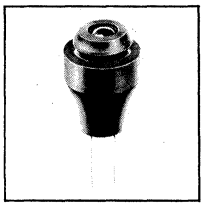




Plug-in module activates photo-electric sensor in high speed check sorter.



Molded base permits bending lead wires at acute angles.



Soft plastic encapsulation permits push-in mounting in sheet-metal panels.

The molded base lamp provides important advantages that simplify production and contribute added reliability to the end product. The molded base is permanently bonded to the bulb. It replaces the previously cemented-on metal base. The former receptacle that had to be wired into the circuit is completely eliminated. The molded base lamp is self-mounting. In fact, the Tu-Pin lamp can be applied with automated equipment.

The molded base technique makes it possible to provide a wide variety of lamp packages—built-in key ways, plug-in types, unusual positioning of the leads and multi-purpose configurations.

Strip-mounted, grain-size, 21-mil lamps snap into molded plastic holder to form a condition monitor for computer circuit boards. Lamp sockets are numbered to correspond to individual circuits. Test probe contacts are provided. Units can be operated in either normally "on" or "off" condition and can be wired to a door switch or test push button.

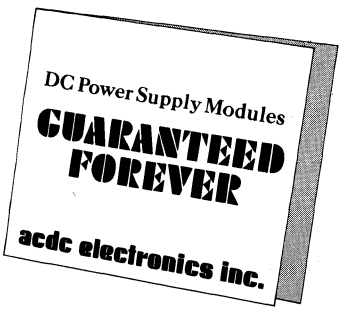
ACDC POWER SUPPLY MODULES

ACDC specializes in the production of modular DC power supplies using uniquely versatile packaging concepts. Since ACDC first began to make power supplies in 1950, there have been many innovations in power supply technology. A large number of these have been the product of ACDC engineering talent. As new modules are introduced or design improvements made to existing power supplies in the ACDC line, bulletins will be issued to supplement this catalog. To ensure that you receive up-to-the-minute modular DC power supply information, send us your name and address and we'll place you on our mailing list. For detailed power supply information, call us toll-free, or contact one of our representatives. See listing in yellow section.

ACDC POWER SUPPLY WARRANTY

When used within its specified operating environments, this ACDC power supply is unconditionally guaranteed to meet all published specifications for an unlimited length of time. This guarantee covers all parts of the module, including semi-conductors, fuses, and mechanical parts, without regard to the date of purchase or installation. All terms of this guarantee are fully transferable when the power supply is sold as original equipment.

If at any time the power supply is in need of warranty service or calibration it may be returned directly to the factory where, without charge, it will be adjusted to meet its original specifications. ACDC will pay surface freight charges to and from the factory.



NEW MINIATURE POWER SUPPLY

The JR! New from ACDC. Now, for the first time, precision regulated DC power in truly miniaturized form. Just think! AC conversion and isolation in one fifth the size and weight with remarkably improved efficiency. But that's not all! The prices are competitive with conventional designs. Yes, again ACDC has opened the door to a totally new era of power conversion. Look around! There's nothing quite like it anywhere—nothing even close! It's the new generation! That's why we call it the JR, a new name for a completely new concept.

FEATURES:

5 times more power per unit volume than conventional approaches, and
50% better efficiency.
0.1% regulation.
Remote Sensing.
Remote Programming.
Short circuit proof.
Overvoltage protection option.
Fits into 1¾" rack panel assembly.

SPECIFICATIONS:

Input: 105-125 VAC, 47-420Hz.

Output: (See table for voltage range and current)

Regulation: 0.1% +5mV NL-FL
±0.1% for ±10% input variation

Ripple: 1mV RMS, 25mV Peak-Peak.

Typical Efficiency: 70% @ 5V, 80% @ 15V and above.

Transient Response: Output voltage returns to within regulation limits within approximately 500 μsec in response to a 100% load change.

Remote Sensing: To compensate for DC voltage drop of of up to 0.5 volts in the load cables, remote sensing terminals are provided to monitor voltage at the load.

Temperature Coefficient: 0.02%/°C maximum.

Ambient Temperature: Units are designed to operate with either conductive or convective heatsinking. When conductively heatsinked, the base temperature of the unit must be maintained at a maximum of 80°C. Since these modules dissipate approximately 21 watts at 5 volts or 13 watts at 15 and 25 volts, provision must be made to remove this heat. For operation in convective air ambients of up to 71°C, an optional heatsink which attaches to the mounting surface of the unit is available. Consult the factory for more detailed cooling information.

Remote Voltage Adjustment: Resistance may be inserted in the negative sensing lead to adjust the output voltage remotely at approximately 1000 Ω/V.

Overload Protection: The supply is protected against overloads and short circuit by a foldback type voltage/current characteristic.

Overvoltage Protection: A completely independent overvoltage protection module is available which attaches to the supply and straddles the output terminals. This protection does not depend on the regulating circuitry of the supply and crowbars the output if it reaches the adjusted trip voltage. Trip voltage adjustable from 5-30 volts.

Input Current Fusing: Input current fusing provided internally.

Connector: Barrier strip (⅜" centers).

Construction: Black anodized aluminum case. Unit may be removed from case for complete serviceability.

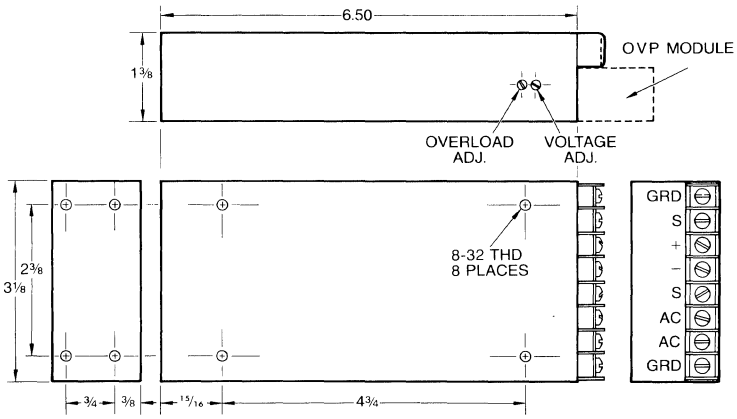
Mounting: See outline drawing.

NOMINAL OUTPUT VOLTAGE	OUTPUT VOLTAGE RANGE	CURRENT	MODEL NO.	PRICE
5	3-5.5	10A	JR5K10	$250.00
15	12-18	4A	JR15K4.0	250.00
25	22-30	2A	JR25K2.0	250.00

(If unit is ordered with overvoltage protection add $30.00 to above prices).

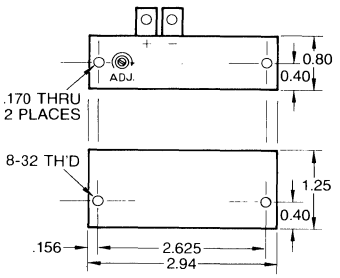
acdc electronics inc. 2979 North Ontario Street, Burbank, California 91504, (213) 849-2414

CASE SIZE K1

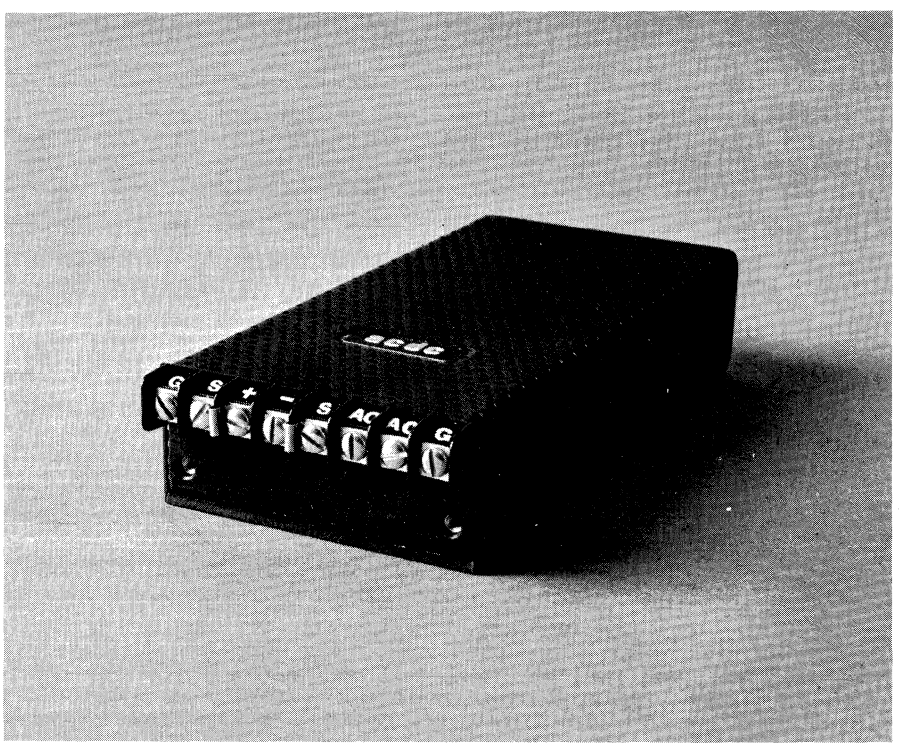


OVER VOLTAGE PROTECTION MODULE

(ADJUSTABILITY: 5 TO 30 VDC @ 10 A MAX)



OV2—$30.00



SPECIFICATIONS	BX & OA SERIES 0.01% REGULATION	BC SERIES 0.5% REGULATION	IC SERIES 0.05% REGULATION
INPUT	105-125 Volts, 47-63Hz (Useable also to 400Hz—consult factory for derating). All models of 20A and greater are provided with 105-125/210-250V input.		
OUTPUT	Voltage range shown in tables is continuously variable between limits by externally accessible screwdriver adjustment of multiturn pot. Output is floating—either positive or negative terminal may be grounded. Current: Zero to full load as shown in tables.		
REGULATION	0.01% or 0.001 volt for line changes of 10%. 0.01% or 0.002 volt for NL to FL changes.	0.5% or 0.02 volt for line changes of 10%. .0.5% or 0.04 volt for NL to FL changes.	0.05% for line changes of 10%. 0.05% for NL to FL changes.
RIPPLE	0.5mV or 0.001% max. RMS (whichever is greater).	10mV or 0.01% max. RMS (whichever is greater).	2mV RMS and 20mV P-P max.
OUTPUT IMPEDANCE	DC—1KHz 0.0001 R_L or 0.001 ohm max. 1—10KHz 0.0003 R_L or 0.01 ohm max. 10—100KHz 0.006 R_L or 0.3 ohm max. (whichever is greater). R_L is the rated load.	DC—1KHz 0.005 R_L or 0.04 ohm max. 1-100KHz 0.02 R_L or 0.3 ohm max. (whichever is greater). R_L is the rated load.	DC—1KHz 0.001 R_L or 0.005 ohm max. 1-100KHz 0.005 R_L or 0.3 ohm max. (whichever is greater). R_L is the rated load.
TRANSIENT RESPONSE	Output voltage returns to within regulation limits within 50μsec. in response to a 50% step change in load current.		
STABILITY	Max. 0.1% or 10mV for eight hour period after initial warm-up.	Typical 1% for eight hour period after initial warmup.	Typical 10mV for eight hour period after initial warmup.
TEMPERATURE COEFFICIENT	Maximum 0.015% or 1mV per degree Centigrade.	Typically 0.1% or 5mV per degree Centigrade.	1mV per degree Centigrade max.
AMBIENT TEMPERATURE	**OPERATING:** Full rated output at operating temperatures of 0 to 71°C without forced air or heatsinking. **STORAGE:** —55°C to +85°C.		
REMOTE SENSING	To compensate for DC voltage drop of up to 0.5 volts in the load cables, remote sensing terminals are provided to monitor voltage at the load.		
REMOTE VOLTAGE ADJUSTMENT OR PROGRAMMING	Terminals are provided to adjust the output voltage by means of a remote variable resistor. On the wide range models, in addition to being internally adjustable over the full range, remote programming is possible at an accurately adjustable 1000 ohms/volt and a separate zero adjustment is provided. Remote voltage adjustment is not provided on dual output models but may be ordered as a special feature.		
OVERLOAD PROTECTION	All models are inherently protected against overload and short circuits of any duration. Except for certain higher voltage units, no fuses or reset buttons are used—automatic recovery is electronically accomplished. On these units short circuit protection by means of an accessible, replaceable fuse is furnished.		
OVERVOLTAGE PROTECTION (Optional: Add $30.00 unless alternate price is specified in catalogue listing)	Any model, up to 50 volts, can be furnished with overvoltage protection which "crowbars" the output in the event of a rise in the output voltage of 10% or 2 volts (whichever is greater). On the dual models, overvoltage protection "crowbars" both voltages to near zero in the event of a rise of one or both of the voltages of 20% or 4 volts (whichever is greater). (Optional feature available at extra cost—specify when ordering by adding -1 to model number).		
INPUT CURRENT, FUSING	The input current drawn from the AC line may be determined from the following: $I_{IN} = I_{DC} E_{DC}^{0.7} \times 0.052$. Fuse ratings should be at least 50% higher.		
CONNECTOR	Cases A through F are supplied with a solder hook terminal header. Case M1 is furnished with an attached 10 terminal P.C. edge connector which may be used either as a solder connection or readily removed by the user and mounted in his equipment to provide plug-in convenience. G and H cases have a barrier strip ($^7/_{16}$" center—center terminal spacing) as shown on outline drawings.		All cases have barrier strip termination.
CONSTRUCTION	Power supply modules are constructed of heavy gage aluminum with integral extruded heatsinks; color is black. Removable covers of perforated steel have a light gold enamel finish. The regulating circuitry is mounted on a printed circuit board.		
MOUNTING	Units can be mounted in any position on either one of two sides as shown in the outline drawing. Mounting faces have threaded mounting holes. See case outline drawings.		
PART NUMBER ASSIGNMENTS	Catalog model numbers followed by -1 have overvoltage protection.		
MILITARY SPECIFICATIONS:	The listed catalog models are constructed with the highest quality components and have MTBF ratings in the neighborhood of 50,000 hours, per MIL-HDBK-217. ACDC will also build supplies to meet specific MIL specifications such as MIL-E-4158A, MIL-E-16400, MIL-T-21200, and meet environmental requirements such as MIL-E-5400, MIL-E-5272, MIL-E-4970, and RFI specifications MIL-I-26600 and MIL-I-6181. ACDC's own environmental laboratory is able to perform qualification testing when required, and is used extensively to prove out designs. In order to provide the most efficient design, customer inquiries are invited, stating exact specifications and environmental conditions required of the end product.

acdc electronics inc. 2979 North Ontario Street, Burbank, California 91504, (213) 849-2414

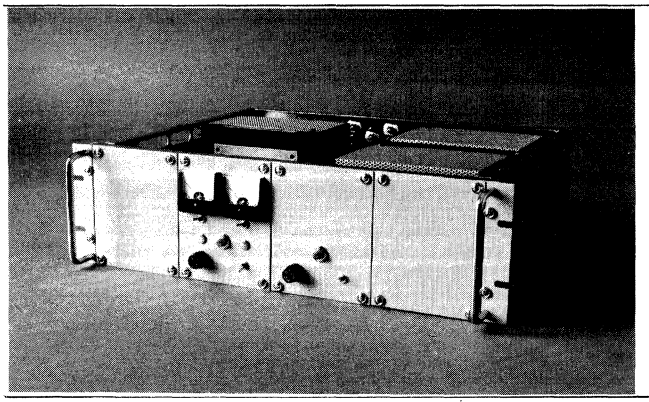
UNIVERSAL RACK ASSEMBLIES



FEATURES

New from ACDC! Now, any ACDC power supply module can be mounted in either the 5¼" or 7" universal rack adapters shown below. Case sizes A1 thru D2 and case sizes J1, L1, M1, N1 and P1 can be mounted in the 5¼" rack. Any ACDC power supply module can be mounted in the 7" adapter. There are no holes to drill. Just assemble using the mounting hardware furnished with each rack. Front panels are finished in grey enamel and the chassis is finished in yellow cadmium. Panel options range from blank front panels to control consoles which are provided in metered or non-metered versions. Any two modules can be controlled and monitored from a single control console. Cabling is simplified in the 5¼" rack by the addition of an enclosed cable race which is located in the center of the chassis. Modules terminate to standard eight position barrier strips on the rear of the chassis. When ordering, specify the desired rack adapter, front panel and termination options, and mounting plates. Chassis slides are also available.

ACDC SPECIAL POWER SUPPLIES

Digital Programmables

Continuing to explore new applications for wide range programmable power supplies, ACDC has designed and manufactured digital programmable modules with voltage ranges up to 100VDC and current ranges up to 0.5A. These units can be programmed for either voltage or current. Resolution is 10MV or 1μA. Programming is accomplished through the use of BCD input. The slewing rate is better than 10,000 volts/second. Common applications for these units are in digital systems requiring rapid and precise changes of voltage and current references such as found in integrated circuit testers.

Wide Range Programmables

ACDC manufactures a comprehensive line of wide range programmable power supply modules with voltages up to 50VDC and currents up to 2.5A. These modules have found broad customer acceptance in programmed equipment and laboratory applications where a stable DC voltage reference is required. Modules can be metered and operated in convective air ambients up to 71°C with no additional heatsinking. Units are completely encased to protect them from damage. Listed below is a selection of standard ACDC wide range programmable modules:

WIDE RANGE PROGRAMMABLE MODULES

VOLTAGE RANGE	CURRENT AMPS	SIZE CODE	0.01% REG. MODEL NO.	0.01% REG. PRICE	0.5% REG. MODEL NO.	0.5% REG. PRICE

Multiple Output Power Supplies

Often, a customer's need for more than one output can best be served with a multiple output power supply. ACDC has produced numerous devices of this type. ACDC also provides universal rack adapters for the consolidation of any of our power supply modules. Please call upon us to consult in the selection of the best solution to your applications problem.

Memory Power Supplies

With the ever increasing demand for computer logic in modern electronic circuitry, ACDC has specialized in providing DC power sources to be used in conjunction with memory applications. These supplies feature separate logic and memory drive outputs. The memory drive can be made temperature programmable and proper turn-on and turn-off sequencing between the various outputs can be provided as required.

DC to DC Converters
